Have recently placed on the market in this city, their Steel Ribbon and attachments for Sash Balance. This balance presents so many desirable features for practical use that it will well repay any person interested in the subject to investigate the matter for themselves, while they have the present opportunity at the Mechanics Fair, where a window fitted up complete is on exhibition. These attachments consist of a *steel ribbon* passing over flat grooved pulleys, and are secured to the sash and weights by means of brass loops and clasps. These ribbons are manufactured expressly for the purpose from the best crucible steel, and galvanized by a *special process* which effectually prevents them from corroding by dampness or on exposure to the atmosphere.

The attachments are very simple yet *perfect* and every detail has been worked out to render them durable in the highest degree, and not at all likely to get out of order. The friction being reduced to the minimum, the heaviest as well as the lightest windows can be raised or lowered with the greatest ease. It presents a neat appearance and can be painted or stained to harmonize with the wood work of the window. It is now in use in many of the principal business blocks in Chicago, where it is rapidly replacing the old style cords and chains. In Pullman, orders have been issued to change over two thousand houses from the old style to the Gardner system. No specially skilled expert is required in its application, it being an easy matter to change the pullies and attach the new ribbon in place of the old cords. For further information see advertisement on another page. Chas. A. Hare, Pier 5 Stuart street, this city, who is the agent for California, can show many letters of recommendation from architects and others who have used them and express their satisfaction.

ON THE USES OF TILE.

The ornamentation of interiors is constantly becoming more complex and luxurious, especially is this the case in the uses of encaustic and enamel tiles, and their employment in dwellings of even the cheaper grades has developed extraordinarily during recent years.

Nowadays a residence is hardly considered complete without its tiled vestibule in the the various shades of inlaid, intaglio or mosaic flooring tile. There are some very pleasing examples of this kind of work to be found in the floors of some of our principal banks, insurance offices and Cafés.

Tiles are also used to good effect in kitchen and bathroom floors where their employment is at once durable, cleanly and pretty.

Tiles in plain and decorative glazes of highly artistic effects in form and color are now used very extensively in the ornamentation of fire places.

We were lately shown in the tile ware rooms of W. W. Montague & Co. some plastic enamel tiles for hearth and grate decorations. They have lately received some samples of head and full length figure work in the more delicate shades of old rose, amber and onyx, with which some pleasing and artistic effects can be obtained in the facing and paneling of wooden mantels.

The mantels of the present day, made of various kinds of polished wood, with their bevel French glass and majolica and enamel tile and bronzed grates are such a pleasing contrast to those formerly used, that it is no wonder that wood and tiles are entirely superseding the use of marble for this purpose, even in our most unpretentious dwellings.

As a matter of progress, the substitution of tile for wood wainscotting of bathrooms and kitchen sinks, wash stands etc., marks an advance of public taste that is truly gratifying.

Messrs. Montague & Co. have lately tiled some bathrooms in this city that are marvels of elegance, and it is not alone in a matter of beauty that this departure in bathroom wainscotting is desirable, but tile is so much more durable and cleanly than wood, that it is a wonder that their use for this purpose has been so long delayed.

We cannot close this article without referring to some of the very handsome grates and grate trimmings in bronze, nickle and antique brass exhibited by this firm.

CITY BUILDING NEWS.

Buchanaan and Washington. Carpenter work; owner, A. G. Hawes; architect, A. P. Brown; contractor, J. B. Gonyeau; cost, $15,160; time, 6 months; signed, Sept. 11; filed, Sept. 24; payments, 75 per cent as work progresses; 25 per cent, 35 days; Plumbing. Contractor, Duffy Bros; cost, $1,580; signed, Sept. 12; filed, Sept. 24; payments, 75 per cent as work progresses; 25 per cent, 35 days.

BUSINESS MOSAICS.

In reflecting upon the display of novelty in mechanism and art that challenges the attention of visitors at the Mechanics Fair, one thought is kept uppermost, that the tendency of the age is pressing hard on the inventive faculties of man. With the impetus given to all branches of industry through the influence of collosal fortunes seeking investments, the inventive faculties are kept at a high working pressure: hence the wants of man, in all his various conditions of life are analyzed in the most critical manner, the result of which is, that every want that can be supplied by new inventions is provided for and the condition of the race is accordingly benefitted to that extent.

In passing the San Francisco Gas Light Co's., exhibit our reflections were brought to a practical test. Here we found contrivances for robbing the *luminous fluid* of its heat. That gas could be used for heating purposes with such economy as to compete with the use of coal for the same purpose, is known to but comparatively few persons.

This company gave actual proofs of the utility of coal gas heat for cooking purposes. Through ingenuously contrived burners so arranged to obtain the greatest amount of heat from a given amount of gas, a complete dinner consisting of soup, fish, meats and vegetables, for twelve persons was cooked and served to the guest within sixty minutes from the time the gas was lit in the stove, and less than forty feet of gas being used in the accomplishment of the feat at a cost of less than ten cents. As the production of heat was from the combustion of gas, without contaminating the air with disagreeable odors, without coal or kindling to litter the kitchen apartment. It will be readily seen that this new method of providing the family meals, has superior advantages over the old method. The San Francisco Gas Light Co. are furnishing stoves of various sizes to meet the family requirements, making all the connections free of charge and furnish either separate meters or connections with the house meter. Office and show rooms, second floor, First and Natoma streets.

The hardware firm of Dunham, Carrigan & Hayden Co., representing the HOPKINS & DICKINSON MANUFACTURING CO., of Brooklyn, N. Y., are leaders in artistic house hardware, grilles, ornamental hinge plates, and fancy scroll escutcheon. THE NEW COLUMBIA CYLINDER LOCK, made by the Hopkins & Dickinson Manufacturing Co., is one of the latest triumphs of mechanical skill. The manufacturers claim as points of superiority in their lock over all others:

First.—That the manner of its application to Lock Case is the simplest and most effective in use; from the fact that the Lock Case is provided with a round hole tapering from the inside, and the Cylinder Shell having a corresponding undercut shoulder. By inserting Cylinder through hole in Case, and turning set-screw in face of Lock-front, the Cylinder and Case are interlocked, and thus complete a most effective and durable fastening.

Second.—The key being endbitted, the Tumbler Cells thereof are brought in direct and instant contact with the Tumblers themselves, thus insuring an easy insertion of key, and at the same time preventing unnecessary friction and wear.

Third.—The Cylinder is provided at its rear end with a heavy dog for throwing bolt in Lock Case, which is integral with the Cylinder itself, and therefore can never loosen or get out of order.

Fourth.—Any desired number of Locks can be made to fit one master-key, and as only one Cylinder is required to effect this result, there is no possibility of inserting key in wrong key slot and causing the annoyance incident thereto.

Fifth.—Duplicate Keys cannot be made from numbers, as Cylinders are required to insure a correct fitting, which is a master piece of art and convenience and they cordially invite all who are interested in building to visit their Art Rooms at 17 and 19 Beale street, where they will be sure to get ideas of incalculable value in finishing and decorating their houses.

At the Fair of the Mechanics Institute, some very large amalgam plates for saving the fine gold in mining operations are on exhibition. These large plates were prepared by E. G. Denniston at his plating works 653-655 Mission street, this city, where all kinds of plating is done in the best manner. See advertisement on another page.

Paper covering for walls and floors in the construction of frame buildings is becoming more popular as the desire for elegant interiors increase. By the use of this material, dampness and sudden atmospheric changes are excluded from the interiors, thereby preserving more completely fine furniture, costly pictures and delicate musical instruments from the deteriorating influences of the sudden changes of climate. Heretofore it has been difficult to obtain a good building paper, but we are assured that now this material of an excellent quality can be obtained of the Pacific Roll Paper Company, 30 and 32 First street, San Francisco. Please read their advertisement under the head of *Fay's Patented Waterproof Building Manilla* on Page VI.

Water close's and other Sanitary appliances form such an integral port of the modern dwelling that every person desires to have the best that can be made. Mr. Joseph Budde, who is so well known, for so many years, as the foremost manufacturer in that line, having recently moved to more spacious factory premises on the corner of First and Mission streets, this city, is now turning out a superior quality of work of real artistic merit. For the Palace Hotel he is fitting up his "Supreme wash out closets", fitted with polished antique oak tanks with nickle plated brackets and plated flushing pipes, the seats being of fancy ornamental wood, polished, and fitted with silver dipped trimmings. His new Superb closet, decorated and gilded, is being fitted up, for one of our finest residences, of highly polished toa wood. The Alcazar, Triumph, Ocean Spray, being the most popular for general use. The tanks made at this factory are lined with heavy copper prepared with mirror finish and hard rolled, heavily tinned and polished, and soldered by an improved process whereby the oints are free from the corroding influence of acid, consequently more durable. The valves are of superior quality, of his own make, and work noiselessly, and are tested twice, once before being put on, and again after the closet is finished. The fittings are all of brass dipped and cleaned of all scale or other defects. The metal finishing department is fitted up with the most approved cutting, grinding and polishing machinery. The metal spinning is all done in his own shop. The Pioneer closet of '49 is quite a favorite, and represents the pioneers crossing the plains. He is now preparing a new closet which he designates as the Native California, having all the sterling qualities of the Pioneer with improvements to date. The waste hoppers made by Mr. Budde are of the most approved pattern, easily adjusted and perfectly gas tight. The machiney for these works are specially adapted to the requirements of the trade, and the leading workmen having been such a long time with Mr. Budde insures a first class article in every respect. All the iron work is covered with a chemical preparation which resists rust and adds to the durability. All closets, valves and fittings are tested twice before being shipped from the factory.

Among all the ornamental wrought iron work throughout the city, none are more carefully worked and finished than those manufactured by A. J. Dunbar & Co., 220 Fremont street, this city. Some work recently put up by this firm shows the most intricate interlacing of scroll work, the curves and angles being turned true and regular. This firm also furnishes stirrups, anchors, straps, bond ties, and all other wrought iron work for buildings or other purposes.

N. & G. Taylor Co. send us a specimen of their new business card, which is a novelty in its way. One side represents a miniature sheet of tin with its leaden surface and the *trade mark stamp* in the corner, at the bottom end of the card beneath the sheet of tin is this sentence: *Every sheet of the Genuine OLD STYLE has the above stamp in the corner of each sheet. None is the genuine without it.* N. & G. Taylor Co., Philadelphia. Chicago address, 78-80 Lake Street.

The Blount Door Check and Spring from Weatherly, Jardine & C., 132 Market street, holds its own against all others. To use one is to like it.

The Norris Patent Sash Pulley retains its place at the lead for all qualities that go to make a first class article.

Hill's Patent Inside Sliding Window Blinds, manufactured by E. B. Hindes & Co., 411 Mission street, this city, has become one of the features of the modern dwelling, or in fact for all windows for buildings where any pretense whatever is made towards convenience or style in accordance with the present mode of life. Send for a catalogue and price list.

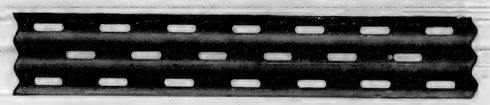
The Cincinnati Corrugating Company, Piqua, Ohio; Corrugated Metallic Lath; Fire Proof; Vermin Proof; Pays for Itself in Three Years, by Saving in Insurance. Nothing spoils the appearance of a new building as quickly as cracked walls and ceilings.

Mortar will not crack on our lath.

Many ingenious efforts have been put forth in the attempt to supply the building trade with an efficient form of Metallic Lathing, but all have resulted in greater or less disappointment, in comparison with the popular *Oval Perforated Lath* we have been manufacturing and selling extensively for several years.

The products of enthusiastic inventors in this direction have been too expensive at the start, not sufficiently practical, and finally their introduction and use, whether by Architect, Builder or Owner, involves too much of a doubtful experiment to bring them into general favor.

Our corrugated Metallic Lathing is far superior to any other form, from the fact that it can be adapted to any kind or shape of surface. It possesses the rigidity which wire lath lacks, requires no stretching, and has ample openings for plaster, as illustrated in this cut.



It should be specially noted that our lath requires no furring, even over unusually long spans; that it is more economical of plaster and can be used over wide spaces than any other style on the market, being effective over 24 inch openings without danger of sagging, and cracking the mortar.

Our lath are being used very extensively in various Government and other large public and private buildings.

We make this Lath usually three corrugations wide, 16, 26, 32, 48, 64, 72, 80, 84 and 96 inches long, but can make up specially, sheets to ten feet long, and four to twelve inches wide.

It may not be generally known but it is never the less true, that the mortar adheres firmly to the *surface* of the Lath. This, with aid of the perforations, makes a perfectly solid key.

Our lath is the only style that can be applied more rapidily than wooden lath, being in large sheets.

No. 27 iron is generally used with corrugations 1½ inches wide, being perforated as shown in the cut.

We ship and quote prices per square yard on No. 27 gauge lath, unpainted and in bundles, unless otherwise requested.

For convenience of customers we put a proportion of short lath with each shipment.

For prices and other particulars, address,

THE CINCINNATI CORRUGATING CO., PIQUA, O.

The Pacific Laundry Tray, manufactured by John Dixon, 1219 Market street, this city, is a most perfect article for use in the laundry. These trays show in a surprising degree to what perfection cement work can be brought by the proper combination. By a method patented by Mr. Dixon the sides, etc, are the same thickness as those made of wood, yet they are stronger and more easily cleaned. Those on exhibition at the Fair should be examined by every architect or other persons interested in such work.

A. B. Cheney & Co. No. 308 Market street, furnish a superior regulator for head lights over doors or swinging sash which will swing the sash outward or inward as desired, made rights and lefts and easily locked in any position.

We desire to call the attention of our patrons to *EDFEWER'S Patent Portland Cement.* This cement comes before the public with recommendations from the highest authority in Germany,—from government officials, whose business it is to examine and pass upon all cements used in government works. Being among the oldest works of the kind in Germany is a sufficient guaranty that its manufactures has been sustained by honest and faithful manipulation of the best of materials, and numerous testimonials to this effect together with tables showing the strength of the cement can be seen at the office of Wm. Wolff & Co., 327 Market st., San Francisco, Cal. This cement no doubt will become one of the most popular brands in this market. (See Advertisement Page XCIII.

THE GARDNER SASH BALANCE

(PATENTED)

Absolutely the best and most economical Sash Balance in the world.

——THIS IS NOT A SPRING BALANCE.——

It consists of a steel ribbon expressly manufactured for the purpose. It is attached to the sash and weights the same as cord or chain as shown in the cut. It presents a neat appearance and can be painted same color as the wood-work of the window. It cannot get out of order or wear out, and being a perfec balance the heaviest windows can be raised or lowered with the greatest ease. We have it in use in several freight elevator doors.

THE GARDNER SASH BALANCE CO.
311 First National Bank Building.

Chicago, Ill., August 19, 1890.

MAJOR T. H. CAPRON:—

After a careful study of the qualities of your Sash Pulley and Steel Ribbon, and comparing the same with other methods of hanging sash, preference was given to your Pulley and Ribbon for the Sash of the Leiter Building, State, Van Buren and Congress streets. This building is over 460 feet long, eight stories high, and being designed for a retail store or stores, the windows are exceedingly large, mostly from 6 to 8 feet wide, and those of the second story, some 12 feet high. The sashes for such openings require the very best cord and pulleys. Good pulleys can be obtained by paying for them, but I was unable to find as good a pulley as yours at the price you charged us. The question of cord, chain or ribbon is a serious one where windows are as heavy as those at the Leiter Building, and it was only after the most thorough examination, with the assistance of an expert to visit the places where your ribbon was in use, that the question was decided, and the contract was awarded to you. Very respectfully,

(signed) W. L. B. JENNEY, Architect.

IN USE IN THE FOLLOWING BUILDINGS IN CHICAGO.

No. 6048 A Pulley.
Page 12 in 1890 Supplement.
The above cut shows the Norris Pulley as it appears in the frame. This Pulley is made so that the Rope cannot possibly leave the wheel.

NORRIS PATENT SASH PULLEY.

STRONGEST AND HANDSOMEST PULLEY MADE.

Our Pulleys you can readily see are the only Pulleys made that do not depend upon the screws to hold them in the frame, the pin for the wheel is back of the bevel or lower end of the Pulley which causes the weight of both sash and weights to pull back, therefore the more weight the more firmly the Pulley imbeds itself in the frame.

Our Pulleys are made in over 1600 different qualities, they are made with Gun Metal Pins, Phosphor Bronze Pins, Steel Pins, Bronze Metal Face, Bronze Metal Wheel, Bronze Metal Face and Wheel. We also make a special groove for chain, which causes the chain to wear twice as long.

Our Self-Lubricating Pulleys if used a life time will always be Anti-friction.

We make a specialty of finishing our Pulleys to match the new finish of hardware now so extensively used, such as old Statuary Bronze, Electro Bronze, and old Copper Bronze.

We make Pulleys Plain or Engraved Face, and of Bronze Metal, or any finish required

Architects and builders generally concede the Norris Pulley to be the Best Pulley in the world.

There are many millions in use, they have been and are used in the finest buildings in the country.

All our Pulleys are numbered, so please order by number, as the number designates size and quality.

Architects wishing a Catalogue and samples will please write us, and we will send same free of cost.

Norris Pulley can be had of any Hardware House in the country, or address

C. SIDNEY NORRIS & CO.

BALTIMORE, MD.

Samples of our Pulleys can be seen at the office of Weatherly, Jardine & Co., 132 Market Street, San Francisco.

MR. George H. Wolfe, having no further connection with the business of this journal, correspondents will in future address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at 408 California Street.
SETH BABSON, Pres. W. J. CUTHBERTSON, Vice-Pres.
OLIVER EVERETT, Sec. JOHN M. CURTIS, Treas

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at 408 California Street.
JOHN RICHARDS, Pres. PROF. FRANK SOULÉ, Vice-Pres.
OTTO VON GELDERN, Sec. JAS. SPIERS, Treas.

ON and after January 1st, 1891, the subscription price of this journal will be $3.00 per annum, and single numbers 30 cents each.

SUBSCRIBERS will please notify us *promptly* of any failure to receive the paper, and also of any change in their address.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects was held at their rooms, 408 California Street, on the 14 inst., the President, Seth Babson, in the chair. The Committee on Library made some suggestions, which were laid over for further consideration.

B. J. Clinch was elected an active member and G. Fauss as a student member.

THE A. I. A. Sketch Club, the membership of which is confined to students in the offices of architects who are members of the Chapter, A. I. A., are now busy arranging for their annual exhibit of the drawings and sketches of the members, which will be held in the rooms of the Chapter, 408 California Street, December 14th, 15th and 16th. All persons who are favorably disposed toward the advancement of our young men in architectural knowledge, are cordially invited by the Club.

THE regular meeting of the Technical Society of the Pacific Coast was held on the 7th inst. at their rooms, 408 California street, President Richards in the chair.

The Secretary of the Academy of Sciences, Prof. F. Gutzkow, explained a new process for the manufacture of chloric magnesia cement by either the single or double burning process. The Professor stated that the raw materials were abundantly distributed throughout this coast. Many specimens were shown of the cement in all its forms, from the natural stone from near this city to the most finished and hardened cement, so white and fine grained as to resemble delicate china ware. This cement is destined to form a modification in our present methods of cement and concrete work.

Mr. H. Vischer explained with the aid of drawings, the intricate mechanism and working of the Thomas Arithmometre, or calculating machine. Mr. Thomas Price of this city is the owner of the machine which was exhibited and operated by H. I. Owens, who worked out in a few seconds' time a long list of intricate problems in multiplication, addition, division, subtraction, decimals, etc., by the turning of a crank.

THE regular meeting of the Electrical Society was held in their rooms on the 3rd inst., Prof. Keith in the chair. The Professor demonstrated on the blackboard the various methods of arc lighting, and showing the advantages of certain positions for the lights where special forms of carbons are used. The change in colors of the lights, both arc and incandescent, when the electric currents are increased or diminished, was explained, also suggesting some valuable hints as regards the lights best adapted for bringing out the full decorative and architectural effects by artificial lighting.

THE Mechanics' Fair of 1890, recently closed, labored under several disadvantages over former years, such as the celebration of Admission Day which just preceded it, and the excitement of election time, which accompanied it. Nevertheless the exhibit was but little, if any, behind those of former years.

In reference to the display of building materials and devices, we have a few words to say, and think the present a good time to say them; and would make these suggestions or propositions for the consideration of the managers of the next exhibition.

In the first place we think it would be a good idea to set apart a separate space to be devoted exclusively to the various articles and materials both crude and manufactured and the different devices used or employed in the construction or adornment of buildings. Thus a person interested in that subject matter, could pursue his investigations without the fatigue and loss of time necessary to hunt up widely separated displays, as was the case this year. We think this would tend to draw out more extensive and more varied exhibits, and attract proportionally more attention from visitors.

Again, while the general opinion is for premiums, yet we think that it might be possible to devise a method whereby the various excellencies, capabilities or qualities of a machine or article should be submitted to a competent committee who should report on the actual facts in relation to the merits of the articles in consideration and on the practical questions of their utility and desirability, thus giving valuable and reliable information to the public, guiding them to what is good, by giving reasons why the introduction of an article could be recommended.

THE Second Annual Convention of the American Institute of Architects was held in Washington, Oct. 22d, 23rd and 24th, 1890. Owing to illness President Hunt was not able to be present, but the address he had prepared was read, and contained much interesting matter. He referred to the methods now employed in designing our national buildings, and made some excellent suggestions concerning the methods that should be employed.

The treasurer reported:

Cash receipts for the year	$4,633
Cash expenditures	3,028
Balance on hand	$1,605

There are twenty-seven Chapters throughout the country with a total membership of over one thousand.

An amendment to the Constitution was adopted, providing that in future no one shall be admitted to fellowship in the American Institute of Architects, unless he be already a member of a Chapter of the Institute, and whose admission is recommended by the officers of his Chapter.

The following officers were elected: President, R. M. Hunt; First Vice-President, W. W. Carlin; Second Vice-President, J. W. McLaughlin; Secretary, John W. Root; Treasurer, S. A. Treat.

The next Convention will be neld in Boston.

WE commence in the present issue the publication of a critical review of The Prang course in Form-Study and Drawing, by Dr. Arnold Dodel, Professor of Botany in the University of Zurich, Switzerland. Mr. Prang's name is a household word among American families, having made himself famous among the children through his beautiful picture cards for holiday gifts. And as many of his friends would like to know what the great teachers in the old world can say about him and his system of teaching, we publish a translation of the above-named review by permission, which we believe will be read with great interest by all those interested in having drawing taught in all the public schools of our country.

INSTRUCTION IN DRAWING.

In Primary and Intermediate Schools in Europe and America. A Critical Review of the Prang Course in Form-study and Drawing.

As in the course of this paper I touch upon an important question of school-teaching—one apparently lying outside my own special field, and it might be objected that I am not competent to deal with it—it seems to me proper to justify myself to the readers of this periodical, and show that I am able to express an opinion upon the past and present methods of instruction in drawing, such as it is not uncalled for at present. I had the misfortune—or the fortune—to pass through schools in my boyhood, the teachers of which not only had no talent of drawing, but also had no idea how to teach it; and who had all arrived at the same conclusion apparently, that it was of little consequence whether it were cultivated or neglected. At my desire, I was given various "studies" and lithographs of all sorts of possible and impossible things, and as soon as I had run through the studies, illustrated calendars, colored landscapes, portraits in magazines, and like, had *their turn*. In the schools for the education of young teachers, the artistic impulses of the pupil were left to be developed by themselves, the teachers here again not being able to draw.

At last I became a teacher, and devoted myself and my pupils to the favorite pursuit of drawing, as far as I understand it. The study of natural science in High School led me to draw somewhat from life. Readiness in mechanical drawing became of use to me, but the power of drawing all real objects was yet to be acquired. Fate led me from the High School to become an instructor in Intermediate Schools, and finally to the chair of botany in the University, where my twenty years of botanical teaching represents as many years of continuous drawing. The favorable recognition which my scientific works have received on account of their so-called artistic illustrations may be considered my justification for speaking upon the subject of drawing even in a council of teachers.

I would not have repeated this story of my development if it were not instructive. We are reminded that not three decades ago the value of drawing was quite underrated even in the most advanced schools of Switzerland. In State examinations, it would happen that a candidate for a teacher's place would be dropped after taking a high rank in drawing, because upon the subject of "religion" he did not pass so well. On the other hand, no one was ever passed by because his drawing was called "bad" when examination in "religion" was marked as "good," the latter being the essential thing, while drawing was of minor consequence.

But the vitally important part to be touched upon, with all who have at heart the interests of school and State, is the fact that all about us—not only in Switzerland, but also in the German Empire and in Austria the same conditions prevail. Drawing is still in many places neglected if not despised. How much talent is thus buried, how many natural powers thus crushed through the school-system itself; how much valuable material lost to the State and society by the nipping frosts of a narrow predogogy! The course of development I have recalled above suggests the importance of drawing as a means of education and preparation for practical life, as well as a source of happiness and as a light to irradiate the hard road of daily life. And here I will state frankly that I believe I should not be today a University professor of botany but for the use I was allowed to make of my power of drawing natural objects artistically, while teaching in public schools and in the laboratory. To-day a thorough teacher, who is able to inspire his pupils with the ambition to do as well as to know, throughout all the departments of natural science, must not be wanting in the power of illustrative drawing. The most perfect oral description of anything seems insufficient beside the ability to demonstrate the same thing, either by way of illustration or experiment. But not only must teachers be able to illustrate pictorially to fulfill their duty, but all men working with material things require this accomplishment. I cannot imagine any such person who does not find himself, in the course of a single year, repeatedly in a position where illustrative drawings of his own becomes almost a necessity. Here we see a reason, on the ground of utility alone, why drawing should be raised from neglect as an incident of education, to the rank of an essential requirement. Another point should be considered apart from utility, which is, its importance as a link in any complete educational system. Whoever learns to draw, learns to observe, to recognize, to see where others preceive nothing, learn nothing—are blind. Such an one receives a mental training, a breadth and acuteness which is an equipment toward a finished organism. I do not hestitate to say, of two men equally cultivated and intellectually gifted, one being able to draw what he sees, and the other not, that they would stand upon an entirely different footing if appearing to give each evidence in court. Both may have been in a railroad accident, escaping injury when the express train ran off the track. Both may have seen the same scene of desolation. One with ready hand makes a sketch on the spot, noting by word and pencil what he sees; while the other can not do so. After a time, both leave the scene of the accident, unequally impressed, therefore unequally reliable in their statements. He who draws makes his with almost absolute certainity, earns the eulogium of the court, and perhaps the gratitude of a man unjustly accused. The other is uncertain in his evidence, because he has seen less accurately and seen *less*. In considering the testimony of both witnesses, the judge will give greater weight to the first, for reasons easily to be understood, and may even rebuke the latter for self-contradiction. Yes, and life itself, the tribunal of success in the struggle for existence, will take on the same attitude as regards these two, one of whom really has one important faculty more than the other. This appears to be only the ability to express some experience pictorially; yet in truth the organs are more acute, more developed, the whole man is superior in skill and executive ability.

Latterly great efforts have been made by leading teachers in all countries favorable to education to elevate intructions in drawing to its right position, both in common and in industrial schools. The increase of commerce and industry, the keen competition in all branches of work, as well as the ever-recurring crisis in the political economy of the nation, have not failed to make increased claims on school education. To this is to be added the knowledge of nature, which, since Darwin's time, has made such progress, and has been carried from scientists to the people by means of popular literature and enlightening influence of the press. The importance of natural science, which has made itself felt in different departments of thought and work, has been seen. The uneducated, finding themselves more and more at a disadvantage, compared with the educated, have desired for their children the acquisitions denied to themselves. Thus in a short time very broad demands have been made upon the common school; essential knowledge must be considered more than ever, and where it was not included in the plan of education, it has in some places been made a part of it. New grafts of cultivated varieties have been inserted in the old organism of the primary school, already heavily weighted; at the same time the sterile branches and exhausting shoots have been suffered to remain. Many things had been learned from Pestalozzi, particularly the development of education through observation. Indeed, it almost seemed as if Froebel was to be the solid corner stone upon which was to be raised a new citadel of knowledge. But what the good, honest men wished and hoped has not been realized. The spiritless routine of the old school was forced into a combination with that of the new. Froebel's idea was in some places caricatured by the "goody" methods of the schools for young children. Instead of cultivating the mind of the child in the natural way by developing the senses, the old dregs of lifeless abstractions were mingled with a little new wine of frivolous observation, and the result was labelled "Froebel's Kindergarten." These offered a fruitful field for religious idealism on the part of the opponents of progress. Among the kindergartens there are, of course, praiseworthy exceptions. I think I am not unjust, however, in saying that at present, in Europe, the "Froebel Kindergartens" do, on the whole, more harm than good. I know that I am not alone in this opinion. Every school of children under twelve years old, where religious instruction and conversation play an important part, and where, therefore, themes are touched upon which demand the mental power of maturity, must be an evil rather than a benefit.

As in the Froebel gardens, so it has happened generally with the recognized primary schools. The general method remained the same. What wonder that the fruit was not in proportion to the hope! Owing to this combination of old and new, the point has been reached where from every little puddle, and from behind every hedge, croaking is heard to the effect that the study of Nature in primary schools must be given up, including the investigation of plants and animals of the earth, and the races of mankind.

"Let us return to cut-and-dry instruction" is the cry. If this state of affairs continues, it will soon be declared, as was said two hundred and forty-five years ago by a certain doctor of Tubingen, in his dissertation, that "among things unbecoming a Christian is the study of the outside world and communion with Nature."

Notwithstanding this backward movement, a larger performance in drawing is now demanded in schools, as may be seen by the following item, which was lately read in all newspapers, and was printed in German official organs:—"Instruction in drawing does not yet receive proper attention, as the teachers lack a correct method, while the directors and superintendents want practical experience and knowledge. Gymnasiums whose obligatory instruction in drawing only extends to the fourth class, inclusively, suffer especially from these draw backs, though the number of teachers who have passed their examination continually increases. However, long experience shows their ability to teach, acquired before, and confirmed by examination, is yet insufficient to attain the best results. A specialist must be appointed to overlook their teaching. The Minister of Public Worship and Instruction has therefore put the question whether it would not be well to recommend regular periodical supervision for this branch of technical education, with an organization like that now existing for superintending gymnastics."

[TO BE CONTINUED.]

Correspondents must not forget to give their names and address, as the editors cannot publish anonymous communications, nor will they hold themselves responsible for opinions expressed by their correspondents.

To Editor California Architect and Building News—

As the Fire Department is now engaged upon the revisal of the present Fire Ordinance, a few word anent the same would not be amiss.

In the first place the cognomen of the law is a misnomer—it treats of not only protection against fire but of the construction of buildings generally, and therefore should be rather called a Building Ordinance than a Fire Ordinance and for the same reason the carrying out of the same should not be vested in the fire department, but in a building department whose deputies should be educated architects and engineers—or as they are called in England surveyors. In London the whole city is districted, and each district is under the control of a district surveyor, who is obliged to pass a strict examination as to his duties before he is eligible, and who is responsible for the proper carrying out of the law in his district. All plans have to receive his approval before being allowed the carrying out. A similar system I believe is in vogue in Boston and New York. Of course, in a comparatively small city like San Francisco, two districts would likely be enough—providing that the surveyors should devote their whole time to the work as should be the case.

A very good feature of the present law is that relating to iron fire escapes on outsides of buirdings. This should by all means be kept, and the requirements will also give architects an opportunity of making interesting an otherwise uninteresting façade. Thus the flat face of the California Theatre building is relieved and helped by the galleries and ladders attached to its front, and no doubt the lank monotonous front of the Chronicle Building might be made interesting in the same manner should the fire department see fit to order ladders on its front.

Again by all means should a law be passed preventing the erection of any building higher than the width of the street upon which it abuts. Lately in London it has been made illegal to build a building vertically higher than 90 feet as there the before mentioned regulations would not work, as some of the roads are over 200 or 300 feet wide, but with our medium size streets such restrictions would be unnecessary.

Ethics teaches us that the health and enjoyment of the com-

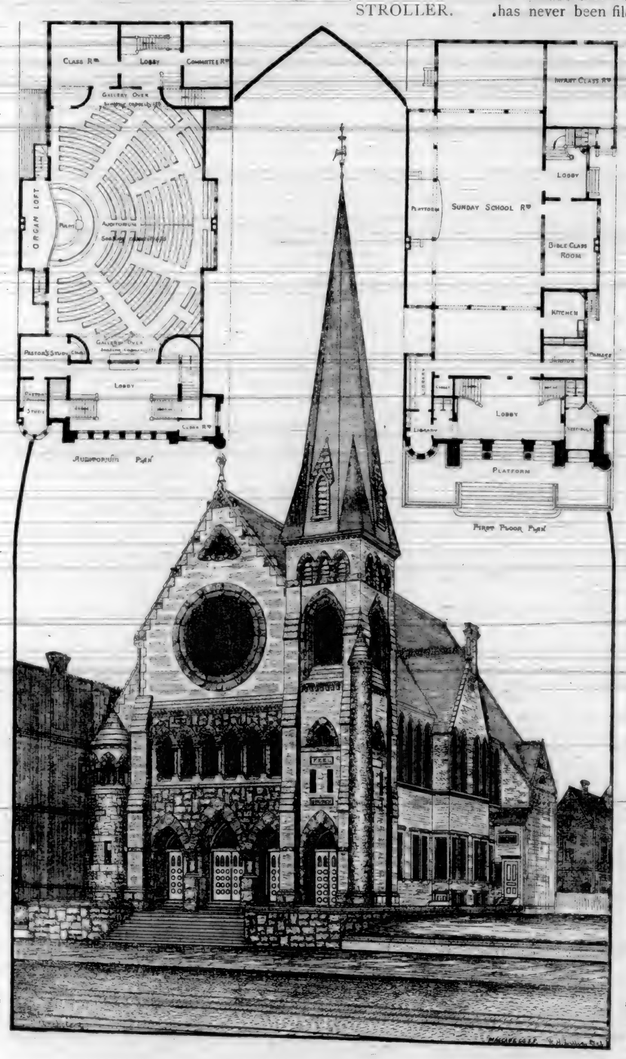
munity must not be sacrificed to the aggrandisement of a few individuals, and any such anarchical state of society that allows this to be done ought to be abolished and some law and order established so that each individual may enjoy God's light and air in fullest possible measure.

Under the same reign of *laissez faire* many passengers on our trains this winter will be and are now being sacrificed by the most horrible of deaths, by the allowance of stoves in cars, in consequence of the little greater expense of adopting some other less dangerous system of heating. The East is waking up a little to this, and the other day one company was fined $7,000.00 for allowing hot stoves in their cars.

A similar bill I hope will be introduced into our next legislature—that is if it should have any time left to look after the interests of the people at large.

Yours etc.,

STROLLER.



FIRST ENGLISH EVANGELICAL LUTHERAN CHURCH.

LEGAL DECISIONS.

Statement for Lien in California.—The California statute relating to mechanics lien provides that every one except the contractor must file a statement of the demand upon which he claims a lien, within thirty days after the completion, and that cessation of work for thirty days, shall be equivalent to completion. A material man must, in order to protect his claim, file a statement within thirty days after the expiration of thirty days, after work is stopped under an uncompleted contract.

Kerchoff-Cuzner M. & L. Co. v. Olmstead, Supreme Court of California, 24 Pac. Rep. 648.

Lien for Materials when Contract not Filed.—When the contract between the owner of a building and the contractor has never been filed for record, a sub-contractor for materials must allege in his complaint, in order to secure a lien, the value of the materials furnished, and the mere allegation of the price which the contractor agreed to pay for them is not sufficient as against the owner. Where materials were furnished at the same time for two buildings being built for one owner by one contractor, the sub-contractor must take his separate lien against each building for the amount furnished therefor, and he will not be allowed to take a joint lien on both buildings for the entire amount.

Booth v. Pendola, Supreme Court of California, 24 Pac. Rep. 714.

Enforcement of Lien Under Broken Contract.—Where it appears in an action by sub-contractors, that the owner broke the contract by refusing to pay the second installment when it was agreed that it should be paid, it is proper to direct a sale of the property for the liens, and that the difference between the amount of the liens and the second installment be paid to the contractor, although the latter had filed no lien.

Thomas v. Sahagan, Supreme Court of New York, 10 N. Y. Supp. 874.

Precautionary Measures Required of Employer.—An employer is bound to provide his employees with a safe place and safe appliances to do the work required of them, but when all the dangers which past experience or the exercise of a proper degree of prudence would lead him to anticipate, have been guarded against, the duty of the employer is fulfilled, and he cannot be held responsible for results which could not naturally be expected to follow from his exactions from the workmen.

Haskins v. Stewart, Supreme Court of New York, 10 N. Y. Supp. 833.

Recovery of Value of Services.—Where one enters upon the performance of services, which, without fault on his part, and by the wrongful act of the other party, he is prevented from completing, he may recover the reasonable worth and value of the work done, without regard to its value to the other party.

Mooney v. York Iron Company, Supreme Court of Michigan, 46 N. W. Rep. 376.

The First English Evangelical Lutheran Church was organized June 18, 1886. The church edifice was begun in 1888, and finished in May, 1890. The exterior is of stone and pressed bricks. The spire is 140 feet in height. The design is by Mr. Samuel Newsum, architect.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this Coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

Our double plate shows the new synagogue for the congregation Beth Israel, to be erected on the south side of Geary street west of Octavia. The style is an adaptation of the Romanesque. The seating capacity is 900.

The interior galleries will be built around three sides, and will be self-supporting, thus doing away with the necessity for columns.

The schoolrooms and day synagogue are on the street level, and are reached through an arched entrance situated below the principal entrance, which latter is reached by a double flight of steps.

The architect is William Curlett.

The mausoleum, is from the designs of Curlett & Eisen, architects, of Los Angeles.

The design for the new front to the Crystal Bath Building, at North Beach, is by R. H. Daley, architect.

NOTES & COMMENTS.

The site for the Mills building is cleared.

One of the sons of Rev. E. E. Hale is now in Paris, studying architecture.

Gilded wall papers have been relegated to the past, and plain tint papers are again coming into fashion.

A word to the wise.—Our subscription price after the first of January will be three dollars. Up to that date two dollars.

Mayor Pond is after dilatory contractors on New City Hall work. Better late than *never*.

Fewer contracts than usual were filed just about election time. Now the agony is over, let the procession proceed.

The great problem before the world at the present time is how to combine industrial education with mental education.

Electric lights in cakes of artificial ice are to be used the coming winter season for lighting ball or assembly rooms.

Section B of the seawall is well under way, and much preliminary dredging and piling already done.

The Grand Hotel burned on the 3d inst., was built in 1869, at a cost of nearly half a million.

Burnham & Root, of Chicago, have been appointed consulting architects for the World's Fair buildings.

The Lick Free Public Baths, of which we published the plans in our March number of this year, are now open to the public.

We hear we are to have another *esteemed contemporary*, to whom we extend the hand.

The more the merrier.

Our grandfathers can remember when the new postoffice was first proposed; our grandchildren will, we hope and trust, live to see a site selected for it.

A new pipe organ for the foreign church at one of the Hawaiian Islands has been built and placed in position by a San Francisco organ builder.

Architect R. H. Daley has designed a new front to the Crystal Bath Building, one of the oldest salt water bathing establishments in San Francisco.

Seaweed is now made into a tough paper which takes the place of window glass. When colored the effect is similar to stained or painted glass.

An important lawsuit has been instituted at Nebraska City, contributors suiug for a $20,000 bonus given toward the erection of a packing house, which subsequently closed down, contrary to the stipulations.—*Stockton Republican.*

The design selected by the Grant Monument committee of New York, to be erected in Riverside Park, is the work of Mr. John H. Duncan. If erected according to present intentions, it will be a creditable affair.

Many important buildings have been erected during the past year, and their variety of styles and beauty of design, form a pleasing contrast to the old pioneers that still remain. San Francisco will one day be as proud of her architects, as California is of her climate.

The *Drug and Paint Reporter* makes mention of a new product called "mineral india-rubber asphalt," produced from tar. It resembles in appearance asphalt, and is elastic like india-rubber. When reduced nearly half its bulk by heat a hard substance like ebony is produced. It is soluble in naphtha, and is a non-conductor of electricity, and forms a good water proof varnish. It is available for many purposes.

Lord Houghton's Committee on the General Powers' Bill of the County Council recently had under consideration, an important clause providing that no buildings should be erected at a greater height than seventy feet without the consent of the Council. The Committee ultimately decided that the figure should be ninety feet, and two stories above the roof.—*London Dispatch.*

The Corporation of Liverpool constructs its public streets in the best manner. The pavement is not allowed to be disturbed by private parties for any purpose whatever. When it is necessary to take up any portion, the work is done by the Corporation, but at the expense of the interested parties.

If this city required a similar procedure, our streets would remain in better condition.

The last steamer that cleared for the Hawaiian Islands, bore a tribute to the memory of Jules Tavernier, in the shape of a granite monument to be erected over the artist's grave in Honolulu. The monument is of rough granite, about ten feet in height, with a polished panel for the inscription; and it is owing to the generosity of Tavernier's former associates in this city that the idea has been carried into execution.

The Brickmaker tells us how to make a good cement for pointing and mending terra cotta or stone work.

Mix 20 parts of clean river sand, 2 of litharge and 1 of quick lime into a thin putty with linseed oil; if for red terra cotta, color to the desired shade with Venetian red; if buff, with yellow ochre; if brown, with Spanish brown. Enough should be made at one time for the entire work, to avoid different shades. This cement becomes very hard with time.

The architect of the Stockton Courthouse, Mr. Meyer, (of Detroit) and the superintendent of construction, Mr. Woodbridge, appear to be at loggerheads.

The Courthouse is now approaching completion, and the architect announces that he will refuse to accept the building on account of the way in which parts of the work on it have been done. The superintendent, in a cutting reply puplished in the *Stockton Republican*, asserts that the work, when completed, will be properly done according to specifications, and accuses Mr. Meyer of posing, and a desire to enjoy another trip to California at the county's expense.

From the *Hawaiian Gazette* we learn that "throughout the Hawaiian Kingdom, great activity in educational matters have been evident during the past few years. The repair of old school houses and the building of new ones are the order of the day." This indicates that the Hawaiian people are laying a sure foundation to success. The islands are every year becoming more important as a transfer point in the commerce of the Pacific Ocean, on account of their being almost in the direct line of the movements of trade. An English education will enable the growing population to hold their own in their native country.

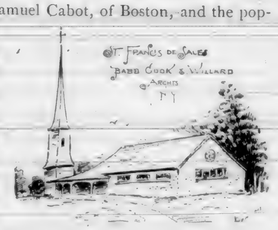
A lift-bridge has been constructed over the Ourcq Canal in Paris to supersede the former swing-bridge. The former bridge afforded a clear width for vessels of 25 feet which has been increased to 50 feet by the latter structure. The new bridge consists of a movable platform, borne by iron girders and suspended at its four corners by strong chains passing over pulleys placed on four cast iron columns, to the ends of which counterpoise weights are attached. The bridge is lifted by two double-acting hydraulic presses; also machinery is provided for raising it by hand power if desired. The length of the bridge is 65 feet by a width of 25 feet, the hollow cast iron columns at the four corners are 25 feet high and 2½ feet diameter, pulleys 8 feet diameter. The weight of the bridge is 241 tons and can be raised 17 feet.

BUSINESS MOSAICS.

In the residence for Mr. John Boas, recently erected on the corner of O'Farrell and Octavia streets in this city, we note some beautiful glass effects manufactured at the art glass works of Messrs. Hopper & Schroder, No. 39½ Fremont street. The front of the dresser in the breakfast room is of cut glass. The door leading from the main hall is ruby, embossed. An art glass window composed of tropical scenery with pillars and arch at side with monogram B on top. This window is 6x10 feet, consequently the subjects are of good size. The front entrance hall is set off to good advantage by art glass doors, and an art glass bay window which gives a particularly fine effect to this portion of the building.

We have lately used some blue print paper from Edward Denny & Co., 418 Montgomery street, which is superior to anything we have heretofore tried. This firm has lately introduced some novelties in draughtsmens materials, which in addition to their already superior stock makes it to the interest of architects and draughtsmen to call on them for anything in their line.

IT is remarkable to notice how extensively shingle work is being used on modern houses, and to see how universally shingle stains are being used for exterior coloring, particularly on the better class of houses, whose owners have a more keen, artistic eye. The pioneer in the manufacture of this sort of coloring was Samuel Cabot, of Boston, and the popularity and success of his Creosote Shingle Stains is due solely to the fact that from the first his material has not been cheapened, no matter what has been the cost of the ingredients, and that no adulterant like kerosene or rosin oil, both of which act solely as a cheapener or adulterant, has been used in its make-up.



The cuts sprinkled through this article are reproductions taken from a book of sketches that is published by the firm, and show actually creosoted in various parts of the country, and we can add, that in nearly all cases the architects are men of the best reputation, who only use the best materials and know the worth of these stains from many actual trials.

So many people hesitate as to what colors their houses shall be painted, have so little idea of what they themselves want, that we think it a good suggestion for them to apply for expert advise, such as this house can and is very willing to give. Therefore we advise you to write to Samuel Cabot, Boston, Mass.

CITY BUILDING NEWS.

Buchanan near Union. Additions: owner, C. E. Thompson; contractors, Wharff & Butler; cost, $1175; time, 54 days; signed, Oct. 1; filed, Oct. 22; payments, $200, enclosed; $200, plaster on; $275, completed; $300, 35 days.

Bay between Mason and Powell. Carpenter work; owner, J. Farnham; architect, R. H. Daley; contractors, J. W. Lancaster & W. J. Nelson; cost, $2255; time, 70 days; signed, Oct. 23; filed, Oct. 25; payments, $593.75 framed; $668.75, cornice on; $893.75, finished; $956.75, 35 days.

Bryant near Ninth. Two-story frame; owner, R. Cunningham; architect, M. J. Welsh; contractor, G. W. Hansbrough; cost, $2100; filed, Oct. 3; payments, $1000, brown mortared; $600, completed; $500, 35 days.

1707 Buchanan. Alterations; owner, E. D. Dubrow; contractor, H. A. Johnson; cost, $1208; time, with all possible haste; signed, Oct. 1; filed, Oct. 2; payments, 75 per cent. as work progresses; 25 per cent, 35 days.

Buchanan and Golden Gate Ave. Carpenter work; owner, F Levinson; architects, Salfield & Kohlberg; contractors, Hatch, Dougherty & Co.; sureties, B. A. Chapel, and E. F. Peck, $5000; cost, $6775; signed, Sept. 25; filed, Oct. 2; payments $1000, framed; $1000, enclosed; $1000, brown coated; $1000, doors hung; $1088, accepted; $1635, 35 days.

Bush and Fillmore. Mason, carpenter plastering painting work; owner, J. Stoddard; architect, Wm. Curlett; contractor, D. Perry; cost, $6350; signed, Oct. 16; filed, Oct. 17; payments, 75 per cent. of value of work done; balance, 35 days.

Broadway near Fillmore. Plumbing; owner, A. W. Wilson; architect, P. R. Schmidt; contractor, R. Rice; cost, $1980; signed, Oct. 15; payments, $800, rough pipes and water pipes in; $780, accepted; $400, 35 days.

Broadway near Leavenworth. Two-story frame; owner, Wm. Harrell; architect, C. M. Rousseu; contractor, A. Discher; cost, $3529; signed, Oct. 14; filed, Oct. 15; payments, $662, framed; $662, brown coated; $661, white coated; $661, completed; $883, 35 days.

Battery corner Clay. Alterations; owner, E. W. Nichols; contractor, Thos. Jeal; cost, $1135; signed, Oct. 15; filed, Oct. 15; payments, $300, girders are set; $500; completed; balance, 25 days.

Clay near Broderick. Two-story frame; owner, C. E. Grunsky; contractor, J. A. Shepard; cost, $4,700; time, 90 days; signed, Oct. 23; filed, Oct. 25; payments, $1,175, enclosed; $1,175, white coated; $1,174, completed; balance, 35 days.

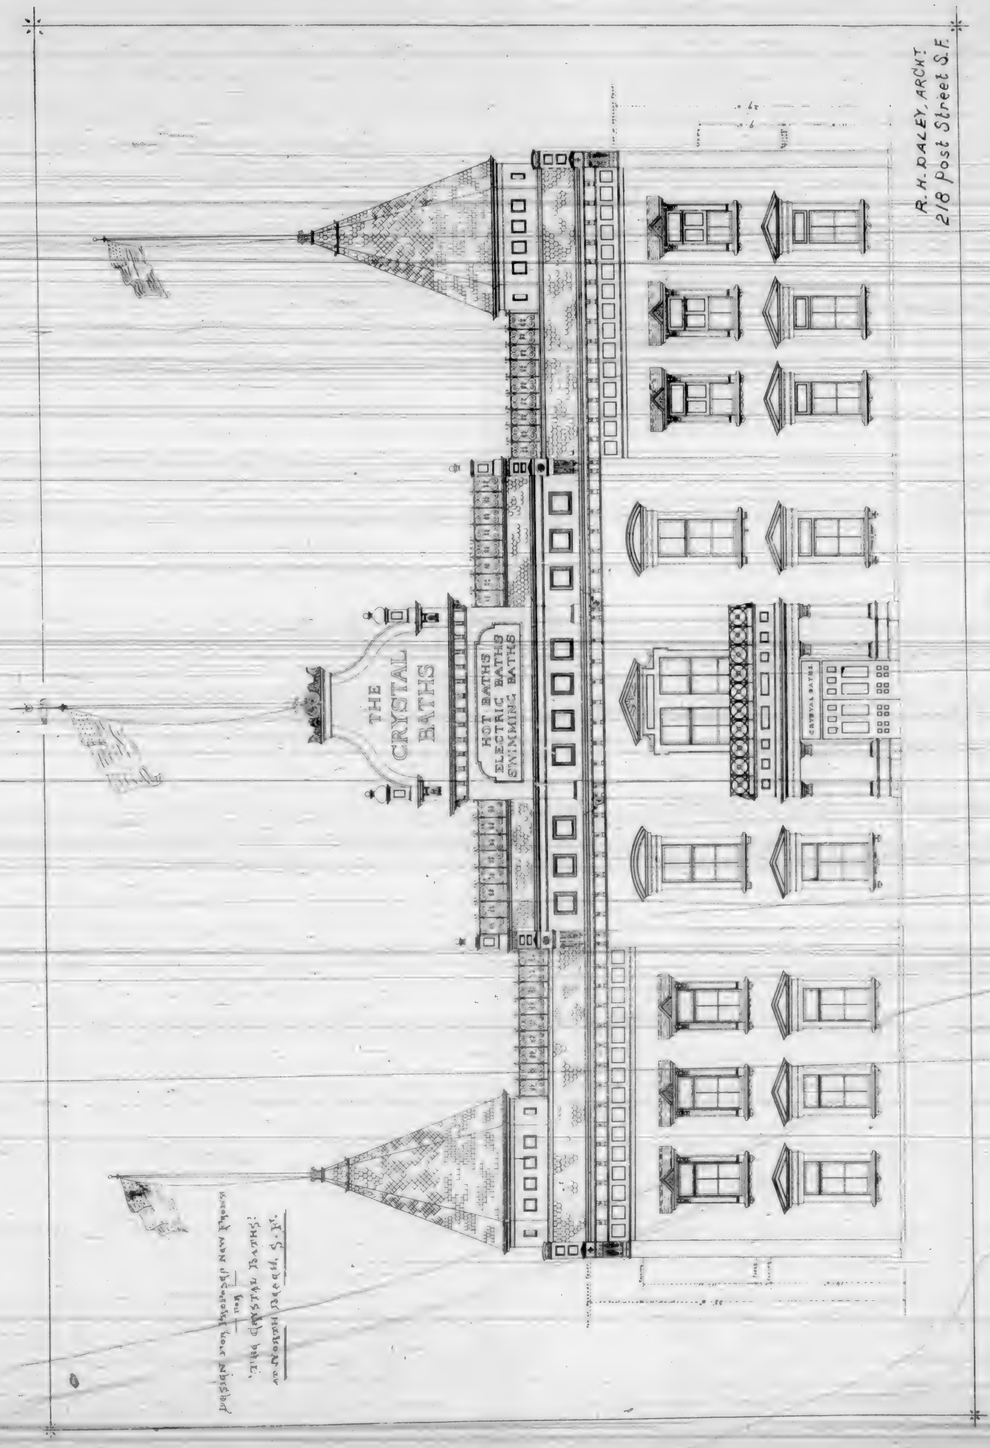
Los Angeles & San Francisco.



Clover near Leavenworth. Two-story frame; owner, W. J. Murray; architect, C. M. Rosseau; contractor, H. Jensen; cost, $3,500; signed, Oct. 21; filed, Oct. 22; payments, $656, framed; $656, brown coated; $656, white coated; $657 furnished; $875, 35 days.

Clinton near Bryant. Additions; owner, H. Filgate and wife; architect, S. Hatfield; contractor, C. Douglas; cost, $3,231; signed; Oct. 15; filed, Oct. 16; payments, $665, foundations done; $665, brown mortared; $666, white coated; $668, completed; $808, 35 days.

Castro near Clipper. Carpenter work; owner, M. Popper; architect, A. J. Barnett; contractor, A. C. Soule; cost, $6,767; time, 90 days; signed, Sept. 29; filed, Oct. 3; payments, $1,287, roof boards on; $1,260, brown coated; $1,260, white coated; $1,260, completed; $1,700, 35 days.

Clipper near Diamond. Alterations; owner, Wm. Isham and wife; contractor, Wm. Linden; cost, $1,100; signed, Oct. 1; filed, Oct. 2; payments, 75 per cent. as work progresses; 25 per cent. 35 days after completion, except $150, which is to remain one year, secured by owner's note upon completion of work.

Castro near Twenty-fifth. Carpenter work; owner, M. Popper; architect, A. J. Barnett; contractor, A. C. Soule; surety, W. J. Adams & C. S. Holmes, $1,500; cost, $4,706; time, 90 days; signed, Oct. 9; filed, Oct. 9; payments, $1,000, roof boards on; $1,000, brown coated; $1,000, white coated; $1,275, completed; $1,430, 35 days.

S. E. corner Clay and Buchanan. Mill work; owner, Moses Hopkins; architect, W. J. Mathews; contractor, Washington street Planing Mill; cost, $1,150; signed, Oct. 13; filed, Oct. 14; payments, $431.50, ———; $431, completed; $288, 35 days.

Douglass bet. Twentieth and Twenty-first street. Carpenter work; owner, C. E. Olsen; contractors, Hauser & Maritzen; cost, $1,550; time, 44 days; signed, Oct. 3; filed Oct. 3; payments, $385, enclosed; $385 brown mortared; $385, accepted; $396, 35 days.

Eureka near Seventeenth. Carpenter work; owner, Paff Bros.; architect, Gellfuss; contractor, H. Kirchmann; cost, $2,582; signed, Sept. 26; filed, Sept. 30; payments, 484, framed; $484, inside finish on; $485, completed; $646, 35 days.

Elgin Park and Ridley. Two two-story frames. Owner, D. Dryer and wife; contractor, P. E. Dunshee; cost, $3,762; signed, Oct. 6; filed, Oct. 7; payments, $942, framed; $940, plastered; $940, completed; $940, 35 days.

Fulton and Octavia. Carpenter work; owner, M. McGuire; architect, J. J. Clark; contractor, W. A. Van Dervort; sureties, D. H. Bibb and O. H. Greenwald, $2,000; cost, $8,000; time, 110 days; signed, Oct. 7; filed, Oct. 9; payments, $1,500, first-story joists on; $1,500, enclosed; $1,500, brown mortared; $1,500, white coated; balance, 35 days.

Fourth near Mission. Plumbing; owner, Mrs. A. E. Root; architects, Huerne & Everett; contractors, Fritz & Kean; cost, $1,625; signed, Oct 2; filed, Oct. 9; payments, $812.50 rough work in; $406.25, completed; $406.25, 35 days.

Fourth near Mission. Carpenter work; owner, A. E. Root; architect, Huerne & Everett; contractor, H. Holzenberg; surety, J. F. Kennedy and G. T. Shaw, $3,000; cost, $12,087; signed, Sept. 27; filed, Sept. 29; payments, $3,021.75, roof sheathed; $3,021.75, brown mortared; $3,021.75, completed; $3,021.75, 35 days.

Fourth near Mission. Brick work; owner, Mrs. A. E. Root; architect, Huerne & Everett; contractor, Chisholm, surety, T. W. Peterson and C. A. Warren, $1,000; cost, $2,353; signed, Sept. 27; filed, Oct. 6; payments, one half, basement wall in; one-fourth, completed; one fourth, 35 days.

Fourth, near Mission. Iron beams, illuminating tiles and concrete arch sidewalk; owner, Mrs. A. E. Root; architects, Huerne & Everett; contractor, P. H. Jackson & Co.; cost, 1,008; signed, Sept. 29; filed, Oct. 6; payments, $801.42, completed; $267.15, 35 days.

Geary near Octavia. Carpenter work; owner, Congregation Beth Israel; architect, Wm. Curlett; contractor, D. Perry; cost, $18,973; signed, Oct. 23; filed, Oct. 23; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Haight bet. Cole and Schrader. Dwelling of three flats; owner, A. T. N. Peterson; contractor, Geo. Houston; cost, $4,450; time, 90 days; signed, Oct. 2; filed, Oct. 2; payments, $1,110, shingles on; $1,110, brown coated, $1,110, white coated; $1,120, 35 days.

Howard and Fourteenth. Two-story frame; owner, W. H. Torpey; architect, Shea & Shea; contractor, J. T. Moore; cost, $3,850; surety, J. T. Kennedy; signed, Oct. 4; filed, Oct. 9; payments, $660, framed; $660, brown coated; $660, hard finished; $660, completed; $1,250, 35 days.

Harrison near Sixth. Additions; owner, Hannah Lichtenstein; architect, J. E. Wolfe; contractor, R. O. Chandler; sureties, E. Aigeltingen and D. Joost, $825; cost, $3,300; signed, Oct. 8; filed, Oct. 14; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Haight corner Scott. Brick and granite work; owner, F. Fauss; architect, H. Gellfuss; contractors, Ferdinara & Wagner; cost, $2,943; signed, Oct. 15; filed, Oct. 16; payments, $1,208, basement wall are finished; $1,000, chimneys are topped out and flues are set; $735, 35 days. Plumbing; contractor, L. Hufschmidt & Bro; cost, $2,350; payments, $75 per cent. as work progresses; 25 per cent., 35 days. Painting and graining; contractor, F. Schafer; cost, $1,195; payments, 75 per cent. as work progresses; 25 per cent., 35 days;

S. E. corner Haight and Pierce. Two-story dwelling; owner, C. Hennecberry; contractor, G. Houston; cost, $5,500; time, 100 days; signed, Oct. 6; filed, Oct. 7; payments, $1,370, rustic on; $1,370, brown coated; $1,370, white coated; $1,390, 35 days.

Isis near Thirteenth. Two-story frame; owner, J. Collins; architect, M. J. Welsh; contractors, R. Doyle & Son; cost, $2,890; signed, Oct. 22; filed, Oct. 23; payments, $722.50, framed; $722.50, brown mortared; $722.50, completed; $722.50, 35 days.

Ivy Ave. bet. Webster and Buchanan. Two-story building; owner, Jennie McCarl; architects, Townsend & Wynken; contractor, A. H. Plummer; time, 60 days; signed, Oct. 11; filed Oct. 14; payments, $600, frame; $600, brown coated; $700, white coated; $600, 35 days.

Jones and Union. Two two-story cottages; owner, J. F. Fagazi; architect, C. H. and J. M. Wilson; contractor, Childs & Chatham; cost, $4,175; signed, Oct. 6; filed, Oct. 9; payments, $782, framed, enclosed; $783, brown mortared; $782, white plastered; $782, completed; $1,044, 35 days.

Jackson near Scott. Two story frame; owner, W. A. Shaw; contractor, J. A. Shepherd; cost, $6,000; signed, Sept. 29; filed, Oct. 9; payments, $1,500; enclosed; $1,500, brown mortared; $1,500, completed; $1,500, 35 days.

Jersey and Castro. Carpenter work; owner, D. Curley; architect, Townsend & Wyneken; contractor, J. E. Loomer; cost, $2,750; time, 78 days; signed, Oct. 8; filed, Oct. 9; payments, $1,037, enclosed; $1,000, completed; $713, 35 days.

Langton near Harrison. Carpenter work; owner, P. Brady; contractor, Chas. Cody; cost, $1,999; srgned, Oct. 14; filed, Oct. 20; payments, $499, framed; $800, brown mortared; $500, completed; $500, 35 days.

Market and Seventh. Sandstone work for five brick buildings; owner, M. J. Lemman; architect, C. I. Havens; contractor, O. E. Brady; cost, $1,650; signed, Sept. 15; filed, Oct. 8; payments, 75 per cent. as work progresses; 25 per cent. 35 days.

Market near Seventh. Terra cotta work for five-story building; owner, M. J. Lemman; architect, R. J. Harris; contractors, Gladding & McBean; cost, $1,900; signed, Oct. 13; filed, Oct. 24; payments, 75 per cent. as work progresses; 25 per cent. 35 days. Wrought iron girders. The Gardner Steel Ribbon and Attachments for Sash Hanging

(PATENTED)

Absolutely the best and most economical Sash Balance in the world.

——THIS IS NOT A SPRING BALANCE.——

It consists of a steel ribbon expressly manufactured for the purpose. It is attached to the sash and weights the same as cord or chain as shown in the cut. It presents a neat appearance and can be painted same color as the wood-work of the window. It cannot get out of order or wear out, and being a perfect balance the heaviest windows can be raised or lowered with the greatest ease. We have it in use in several freight elevator doors.

THE GARDNER SASH BALANCE CO.
311 First National Bank Building.

Chicago, Ill., August 19, 1890.

MAJOR T. H. CAPRON:—

After a careful study of the qualities of your Sash Pulley and Steel Ribbon, and comparing the same with other methods of hanging sash, preference was given to your Pulley and Ribbon for the Sash of the Leiter Building, State, Van Buren and Congress streets. This building is over 4 0 feet long, eight stories high, and being designed for a retail store or stores, the windows are exceedingly large, mostly from 6 to 8 feet wide, and those of the second story, some 12 feet high. The sashes for such openings require the very best cord and pulleys. Good pulleys can be obtained by paying for them, but I was unable to find as good a pulley as yours at the price you charged us. The question of cord, chain or ribbon is a serious one where windows are as heavy as those at the Leiter Building, and it was only after the most thorough examination, with the assistance of an expert to visit the places where your ribbon was in use, that the question was decided, and the contract was awarded to you. Very respectfully,

(Signed) W. L. B. JENNEY, Architect.

No. 0408 A Pulley.
Page 12 in 1890 supplement.
The above cut shows the Norris Pulley as it appears in the frame. This Pulley is made so that the Rope cannot possibly leave the wheel.

NORRIS PATENT SASH PULLEY.

STRONGEST AND HANDSOMEST PULLEY MADE.

Our Pulleys you can readily see are the only Pulleys made that do not depend upon the screws to hold them in the frame, the pin for the wheel is back of the bevel or lower rd of the Pulley which causes the weight of both sash and weights to pull back, therefore, the more weight the more firmly the Pulley imbeds itself in the frame.

Our Pulleys are made in over 1600 different qualities, they are made with Gun Metal Pins, Phosphor Bronze Pins, Steel Pins, Bronze Metal Face, Bronze Metal Wheel, Bronze Metal Face and Wheel. We also make a special groove for chain, which causes the chain to wear twice as long.

Our Self-Lubricating Pulleys if used a life time will always be Anti-friction.

We make a specialty of finishing our Pulleys to match the new finish of hardware now so extensively used, such as old Statuary Bronze, Electro Bronze, and old Copper Bronze.

We make Pulleys Plain or Engraved Face, and of Bronze Metal, or any finish required.

Architects and builders generally concede the Norris Pulley to be the Best Pulley in the world.

There are many millions in use, they have been and are used in the finest buildings in the country.

All our Pulleys are numbered, so please order by number, as the number designates size and quality.

Architects wishing a Catalogue and samples will please write us, and we will send same free of cost.

Norris Pulley can be had of any Hardware House in the country, or address

C. SIDNEY NORRIS & CO.

BALTIMORE, MD.

Samples of our Pulleys can be seen at the office of Weatherly, Jardine & Co., 132 Market Street, San Francisco.

NOTICE.

MR. George H. Wolfe, having no further connection with the business of this journal, correspondents will in future address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute Architects, meets second Friday of each month at 408 California Street.

Seth Babson, Pres. W. J. Cuthbertson, Vice-Pres.
Oliver Everett, Sec. John M. Curtis, Treas

Technical Society of the Pacific Coast, meets first Friday of each month at 408 California Street.

John Richards, Pres. Prof. Frank Soulé, Vice-Pres.
Otto Von Geldern, Sec. Jas. Spiers, Treas.

IT is the desire and intention of the Directors to enlarge and improve the paper for the coming year. To do so to any extent, will require the good will and aid of all persons interested in the advancement of the Pacific Coast in this respect. We therefore ask our friends throughout the country to favor us with any news in this line that may come to their knowledge. During the year, we propose to illustrate some of the oldest architecture in the State, and as there are many persons who have a knowledge of these buildings from personal observation, we request them to do us the kindness to send any information that may be of use to the student of the future when all these monuments are gone.

THE daily papers have recently described the over-crowded condition of the County Jail; almost thrice as many inmates as the building was designed to accommodate, jammed into a worn out, tumble down structure, from which a determined criminal could easily escape; nothing like as much air as the cubic air ordinance is supposed to make compulsory; great danger of an epidemic, and no ghost of a probability that anything will be done to remedy these evils.

Really, the citizens of San Francisco have but little right to criticise the Government for dilatory proceedings in erecting a Post-office, when such a disgraceful jail building is in existence.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects was held at their rooms, 408 California street, on the 14th inst., the Vice-President, W. J. Cuthbertson presiding. Jas. W. Reid was elected an active member. Linden Bree a student member.

A. Pissis, J. W. Curtis, and H. T. Bestor were appointed a committee to confer with kindred societies in regard to legislative measures, etc. An invitation was received from Prof. Keith, to the Chapter and its individual members to visit the works of the Electrical Engineering Co., 21 Spear street, to view the materials and the various processes used in the manufacture of the Keith Motor. The "Sketch Club" drawings were received, and awards made.

THE A. I. A. Sketch Club held its regular monthly meeting in the rooms of the Chapter. The following officers were elected for 1891: President, R. H. Wetmore, Jr.; Vice-President, S. C. Benson; Secretary and Treasurer, H. J. Van Vlack. Several applications for membership were received. The subject for the evening was a paper by S. C. Benson on "Architectural Design." "A Wayside Shelter" the competition subject for December were shown. These drawings indicate improvement both in design and draughtsmanship. The annual exhibition of drawings was postponed.

THE subscription of this Journal for the year 1891 is $3.00, payable in advance.

SUBSCRIBERS will please notify us *promptly* of any failure to receive the paper, and also of any change in their address.

THE regular meeting of the Technical Society of the Pacific Coast was held on the 7th inst. at their rooms, 408 California street, President Richards in the chair.

Mr. A Lietz, a manufacturer of mathematical instruments, read an interesting paper on "How to Select a Good Surveying Instrument." He showed by the aid of the microscope the difference between lines properly and improperly cut in the very fine scales for measuring.

Mr. Wagner illustrated a practical method adopted by himself, for correcting a surveying instrument that had been sprung out of true by accident.

INSTRUCTION IN DRAWING.

A Critical Review of the Prang Course in Form-study and Drawing.—Continued from Page 116.

This is the report which comes to us from the "heart" of Europe, from the country which conquered through "the schoolmaster at Shadowa."

As the matter of instruction in drawing has interested me very much for twenty years, I have taken every opportunity to inform myself in regard to it. It has been repeatedly required of me to give lessons in microscopic drawing in the botanic laboratory, and to initiate students of both sexes in its technique; and I may say, after my considerable experience, that a decided advance in the education of the young in this study is evident, though not in a degree to satisfy me with the acquirements of students entering our universities.

I will not omit, in this connection, to allude to a very significant fact, which gave rise to this present dissertation. I have been repeatedly honored by the presence of young students from America, who came to work with me in botanic microscopy for one or more terms. In such cases I observed that the average of students from America drew better than those of Europe of the same age who, coming from the most varied nationalities of the Old World, competed with the young Americans in these practical studies. To this must be added the circumstance that in America, during the last two decades, the technique of reproduction in the case of drawings, water-colors, chromo-lithographs, zincographs, woodcuts, etc., has made more progress than in any other part of the world.

That this state of affairs has been brought about, that it has become possible to-day in the United States for instruction in drawing, and the resulting ability for work in art and scientific technique to surpass similar European effort, is no wonder to him who traces the effect to its natural cause. This is interesting and instructive; then following backward the natural cause of this development, we are brought at last to the fountain-head, the primary school, and gain the conviction that we Europeans have been surpassed by the Americans in their *method of instruction in drawing in the primary and intermediate schools.* It will not be surprising if this vigilant nation finally surpasses us, and also puts us in the shade in the field of artistic painting and sculpture. This I call an enjoyable danger, and greet it in advance in the interest of the general welfare of humanity.

An article in the "Journal of Education", published in Boston (Vol. XXVIII, No. 1), first called my attention to an American method of teaching drawing that obtained there in a short time a leading and almost national influence. There it was stated that "to-day about two millions of pupils are taught by this method, and that the principal teachers and educators of the New World consider it the best and most rational of all." An especial work based on this method was referred to, "Prang's Course of Instruction in Form Study and Drawing," published by the Prang Educational Company, in Boston. I at once ordered the Prang materials for teaching to be sent to me, that I might understand the method by personal study. Having now done so, I am ready to declare that the United States may congratulate themselves upon having created, and put in practice in their schools, a work of such importance. I have no doubt that this is a great pedagogical achievement, of invaluable benefit in possible results, though its educational usefulness can perhaps only be fully appreciated by future generations. A branch of culture heretofore neglected has at a stroke been firmly established in the line of natural methodical progress, and must prove one of the most powerful levers known in the history of educational methods. This important work has been brought about largely by the instrumentality of Louis Prang, a political refugee of '48, who has united German taste for the fine arts and German idealism to American executive power; and it is to him that United States owe in no small degree the development of a course in drawing for public schools that may well engage the attention and excite the envy of European nations.

It is worth while to examine the Prang method closely. It is a systematic course, including all the school years from the first primary class through the intermediate to the high schools. It is so simple and natural a system that it *must* be successful. It is adapted to the plastic child-nature, which needs to be cultivated and developed by parents and teachers to the stature of perfect manhood. It is fitted to the child's senses, which must be trained, and it cannot fail to be a powerful factor in the simultaneous unfolding of the mental powers. It appeals in the first instance to the senses of sight and touch. As the old school method limited itself almost wholly to intellectual training and inward activity, and notwithstanding its definitions and exercises never arrived at the proper use of the essential tools of the mind, and hardly to the observation of the real world, it is not surprising that this old school method, still to be found in most parts of Europe, has not fulfilled, and will not fulfil, the demands of daily life. People have been trying too long "to bridle the horse by the tail." But now comes the Prang method in drawing, which requires as the first condition of education, observation by the hand and eye, feeling and seeing, the exercise and development of the senses of touch and sight; and then as soon as the senses begin to develop thought follows, which finds expression through the naming of objects, through comparing and discriminating, and through modelling, drawing, and verbal descriptions. The Prang method makes necessary the use and study of external objects and models from the very outset. Thus the general character of the first years of study depends upon the necessity of developing ideas of form in the minds of the young pupils from the outset. Later this knowledge of form is carried farther, and this is done in three different directions, which tend toward industrial construction, pictorial representation, and decorative design.

For the better understanding of this new method, nothing seems so desirable as to study it in its beginnings. It is too often forgotten that the pupils in the *elementary classes* are the essential material which every school has to deal with. Here is laid the foundation for the whole superstructure of a thorough all-round school education. One glance at the first year's work according to the Prang method serves to attack and convince us. A little manual, "The Use of Models", is given to the teachers. The sphere, cube, cylinder, various prisms, cone, ellipsoid, ovoid, square pyramid, together with little uniform sticks, are given to the pupil to serve for standards; and it should be noted that these models are used by every pupil as well as by the teachers—that is, each pupil is supplied with them, and they are looked at, handled, modelled in clay, and finally drawn.

These objects are first studied as wholes by being grasped and examined by each and all of the pupils at one time according to the teacher's direction, and then some are modelled in clay by all. After this they are used in building and in arrangements. Their surfaces are studied by each of the scholars in the presence of the others. The different sides or faces of the models are then studied to find the plane geometrical figures. The shapes of these geometric figures are then shown of cardboard, and are studied, and are also used to represent objects and decorative arrangements. Then follows the folding and cutting of paper into different figures. The slender sticks are laid down to represent the outlines of certain forms. When the scholars have thus made themselves familiar with their models, they are shown how to study other objects similar in form and shape.

It will be noted that the scholar's work consists chiefly in cultivating his organs of sense; that perception of form is invariably obtained from models and real life, and not from drawings or copies in the old drawing master's style, and that actual drawing does not begin as an exercise till a clear idea of the form or subject is created in the pupil's mind. The drawing itself is used in the first stage very freely, the pupil not being confused at first with rules, but gradually accustomed to a proper attitude and a correct use of the pencil.

Drawing-books, made of suitable paper, of half quarto size, contain hints for pupils, and these are accompanied by a manual for teachers; and an examination of these and the suggestions they contain must persuade any reasonable person that the principle of gradual progressive development pursued here is the true one, and cannot fail in its results.

From the beginning great stress is laid upon bold, freehand drawing. The advice given for this purpose is intelligible to any one who has ever drawn with a pencil.

The models and objects to be used, as well as the use of them, are unique, and such as have not been seen in Europe. The model being held in the hand of each pupil, the part visible from one point of view is carefully observed, and attention is called to these parts which cannot be seen. The pupils are made to pass the finger along the outer limit of the visible part, the character of this outline or contour being noted, and drawn in the air by a movement of the pupil's hand. After this the drawing is made on paper with a soft pencil. During the first lesson each line to be drawn is preceded by a corresponding preliminary movement.

[TO BE CONTINUED.]

Correspondents must not forget to give their names and address, as the editors cannot publish anonymous communications, nor will they hold themselves responsible for opinions expressed by their correspondents.

To Editor California Architect and Building News:—

Before the Trustees of the Mechanics' Institute make a decision as to their method of procedure in regard to their proposed new buildings, we hope that the following items have received due consideration from them.

In the first place, being a building of a semi-public character—a building which the whole community takes an interest in, and the Institute being founded for the public benefit, they have no light trust thrust upon them, and the best talent ought to be got to carry out the proposed improvements.

This can only be done by inviting sketches from all architects and distributing a liberal sum, say $500, among them to induce the best architects to use their greatest endeavors in producing good designs. A Library Building for the Mechanics' Institute is an interesting enough subject to bring out first class designs, and for such a building we think no doubt architects would be willing enough to allow the good points of any selected plans to be used for the bettering of the one adopted for carrying out, as long as compensation was made for the same and due acknowledgment.

By this means the Trustees would be greatly helped in their endeavors to make the most of the property, and to do what is right by the public.

Secondly. By no means must they allow the spirit of commercialism to overcome them to such an extent as to mix up shops with library.

The Library must be a separate building, altogether from the store and office building, and any such absurd proposition as was made at the last quarterly meeting, of a huge commercial block with the library sandwiched in, as if it were to be considered as rather a nuisance than otherwise, because it brings in no rents, ought to be at once squashed. Let us make no more mistakes such as the Academy of Sciences did when they stowed away their rooms in the rear, and gave no sign of the character of their building on the outside, except a *gilt* sign, which will be only distinguished from the signs of the dentists, lawyers, doctors, tailors, shirtmakers, etc., who will occupy the front rooms, by it being on granite, while theirs will be on glass. This will evermore be a standing disgrace to it; let not the Mechanics' Institute be included under the same obloquy.

The Library Building should be a fire-proof structure with a space all around it, entirely cutting it off from any other building—say occupying the Grove street side of the Institute lot. The rest of the lot could be leased, or stores built upon it as an entirely separate proposition.

Now this problem is no light one, and all the light which the combined architectural talent of this country can throw upon it will be none too much.

An exception to the general rule is the new Hibernia Bank Building, which for that reason will be a monumental building always worthy of the City, notwithstanding any objections that may be made against its style. We believe, however, that even in that case, the Bank was compelled to put up a building undevoted to trade, by its charter.

Yours etc.,

Stroller.

ILLUSTRATIONS

This city will soon possess a Girls' High School, which will be a model of its kind. It was designed by T. J. Welsh, architect, and will replace the building destroyed by fire some months ago. The site for the new school is the southeast corner of Geary and Scott streets. The building will be three stories in height, besides a high finished basement. The materials employed will be brick, with stone trimmings, and the style, modern Romanesque. The top story is devoted almost exclusively to an Assembly Room, with a stage for exhibition purposes.

The design for a Carriage and Gate Lodge at Pinole, is by Samuel Newsom, architect.

The design for a two-story city cottage is by Huerne & Everett, architects.

We present the following idea as a suggestion for a "cartouch" on a monument in memory of a deceased book-keeper.

"A mercantile firm sent as a floral offering to their deceased book-keeper, a ledger with 'O. K.' inscribed across the open page."

A recent canvass of the New York Board of Health shows that 1,200,000 people—about three-quarters of the population of the city—live in tenement houses.

LEGAL DECISIONS.

Substantial Compliance with Contract.—By the terms of a building contract, the second payment was to be made "when the cornice is set, siding on, and floor laid." Where the question as to whether or not the second payment is due, the fact that a small portion of the siding, which could be put on to a better advantage at a later stage, has been omitted, with the consent of the other party, will not defeat a recovery on the ground that the terms of the contract have not been complied with.

Rogers v. McGuire, Supreme Court of New York, 10 N. Y. Supp. 831.

Appraisal of Value by Insurance Agent.—Where the defense to an action of fire insurance rests upon the allegation that the insured misrepresented the value of the property insured, the fact that the statement of value is largely a matter of opinion, and that the agent of the company has a full view of the property and concurs in the estimate of value made by the insured, binds the company to an acceptance of the estimates, and amounts to a waiver of the misrepresentation if there is any.

Virginia F. & M. Ins. Co. v. Saunders, Supreme Court of Appeals of Virginia, 11 S. E. Rep. 794.

THE case of Smithmeyer & Pelz against United States, to which we have before referred, has been tried and decided by the Court of Claims, and, although the plaintiffs have appealed from the decision to the Supreme Court of the United States the interpretation of the law which the Court of Claims lays down is of extreme importance to architects. According to the printed report of the case, the facts, as found by the court, were that of March, 1873, the Commission of Plans for the proposed Congressional Library building issued an invitation to architects to submit sketches for the building, and offered a prize of fifteen hundred dollars for the one adjusted best by the Commission, one thousand dollars for the second, and five hundred for the third. In response to this invitation, Messrs. Smithmeyer & Pelz submitted a design, in Italian Renaissance style, was adjusted the best, and the first prize was paid to them. Soon afterwards, at the request of the chairman and members of the Committee on the Library, and plaintiffs submitted a new design, involving some changes of the plan and a change in the elevation. Five new drawings were submitted, including a colored prespective, a front elevation and portions of the floor plans. About 1875, at the request of the chairman of the Joint Committee on the Library, the plaintiffs prepared plans on an entirely new basis for a library building in the Gothic style. Seven drawings were made, only four of which were submitted at the request of the chairman, although the designs of the previous year were acceptable to the Committee. About 1877, at the request of the chairman, the plaintiffs made new drawings, using the same general plan as in the previous Gothic design, but fitted to the elevations in the French Renaissance style, and interchanging the first and second stories. At the time of the preparation of these plans, it was thought possible that the building might be placed on Judiciary Square, and the plaintiffs made, by request cross sections of the square showing the buildings, with grades, sewers, etc.

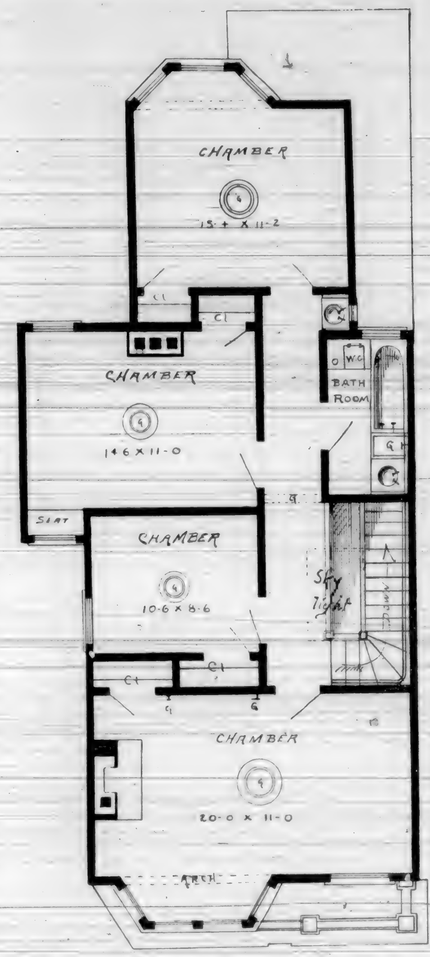
The next whim which seized the committee was to have a design for the building in the Romanesque style, and drawings were made and submitted accordingly. About 1879, the committee had again changed its views and requested the plaintiffs to prepare for a fresh design in the German Renaissance style, embodying all the improvements which had been made by the plaintiffs since the original competition of 1873. These plans, shown by forty finished drawings, were made by the firm of which Mr. Smithmeyer belonged, and submitted and with a slight modification were adopted by Act of Congress, April 15, 1886, and re-adopted by Act of March 2, 1889. This, however, was not all the work that the plaintiffs did in obedience to the whims of Congress. In 1882 at the request of the same committee that ordered the plans of 1880, the plaintiffs remodeled the Gothic designs made several years before and submitted the new drawings, which were adopted by the Senate in a bill which failed to pass the House. Even this was not the end. In 1885 or 1886, the committee asked for new exterior elevations and perspectives, showing the design of 1880 with a more ornate treatment, and these, also, were made and submitted. It may be readily imagined that after 1874, the plaintiffs abandoned nearly all other business to attend to the demands and fancies of the Committee on the Library, and from that time to 1886 they devoted themselves almost exclusively to that work, losing in this way the private business, which as the Court found, they had not regained up to the time of the commencement of the suit; while in 1882, Mr. Smithmeyer, at the request of the committee, traveled through this country and Europe for the purpose of obtaining information about the architecture of the great library of the world.

As our readers know, work has begun on the building from the plaintiff's designs and under their direction, and continued for two years, Mr. Smithmeyer being appointed architect of the building at a salary of five thousand dollars a year, and Mr. Pelz principal draughtman, at a salary of three thousand dollars. In October, 1888, the construction of the building was, by a new Act of Congress, placed under the direction of chief of engineers, with orders to reduce the cost. This he did by the simple process of leaving out a part of it, and summarily dismissed Mr. Smithmeyer, retaining Mr. Pelz, who is still employed.

The claim made by the plaintiffs is for a commission of two and a half per cent. on the estimated cost of the building, amounting to one hundred and seventy-five thousand dollars, in accordance with the schedule of the American Institute of Architects. The Court quotes the schedule and finds that "These are the rates and rules established by the custom and usage of the profession, and are never deviated from by architects in good standing, except under exceptional circumstances, and then only by a special and express contract." It finds further that "The plans under which the building for the library of Congress is being constructed and designed and intended for a monumental building within the meaning of the paragraph of the foregoing schedule, which describes additional rates for such plans," and says that "In a number of the cases the executive brand of the Government has employed architects at the rates prescribed by the foregoing schedule of the American Institute." The Court found that the plaintiffs notified the Chairman of the Joint Committee, previously to 1886, that they intended to charge for their plans, but did not notify Congress of the commission that they intended to charge according to the schedule of the institute.

On this showing, one of the judges is "of the opinion that compensation should be measured by the general rule and usage which govern the compensation of the profession;" that "in legal effect, the claimants proffered their plans to Congress, through the intervention of the Joint Select Committee, for inspection; coupled, nevertheless, with the implied condition that if they were used their services should be paid for as like services are paid for by other persons; that when Congress adopted the design by the Act of 1880, the case reached the condition *Tilly vs. county of Cook;* and that when the defendants proceeded to give effect to the statute by actually using the plans in the erection of a building after their design, the case entered the third stage, in which, as the Supreme Court intimates, the legal liability of the employer at last becomes fixed, and the obligation to pay for the service becomes legally binding." The judge thinks "too, that the decision of the Supreme Court holding that the usage of architects extends to and is binding upon a body-politic erecting a public building *(Tilly vs. county of Cook),* and that it has a recognized and established existence in the District of Columbia *(District of Columbia vs. Cluss, 103 U. S. R., 705)* are authority for holding the usage obligatory upon the Government for a building erected in the city of Washington."

The majority of the judges, however, were of the opinion that the acts of the parties indicated that the services should be estimated according to the rule of *quantum meruit*, and not according to the schedule of charges of the Institute of Architects. Inasmuch as the plaintiffs' "departed from the general rule of architects of measuring their compensation by the customary fees of their profession," and accepted salaries amounting to eight thousand dollars a year, the judges thought that the preceding part of their services "should be estimated according to the same rule which the parties have themselves adopted," and gave the decision of the Court: That the plaintiffs should recover forty-eight thousand dollars, this being approximately equivalent to salaries of eight thousand dollars a year from October, 1874, when the plaintiffs gave up their business to devote themselves to perfecting their plans, to January, 1881, when the plans were submitted to Congress.



Second Floor Plan
City Cottage. Huerne & Everett, Architects.

We shall make no comment on the decision except the obvious one, that if the committee has kept the plaintiffs dancing attendance on them, to the neglect of all their business, for a few years longer, they might have starved them into accepting eight hundred dollars a year salary, instead of eight thousand, and this would then have been the "rule" for computing the value of their professional services in previous years. After an architect has spent fifteen of the best years in his life in trying to please such a committee, and has seen all his private clients leave him, never to return, it is not surprising, that with the prospect of old age and poverty not far away, he should be willing to accept a salary of five thousand dollars a year, rather than get nothing; but the doctrine that one who owes a professional man a large bill for services already rendered, and can keep him out of his money until he is willing to accept a reduced rate for his continued services, is thereupon entitled to scale down the bill

already incurred to the reduced rate is a singular one to be announced by the highest Court but one in the United States.—*The American Architect and Building News.*

COLOR TREATMENT OF INTERIORS.

Nice discrimination will always be called for in the coloring of the rooms with reference to their special character and purpose. The coloring has often more to do with the general effect than the forms of decoration carried out. With cheerfulness or an enlivening tendency must be combined qualities that vary with given rooms. The color most suitable for a parlor is that suggestive of breath, quietude and repose, appearances best secured by the avoidance of a large multitude of details or smaller parts. Consequently a certain degree of simplicity should mark the patterns. Refinement has to be aimed at.

Two parlors open on each other being divided by a portiere hung somewhat low so that the ceiling of either one was visible from the other. The color tint of the separate cellings was strongly contrastive and had an excellent effect. One was of lilac made of blue-black and Indian red, the other a flesh tint made of lakes, carmine and a little blue with some yellow. This of course implied different colored treatment on the walls of the respective rooms. The dado of the former was of cherry wood; the middle space of the wall had a ground of warm orange gray; the ornament consisted of flowers, stems and leaves united in garlands and led over the surface forming capricious divisions; the stem color shades of brown blended into the leaves a mixture of yellow ochre and burnt sienna with a touch of raw umber; the leaf color was mixed from white, chrome green and yellow ochre and a touch of black to subdue. Some of the flowers were carnation color made of scarlet lake and the best and cleanest dry white; others buff color made from white and yellow, and others white. The leaves of the flowers in buff were cold green made from ochre, green and blue, with stems of reddish brown. The frieze consisted of a series of stately hollyhock in reddish purple raising from a mass of cultivated and wild roses and blue forget-me-nots. The ground was a cream white. The color of the cultivated rose was first painted white and afterward glazed over with madder lake; the wild rose was left white with deep yellow and green centre. The green of the leaves and stems was put in different shades so as to give variety and some of the leaves were tipped with pink and red, also upon the coil or undersides. The stiles of the ceiling were flesh color made of lake, carmine and a little blue and some yellow, a faintly tinted ivy plant running in the interstices. Small circles of chocolate color made of red and black were distributed over the ceiling and dotted with old gold.

The parlor with flesh tint on ceiling had dado of maple and the wall had a ground of canary color made of five white and three parts lemon yellow. The middle space of wall was divided off by latticed lines up which a slender creeper made its way, and in the center of each panel was a medallion form filled in with arabesque work in copper colors, of which one part was red, two parts yellow and one black in green color of blue and yellow, in rose color consisting of white mixed with carmine, and some color made of equal parts of yellow umber and red mixed with white, the border showing French gray, citron and willow green. The ceiling had borders of maroon color, three parts of carmine and two of red, filled in with a running design in olive color. The ornament of ceiling consisted of separate scattered flowers of rose color made up of five parts of white and two of carmine.

In the drawing room something of gaiety in the quality of colors never comes amiss. In one of a somewhat stately character lately furnished, olive and blue very suitably predominated, red being only introduced in a very slight degree, as it would otherwise form an inharmonious combination. Gold plays a large part in the enrichment and red simply appears as a fine bordering line to this. But a rich warm brown, which can seldom be omitted in any extensive combination of colors, takes its place, the rest being for the most part broken colors. The frescoed design on the wall, the ground of which is straw color composed of five parts of yellow, two of white and one of red, is a mass of scroll work and leafage tinted in broken colors of medium tone with medallion heads at corners. The frieze consists of series of panels divided off by vases bearing flowers, on which a group of children are disporting themselves. They are in appropriate colors, the ground being white glazing varnish. Beneath all is a band of discs in raised work, these overlapping each other and in oxidized silver. The mode in which the surface is oxidized is as follows: It is first glazed with white shellac varnish and when dry brushed over with a gray color, leaving the color thickest on those portions of background surrounding the raised ornament. The color is now removed from the highest points by rubbing with a soft cloth tightly folded and passing a clean brush over those parts in lower relief that require to be left in half tone. As oxidized silver effects form, a valuable addtiion to mural relief is of importance in producing this metallic effect, that the colors be thickest on those parts of the design thrown most into the shade, and that as in natural oxidation, with its grace with burnished light and softened shadows, the flat surface forming the background should have fewer and more prominent parts of the raised ornament. The woodwork of this room is of enamel white and gold which assorts well with the varied wall colors. The borders of the ceiling are stenciled bronze ornaments of antique design representing open work through which shines a red light tint. Triangular panels in the corner contain large, finely-painted, Ranaissance scrolls. The center is composed of Louis XVI. garlands of flowers beautifully painted. The rest of the surface has a ground of light blue reddish tint and is frescoed with sky effects.—*The Painters' Magazine.*

"SELECTED DETAILS OF INTERIOR AND EXTERIOR FINISH, FOR ARCHITECTS, CARPENTERS AND BUILDERS," is the title to a new work from William T. Comstock, New York. This work is of practical utility to persons formulating designs in the later cottage styles. The details are drawn to a scale and take a wide range, treating every part of the house in detail. It contains 32 plates, 14x18 inches.

The Pacific Coast number of the NORTHWESTERN LUMBERMAN for November, published by W. B. Judson, 325 Dearborn street, Chicago, is at hand. It contains a number of articles relating to the timber interests of this coast. It also gives many suggestions as to how the trade of this portion can be increased. It should be in the hands of every one who is engaged in any manner with the lumber trade. The price of the November number is fifty cents.

We have received from the Department of State at Washington, a work containing the special reports on FRUIT CULTURE IN FOREIGN COUNTRIES as made by the U. S. Consuls to those countries. The work contains much useful information to those interested, and most especially so to this portion of the United States. We hope soon to hear through the same source an extensive report on the timber and ornamental woods of the various countries where specialties in this line exist.

HOUSE PAINTING AND DECORATING, an excellent monthly magazine published by the House Painting and Decorating Publishing Co. of Philadelphia, has been changed to *Painting and Decorating*. The October number of this work contained a very profusely illustrated article on Stage Painting which should be in the hands of every painter and artist. It is far ahead of anything in that line that we have seen published.

"MODERN BUILDINGS OF CALIFORNIA," by Salfield & Kohlberg, architects of this city, has been brought to our notice. This work is a series of designs by the authors, and is intended to fill a want in the line of published designs, such as the modern flat and other interest paying buildings. The work is quite fully illustrated, some of the plates being artotypes from photographs of buildings actually built. Although the designs are intended, principally, for city buildings, yet they can be used to advantage wherever corner buildings are to be erected, even in the smallest towns. The size of the book is 10½x13½ inches.

We have received the eighth and ninth annual reports, for the years 1889 and 1890, of the STATE MINERALOGIST, WILLIAM IRELAN, JR. These reports contain information of value to any person who may be interested in the subject, as well as to the capitalist who contemplates the establishment of industries where natural mineral deposits become a part of the project.

A NEW BOOK OF DESIGNS by Samuel Newsom,—Architect, 318 Phelan Block, San Francisco,—is just out.. The title is "Some City and Suburban Houses." The book contains a variety of city and country buildings of all kinds. There is something in it that will suit almost anyone. Size of the book, 10½ x 13½ inches.

The MECHANICS' COMPLETE LIBRARY of modern rules, facts, processes, etc., for engineers, mechanics, electricians, etc., is the title of a handy pocket library of 576 pages, 4 by 5½ inches. Published by Laird & Lee, Chicago. This is a handy book and contains much information compiled by Thos. F. Edison, A. M., and Chas. J. Westinghouse. The price of the book is $1.50.

The late catalogue of the *Union Pressed Brick and Terra Cotta Co.* of this city, is a work fit for the drawing room. It is fully illustrated with engravings of ornamental bricks and terra cotta. Also many beautiful designs showing each specialty by itself or in combination.

"BRICKMAKING AND BURNING" is a new and valuable book from T. A. Randall & Co., publishers, Indianapolis, Ind. Price $2.50. The book is 5¼ by 7½ inches, printed on fine heavy paper, handsomely bound, and is of convenient size for the pocket or library. The chapters on the various processes and methods of manufacture are penned in a terse condensed manner by a practical expert, leaving out all unnecessary verbiage yet in no wise restricting the technical and practical part of the work.

The work treats of the different kinds of clay and kilns for burning, the different glazing processes, the various methods of drying, baking and fireing or burning. It also contains many hints to bricklayers, builders, etc.

The author, J. W. Crary, Sr., is a successful brickmaker of upwards of 60 year's experience. In the preface the author says "there are thousands of compilers, but few real authors of books. A compiler may select and arrange matter for a book and make it readable, but of no practical value." In this book the author has worked the most advanced technical knowledge on the subject, with his own long practical experience in a manner which makes a hand book of real merit, and one that should be in the hands of every person in any way engaged in the making or useing of bricks. No architectural library is complete without it.

NOTES & COMMENTS.

The fire limits of San Francisco have been extended.

Work has been begun on the canal and tunnel designed to utilize the water power of Niagara Falls.

"An honest candle power is the noblest work of the electrician."—Healy.

Seattle is now passing through the stage of rotten street planking. Other ancient cities have had the same experience. Seattle has our sympathy, we know how it is ourselves.

The fire escape ordinance of Oakland is to be enforced. It calls for a fire escape to be attached to every building three or more stories in height. The ordinance was passed some eight months ago, but has not, heretofore, been enforced.

Ira O. Baker in the *American Architect* holds that the addition of less than fifty per cent. of Portland cement to common lime mortar decreases the strength of the mortar. We think the experience of builders on this coast will not bear out Mr. Baker's views.

Judge Cullen, of the New York Supreme Court, has decided that the municipal authorities cannot make building regulations that conflict with State Laws—the city ordinances required that 35 per cent. of the ground space of lots for tenement use, should be left vacant for light and air. The State law required only a vacant space of ten feet in the rear of the building.

Zymotic diseases continue to spread in the districts on the other side of the Bay. The Health Officer blames the doctors for not notifying them of cases that are brought to their notice. The doctors blame the Health Officer for not taking the necessary precautional measures. The public blames the authorities all round, while the outside lookers-on blame the public, individually and collectively, for not attending to the proper sanitary condition of their own surroundings.

An ornament when made useful becomes a pleasure.

It is told of a good husband who stayed home evenings to read the paper, and yet had the grievous habit of putting his feet up against the wall, that his wife, after long suffering on account of the disfigured walls, made a fine silk holder for a pair of art worked slippers, which she fastened to the wall as an ornamental covering over the place defaced by the foot marks. The husband, mistaking the meaning, placed his boots in the slippers, thereby holding his feet in place much to his ease, whereupon he praised his wife for her thoughtfulness and ingenuity.

ANNUAL BUILDING SUMMARY.

In the following table we present the number and value of buildings erected in San Francisco during the year about to close:

FOR FIRST SIX MONTHS.

	No. of Bld'g.	No. of Contr't.	Brick Building Value.	No. of Bld'g.	No. of Contr't.	Frame Building Value.	No. of Bld'g.	No. of Contr't.	Alterations & Ad'tions Value.	No. of Bld'g.	No. of Contr't.	Total Value.
January	3	10	$102,754	21	33	$158,555	8	9	$20,479	33	52	$281,779
February	5	18	261,940	48	54	266,017	6	6	24,725	60	78	552,985
March	5	15	192,120	98	44	318,906	5	5	15,575	48	64	526,701

Total	31	101	$1,086,686	326	589	$2,102,950	58	66	$204,831	417	556	$3,393,858

FOR SECOND SIX MONTHS.

	No. of Bld'g.	No. of Contr't.	Brick Building Value.	No. of Bld'g.	No. of Contr't.	Frame Building Value.	No. of Bld'g.	No. of Contr't.	Alterations & Ad'tions Value.	No. of Bld'g.	No. of Contr't.	Total Value.
July	3	6	$329,225	42	59	$389,412	10	12	$27,455	55	71	$746,092
August	2	17	75,516	61	71	349, 71	8	9	24,968	71	97	449,555
Sept	4	15	153,067	55	71	291,457	17	17	58,690	74	103	503,214
Oct	2	8	94,981	41	48	296,394	6	5	13,173	48	61	404,551
Nov	3	9	48,107	39	47	227,780	8	8	11,219	50	64	287,111
Dec	6	24	229,194	60	60	380,325	2	2	7,035	65	85	602,642
Total	20	79	$1,130,101	296	350	$1,844,446	50	53	$142,522	366	481	$3,101,155
G'd Total	51	180	$2,216,787	622	939	$3,947,396	108	119	$347,353	783	1037	$6,495,013

This statement has been made up from the files of the ARCHITECT and we should bear in mind that in addition to this, there must have been many improvements not noted through the records. We should estimate such improvements at not less than $600,000 in the whole city, making a grand total of say, $7,095,013 for the year.

We give the total values and numbers from 1880 so that our readers may make a comparison :

1880—	397	engagements, value	$1,754,435
1881—	533	" "	3,790,732
1882—	785	" "	3,896,212

1890—	1,037	" "	7,095,013

BUSINESS MOSAICS.

"**Procrastination** is the mother of disaster." See to it that your advertisement in the California Architect for the year 1891 shall begin with the January number in order to bring the various articles in your line to the attention of the Architects in time for them to consider the question of their use in the buildings being planned for next season.

Contracts for the iron and steel beams, girders, etc., for the new Mercantile Library building in course of erection in this city, have lately been let to Messrs. P. H. Jackson & Co., the well known expert constructionists in that line. Mr. Jackson has made the constructioned features of iron work a special study for many years, in fact he was engaged in this business in New York when iron was first introduced as an important feature in the construction of buildings in that city.

By bringing the higher technical knowledge of the day to aid an extensive practical experience, he has become a thorough adept, and master of all the details required for such work. Those persons who have the October and November issues of the California Architect will note some of the forms of construction as worked by Mr. Jackson, they having received the endorsement of the best qualified judges in such matters.

"**Shrewd** prophecy is apparent folly."

W. H. Birch & Co., the old and well-known manufacturers of elevators, are running almost to the full capacity of the works. The improvements introduced by them during the past year, has given such satisfaction, that when these become more generally known, increased facilities will be required to supply the demand.

The city authorities being about to extend the fire limits, it would be well for those parties who may be interested in the matter, to look into the merits of the fire-proof iron lath of the Pacific Iron Lath Company.

Plaster of Paris is prepared of the very best quality for any of the various uses to which the material is applied, by our pioneer factory, the "Golden Gate Plaster Mills," of Lucas & Co. of this city. Superior to Eastern plaster.

Santa Cruz Lime from Henry Cowell & Co. yet remains at the head of the list, wherever a thoroughly reliable article of lime is required.

The Pacific Roll Paper Company is receiving daily, favorable accounts from their Waterproof Building paper, Fay's patent. It has given such general satisfaction to those who have used it, that many orders are beings received in advance for the coming season.

"**If** the lion and lamb lie down together, where is the lamb when the lion gets up?"

For ornamental and cut glass, the establishment of James McCarthy has aquired a reputation for beautiful designs, worked with neatness and care. Convince yourself by giving him a call.

For sheet metal roofing and other work, ornamental galvanized iron, cornices, string courses, chimneys, etc., the old establishment of Wm. Cronan holds its own for first class work.

The Architectural Iron Works of O'Connell & Lewis, are turning out some heavy castings for buildings. This firm has fitted up, at a great expense, apparatus for the accurate fitting of columns and other heavy iron work, so as to give the greatest possible strength for bearing constructive weights.

Curious and peculiar articles are made from a plain sheet of metal by August Lutz, the metal-spinner, who deftly moulds the plain metal into beautiful designs in a few seconds. He is an adept at the business. Parties in want of anything in this line will do well to call on him.

F. H. Rosenbaum & Co., so well and favorably known for years, are yet full of life and vigor, and anything in the glass or mirror line, ancient or modern, can be had of their house. When you pass a very large plate glass with an extremely fine polished surface, just set it down as furnished by F. H. Rosenbaum & Co., and you will be pretty certain of being in the right.

"**The** man who in his carelessness
Leaves wide the outer door,
Will find a place some day, I guess,
Where winter rains ne'er roar."

The author of the above lines had never used the "Blount door check."

Among the Iron Works that have become favorites on account of the excellent quality of their work, is the Western Iron Works. These works are the successors to the old firm of Sims & Morris, which is well known throughout the Coast, as the maufacturers of iron and steel, fire and burglar-proof doors, shutters and bank vaults, and in all kinds of girder, beam, and wrought iron work. Jail work a speciality.

The Selby Smelting and Lead Company is one of those manufacturing establishments without which we could hardly get along. The Selby shot tower has been a marked feature in the views of San Francisco, so also the lead work from this establishment has become a standard for full weight and excellent quality.

About this time of the year the fly-screen man says that the winter was invented just to spoil his business and help the coal man out.

Plumbing is one of the departments of a building that requires to be well done. Messrs. Thos. Clark & Sons, make a specialty of fine work. They are at present putting in the plumbing for the building on California near Kearny street, the new engine house, and the additions to St. Mary's Hospital for the Sisters of Mercy, which is proof of their ability when first class work is wanted.

We had occasion lately to visit Edward Denny & Co., where we obtained an excellent tracing parchment paper, also some colored crayons of superior quality; in fact, they keep the best of everything in the draughtsman's line.

The late fire at the Pottery Works of Tracy Bros. & Co., in this city, will delay the output but a short time. This firm had considerable stock on hand at the time of the fire, from which they are filling orders as usual. By the time the next season opens, the rebuilt works will have their large stock replenished.

"**We** have no historical account that logs were ever rafted down the river Styx."

After a redwood tree is cut down, it must be cut up and run down, then worked up and rubbed down in order to get that beautiful effect of lights and shades due to its variously grained and curled wood as seen at the California Veneer Works, R. P. Hurlbut, Manager.

The merits of Dixon's graphite paint as a covering for metallic surfaces has been attested to by a recent change of practice on the part of the Pennsylvania Railroad Company, who have decided to use it upon the iron work of the Jersey City elevated railroad now being erected. This structure is a mile long, and the iron work has a street clearance of thirteen feet. The company have abandoned their practice of using light colored paint upon iron work, as has been their custom, and will coat this great surface with the Joseph Dixon Crucible Company's Silica-Graphite, which, as everybody knows, is made by this old established concern at their works in Jersey City, N. J.—*American Artisan.*

"**The** nail under the hammer. Which nail?"

The extension of the fire limits will necessitate many changes in the old buildings in the districts effected. Many old buildings can be moved and fitted up to last for considerable time, provided they are raised or moved by a careful and experienced person, such as Mr. Kelleher. For raising or holding in place heavy buildings Mr. Kelleher ranks first. His apparatus can be seen daily where heavy buildings are undergoing the renewal process on the business streets.

To the "Women's Rights" advocates we would suggest that a good way to improve a woman's lot is to build a house on it.

Schuster Bros. have been doing an immense business in stoves and ranges during the past season. The improved portable kitchen ranges, as furnished by this firm, is a superior appliance for the kitchen. This firm also manufactures the Mann patent chimneys.

The West Coast Furniture Company, L. & E. Emanuel, proprietors, have made a reputation for first class furniture and fittings for interior work. Many of our best and most artistically finished residences, banks, and business offices, have been done by this firm. At present they are fitting up the latest improved appliances for the manufacture of the newest high grade work for next season.

A. J. Dunbar & Co. are still manufacturing their high grade Ornamental Iron Work. This firm also makes fire escapes, and all kinds of iron work; such as tie rods, anchors, brackets, etc., buildings.

"Willer" Sliding Blinds.

In no department of the much-vaunted progress for which the Nineteenth Century is so justly remarkable, has greater skill and more persistent ingenuity been shown, than in the various "fitments" which in these days form such material factors in the comfort and convenience of the home. A most interesting case in point is furnished by a new Catalogue (No. 9) which has just been issued by The Willer Manufacturing Co., of Milwaukee, Wis.

The Book is most carefully and elaborately got up, contains about 132 pages, and is profusely illustrated. It is principally devoted to the Vertical Sliding Blind, of which this firm make a special line, though they also manufacture every other form of Sliding and Folding Blinds and Screens as now used.

The feature of the Vertical Blind is that it works like an ordinary sash, by sliding up and down in grooved guide-ways fixed for the purpose in the sides of the window space. The Blind is divided into sections, each of which works independently of the other, and any section can be, when necessary, removed from the window or re-adjusted without interfering with the sash or other sections.

For convenience the Blinds are arranged in classes, each comprising some feature wherein it differs from the others. Thus classes "D" and "E" (which are the two kinds most generally used), or also, classes "F" and "G," all show some varying form of adaptation to existing windows; and in each case, the sections slide wholly within the window space, allowing from one-half to three-fourths of the window being closed when desired. Where it is practicable, however, it is usual to arrange for a space above or below the window, into which the sections can be slid, so as to leave the window wholly clear, and classes "A," "B," "C," "H," "J," "O," "Q," "R," "S," and "T," each show difference of arrangement of pocket space, while classes "I," "K," "L," "M," "N," and "P," all show some different, but always ingenious, means of attaining a similar result where circumstances preclude the use of pockets.

ILLUSTRATION OF CLASS "A."

The Blinds are made in every known wood, and are furnished in two grades. A higher quality for Mansions, Public Buildings, etc., and a second quality for those who require a cheaper article, suited to houses of minor importance. In substance and general appearance there is little to choose, the essential difference being that the latter is not finished with such extreme care.

The Catalogue also contains explanatory illustrations of the "Rolling" Slats, and the new method of operating them which this firm have patented. It is very simple and easy, and obviates any necessity for the rod in front, which is, to so many, so highly objectionable.

A charge of 50 cents is made for the Catalogue, (the latter part of which contains a series of original designs for Fine Stair Work), but a smaller Catalogue (No. 10) is intended for gratuitous distribution and will be supplied to any who desire it.

CITY BUILDING NEWS.

Alabama and 24th Sts. Two-story frame; owner, Richard Haynes and wife; architect, Richard Haynes; contractor, Joseph Sullivan; sureties, P. Swift and Wm. Oakley. $1,000; cost, $1,100; signed Nov. 10; filed, Nov. 10; payments, $700, framed; $800, brown mortared; $800, white coated; $800, completed; $1,000, 35 days.

Arkansas near Napa. Two-story frame; owner, Peter J. Smith; architect, James Glackin; contractor, Jas. Glackin; cost, $1,810; signed, Nov. 8; filed, Nov. 10; payments, $350, framed; $350, brown mortared; $350, white coated; $310, finished; $450, 35 days.

Army near Guerrero. Two-story frame; owner, Mrs. E. R. Parsons; contractor, W. Greenwood; cost, $3,320; signed, Nov. 9; filed, Nov. 20; payments, $775, framed; $760, outside finish done; $1,015, completed; $770, 35 days.

Broadway and Scott. Carpenter work, etc; owner, Wm. F. Herrin; archit ct, Julius E. Krafft; contractor, R. O. Chandler; sureties, W. J. Adams and A. D. Moore. $2,875; cost, $11,500; signed, Nov. 8; filed, Nov. 10; payments, $1,000, attic floor joists on; $2,000, window frames set; $2,000, plastered; $3,600, completed; $2,900, 35 days.

Broadway and Scott. Brick building; owner, Wm. F. Herrin; architect, Julius E. Krafft; contractors, Riley & Loane; sureties, C. A. Warren and H. Remillard. $4,000; cost, $10,825; signed, Nov. 8; filed, Nov. 6; payment, $1,500 up to level of basement; $2,000, level of first story; $2,300, up to level of second story; $2,300, finished; $2,725, 35 days.

Broadway and Webster. Residence; owner, Sydney M. Smith; architect, Maxwell G. Bugbee; contractor, R. O. Chandler; cost, $18,150; signed, Oct. 29; filed, Oct. 30; payments, 75 per cent. as work progresses; 25 per cent, 35 days.

Broadway and Webster. Stone work; owner, R. O. Chandler; architect, Maxwell G. Bugbee; contractor, David O'Neil; cost, $5,000; signed, Oct. 29; filed, Oct. 30; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Broderick and McAllister. Brick work, carpenter work, etc; owner, John F. Boyd architect, B. McDougall & Son; contractor, A. Jackson; cost, $20,790; signed, Oct. 27; filed, Oct. 28; payments, $2000, first story joists in; $2,000, framed; $3,000, chimneys up; $5,000, white coated; $2,000, inside finish done; $1,590, completed; $5,200, 35 days.

Broadway and Franklin. Seven two-story frames; owner, Thos. I. Bergin; architects, Shea & Shea; contractors, Mahoney, Bros. cost, $62,411; signed, Oct. 27; filed, Oct. 29; payments, 75 per cent as work progresses.

Broadway and Franklin. Brick work on 7 two-story frame buildings; owner, Mahoney Bros; architect, Shea & Shea; contractor, Geo. D. Neagle; cost, $4,600; signed, Nov. 24; filed, Nov. 24; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Broadway near Fillmore. Painting and graining; owner, A. W. Wilson; architect, P. E. Schmidt; contractors, Fraser & Keefe; cost, $1,400; signed, Nov. 21; filed, Nov. 22. payments, 75 per cent as work progresses; 25 per cent, 35 days.

Brannan near Second. Two two-story frames; owner, I. T. Killips; architect, Chas. I. Havens; contractor, Robt. Currie; cost, $7,704; signed, Nov. 25; filed, Nov. 26; payments, $1,426, enclosed; $1,426, brown mortared; $1,426, outside primed; $1,426, completed.

Bryant and Rincon Place. Elevators; owner, The Sisters of Mercy; architect, Chas. J. Devlin; contractor, A. J. McNicoll & Co; sureties, Geo. E. Dow and Martial Hainque, $2,000; cost, $3,250; signed, Oct. 25; filed, Oct. 27; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Chattanooga near Twenty-fourth. One story cottage; owner, Chas. E. Anderson; contractors, McCauley & Smith; cost, $1,600; filed, Nov. 25; architect, Chas. E. Anderson; payments, $400, shingled; $400, brown mortared; $400, completed; $400, 35 days.

Clay near Buchanan. Owner, N. K. Marten; architect, Samuel Newsom; contractor, J. J. Dunn; sureties, B. Joost & C. S. Holmes, $3,200; cost, $9,500; signed, Nov. 24; filed, Nov. 24; payments, first and fifteenth day of each month; balance, 35 days after completion.

Clay near Scott. Two-story frame; owner, Emmeline Bates; architect, Geo. E. Bates; contractor, R. O. Chandler; cost, $5,000; signed, Nov. 6; filed, Nov. 7; payments, 25 per cent, framed; 25 per cent. brown mortared; 25 per cent. completed; 25 per cent, 35 days.

Collingwood near Nineteenth. Two-story frame; owner, Alice Hoey; architect, M. J. Welsh; contractor, D. Currie; cost, $3,618; signed, Nov. 20; filed, Nov. 26; payments, $904.50, framed; $904.50, brown mortared; $904.50, completed; $904.50, 35 days.

Dore near Bryant. Two-story frame; owner, Michael Mullin; architect, M. J. Welsh; contractors, Mullins Bros.; cost, $2,600; signed, Nov. 17; filed, Nov. 18; payments, $650, framed; $650, brown mortared; $650, completed; $650, 35 days.

Douglass near Seventeenth. Fences and outbuildings; owner, Luke Tierney; contractor, Chas. C. Terrill; cost, $3,700; signed, Oct. 27; filed, Oct. 28; payments, $925, brown coated; $925, plastered; $925, completed; $925, 35 days.

Ellis near Powell. Electric wires, &c.; owner, Caus. Mangels; architect, H. Geilfuss; contractors, Parsons Construction Co.; cost, $1,627; signed, Oct. 29; filed, Nov. 5; payments $600, wires all run; $600, completed; $427.25, 35 days.

Fillmore near Herman Two-story frame; owner, M. C. Doyle; architect, A. J. Barnett; contractor, Thos. Morris; sureties, L. T. Lewis and Reese Llewellyn, $2,000; cost, $5,500; signed, Oct. 24; filed, Oct. 29; payments, $1,200, roof boards on; $1,000, brown coated; $925, white coated; $1,000, completed; $1,375, 35 days.

Hampshire street near Twenty-third. Dwelling house; owner, Wm. S. Wright; architect, Geo. Houston; contractor, Geo. Houston; cost, $1,914; filed, Oct. 28; payments, $475, rustic on; $475, brown mortared; $475, white coated; $489, 35 days.

Harrison near Twenty-third. Two-story frame; owner, Dennis Wynne; architect, Dennis Wynne; contractor, Jas. Campbell; cost, $3,790; signed, Oct. 31; filed, Oct. 31; payments, $947.50, framed; $947.50, brown mortared; $947.50, completed; $947.50, 35 days.

Hayes near Lyon. Two-story frame; owner, Miss E. Cooney; architect, W. W. Rednall; contractor, W. W. Rednall; sureties, Jason Springer & Co. and S. E. Slade Lumber Co., $2,000; cost, $4,990; signed, Nov. 5; filed, Nov. 6; payments, $1,245, enclosed; $1,250, brown mortared; $1,250, completed; $1,245, 35 days.

Hill near Noe. Excavating and foundations; owner, Edwin Parish; architect Edwin Parish; contractor, S. C. Buzzell; sureties, David Woemer and James Rowe, $2,000; cost, $2,200; signed, Nov. 6; filed, Nov. 19; payments, $550, foundations built, 550, enclosed; $800, completed; $550, 35 days.

Smilie; cost, $8,570; signed, Nov. 26; filed, Nov. 28; payments, $1,285, one-fifth payments completed; $1,285, two-fifths completed; $1,285, three-fifths completed; $1,285, four-fifths completed; $1,285, completed; $2,155, 35 days.

Grove and Thirty-sixth St., Oakland. Additions and Alterations; owner, Mrs. Mary Canning; architect, Chas. Man; contractor, W. S. Wilson; cost, $1,728; signed, Oct. 30; filed, Nov. 3; payments, $434.50, one-third work done; $434.50, two-thirds done; $434.50, 35 days.

Henry St., Oakland. Owner, John Clonen; architect, Wm. Goodwin; contractor, Hugh McCracken; sureties, Joseph Harris and Fred Mentz, $1,200; cost, $1,765; signed, Oct. 28; filed, Oct. 29; payments, $400, rustic on; $400, first coat plaster on; $500. completed; $465, bal.

High St. near Prospect St., Brooklyn. 1½ story frame; owner, J. R. Talcott; architect, W. H. Wellbye; contractor, W. H. Wellbye; cost, $5,000; signed, Nov. 17; filed, Nov. 24; payments, $1,250, roof on; $1,250, first coat plaster on; $1,250, plastered; $1,250, 35 days.

Linden St., near Thirty fourth St., Oakland. One-story cottage; owner, Henry Schelhaas; architect, A. Man; contractor, E. H. Lake; cost, $2,300; signed, Nov. 28; filed, Nov. 29; payments, $575, enclosed; $575, brown mortared; $575, completed; $575, 35 days.

Linda Vista Park. Two-story dwelling; owner, O. J. Backus; architect, Geo. A. Budwell; contractor, John J. Boyle; cost, $3,335; signed, Nov. 18; filed, Nov. 19; payments, $830, seamed; $830, plastered; $840, completed; $835, 35 days.

Linda Vista Terrace. Two-story dwelling; owner, Myron T. Holcomb; architect Geo. A. Budwell; contractor, John J. Boyle; cost, $4310; signed, Nov. 17; filed, Nov. 18; payments, $1077, seamed; $1077, plastered, $1078, completed; $835, 35 days.

Lot 28, Block 557. Owner, G. Magerstaedt; architect, Howard Burns; contractor, H. E. Jones; cost, $4540; signed, Nov. 12; filed, Nov. 12; payments, $851.25, ¼ completed; $851.25, ¼ completed; $1135, 35 days.

Lot 21, Block 8, Sather & Robinson. Owner, Mrs. Helena Morgenstern; architect, J. L. Atwood; contractor, L. J. Atwood; cost, $1300; signed, Oct. 27; filed, Oct. 28; payments, $325, framed; $325, brown mortared; $325, completed; $325, 35 days.

Magnolia street near 24th street, Oakland. Chemical Engine House; owner, City of Oakland; architect, W. J. Mathews; contractors, J. C. Kyte & J. Rutherford; cost, $2750; signed, Nov. 20; filed, Nov. 24; payments, $687, ¼ work done; $687, ¼ work done, $687, completed; $689, 35 days.

Owner, Henry D. Bacon; architect, F. P. Bacon; contractor, F. M. McCordy; sureties, S. Walton and T. G. Buttery, $800; cost, $817; signed, Nov. 7; filed, Nov. 20; payments, $190, floor laid; $290, piping connected; $200, completed; $267, 35 days.

Owner, W. F. Lewis; architect, H. P. Barker; contractor; H. P. Barker; cost, $2450; signed, Nov. 17; filed, Nov. 19; Payments, $204, ready for plastering; $204, framed; $204, enclosed; $1225.50, completed; $611, 35 days.

R. R. Ave. near Second Ave. One-story frame with basement; owner, F. W. Dietsch; architect, A. R. Denke; contractor, J. P. Fmbury; sureties, J. F. Collins and G. L. Ainsworth; cost, $1,060; signed, Nov. 1; filed, Nov. 7; payments, $350, lathed, etc; $380, completed; $360, 35 days.

San Antonio Ave. near Park, Alameda. Alterations; owner, Wm. Lawson; architects, Pissis & Moore; contractors, Gardner & Boyde; cost, $1,450; signed, Nov. 26; filed, Nov. 28; payments, 75 per cent of value of work done and materials furnished; 25 per cent., 35 days.

Shepharson Tract. Alameda; owner, John Burke; architect, John Conant; contractor, John Conant; cost, $1,200; signed, Nov. 15; filed, Nov. 22; payments, $400, framed; $400, brown coated; $400, completed.

Summit St. near Prospect Ave. Owner, C. A. Capwell; architect, Maxwell Bugbee; contractor, O. C. Soule; cost, $3,940; signed, Nov. 6; filed, Nov. 6; payments, $987.50, enclosed; $987.50, second coat mortar on; $987.50, completed; $987.50, 35 days.

Tenth Ave. and Twenty-first St., Oakland. Two-story building; owner, Louis S. and W. C. Harrington; architects, J. T. and T. D. Newsom; contractors; Oliver P. Smith and Chas. Murrell; cost, $8,570; signed, Nov. 1; filed, Nov. 6; payments, $890, enclosed with rustic; $890, brown mortared; $890, completed; $900, 36 days.

Twenty-first St. and Twenty-fourth Ave., Oakland. One story cottage; architect, Wm. Crowhurst; contractor, J. W. Whyte; cost, $,1504; filed, Nov. 6; signed, Nov. 6; payments, $376, enclosed; $376, brown mortared; $376, completed; $376.50, 35 days.

Twenty-first near Eighth Ave. One-story cottage; owner, Emily M. Weiber; architect, R. Gray Frise; contractor, W. S. Wilson; cost, $1,567; signed, Nov. 1; filed, Nov. 1; payments, $4 1.75, enclosed with rustic; $391.75, brown coated; $391.75, windows hung; $391.75, 35 days.

Twenty-sixth and Grove St. Owner, Louis Wuns; architect, O. F. Hunt; cost, $900; contractor, Oscar F. Hunt; signed, Oct. 30; filed, Oct. 30; payments, $300, roof on; $300, brown mortared; $300, 35 days.

Vernon Park Track. Two-story dwelling; owner, J. C. Ainsworth; architect, W. J. Mathews; contractor, W. Winnie; cost, $14,089; signed, Nov. 12; filed, Nov. 14; payments, $2113, 1-5 completed; $2113, 2-5 completed; $2113, 3-5 completed; $2113, 4-5 completed; $2113, completed; $3524, 35 days.

Webster near Walnut. Two-story residence; owner, J. L. Wetherbee; architect R. Gray Frise; contractor, H. C. Jones; cost, $8270; signed, Nov. 5; filed, Nov. 6; payments, $817.50, enclosed with rustic; $817.50, first coat plaster on; $817.50 second coat; $817.50, 35 days.

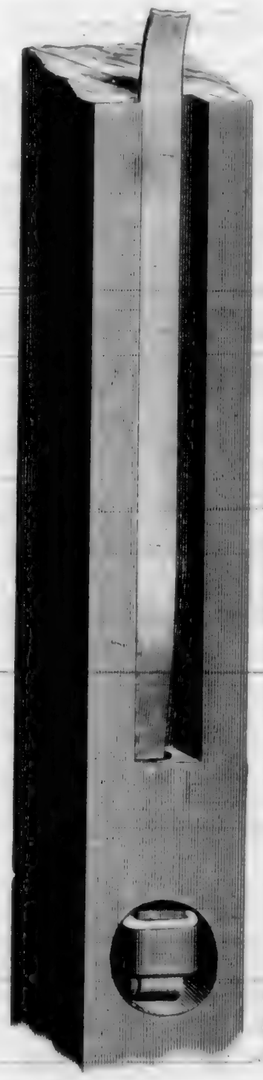
The Gardner Steel Ribbon and Attachments for Sash Hanging

(PATENTED)



Absolutely the best and most economical Sash Balance in the world.

——THIS IS NOT A SPRING BALANCE.——

It consists of a steel ribbon expressly manufactured for the purpose. It is attached to the sash and weights the same as cord or chain as shown in the cut. It presents a neat appearance and can be painted same color as the wood-work of the window. It cannot get out of order or wear out, and being a perfect balance the heaviest windows can be raised or lowered with the greatest ease. We have it in use in several freight elevator doors.

THE GARDNER SASH BALANCE CO.
311 First National Bank Building.

Chicago, Ill., August 19, 1890.

MAJOR T. H. CAPRON:—

After a careful study of the qualities of your Sash Pulley and Steel Ribbon, and comparing the same with other methods of hanging sash, preference was given to your Pulley and Ribbon for the Sash of the Leiter Building, State, Van Buren and Congress treets. This building is over 400 feet long, eight stories high, and being designed for a retatl store or stores, the windows are exceedingly large, mostly from 6 to 8 feet wide, and those of the second story, some 12 feet high. The sashes for such openings require the very best cord and pulleys. Good pulleys can be obtained by paying for them, but I was unable to find as good a pulley as yours at the price you charged us. The question of cord, chain or ribbon is a serious one where windows are as heavy as those at the Leiter Building, and it was only after the most thorough examination, with the assistance of an expert to visit the places where your ribbon was in use, that the question was decided, and the contract was awarded to you. Very respectfully,

(Signed) W. L. B. JENNEY, Architect.

IN USE IN THE FOLLOWING BUILDINGS IN CHICAGO.

FIRST NATIONAL BANK.	*J. V. FARWELL'S BUILDINGS.*	*COMMERCIAL NATIONAL BANK*
NEW DEPOT WISCONSIN CENTRAL R. R.	*ADAMS EXPRESS BUILDING.*	*CAXTON BUILDING.*

NOTICE.

MR. George H. Wolfe, having no further connection with the business of this journal, correspondents will in future address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at 408 California Street.

SETH BABSON, Pres. W. J. CUTHBERTSON, Vice-Pres.
OLIVER EVERETT, Sec. JOHN M. CURTIS, Treas.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at 408 California Street.

JOHN RICHARDS, Pres. PROF. FRANK SOULÉ, Vice-Pres.
OTTO VON GELDERN, Sec. JAS. SPIERS, Treas.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects was held at their rooms, 408 California Street, on the 9th inst., the President, Seth Babson in the chair.

The Committee on Amendments to the Lien Laws made a partial report.

The Students' Sketch Club submitted designs for a mantel, the subject for the regular monthly competition, also designs in accordance with the special competition for a book-case and secretary's desk, for the S. F. Chapter, A. I. A.

Awards were made for a former competition, a "Wayside Shelter". 1st mention to "Wandering draughtsman", submitted by S. C. Benson; 2nd mention, to "Tramp", submitted by C. O. Hilpisch.

The feature of the evening was the reading of a paper on the Poetry of Architecture, by Oliver Everett, which will be found complete on another page.

THE regular meeting of the Technical Society of the Pacific Coast was held on the 2nd inst. at their rooms, 408 California street, President Richards in the chair.

A proposed bill for the licensing of County surveyors was presented and laid over for discussion until next meeting.

R. B. Elder read a paper on Electrical Accumlators and their application.

Any information in regard to membership in this Society can be had on application to the Secretary Otto Von Geldern at their rooms, 408 California street.

THE regular meeting of the Electrical Society was held in their rooms on the 5th inst.

Mr. W. C. Quimby read a paper on Primary Batteries. The subject was treated historically and chemically to a very full extent, describing in detail the different forms of batteries, and the best forms for certain results. Many points desirable, and otherwise, were shown by the apparatus present, and illustrated by the lecturer on the blackboard.

Any information in regard to membership in this Society can be had on application to the office of this Journal.

TECHNICAL SCHOOLS.

On another page will be found a communication on "Technical Schools for Practical Instruction" by T. T. The subject is one of great moment to the people of this country,—particularly so to California and the Pacific slope. We, therefore, invite our readers to an examination of the question as presented by our correspondent, who is a gentleman having a practical knowledge of some of the deficiencies of the present system of education.

In looking around for a remedy, the indications on every hand show a growing interest and appreciation by the public, of a thorough knowledge in those who are to conduct the business of the future, both theoretically and practically; and that with a systematized order of procedure, commencing with the elementary and passing through all the stages of development to the final conclusion of the highest qualifications in the various departments applicable to the practical issues of the day. While many believe that the great mass of the people would derive more benefit from public than from private beneficiary schools, yet, we all note with pride and satisfaction such noble munificent gifts as that of Ex-Gov. Leland Stanford at Palo Alto, where it is intended to carry out on a magnificent scale a system of technical instruction, which shall reach and include the highest practical training of the student.

Whenever any private undertaking is discussed, the question of first importance to those who are to furnish the funds, is, "will it pay, can an adequate return be had for the capital invested." When after investigation the project appears feasible and profitable, capital can be obtained and the work carried to conclusion.

In public works the same question arises and must be met by the same showing of profit to the capitalist, which in such cases are the tax-payers, before the project can be carried out. When several schemes are presented for consideration, the one giving the greatest returns for the capital invested would seem the proper one for adoption. Two propositions present themselves to the people as tax-payers. Under the present system of, we may say, enforced idleness, the excesses of youthful vigor finds an outlet in acts, which, under the laws, are considered as crimes against the welfare of the community; consequently houses of correction, industrial institutions and penitentiaries are built and maintained at a great expense to the tax-payers, for the restraint of the visciousness engendered by reason of misapplied energies. Would it not be of more profit to the tax-payer, and to society at large, if the procedure should be reversed, at least to the extent that we first build the public industrial and educational institutions upon such a broad basis that all growing youth, male or female, may learn some trade or calling whereby they may be enabled to obtain a respectable living and become beneficial members of the community? Such a program carried out, a very small percentage of the population would require to be kept under the restraint at present deemed necessary. We present herewith a few quotations which seem applicable to the proposition, "Education ever strives for advancement; "Ignorance when discontented and active, sinks deeper into obscurity with each movement."

"Education acts with reason." "Ignorance acts with blindness." "Intelligent labor even when discontent, does not seek to destroy that which it has been paid to build up."

"Ignorant and brutish labor when discontent, seeks to destroy that which it has been paid to build."

"Intelligent labor is self-supporting;" Ignorance tenants our jails and reformatories,"

Subscribe for The California Architect and Building News, $3.00 per year.

THE question of sculptor's work on the stone work of buildings, has been brought forward with the suggestion that architects reserve from the stone work, the sculptors work to be let separate, or that the architect should at least choose the modeler and sculptor for such work. In case the architect should state in the specifications, or in any other way select the person who should perform such work, the probabilities are that a higher order of stone work would be developed and noticeable in such architectural finish.

The result of the experience of past ages places the architect in direct communication with the artist performing the work whenever excellence is to be obtained.

PROF. I. O. Baker is reputed as saying that, "Mortar may be made practically non absorbent by the addition of alum and potash soap, about 1 per cent of each. The alum and soap combine and form compounds of alumina and the fatty acids, which are insoluble in water."

In the foregoing statement Prof. Baker has not shown what becomes of the potash, which as we understand the subject, is a soluble compound and an active element for the disintegration of mortars. It is well known that solutions of alum and soap are alternately used on exterior surfaces of walls to prevent the penetration of moisture, but in such cases the alkaline efflorescence being soluble is easily washed out. When the soluble alkali is used in the composition of mortar for the walls, its action becomes more complicated and of more importance than a simple wash for exteriors. In some old walls recently taken down, the mortar was found to be so thoroughly disintegrated that it appeared much like dry sand, which upon testing showed soluble alkaline compounds in the mass of the mortar, more especially in the portions farthest removed from the action of the atmospheric elements and the exterior surfaces.

The subject is one that may be studied with profit from both the practical and theoretical point.

WE have received an invitation to be present at the Formal Opening of the new Builders and Traders Exchange Building at Kansas City, Mo., and we hereby tender to this Association of intelligent builders of a great city, the thanks of the California Architect and Building News, while wishing them the full measure of success they so justly deserve.

As we go to press we regret to chronicle the death of John W. Root, the Consultiug Architect of the World's Fair, of pnuemonia, after a brief illness. Mr. Root, though but thirty-eight years of age, stood at the head of his profession in this city. He was a member of the firm of Burnham & Root, and has been the leader in a movement that since the great fire has put in a permanent form many of the fine buildings that have so added to the reputation of Chicago.

Upon Mr. Root's World's Fair plans the directory was depending in a large measure to make the design of the Exposition an artistic success.

IN accordance with our notice of December, we commence in this issue a description, in detail, of the original plan and mode of construction as adopted by the builders of one of the oldest architectural structures of the coast. These descriptions will be continued from time to time as circumstances will allow. There are many persons who are conversant with the mode of construction of other buildings of this class, therefore, an invitation is hereby extended to such persons to aid in this matter. In the present instance our thanks our due to Mr. D. D. Davisson who has lived there and occupied the building for a period of 40 years.

OLD MISSION CHURCH AT SONOMA, CALIFORNIA.

The date of this old work as given by different authorities appears somewhat at variance. The most recent date represents the building as erected some 75 years ago, while other quite reliable authorities place the date as far back as 150 years. Many peculiarities in the arrangement and details, point strongly to the direct influence of the more ancient date, and more in accordance with what would probably be the pioneer missionaries from some Spanish ship which at about that date anchored in the Bay of San Francisco, and history records a number of such ships. Some peculiarities point to a re-modeling or renovation at about 75 years ago. Special marks of this period indicate the influence of the line of pioneer missionaries from Mexico along through Santa Barbara, Monterey, San Francisco and finally at Sonoma. Many are the legends relating to this ancient mission, and the ritual and customs of the founders and occupants at various times, nearly all of which are without the province of this paper.

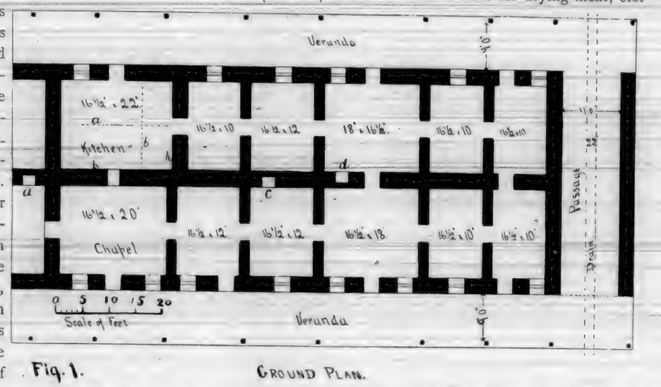

Fig. 1. GROUND PLAN.

The walls are built with adobe bricks or slabs, 11 by 22 inches and 3 inches thick. The joints are laid in clay and chopped straw, the joints being large—ten courses in height to 36 inches. The bricks are laid to bond and when plastered with adobe are about 3 ft. in thickness for outside walls and main longitudinal walls, and 2 ft. for partition walls.

When we speak of adobe bricks or adobe walls it appears such a simple matter that few persons make an investigation of the subject; yet, the more we inquire into the particular qualifications of adobe, the deeper the mystery becomes. Can anyone explain to us why the adobe walls built 75 to 100 years ago withstand the weathering, and are in a better state of preservation than those built 20 years ago? The conviction forces itself upon us, that the builders of these old buildings were possessed of a practical knowledge of the method for working and tempering the material from the beginning to the end of the process for making the adobe bricks or wall slabs, unknown at the present time.

The adobe bricks used in the construction of the walls of this old building were made of the natural soil, which contains in its composition some organic matter and a considerable proportion of the decomposed rocks of the adjacent hills, and is of a clayey nature. When worked to a plastic state with water, and mixed with chopped straw, and dried by a series of processes known to the workers, when built up makes a firm wall of great strength and power of resistance to the weather, the average yearly rainfall being 22 inches.

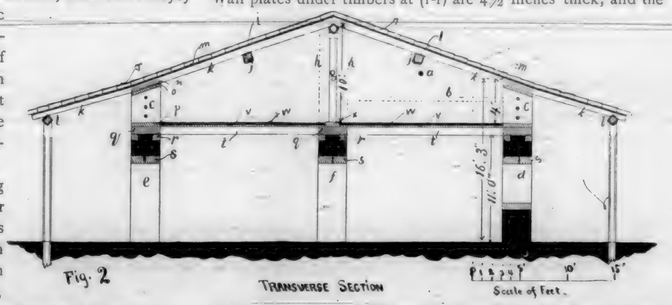

Fig. 2 TRANSVERSE SECTION

The general plan of the building at present standing, was in former times, arranged and partitioned off as shown in the plan Fig. 1. The length is 120 feet by a width of 42, which with the verandas of nine feet each, covers a total width of 60 feet, being one-half the length.

A passage or drive way 11 feet in width, was placed at one end, and the chapel and kitchen at the other end. The intermediate rooms or apartments having connecting door-ways in the interior division walls or partitions of the several apartments.

Windows or openings for light also door ways were placed in the exterior walls, and it will be noticed that the doors are set opposite each other, or in direct lines, either longitudinally or transversely. In the wall dividing the chapel from the kitchen is an opening through the wall 2 feet 3 inches wide and 1 foot 6 inches high, set 4 feet from floor to sill; whatever its purpose, is a subject for conjecture. At (a) is a square recess in the wall 2 feet deep, 2 feet 4 inctes wide and 3 feet high. Its purpose not definately known. At (c) is another recess or locker 2 feet 6 inches wide and 3 feet 6 inches high, set 4 feet above the floor. This locker has doors and shelves and will be described hereinafter. At (d) is a niche for font and formed like (a or c). A drain, built of burned bricks has been lately discovered in the ground through the main passage.

If we now examine the transverse section, Fig. 2, the general features of the construction are apparent. The main story being 11 feet in the clear, and the attic 4 feet at the low parts and 10 feet at the high parts. The three main walls are shown, having doorways at (e and f); and windows at (d).

The main exterior side walls at (e and d) extend to roof, and the center wall (f) to the height of main story with this exception, the two walls, (h h) of kitchen in Fig. 1 and h, Fig. 2 extend to the roof, therefore, the kitchen extends to the full height to the roof. Two poles about 10 inches in diameter were built into the walls and extended across the kitchen at (a and b) in Fig. 1 and at (a and b) in Fig. 2. These were for drying meat, etc.

Windows were placed in the walls of the attic as at (c c) having 3 to 4 inch poles built into the walls as guards.

The timbers (t) for floor of attic were 9 by 9 inches and set 22 inches apart, and extending clear through the walls, over these were laid split and hewn planks (v) 1¾ inches thick and from 11 to 22 inches wide, then over these the finished floor of adobe tiles, (w) 22 by 22 inches, and 3 inches thick. Over the main center wall at (x) is a wooden wall plate 3 by 11 inches, upon which rests the posts (g) supporting roof.

Lintels (s-s) over openings are 7½ inches thick and in two or three pieces in width to correspond with the thickness of the walls. Wall plates under timbers at (r-r) are 4½ inches thick, and the space (q) over walls and between timbers filled in solid. Window sills (p) 3 inches thick. Lintels (o) 3 inches thick, and the space (n) between rafters filled in solid to roof. The rafters (k) are of round poles about 10 inches in diameter at the butt which is placed at the top, and 4 to 6 inches at (l) over veranda posts. (j-j) are strengthening beams 11 by 11 inches; (m) is the brush thatch and (T) the tiles of roof which will be shown more in detail hereafter.

H. T. B.

TECHNICAL SCHOOLS FOR PRACTICAL INSTRUCTION.

Mr. Editor:—

Every intelligent reader of The California Architect must appreciate its broad and comprehensive policy in all that pertains to both the architectural, building and manufacturing crafts, and rejoice that it has done such commendable work in giving a higher tone to all that relates to architecture and construction in this city and state.

The science of architecture and construction, the art of design and fabrication being so inter-related, it follows that whatever tends to improve and advance the one must also act for the benefit of the other. Hence, when we speak of the interests, growth and advancement of architecture, it follows that such improvement and advancement is all important to the manufacturer, builder and building trades generally. Thus progress follows for all in proportion to the recognition of both professional and technical principles, and that consequent advance which leaves its impress for the general good. Perhaps this may be said to be an educational work, and that your journal should be proud of the good so far done.

It is the belief that its powerful influence in this line may be still further felt that the writer would dwell on a subject which, if impartially considered will be seen to be of some importance to those mentioned, and at the same time be a matter of vast importance to both our city and state.

San Francisco needs in its midst a public Polytechnic Institute or Technical School of Mechanic Arts. An institute wherein the youth and apprentices of the city may obtain special and practical training in its schools of Design and in the theory and practice of the various Mechanic Arts, and the Lecture Rooms of which would be kept open for the adult public and so foster an appreciative sentiment in all that relates to manufacturers, mechanics, the useful arts, and the grand sciences of engineering and architecture.

This structure should occupy not less than an entire block, and be centrally located. While day classes would be encouraged, the night classes and lectures for our young men and women should be its especial feature. It should be equipped in all its various departments with the most complete educational staff of *practical teachers*, elected from the active professional element, who in business were a practical success.

And its libraries, models, tools and all other requisites of such a practical character that our California apprentices and students in the science and art of design and construction, etc., might soon stand before the world with heads erect, and not be the botches which so many of them are to-day, especially in the building trades.

This institute should be of as easy access by cable lines as the present Mechanics Pavilion. It should be provided with baths and lavatories, so that apprentices coming from the building, foundry, factory or mill, could go direct from their work (if necessary) in his or her work clothes to the lavatory department, enter their numbered box; don his or her bath suit; when through their bath, redress, and then go to the Institute restaurant, and from there while an hour away in the many apprentice club rooms, until the chimes ring out the hour for the students to ascend the many elevators which ply heavenward up a grand ten-story fire-proof structure.

In reading these suggestions it should be borne in mind that San Francisco has a great future; and that it is all important for its well-fare that manufactures of every kind should center about this city. It should also be remembered that manufacturers, builders, foundrymen and others, will find it to their interest to see their apprentices and workmen grow in a thorough knowledge of their art, while a higher character and more manly dignity would obtain in each craft and craftsman.

California has vast undeveloped resources and it is to her commercial interests to see them develop and to have skilled California workmen who in theory and practice will be able to enter new fields for practice and profitable development. Our native sons should in their own state be given the opportunity to become competent to utilize the undeveloped wealth of their own state, and not see its interests drift into the hands of foreign syndicates who will displace them with alien labor.

These institutes of theoretical and practical training are to be found in most of the large cities of Europe, and England, France and Germany, each spend millions annually for their public maintainance. Since their establishment in England alone the social condition of the workers has been vastly improved. Intemperance and vice has decreased, and the social status of the working people generally changed for the better.

It is well known that thousands of our city youth annually come to adult age, and that thousands of them seek and are unable to find employment: in the most cases, for the reason that many San Francisco youths are not the most desirable material for apprentices, and because that their education has been confined to the primary school grades and the still lower grades of our less respectable side-streets, alleys and dens. The writer has been some twenty-five years connectedly with the building trades in this city, and it asked to give his opinion and experience with the San Francisco apprentice, or of the graduated "journey-man apprentice" he would characterize him as a *cigarette smoking botch*, too conceited to learn, and as a working man, too ignorant to recognize his ignorance.

In the absence of any "apprentice law" he runs from one boss to another, and instead of legitimately learning the trade, goes from shop to shop as a "journeyman-apprentice," and steals the trade or the little he knows of it. Hence it is that so many respectable building firms employ none but well-known mechanics and artizans, and refuse to have anything to do with your hoodlum apprentice.

But all this can be remedied. The youth of California are as good as the youth of any country, but they need that special technical training which shall obliterate from their vocabulary the words "chippie" and "cigarette."

It should be remembered that their domestic and social environment, together with a false and precocious idea of *individual liberty independence*, and the fact that a great deal of labor is made repulsive through the greed of many ignorant, and selfish bosses and manufacturers, tends to make our San Francisco youth look repellantly on what should be regarded by all as honorable toil.

In the founding of the Mechanic Art College at Berkeley, the special training of our youth was had in view, but how many students have graduated from either the Mechanic Arts College or the Agricultural College who are to be found *actively employed* either in mechanical or agricultural production.

However the intention of the State was all right, and the idea embodied may be made practical and of great benefit to our State, provided Technical Schools of Design and Mechanic Arts are generally founded *in cities* of a given population, and the proper legal course pursued by which the site, the building and maintainance of such Institutes would be provided for, so as to be for all time public Institutes which would attract to such city or cities, thousands on thousands of well-to-do people who are seeking such localities where their children could receive a practical training, fitting them to become respected and useful factors in the social compact of which it is the high privilege of each American to claim he is a soverign peer.

The writer does not look with favor on those charity institutes founded by individuals who have amassed great wealth. There are many reasons therefore, the principle one is that the State being the conservator of the well being of its members, then all institutes founded for the intellectual and matenial training and discipline of its youth or wards would result in a higher class of wealth producers, whose special training fitted them to develop and utilize other and still other fields of wealth which would bring a greater revenue and a more general prosperity as a result.

Now as all members of the State are supposed to be generally interested in that which tends to develop the wealth and resources of their State, for the reason that the benefit thereof becomes general and reciprocal, then each member of the social compact should be willing to bear his or her share of taxation to see the general prosperity become assured and transmit a legacy of independence to those who followed us.

It may be said that such institutes would cost considerable for their creation and maintainance. Well, would not their maintainance be a better investment of public funds than the appropriations which go to sustain jails and state prisons, and would not the graduates of the institutes suggested give better results for the money invested than the graduates from those latter colleges of crime.

The writer looks on this subject from a cold-blooded business standpoint as well as one of patriotism. He considers it a *good investment* not only for the public but one which every intelligent capitalist and property owner should consider.

The capitalist and manufacturer should know that the cultured and expert wealth producer is by all odds the most desirable and profitable worker in the end, and the property owner should also remember that the anarchist finds his fertile field for devilish mischief in the midst of unskilled ignorance, and boorish brutishness.

If there is any trueism, the capitalist and property owner should remember it is that "The Devil finds work for idle hands to do."

Feeling that I have already occupied much of your valuable space, I beg to suggest in conclusion, Mr. Editor, that this subject in all its bearings is too important to be ignored or overlooked. Its ramifications are too extensive and of such concern to the public weal that it is to be hoped that this journal will lend its broad reaching influence for the successful realization of the work here suggested. T. T.

GAS FOR HEATING.

As the cold weather is now upon us, it seems opportune for the consideration of the problem relating to the use of gas for the heating of apartments.

The obstacles and difficulties to be overcome are many, yet a surprising degree of success has been attained by some of the heaters already in the market, as independent fixtures; and where ordinary intelligence is brought to bear upon their proper use, they seem to give satisfaction. The small minority who cry out against them, will, in most cases continue their use, rather than return to the old system of coal, smoke, soot, dust and ashes.

Such stoves as are now manufactured, present a variety of designs, as well as great ingenuity in the devices for burning the vapor in such a manner as to obtain the most available heat from the least quantity of gas. It was found that a small gas stove which had been in use for some five years, that when the temperature out doors was 45° F., the stove, with a tube from a five foot burner, would raise the temperature of the room to 58°; by closing the holes on the side it was increased to 60°. By placing a sheet-iron cap over the central opening in the top of the stove, it would cause an increase of some 2 to 4 degrees, thus bringing the temperature to 63 or 64 degrees.

Near the stove above mentioned, stood another gas heater of a different pattern, which consumed about three-fourths of the quantity of gas used by the first heater, yet with the same outside temperature, that of the room would be raised to 68 or 70 degrees. These stoves were of ordinary form and set above the floor, leaving a space of a few inches to supply air for the flame. This stratum of cold air is the cause of many of the objections raised against the system.

Some manufacturers have endeavored to overcome this defect, and have succeeded to some extent; but considerable still remains to be done in this direction. It would be desirable in many cases, if architects, when preparing plans, would arrange for gas heaters. This could be done in many ways.

The heat utilized in gas stoves, commences about six inches above the floor, leaving a stratum of cold air in motion for supplying the flame. If a sinkage or well, lined with metal, could be arranged in the floor to a depth of from 12 to 15 inches, and provided with a fresh air pipe from the outside, also a gas pipe with fixtures ready for attachment to the stove, we could then set the stove into this receptacle and attach it to the gas pipe. The cold or fresh air supply will then come through the pipe from the outside, thereby avoiding the draft around the bottom of the stove. The heated air will be thrown out into the room at a lower point than is usual, thus warming the room in a more agreeable manner.

When the stove is not in use a cover could be fitted over the receptacle, which if provided with suitable openings would supply fresh air for ventilation without the annoyance from dust and flies.

With the use of gas it would not be necessary to build large fire places as required for coal, and a much better arrangement could be had by forming a niche or receptacle in the side wall where desired. From this receptacle low down, better, if even with the lower side of the floor timbers, and double line the sides and top with sheet iron, leaving an air space all round of about two to three inches. Bring the gas pipes in through the wall, and provide the burners. The burners should be set as low as possible, if possible at the height of the floor, in order to throw the direct heat of the flame out along the floor surface.

The double walls inclosing the air space saves all the waste heat at the back, warming the air, which may be conducted into the room.

January 6th, 1891.

PROPOSED AMENDMENTS TO THE LIEN LAWS OF THE STATE OF CALIFORNIA,

AS RECOMMENDED BY THE

Joint Committee from the following Associations:

S. F. CHAPTER OF ARCHITECTS, A. I. A.
BUILDERS' ASSOCIATION, MILL MEN'S ASSOCIATION,
BUILDERS' EXCHANGE, LUMBER DEALERS' EXCHANGE.
BUILDERS' PROTECTIVE ASSOCIATION OF OAKLAND.

Amending sections 1183, 1184 and 1187 of the Code of Civil Procedure of the State of California, as amended March 15th, 1887; and section 1195 of the said Code of Civil Procedure, as amended March 18th, 1885, relating to Liens of Mechanics and others.

The people of the State of California, represented in Senate and Assembly, do enact as follows:—

Section 1, section 1183, of the Code of Civil Procedure of the State of California is amended so as to read as follows:—

Sec. 1183. Mechanics, material-men, contractors, sub-contractors, artisans, architects, machinists, builders, miners, and all persons and laborers of every class preforming labor upon or furnishing materials to be used in the construction, alteration, addition to, or repair, either in whole or in part, of any building, wharf, bridge, ditch, flume, acqueduct, tunnel, fence, machinery, railroad, wagon road, or other structure, shall have a lien upon the property upon which they have bestowed labor, or furnished materials, for the value of such labor done and materials furnished, whether at the instance of the owner or of any other person acting by his authority, or under him, as contractor or otherwise; and any person who performs labor in any mining claim or claims has a lien upon the same, and the works owned and used by the owners for reducing the ores from such mining claim or claims, for the work or labor done, or materials furnished by each respectively, whether done or furnished at the instance of the owner of the building or other improvement, or his agent; and every contractor, sub-contractor, architect, builder, or other person having charge of any mining, or of the construction, alteration, addition to or repair, either in whole or in part of any building or other improvement as aforesaid, shall be held to be the agent of the owner, for the purposes of this chapter. In case of a contract for the work, between the reputed owner and his contractor, the lien shall extend to the entire contract price; and such contract shall operate as a lien in favor of all persons, except the contractor, to the extent of the whole contract price, and after all such liens are satisfied, then as a lien for any balance of the contract price in favor of the contractor. All such contracts shall be in writing when the amount agreed to be paid thereunder exceeds one thousand dollars, and shall be subscribed by the parties thereto, and the said contract or a memorandum thereof, setting forth the names of all the parties to the contract, a description of the property to be affected thereby, together with a statement of the general character of the work to be done, the total amount to be paid thereunder, and the amounts of all partial payments, together with the times when such payments shall be due and payable, shall, before the work is commenced, be filed in the office of the County Recorder

of the county, or city and county, where the property is situated, who shall receive one dollar for such filing; otherwise they shall be wholly void, and no recovery shall be had thereon by either party thereto; and in such case, the labor done and materials furnished by all persons aforesaid, except the contractor, shall be deemed to have been done and furnished at the personal instance of the owner, and they shall have a lien for the value thereof.

In case a memorandum shall be filed, as herein provided, the same before the filing thereof, shall be endorsed "Memorandum of Contract."

In all cities, cities and counties or incorporated towns, where there exist fire ordinances or municipal law regulating the construction of buildings, all such contracts and every memorandum thereof, before being filed, as herein provided, shall have endorsed thereon, a certificate, signed by the officer or person charged by the Board of Supervisors, City Council or other governing body of such city, city and county or incorporated town with the duty of enforcing said fire ordinance or laws, which said certificate shall state that the plans for the construction of said building, improvement, structure or work mentioned in said contract, fully comply with all the requirements of such fire ordicances or laws.

Said officer, or person giving such certificate, shall be entitled to charge therefor, the sum of $5; in all cases where the contract price mentioned in said contract amounts to $5,000 or less, and fifty cents additional for each $1,000 or fraction thereof in excess of $5,000.

Section II. Section 1184, of the Code of Civil Procedure, of the State of California, is amended so as to read as follows:—

Sec. 1184. No part of the contract price shall, by the terms of any contract, between the owner and his contractor, be made payable, nor shall the same, or any part thereof, be paid in advance of the commencement of the work; but the contract price shall, by the terms of the contract, be made payable in installments, at specified times, after the commencement of the work, or upon the completion of specified portions thereof; provided, that at least twenty-five per cent. of the whole contract price shall be made payable at least fifteen days after the final completion of the contract. No payment made prior to the time when the same is due under the terms and conditions of any such contract shall be valid for the purposes of defeating, diminishing, or discharging any lien in favor of any person except the contractor, but as to such liens, such payment shall be deemed as if not made, and shall be applicable to such liens, notwithstanding, that the contractor to whom it was paid may thereafter abandon his contract, or be or become indebted to the reputed owner in any amount, for damages or otherwise, for non-performance of his contract or otherwise. As to all liens, except that of the contractor, the whole contract price, whatever may be the amount thereof, shall be payable in money, and shall not be diminished by any prior or subsequent indebtedness, offset, or counter-claim in favor of the reputed owner and against the contractor. No alteration of any contract shall affect any lien acquired under the provisions of this chapter. In case any contract and the alteration thereof does not conform substantially to the provisions of this section, the labor done and materials furnished by all persons, except the contractor, shall be deemed to have been done and furnished at the personal instance and request of the person who contracted with the contractor, and they shall have a lien for the value thereof. Any of the persons mentioned in section eleven hundred and eighty-three, except the contractor, may, at any time, give to the reputed ower a written notice that they have performed labor or furnished materials, or both, to the contractor, or other person acting by authority of the reputed owner, or that they have agreed to do so, stating in general terms the kind of labor and materials, and the name of the person to or for whom the same was done or furnished, or both, and the amount in value, as near as may be, of that already done or furnished, or both, and of the whole agreed to be done or furnished, or both. Such notice may be given by delivering the same to the reputed owner personally, or by leaving it at his residence or place of business, with some person in charge: or by delivering it to his architects, or by leaving it at their residence or place of business, with some person in charge: or by posting it in a conspicuous place upon the mining claim, or improvement. No such notice shall be invalid by reason or any defect of form: provided it is sufficient to inform the reputed owner of the substantial matters herein provided for, or to put him upon inquiry as to such matters. Upon such notice being given, it shall be the duty of the person who contracted with the contractor, to, and he shall, with-hold from his contractor, or from any person acting under such reputed owner, and to whom by said notice the said labor or materials, or both have been furnished or agreed to be furnished, sufficient money due or that may become due to such contractor, or other person, to answer such claim and any lien that may be filed therefor, for record under this chapter, including counsel fees, not exceeding one hundred dollars in each case, besides reasonable costs provided for in this chapter.

Section III. Section 1187, of the Code of Civil Procedure, of the State of California, is amended so as to read as follows:—

Sec. 1187 Every original contractor, within sixty days after the completion of his contract, and every person, save the original contractor, claiming the benefit of this chapter, within ten days after the completion of any building, improvement or structure, or after the completion of the alteration, addition to, or repair thereof, or the performance of any labor in a mining claim, must file for record with the county recorder of the county in which such property or some part thereof, is situated, a claim containing a statement of his demand, after deducting all just credits and offsets, with the name of the owner or reputed owner, if known, and also the name of the person by whom he was employed or to whom he furnished the materials, with a statement of the terms, time given, and conditions of his contract, and also a description of the property to be charged with the lien, sufficient for identification, which claim must be verified by the oath of himself or of some other person. The occupation or use of any building, improvement or structure by the owner, his representative, or tenant, or the acceptance by said owner or his agent, of said building, improvement, or structure, shall be deemed conclusive evidence of completion; and cessation from labor for thirty days upon any unfinished building, improvement, or structure, or the alteration, addition to, or repair thereof, shall be deemed equivalent to a completion thereof for all the purposes of this chapter.

In case of completion being established by occupation, or use, or by the cessation of labor for a period of thirty days, as herein provided, all persons, save the original contractor, claiming the benefits of this chapter, may have thirty days from and after the date of such occupaiton or use, or from and after the expiration of thirty days immediately succeeding the cessation of labor, within which to file their claims of lien, as herein provided. And in each case, the owner or person who contracted with the contractor must withold the final payment of twenty-five per cent. of the contract price for thirty-five days after such occupation or use, or after such cessation of labor for a period of thirty days.

The completion of any building, improvement or structure or the completion of any alteration, addition to or repair thereof, or the performance of any labor in any mining claim shall, except when the same is established by the occupation or use thereof, or by the cessation of labor thereon, for a period of thirty days, be evidenced by a certificate of completion, which said cerfiticate shall be signed by the reputed owner, his architect or agent, and shall be filed for record in the County Recorder's office of said county or said city and county, where such property is situated, who shall receive fifty (50) cents for filing and recording the same, and until said certificate is so filed and recorded, said work shall be deemed not to have been completed.

The recorder of the county, or city and county, must record all certificates required by this section in a book kept by him for that purpose, which record must be indexed as deeds and other conveyances are required by law to be indexed.

Section IV. Section 1195, of the Code of Civil Procedure, of the State of California, is amended so as to read as follows:—

Sec. 1195. Any number of persons claiming liens may join in the same action, and when separate actions are commenced, the Court must consolidate them. The Court must also allow, as a part of the costs, the money paid for filing and recording the lien, and reasonable attorney's fees in the Superior and Supreme Courts, such costs and attorney's fees to be allowed to each lien claimant whose lien is established, whether he be plaintiff or defendant, or whether they all join in one action or separate actions are consolidated.

Section V. This act shall take effect and be in force immediately upon its passage.

THE POETRY OF ARCHITECTURE.

A paper read before the San Francisco Chapter of the American Institute of Architects, by Oliver Everett.

To begin my paper with a familiar quotation,

"Architecture is frozen music".

The quotation not only emphasizes the permanency of an architects creation, but, at the same time, warns him to be careful how he sends his work forth, for unfortunately the poor work, as well as the meritorious, is congealed, and the sweetest notes make discord, unless played to the requirements of harmony.

As the purposes of Architecture have varied from the defensive habitations required by the early races, to the devotional structures of Medieval times, and the psosaic and practical buildings of to-day, so have the various forms and expressions resulting therefrom varied, and it is an interesting study to trace this evolution of styles and its development of ideas, and to speculate on the changes yet to be wrought by our posterity.

In passing judgment on the works of the past, the first consideration should be to ascertain how perfectly or imperfectly the needs of the situation were met, and then we may sympathize with the satisfaction experienced by the architect upon the successful realization of his ideal. Unfortunately, however, every architect does not win the applause he considers himself to merit, for the question of individual taste enters largely into the verdict of the public, as well as that of the discriminating critic.

From the mists of antiquity comes the story of the unfortunate architect thrown into space by angry Jove; if this punishment was intended as a mark of professional disapprobation, he must have been guilty of something atrocious.

As this paper is only designed to obtain a few glimpses of architectural achievements from the point of view of the poet, and as the earlier architecture comes from the Orient, suppose we begin by this description of the dwellings of an Indian Prince, written by Sir Edwin Arnold.

The King commanded that there should be built
Three stately houses, one of hewn square beams
With cedar lining, warm for winter days;
One of veined marbles, cool for summer heat;
And one of burned bricks, with blue tiles bedecked,
Pleasant at seed-time, when the champaks bud—
Subha, Suramma, Ramma, were their names.
Delicious gardens round about them bloomed,
Streams wandered wild and musky thickets stretched,
With many a bright pavilion and fair lawn.
* * * * *

and still again as follows:

Stately and beautiful he bade them build, love's prison house,
So that in all the earth no marvel was
Like Vishramvan, the Prince's pleasure-place.
Midway in those wide palace-grounds there rose
A verdant hill whose base Rohini bathed
Murmuring adown from Himalaye's broad feet,
To bear its tribute to Gunga's waves
* * * Fronting this
The builders set the bright pavilion up,
Fair-planted on the terraced hill, with towers
On either flank and pillared cloisters round.
Its beams were carved with stories of old time.
* * * * *
By winding ways of garden and of court
The inner gate was reached, of marble wrought,
White, with pink veins; the lintel lazuli,
The threshold alabaster, and the doors
Sandal wood, cut in pictured panelling;
Whereby to lofty halls and shadowy bowers
Passed the delighted foot, on stately stairs,
Through latticed galleries, 'neath painted roofs
And clustering columns, * * *
But innermost,
Beyond the richness of those hundred halls,
A secret chamber lurked, where skill had spent
All lovely fantasies to lull the mind:
The entrance of it was a cloistered square—
Roofed by the sky, and in the midst a tank
Of milky marble built, and laid with slabs
Of milk white marble; bordered round the tank
And on the steps, and all along the frieze
With tender inlaid work of agate-stones.
Cool as to tread in summer-time on snows
It was to loiter there; sunbeams dropped
Their gold, and, passing into porch and niche,
Softened to shadows, silvery, pale and dim,
As if the very Day paused and grew Eve
In love and silence at that bower's gate;
For there beyond the gate the chamber was,
Beautiful, sweet; a wonder of the world!
Soft light from perfumed lamps through windows fell
Of nakre and stained stars of lucent film,
On golden cloths outspread, and silken beds,
And heavy splendor of the purdah's fringe,
Lifted to take only the loveliest in.
Here, whether it was night or day none knew,
For always streamed that softened light, more bright
Than sunrise, but as tender as the eve's.
* * * * *
And around, the King bade build
A massive wall, and in the wall a gate
With brazen folding doors, which but to roll
Back on their hinges, asked a hundred arms;
And inside this another gate he made,
And yet within another—through the three
Must one pass if he quit that pleasure-house.

Next listen to this description of Milton's in Paradise Lost, of a structure reared by fallen angels:

Anon out of the earth a fabric huge
Rose, like an exhalation, with the sound
Of dulcet symphonies and voices sweet,
Built like a temple, where pilasters round
Were set, and Doric pillars overlaid
With golden architrave; nor did there want
Cornice or frieze with bossy sculptures grav'n;
The roof was fretted gold. Not Babylon,
Nor great Alcairo, such magnificence
Equalled in all their glories, to inshrine
Belus or Serapis their Gods, or seat
Their kings, when Egypt with Assyria strove
In wealth and luxury. Th' ascending pile
Stood, fixt her stately hight, and straight the doors,
Op'ning their brazen folds, discover, wide
Within, her ample spaces, o'er the smooth
And level pavement: from the arched roof,
Pendent by subtle magic, many a row
Of starry lamps and blazing cressets, fed
With naphtha and asphaltus, yielded light
As from a sky. The hasty multitude
Admiring entered, and the work some praise,
And some the Architect: his hand was known
In heaven by many a towered structure high,
Where scepter'd angels held their residence,
And sat as princes; whom the supreme King
Exalted to such power, and gave to rule,
Each in his hierarchy, the orders bright.
Nor was his name unheard or unador'd
In ancient Greece; and in Ausonian land
Men called him Mulciber, and how he fell
From heav'n they fabled, thrown by angry Jove
Sheer o'er the crystal battlements; from morn
To noon he fell, from noon to dewy eve,
A summer's day; and with the setting sun
Dropt from the zenith like a falling star,
On Lemnos th' Ægean isle.

The following is a description by Sir Walter Scott of a rustic retreat in the highlands of Scotland. How different are the methods and materials employed, from those described in the preceding passages.

Here, for retreat in dangerous hour,
Some chief had framed a rustic bower.
It was a lodge of ample size,
But strange of structure and device;
Of such materials as around
The workman's hand had readiest found.
Lopped of their boughs, their hoar trunks bared,
And by the hatchet rudely squared,
To give the walls their destined height,
The sturdy oak and ash unite;
While moss and clay, and leaves combined
To fence each crevice from the wind.
The lighter pine-trees overhead,
Their slender length for rafters spread.
And withered heath and rushes dry
Supplied a russet canopy.
Due westward fronting on the green,
A rural portico was seen,
Aloft on native pillars borne,
Of mountain fir with bark unshorn,
Where Ellen's hand had taught to twine
The ivy and Idean vine.

The following passage from "Marmion" is descriptive of an ancient Saxon monastery as seen from the sea:

As to the port the galley flew,
Higher and higher rose to view
The Castle, with its battled walls,
The ancient monastery's halls,
A solemn, huge, and dark-red pile,
Placed on the margin of the Isle.

In Saxon strength the Abbey frowned,
With massive arches broad and round,
That rose alternate, row and row
On ponderous columns, short and low
Built ere the art was known,
By pointed aisle, and shafted stalk,
The arcades of an alley'd walk,
To emulate in stone.
On the deep walls, the heathen Dane,
Had poured his impious rage in vain;
And needful was such strength to these,
Exposed to the tempestuous seas,
Scourged by the wind's eternal sway,
Open to rovers fierce as they,
Which could twelve hundred years withstand
Winds, waves, and northern pirates' hand.
Not but that portion of the pile,
Rebuilded in a later style,
Showed where the spoiler's hand had been
Not but the wasting sea-breeze keen,
Had worn the pillars carving quaint,
And mouldered in his niche the saint,
And rounded, with consuming power,
The pointed angles of each tower:
Yet still entire the Abbey stood,
Like veteran, worn, but unsubdued.

[TO BE CONTINUED.]

PERSPECTIVE VIEW.

The AMERICAN MACHINIST, N. Y., for December 4th, contains an article on strains on pin and eye for pull rod joints, also one on force, motion and work. Both articles are interesting to those who wish to study constructive details.

The AMERICAN ARTISAN, TINNER and HOUSE FURNISHER, Chicago, for December 13th, has a chapter on the tying of knots, making splices and loops of the most intricate kind. The article is profusely illustrated and should be in the hands of every person in any way interested in making scaffolding, or rigging hoisting apparatus for building operations.

The ENGINEERING RECORD, of December 6, has an illustrated article describing the plumbing for the water supply in the new U. S. war and navy buildings, Washington, D. C., also a description, illustrated, of the steam heating in the Plaza Hotel, N. Y.

PRACTICAL GRAINING is the title of a New Book written by William E. Hall, and published by the House Painting and Decorating Publishing Co., Philadelphia.

There are some sixty pages of text descriptive of the various materials and processes used by the grainer to imitate natural woods, and the different kinds of brushes, combs, stipples, and other implements, and the methods of manipulating them.

The book is 6x9 inches, profusely illustrated, showing the different stages of the work, with more than forty beautiful colored lithographic plates of the different woods both usual and rare, that the grainer may be called on to imitate.

The book is fully indexed, and deserves to become a standard book of reference on the subject it treats.

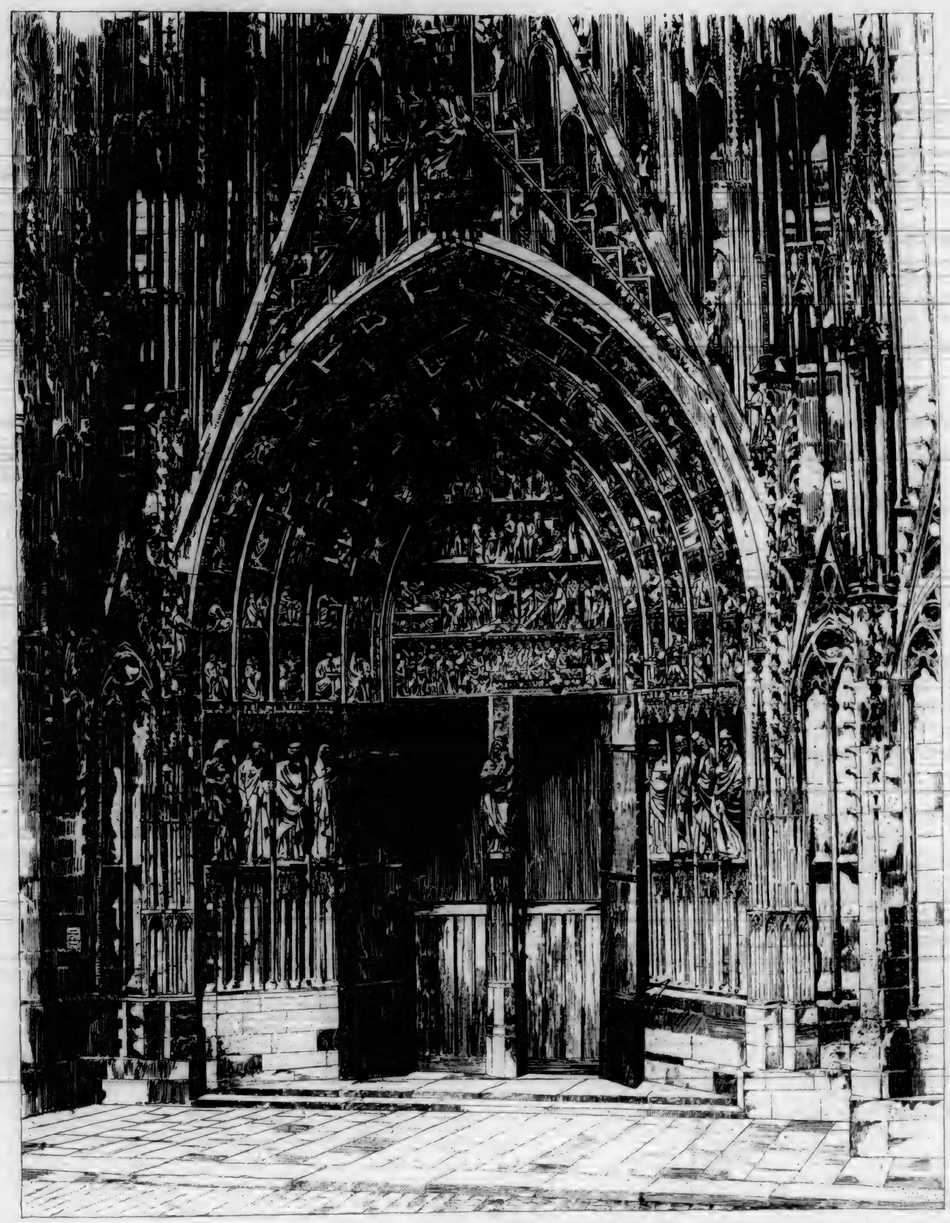
RESIDENCE OF Dr. C. D. SALFIELD N.E. CORNER PAGE & SCHRADER STREETS SAN FRANCISCO CALIFORNIA SAMUEL NEWSOM ARCHITECT 415 SIB PHELAN BLOCK SAN FRANCISCO CALIFORNIA.

PLATE No1.

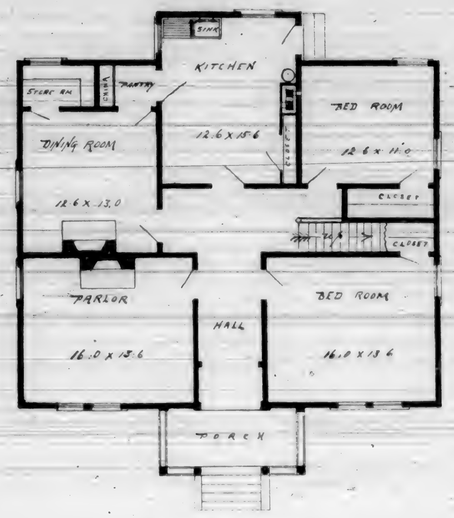


ENTRANCE TO CATHEDRAL OF CHARTRES.

Drawn by S.C. Benson.

PLATE No3.

SUBSCRIBERS will please notify us *promptly* of any failure to receive the paper, and also of any change in their address.



PLAN OF MAIN STORY.

The management of this journal desires to extend a cordial invitation to all architects on this Coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

Plate No. 1 is a design for a residence for Dr. C. D. Salfield, Samuel Newsom, architect.

Plate No. 2 is a design for a Jail at Santa Rosa, Cal., in course of erection, John M. Curtis, architect.

Plate No. 3.—Entrance to Cathedral Chartres, from a pen drawing by S. C. Benson.

The design for a one and a half story cottage was prepared for this Journal. Several bed rooms and store rooms are arranged in the attic story.

THE subscription price of this Journal is $3.00 per annum, and single numbers 30 cents each.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

JUDGMENT IN REPUTED NAME.—Where a man is known by two names, and both are generally used to designate him, a judgment against him under either name is valid, without respect to which is actually his true name.

Isaacs v. Mintz, Supreme Court of New York, 11 N. Y. Supp. 422.

MECHANICS' LIEN FOR UNAUTHORIZED IMPROVEMENT.—The mechanics' lien law makes ample provision for the protection of property from encumbrance by lien for unauthorized improvements, and the establishment of a lien, by a material man, on both the land and building, cannot be barred by the defense that the building was erected by tenants under an agreement that it could be removed by them at the end of the term, unless notice of such agreement was brought home to the lienor before his contract was completed.

West Coast Lumber Co. v. Apfield, Supreme Court of California, 24 Pac. Rep. 993.

CONTRACT BY IMPLICATION.—Where it appears that a person requests prices on goods from another, and where the quotations are furnished asks how soon he could have them delivered, and upon being informed that he could have them right away responds "all right," it is a question for a jury to determine from all the facts, whether or not a contract for the goods was actually entered into, and the finding of a jury that these negotiations constitute a contract is not repugnant to law, and an appeal will be sustained.

Barwick v. Gast Lith. & Eng. Co., Supreme Court of New York, 11 N. Y. Supp. 373.

LIENS IN FAVOR OF CORPORATIONS—ERRONEOUS IN CLAIM.—Where the mechanics' lien statute gives a lien to persons but not to corporations, the benefit of its provisions will nevertheless be extended to commercial corporations furnishing materials or labor; where the statute provides that the statement for lien must show the amount of the demand, less all just credits and offsets, a statement of an amount slightly in excess of the amount proved will not invalidate the lien, if the overcharge appears to have resulted from inadvertence and not through attempt to fraud.

Gaskell v. Beard, Supreme Court of New York, 11 N. Y. Supp. 399.

DAMAGES FOR FAILURE TO DELIVER LUMBER.—Where a contractor for a building enters into a contract with a lumber dealer for the delivery of lumber at a certain time and the lumber is not delivered at the time agreed upon, the contractor is only entitled to recover the difference between the price agreed upon and the price he was obliged to pay for lumber to take its place, but he cannot recover damages resulting from delay of the building unless he shows that he could not obtain lumber elsewhere and that such damages were within the contemplation of the parties.

Eagle Manufacturing Co. v. Andrew, Supreme Court of New York, 11 N. Y. Supp. 334.

MECHANICS' LIEN FOR UNAUTHORIZED IMPROVEMENT OF PROPERTY IN CHANCERY.—Where the guardian of minor children without any authority from the court reconstructs an old and practically valueless building so as to make it productive of an income, those who furnished material for such improvement, though not entitled to a lien under the statute, will as a matter of equity be reimbursed out of the fund which arises from the difference between the rental value of the property before and after the improvement.

Bent v. Barnett, Court of Appeals of Kentucky, 14 S. W. Rep. 596.

DEVIATION FROM SPECIFICATIONS BY CONTRACTOR.—Where the terms of a written building contract provide that the drawings and specifications of the architect are a part of the contract, it is a material and substantial defect in the performance of the contract for the builder, without permission from either the owner or the architect, to construct the rear part of the house five inches lower than the height called for by the specifications, and this is such a failure as will prevent recovery on the contract.

Oberlies v. Bulinger, Supreme Court of New York, 11 N. Y. Supp. 264.

Notes & Comments.

A Mausoleum or Tomb is dead property.—Davisson.

Paper is now made so strong and tough as to be used as a substitute for oil-cloth or lineoleum. The surface is covered with a resisting and ornamental surface the same as oil-cloth.

The death rate among the Indians who aim to live like white people is three times that of those who continue to live a semi-wild life. The Pawnee tribe has lost more men by lung troubles in the last ten years than they lost in battle during the previous thirty.

It is to be hoped that the recommendation of Supervising Architect Windrim, (concurred in by Mr. Windom) that the competitive system of obtaining designs for our public buildings be given a trial, will soon be carried into effect.

The water passing over Niagara Falls is estimated at 270,000 cubic feet per second; consquently the 10,000 cubic feet per second to be utilized by the power canal and tunnel now building would have no perceptible effect on the Falls.

Hard burned bricks reduced to a fine powder, or the finely sifted brick dust from the kilns when mixed with the common lime and sand mortar may be used as a fair substitute for cement in localities where cement is not easily obtained.

"Should 'Owld' acquaintance be forgot?" is an appropriate inscription which appears upon a new card-receiver of silver gilt, immediately above an engraved gamut, the whole being surmounted by two wise-looking owls.—Jewelers' Review.

"This is the Turkish bath-room," said Mr. Cox, as he came to the apartment: "I always made up my mind to introduce one when I built a house of my own."

"But where's the water?" asked the visitor.

"Water? Why, this is a *real* Turkish bath-room! The Turks never bathe, you know!"—Ex.

Tom—"We've got a bay window in our house." Bessie—"So have we. And a balcony." Tom—"Pooh! That's nothing. We have two bathrooms." Bessie—"So have we." Tom—"We've got something you folks haven't. I heard papa tell mamma about it last night." Bessie—"I'll bet we've got some of 'em too. What is it?" Tom—"A defective flue."—Ex.

King Solomon's Temple was begun in the year B. C. 1012, finished in B. C. 1005, and it is thought the Queen of Sheba went to Jerusalem to see King Solomon in the year B. C. 993, twelve years after the dedication of the temple. Concerning this visit "the half has not been told."

We learn from the *Seattle Press* that the School Board of Seattle has resolved to establish a training school in connection with the High School of that city. The basement of the present building is to be fitted for a workshop and supplied with materials, tools, etc. This is intended only as a beginning, to prepare the way to a more extended system.

We are pleased to see that the experiment of the Illinois Chapter, A. I. A., in taking charge of and conducting the Institute of Building Arts, bids fair to be a success. According to the report presented to the Chapter at its annual meeting, the institute has an assured income large enough to more than meet its expenses for the year, and the Chapter hopes, besides making of it a financial success, to have it represent fully the architectural engineering and building branches of science and art.

The Quebec and Ontario Associations of Architects have recommended all members of the two societies to refrain from competing for the Montreal Board of Trade.

They object to the terms of the competition for two reasons, the first being that Canadian architects are discriminated against, in favor of architects resident in the United States; the second, that the amount appropriated for the erection of the building is insufficient.

The Board of Trade refuse to alter the programme.

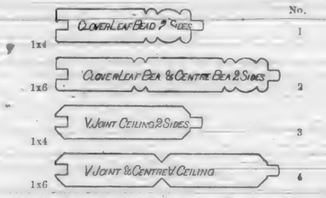
The new hotel to be built at the corner of Fifth avenue and Fifty-ninth street, New York, is to be seventeen stories, or 225 feet high. There is one comfort which the guest assigned to a room on the sixteenth story will have, and that is that the laundry, the starting place of so many a fire, will be above him on the top floor, and not at the bottom of the pile. A contemporary is worrying itself because there are to be no external fire escapes upon the building, but really when it came to a descent of 200 odd feet of iron ladders, we fear that these would hardly prove of great service to the average hotel guest; a big good parachute would seem better adapted to his needs.—Fire and Water.

The bill regulating the sale of paints, white lead, colors, linseed oil, etc. drafted by our contemporary, *Painting and Decorating* of Philadelphia, was on December 5th introduced into the House of Representatives by the Hon. H. H. Bingham and after being read twice was referred to the Committee on Ways & Means and ordered to be printed.

The bill provides that any person who shall sell or offer for sale any package of paint or linseed oil bearing a label which falsely describes its contents shall be guilty of a misdemeanor, punishable by fine and imprisonment. The Hon. A. C. Harmer has the bill in charge and will endeavor to push it to a successful conclusion.

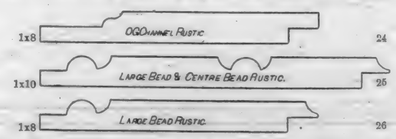
BUSINESS MOSAICS.

Old style plain tongued and grooved, narrow boarding for wainscoting, partitions etc., has become such common materials that boards 4 to 6 inches wide may be had wherever lumber is sold. We are pleased to note that the Excelsior Red-wood Co., C. A. Hooper & Co., have recently made an entirely new departure. Some patterns are kept in stock; others are worked to order.



The clover leaf bead No. 1 and No. 2 worked both sides are carried in stock also, the V bead No. 3 and No. 4, worked one or both sides.

The corrugated bead Nos. 16 and 17, worked both sides for partitions, are run to order at $3.50 per M. more than clover leaf bead, when only one side is worked $2.50 additional.



Outside sheathing, rustic, 8 and 10 inches in width, worked in special patterns as shown in cuts, No. 24, 25 and 26, at same price as regular rustic.—See advertisement for prices.

The California Sash Balance Company appear to be sweeping out all the old appliances for raising and lowering windows with the least possible exertion, and at the same time locking either the upper or lower casement in any position desired. Some of the most prominent buildings in course of erection have been planned with a view to use this appliance. Inventors who may be experimenting on casements that can be opened for cleaning, should examine this sash balance, there being no cords or weights to interfere. Wherever two or more windows are placed side by side, the space between the windows can be reduced to a minimum on account of the absence of weights in the piers. When this article becomes better known, we will be making our book-cases, closets, etc., with the doors to slide up and down in place of their swinging out into the room as is done at present.

Interested parties should inquire into this matter.

Red-wood Veneers, as prepared by the California Veneer Works, are rapidly taking presidence over other veneer work for furniture and ornamental use.—The beautiful effects of the curley and mottled red-wood is not surpassed by any of the tropical woods, while the practical advantages of this material are many. The nature of red-wood is to hold, when glued, with a tenacity unequaled by other woods, and its freedom from shrinkage makes it durable and valuable wood for the cabinet maker. When Eastern manufacturers of artistic and high quality furniture, become better acquainted with the superior quality of California red-wood, and especially such as is selected and turned out by this company, we may expect to see this excellent material in every important decoration where wood is used for decorative affect.

The engraving herewith is a representation of the exterior finish of the office of the company. The effect is more surprising when we view the Log Cabin of 200 years ago—with the beautifully polished red-wood of the interior finish, as used at the present time.

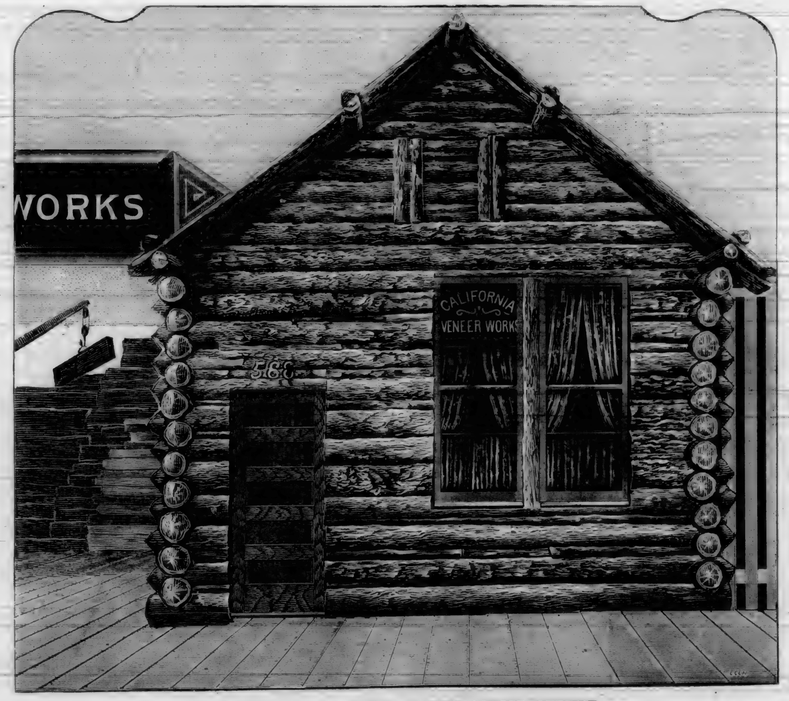
Silver Gray Effects.

The church of The Holy Innocents on Fair Oak street near twenty-seventh, of which we present an illustration, is covered with shingles from the roof to the ground. These are colored with "Cabot's" silver gray, giving a true effect of weathered shingles. It is a well known fact, that neither redwood nor cedar shingles weather to a satisfactory color in this climate, probably on account of the heavy dews and consequent continual dampness of parts of the exterior, that are not directly reached by the sun's rays; however, we wish to call the attention of architects and owners, who are interested in silver gray effects to this church as a sample, and also state that this color is carried in stock in San Francisco, as well as a large variety of the other shades of Cabot's creosote wood preserving stains.

"I have a little ornamental work I should like to submit," said the Carved Design to the Corinthian Temple.

"Thanks," replied the Temple, "but the pressure upon our Columns is so great that we shall have to Decline your Offer."

The scepter of fashion has cast its shadow over the floor areas, and carpets with all their accumulation of filth are being swept out into the dust bins. Paint ascerted its right to the vacant position which was upon investigation declined. The Grand Visier was dispatched at once to the Pacific Paper Roll Company's office for a supply of the ornamental paper floor covering, as furnished by them, and used on all floors when a beautiful and healthful covering is required.



THE CALIFORNIA VENEER WORKS' OFFICE OUTSIDE.

Gas stoves for heating, made in endless variety of patterns can be seen at the show-rooms of the San Francisco Gas Co., cor. of First and Natoma streets. Ornamental grates with imitation log or coal fires and asbestos linings, showing flames sporting like sprites among the rocks and mosses of a cave, and all protected by wire screen from the danger of fire to children's clothing. Open fire moveable stoves from plain to elaborate tile decoration can be seen in operation; also close heaters where the scientific inventor has endeavored to obtain all the heat possible from the least quantity of gas. Cooking stoves and ranges manufactured on the latest improved models, which have given such universal satisfaction wherever used can be obtained at their rooms.

A Grand Bronze Medal was awarded by the 25th Industrial Exhibition of the Mechanic's Institute on the Schenck Swinging Hose Rell. This Reel is one of the most ingenious and perfect of recent inventions, and is made with a special view to simplicity of construction, safety, durability, reliability, and a perfect utilization of the water pressure. The architects appreciate their superiority for inside fire protection, and have specified them in nearly every prominent building now being erected in this city. W. T. Y. Schenck, 222 & 224 Market st. is the inventor and manufacturer.

CITY BUILDING NEWS.

Bay near Powell. Carpenter work; owner, John Farnham; architect, R. H. Daley, contractor, Lancaster & Nelson; cost, $1,401; signed, Dec. 8; filed, Dec. 16; payments, $625, framed; $525, framed, $525, completed; $350, 35 days.

Buchanan and Post. Carpenter work, etc; owners, Emma Voil & Husband; architect, Townsend & Wyneken; contractor, Jas. R. Whalen; sureties, O. H. Greenwald & L. Levi, $2,500; cost, $8,800; signed, Dec. 27; filed, Dec. 29; payments, $1,800 framed; $5,000, accepted; balance, 35 days.

Clay near Broderick. Carpenter work, etc; owner, Geo. E. Ames; architect, W. J. Mathews; contractor, Cuneamon & Shay; cost, $6 658; signed, Dec. 8; filed, Dec. 9; payments, $997, 1-5 completed; $997, 2-5 completed; $997, 3-5 completed; $997, 4-5 completed; $1,665, 35 days.

Cor. Bryant and Rincon Place. Heating system; owner, Sisters of Mercy; architect, Chas. J. Devlin; contractor, J. J. Lawton & Jas. E. Britt; sureties, Jas. W. O'Brien & E. W. Fritz; $1,000; cost, $1,358; signed, Dec. 10; filed, Dec. 12; payments, 75 per cent. as work progresses; 25 per cent., 5 days.

Cor. Bryant and Rincon Place. Painting; owners, Sisters of Mercy; architect, Chas. J. Devlin; contractor, Bernard Bradley; cost, $1695; signed, Dec. 11; filed, Dec. 12; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Bryant and Rincon Place. Tinning & galvanized iron work; owners, Sisters of Mercy; architect, Chas. J. Devlin; contractor, Conlin & Roberts; cost, $1,995; signed, Dec. 5; filed, Dec. 12; payments, 75 per cent. as work progresses; 25 per cent. 35 days.

Cor. Bryant and Rincon Place. Plumbing; owners, Sisters of Mercy; architect, Chas. J. Devlin; contractor, Thos. Clark & Sons; sureties, Jas. B. Stetson & G. P. Ayer, 3,000; cost, $3,688; signed, Dec. 5; filed, Dec. 12; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Bryant and Rincon Place. Artificial stone work; owners, Sisters of Mercy; architect, Chas. J. Devlin; contractor, Geo. Goodman; cost, $1,087; signed; Dec. 5; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Bryant and Rincon Place. Plastering; owners, Sisters of Mercy; architect, Chas. J. Devlin; contractor, P. B. Downing; surety, R. Tierman, $2,000; cost, $3,035; signed, Dec. 5; filed, Dec. 13; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Bryant and Rincon Place. Tinning and galvanized iron work; owners, Sisters of Mercy; architect, Chas. J. Devlin; contractors, Conlin & Roberts; cost, $2,128; signed, Dec. 5; filed, Dec. 13; payments, 75 per cent. as work progresses; 25 per cent, 35 days.

Cor. Front and Pacific. Wrought iron work; owner, Jas. G. Fair; architect, Henry A. Schulze; contractors, Western Iron Works; cost, $5,-55; signed, Dec. 17; filed, Dec. 30; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Front and Pacific. Painting; owner, Jas. G. Fair; architect, Henry H. Schulze; contractor, Geo. J. Smith; cost, $2,371; signed, Dec. 17; filed, Dec. 30; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Market and City Hall Ave. Plastering; owner, H. J. Techau; architect, H. J. Techau; contractor, M. O'Hare; cost, $1,450; signed, Dec. 3; filed, Dec. 4; payments, $653.75, lathed and brown mortared; $653.75 completed; $862.50, 35 days.

Cor. Mission and 9th. Four-story frame; owner, P. J. McGovern; architect, Townsend & Wyneken; contractor, T. McGovern; cost, $16,000; signed, Dec. 1; filed, Dec. 4; payments, $1,000, framed; $4,000, first mortar on; $4,000, second coat mortar on; $4,000, 35 days.

Cor. O'Farrell and Elwood. Alterations; owner, Alex. McCloud, architect, M. J. Welsh; contractor, Jas. McConahey; cost, $2,180; signed, Nov. 12; filed, Dec. 2; payments, $410, house is raised; $410, enclosed; $410, brown mortared; $405, completed; $545, 35 days.

Cor. Post, Market and Montgomery. Plumbing and gas fitting; owner, Crocker Estate Co.; architect; A. Page Brown; contractors, Duff. Bros.; cost $57,000; signed, Dec. 13; filed, Dec. 20; payments, first day of each month as work progresses; 75 per cent of work done; balance, 35 days.

Cor. Post, Market and Montgomery. Passenger and freight elevators; owner, Crocker Estate Co.; architect, A. Page Brown; contractor, Otis Bros. & Co.; cost, $24,000; signed, Oct.; 9 filed, Dec. 20; payments, ½ on receipt of machinery at Building; balance, 35 days.

Cor. Pine and St. Mary's St. Alterations; owners, T. Emden & L. Raverat; architect, Emile Depierre; Contractor, T. R. Whelan; surety, $350; signed, Dec. 13; filed, Dec. 13; payments, $500, brick work completed; $500, completed; $400, 35 days.

Cor. Pine & Jones. Plumbing, etc; owner R. M. Murray; architect, J. C. Newsom; contractor, R. Rice; cost, $4,750; signed, Dec.; filed, Dec. 8; payments, $1,781.25, rough work in, $1,781.25, completed; $1,187.50, 35 days.

Cor. Pone & Jones. Plastering; owner, R. M. Murray; architect, J. C. Newsom; contractor, Thos. Maunix; cost, $3,950; signed, Nov. 13; filed, Dec. 8; payments, $560, lathed; $1,200, brown coated; $1,262.50, completed; $987.50, 35 days.

Cor Pine and Jones. Brick and tile work; owner, Irvin C. Stump; architect, J. C. Newsom; contractors, Bush & Mallet; cost, $-,200; signed, Dec. 5; filed, Dec. 18; payments, $1,650, when contract is fulfilled; $550, 35 days.

Cor. Treat Ave. and Twenty-fifth. Carpenter-work; owner, J. C. Jens and wife; architect, W. C. Dickerson; contractor, J. C. Weir; cost, $8,800; signed, Dec. 18; filed, Dec. 19; payments, $500, foundation up; $1,500, framed; $1,000, roof tinned; $1,000, partitions set; $1,400, white coated; last payment not made if owner does the painting.

Duncan near Church. One-story and rough basement; owner, Edward Fennell; contractor, Michael Lottus; cost, $1,500; signed, Dec. 31; filed, Dec. 31; payments $500, framed; $625, completed; $375, 35 days.

Folsom near Twentieth. Two-story frame; owner, Jas. Quinn and wife; architect, Chas. J. Devlin; contractor, M. J. Gorman; sureties J. Mahoney and B. Joost, $1,000; cost, $3,890 payments, $300, framed; $650, enclosed; $450, first coat of plaster on; $800, plastered; $700, wood work is done; $715, completed; $975, 35 days.

Folsom near Twentieth. One-story and basement; owner, F. H. Classen; architect, B. A. Brown contractor, J. W. Magder; cost, $3,000; signed, Dec. 1; filed, Dec. 1; payments, $562.50, framed; $562.50, brown coated; $562.50, white coated; $562.50, completed; $750, 35 days.

Fourteenth near Castro. Two-story frame; owner, Mrs. Bertha Munger; architect, J. C. Newsom; contractor, H. Jacks; cost, $3,600; signed, Dec. 30; filed, Jan. 3; payments, $900, framed; $900, brown mortared; $900, completed; $900, 35 days.

Fulton near Polk. Four-story frame; owner, Henry Geilfuss; architect, Henry Geilfuss; contractor, Jos. Bucher; cost, $7,445; signed, Dec. 29; filed, Dec. 30; payments, $1,395, framed; $1,395, enclosed; $1,395, inside finish on; $1,395, completed; $1,885, 35 days.

Golden Gate Park. Bridge cement work; owner, Park Commissioners; architects, Percy & Hamilton; contractors, Ransome & Cushing; cost, $8,500; signed, Dec. 3; filed, Dec. 9; payments, 75 per cent., as work progresses; 25 per cent., 35 days.

Greenwich near Taylor. Three-story frame; owner, John L. Williams; architect, Chas. M. Ronsseau; contractor, H. C. Gardner; sureties, Blyth & Trott, $2,000; cost, $4,750; signed, Dec. 9; filed, Dec. 10; payments, $890, framed; $890, brown coated; $890, white coated; $890, completed; $1,190, 35 days.

Haight near Devisadero. Carpenter work, etc.; owner, Margaret Greene; architects, R. H. and R. White; contractors, White Bros.; surety, F. Joost, $5,000; cost, $6,924; signed, Dec. 4; filed, Dec. 9; payments, $1,000, framed, $1,375, ready for brown mortar; $1,400, standing finish done; $1,414, completed; $1,735, 35 days.

Hermann near Webster. Carpenter work, etc.; owner, John T. Cosgrove; architect, A. J. Barnett; contractor, A. J. Ahern; cost, $8,200; signed, Dec. 31; filed, Jan. 3; payments, $800, roof boards on; $800, brown coated; $800, completed; $800, 35 days.

Hickory Ave. near Van Ness Ave. One-story frame; owner, Frank Brooke; contractor, Wm. Pluns; cost, $875; signed, Nov. 29; filed, Dec. 1; payments, $875, completed and accepted by the owner.

Howard near Eighteenth. Mill work; owner, P. R. Sanchez; contractors, Miller & Co.; cost, $1,465; signed, Dec. 2; filed, Dec. 2; payments, 35 days after completion.

I st. and Seventh Ave. Hand Ball Court, bulkheads, etc.; owner, Olympic Club; contractors, White Bros.; surety, F. Joost; cost, $4,067; signed, Dec. 29; filed, Dec. 29; payments, 75 per cent., as work progresses; 25 per cent., 35 days.

Kansas near Yolo. One-story frame; owner, Regina Thorne; architect, A. Martin; contractor, A. Martin; cost, $1,590; signed, Dec. 16; filed, Dec. 16; payments, ¼, framed; ¼, mortar on; ¼, completed; $2,000, 35 days.

Market near Sixth. Shelving, store fixtures, etc.; owners, Summerfield & Roman; architects, Jordan & Lyon; contractor, J. S. Sanders; cost, $1,100; signed, Dec. 12; filed, Dec. 15; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Minna near Julia. Carpenter work; owner, Jas. Fitzgerald and wife; architect, Bryan J. Church; contractor, Timothy Sullivan; cost, $6,250; signed, Dec. 8; filed, Dec. 8; payments, $1,050, framed; $1,250, brown mortared; $1,200, white coated; $1,200, completed; $1,000, 35 days.

Mission near Eugenia. Alterations and additions; owner, Philomene Soiselle; contractor, H. L. Joslin; Sureties, J. S. Kruse and F. Joost, $4,000; cost, $4,085; signed, Dec. 1; filed, Dec. 1; payments, $1,020, framed; $1,020, brown mortared; $1,022.50 completed; $1,022, 35 days.

Noe near Eighteenth. Carpenter work, etc.; owner, F. D. Davidson; architects, Gould and Colley; contractor, Wm. McPhee; cost, $2,730; signed, Dec. 3; filed, Dec. 10; payments, $682.50, framed; $682.50, brown coated; $682.50, completed; $682.50, 35 days.

Noe near Fourteenth. One-story frame; owners, German Ben. Society; architect, H. Geilfuss; contractor, Jos. Bucher; cost, $1,059; signed, Dec. 23; filed, Dec. 24; payments, $397, brown mortared; $397, completed; $265, 35 days.

No. 923 Washington st. Carpenter work, etc.; owner, Lucy A. Armstrong; contractor, C. H. Norton; cost, $2,675; signed, Dec 1; filed, Dec. 6; payments, $450, grading done; $350, south walls built; $350, brick work finished; $250, brown mortared; balance, 35 days.

No. 155 Natoma st. Two-story brick building; owner, L. D Frichette; architect, M. P. Shetzel; contractor, D. H. Schriefer; cost, $4,275; signed, Dec. 22; filed, Dec. 22; payments, first and fifteenth day of each month.

No. 155 Natoma. Brick work and repairs for rear house; owner, L. D. Frichetti; architect, M. P. Schetzel; contractor, J. O. Sullivan; cost, $1,125; signed, Dec. 22 filed, Dec. 26; payments, first and fifteenth day of each month.

No. 1717 Van Ness Ave. Alterations; owner, O. H. Greenwald; architect, P. R. Schmidt; contractor, J. H. Wilson; cost, $2,000; signed, Dec. 23; filed, Dec. 29; payments, 75 per cent, as work progresses; 25 per cent, 35 days.

O'Farrell near Powell. Alterations; owner, B. F. Bachman; architect, Huerne & Everett; contractor, F. L. Hansen; surety, B. Joost; cost $2,200; signed, Dec. 18; filed Dec. 19; payments, $550, brown mortared; $1,100 completed; $550, 35 days.

Pacific Ave near Van Ness Ave. Mill work; owners, Patterson & Ackerson; architect, Julius Craft; contractor, A. Kendall; cost, $2,800; signed, Nov. 29; filed, Jan. 2; payments, $400, framed; $475 enclosed; $475, brown coated; $475, plastered; $475, completed; $500, 35 days.

Post near Lyon. Carpenter work, etc; owner, Owen Mulholland; architect, T. J. Welsh; contractor, J. W. Smith, cost $2,100; signed, Dec. 6; filed, Dec. 10; payments, $750, ready for plastering; $825, completed; $525, 35 days.

San Jose Road near 24th. Plumbing and gas fitting for 9 flats; owner, E. C. Worden; architect, Salfield & Kohlberg; contractor, John G. Gallagher; cost, $1,359; signed, Dec. 2; filed, Dec. 4; payments, $500, rough plumbing in; $359 finishing plumbing done; $500, 35 days.

Scot near Broadway. Plumbing, sewering, etc; owner, Benj. M. Gunn; architect, Henry A. Schulze; contractors, Wm. S. Snook & Son; cost, $664; signed, Nov. 29; filed, Dec. 2; payments, 75 per cent. as work progresses.

Sixth near Minna. Three-story frame; owner; Newman Bros. architect, H. Geilfuss; contractor, Jas. F. Logan; cost, $4,498, signed, Dec. 2; filed, Dec. 15, payment, 75 per cent. as work progresses; 25 per cent. 35 days.

Sutter and Leavenworth. Plumbing, etc.; owner, Frederick H. Deakin; architects, Chas. R. and J. M. Wilson; contractors, S. Ickelheimer & Bros.; cost, $1,128; signed, Dec. 29; filed, Dec. 31; payments, $423, rough work in; $423, completed; $282, 35 days.

Sutter and Leavenworth. Carpenter work, etc.; owner, Frederick H. Deakin; architects, Chas. R. and J. M. Wilson; contractors, Ingerson & Gore; cost, $9,180; signed, Dec. 29; filed, Dec. 31; payments, $2,295, framed; $2,295, brown coated; $2,295, completed; $2,295, 35 days.

Sutter near Van Ness Ave. Three-story frame: owner, Alice Hastings; Architects, J. A. Shepard; contractor, W. T. Commary; cost, $8,242; signed, Dec. 15; filed, Dec. 15; payments, $800, enclosed; $800, white coated; $800, completed; $842, 35 days

Sutter near Jones. Two-story frame; owner, Mrs. Bertha Biber; architect, John C. Balczynski; contractor, J. R. Whalen; cost, $8,146; signed, Dec. 15; filed, Dec. 15; payments $2,000, framed; $1,000, enclosed; $1,500, white coated; $1,609.50, completed; $2,036.50, 35 days.

Tehama St. Carpenter work; owner, Jos. Laine; architect, W. H. Bayless; contractor, H. J. Goetzman; cost, $700; signed, Dec. 18; filed, Dec. 29; payments, $100, second floor joists in; $200, roof on; $400, completed.

Townsend near Seventh. Two-story frame; owner, Wisconsin Furniture Co.; architect, Edward Burns; contractor, O E. White; cost, $7,970; signed, Dec. 11; filed, Dec. 17; payments, $3,000, roofed; $2,070, completed; $2,000, 35 days.

Twenty-sixth near Church. One-story cottage; owner, W. F. O'Leary; architect, J. J. Clark; contract r, F. Maloney; sureties, Chas. L. Ingler and H. McCollough; cost, $2,177; signed, Dec. 26; filed, Dec. 30; payments, $1,000, brown mortared; remainder, when accepted by the architect.

Twenty-fifth near Church. Carpenter work; owner, Tim Flynn; architect, A. J. Barnett; contractor, John Blake; cost, $3,000; signed, Dec. 17; filed, Dec. 22; payments, $850, roof boards on; $700, ready for lathing; $700, completed; $750, 35 days.

Union near Larkin. Two-story frame; owner, A. M. Hauser and wife; architect, W. O. Banks; contractor, G. H. Walker; sureties, H. Williamson and I. Graham; cost, $5,000; signed, Dec. 22; filed, Dec. 24; payments, $2,500, outside finished; $1,250, completed. $1,250, 35 days.

Van Ness near Golden Gate Ave. Terra cotta work; owners, Mercantile Library Association; architects, Pissis & Moore; contractors, Gladding, McBean & Co.; cost, $12,500; signed, Oct. 22; filed, Dec. 26; payments, first and fifteenth day of each month, 75 per cent of work done; balance, 35 days.

Van Ness near Golden Gate Ave. Facing brick; owners, Mercantile Library Ass'n; architects, Pissis & Moore; contractors, Union Pressed Brick and Terra Cotta Co.; cost, $6,590; signed, Oct, 22; filed, Dec. 23; payments, first and fifteenth day of each month, 75 per cent of work done, balance, 35 days.

Van Ness near Golden Gate Ave. Painting, etc.; owner, Mercantile Ass'n; architects, Pissis & Moore; contractors, I. St. Dennis & Co.; cost $2,995; signed, Oct 22; filed, Dec. 23; payments, first and fifteenth day of each month, 75 per cent of work done; balance, 35 days.

Alameda County.

Bay St. near Buena Vista Ave. Two-story dwelling; owner, Henry Mohns; architect, A. Stenbiht, contractor, A. L. Fall; cost, $2,000; signed, Dec. 4; filed, Dec. 12; payments, $500, framed; $500, white coated; $500, completed; $500, 35 days.

Bathing Establishment, Oakland. Plumbing work; owner, Piedmont Bath & Power Co.; contractors, Duffey Bros.; cost, $9,800; signed, Nov. 29; filed, Dec. 1; payments, on fifth of each month, 50 per cent. of value of work done and materials furnished; on completion, 25 per cent. of entire price; 25 per cent., 35 days after.

Block U, Vernon Park Tract. Two story stable; owner, H. Ainsworth; architect, W. J. Mathews; contractor, W. Winnie; cost, $6,370; signed, Dec. 11; filed, Dec. 13; payments, $955, 1-5 completed; $955, 2-5 completed; $955 3-5 completed; $955, 4-5 completed; $2955, completed; $1,595, 35 days.

Block 19, Fitch Tract. Two story livery barn; owner, Albert Port, Jr.; architect, J. B. Sprague; contractor, J. B. Sprague; cost, $2,625; signed, Dec. 12; filed, Dec. 13; payments, $650, framed; $650, enclosed; $650, completed; $400, 35 days

Block A, Woolsey Tract, Oakland. One-and-one-half-story, frame; owner, Hugh Forgie; architect, S. Edgar Fisher; contractor, Chas. F. Weldon; cost, $1,900; signed, Dec. 26; filed, Dec. 27; payments, $450, roof on $450, brown mortared; $450, completed; $550, 60 days.

Bray Tract, Brooklyn. Carpenter work, etc; owner, J. H. W. Riley; architect, J. H. W. Riley; contractor, F. A. Brown; cost, $2,975; signed, Dec. 22; filed, Dec. 24; payments, $743.75, enclosed; $743.75, brown mortared; $743.75, completed; $743.75 35 days.

Cor. 12th and Webster, Oakland. Carpenter work, etc.; owner, Geo. F. Marye, Jr.; architect, Geo. H. Flick; contractor, Geo. H. Flick; surety, Geo. Miller; cost, $4,940; signed, Dec 15; filed, Dec. 30; payments, $1,235, walls up; $1,235, roof tinned; $1,235, completed; $1,235, 35 days.

Cor. Central Ave. and Lafayette st., Alameda. Building stable; owner, F. W. Van Sicklen; architect, Clinton Day; contractor, C. A. Parker; cost, $2,645; signed, Dec. 19; filed, Dec. 26; payments, $1,000, roof boards on; $983, completed; $662, 30 days.

Fifteenth st. near Central Ave., Alameda. Two-story frame; owner, Henry Mohns; architect, H. M. Allen; contract, H. M. Allen; cost, $2,540; signed, Dec. 22, filed, Dec. 23; payments, $635, framed; $635, white coated; $635, completed; $635; 35 days.

Grove near 47th st., Oakland. Brick building; owner, Oakland & Berkeley Rapid Transit Co.; architect, Chas. Man; contractors, Herbst & McLeod; cost, $8,929; signed, Dec. 31; filed, Dec. 31; payments, 75 per cent of value of work done, and materials furnished as work progresses, on first and fifteenth day of each month; 25 per cent, 35 days.

Jones st. near San Pablo, Oakland. Two-story flats; owner, Abbie F. Aldrich; architect, R. Gray Frise; contractor, J. C. Nelson; cost, $3,99'; signed, Dec. 29; filed, Dec. 29; payments, $2,392.50, completed; $897.50, 35 days.

Lot No 2, Brooklyn Township. Lathing and plastering; owner, Ruth A. Wellman; architect, Henry A. Schulze; contractor, T. Tucker; cost, $1,385; signed, Dec. 13; filed, Jan. 3; payments, on first of each month as work progresses; 75 per cent. of value of work done and materials furnished, 25 per cent., 35 days.

Lot No. 2, Brooklyn Township. Plumbing, etc; owner, Ruth A. Wellman; architect, Henry A. Schulze; contractors, Wm. & Frederick Snook; cost, $984; signed, Dec. 12; filed, Jan. 3; payments, on first of each month as work progresses; 75 per cent. of value of work done and materials furnished; 25 per cent., 35 days.

McPherson st. near Railroad Ave. Two cottages; owner, James Wall; architect, Geo. H Benjamin contractor, C. A. Brown; cost, $3,080; filed, Dec. 16; payments, $1,000, framed; $1,000, brown mortared; $1,050. 30 days.

Park St., Alameda. Plastering; owner, Carl C. Peterson; architect, Wm. Patton; contractor, Walton & Buttery; cost, $1,130; signed, Dec. 1; filed, Dec. 6; payments, 75 per cent. of work done as it proceeds; balance, 25 per cent., 35 days.

Seventh and Myrtle sts., Oakland. Construction of second-story over building; owner, Wm. Gregory; architects, Willmore & Richmond; contractors, Willmore & Richmond; sureties, C. L. Maxwell and F. Johnson, $2,000; cost, $4,925; signed, Nov. 21; filed, Dec. 6; payments, ⅓, ready for plastering; ⅓ inside painted; ⅓, 35 days.

Thirty-first near Grove. Carpenter work; owner, Nettie R. Gates; architects, A. W. Pattiani & Co; contractors, A. W. Pattiani & Co.; cost, $3,470; signed, Nov. 29; filed, Dec. 1; payments, $500, chimney built; $1,130, brown mortared; $790, completed; $870, 35 days.

The Gardner Steel Ribbon and Attachments for Sash Hanging

(PATENTED)

Absolutely the best and most economical Sash Balance in the world.

—— THIS IS NOT A SPRING BALANCE.——

It consists of a steel ribbon expressly manufactured for the purpose. It is attached to the sash and weights the same as cord or chain as shown in the cut. It presents a neat appearance and can be painted same color as the wood-work of the window. It cannot get out of order or wear out, and being a perfect balance the heaviest windows can be raised or lowered with the greatest ease. We have it in use in several freight elevator doors.

THE GARDNER SASH BALANCE CO.
311 First National Bank Building.

Chicago, Ill., August 19, 1890.

MAJOR T. H. CAPRON:—

After a careful study of the qualities of your Sash Pulley and Steel Ribbon, and comparing the same with other methods of hanging sash, preference was given to your Pulley and Ribbon for the Sash of the Leiter Building, State, Van Buren and Congress trees. This building is over 400 feet long, eight stories high, and being designed for a retail store or stores, the windows are exceedingly large, mostly from 6 to 8 feet wide, and those of the second story, some 12 feet high. The sashes for such openings require the very best cord and pulleys. Good pulleys can be obtained by paying for them, but I was unable to find as good a pulley as yours at the price you charged us. The question of cord, chain or ribbon is a serious one where windows are as heavy as those at the Leiter Building, and it was only after the most thorough examination, with the assistance of an expert to visit the places where your ribbon was in use, that the question was decided, and the contract was awarded to you. Very respectfully,

(Signed) W. L. B. JENNEY, Architect.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at 408 California Street.
SETH BABSON, Pres. W. J. CUTHBERTSON, Vice-Pres.
OLIVER EVERETT, Sec. JOHN M. CURTIS, Treas.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at 408 California Street.
JOHN RICHARDS, Pres. L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. GEO. F. SCHILD, Treas.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects was held at their rooms, 408 California Street, on the 13th inst., the President, Seth Babson, in the chair. The Chapter voted to engage rooms at the new building of the Academy of Sciences.

THE Chicago Polytechnic Institute announces the establishment of an Architectural department with both day and evening sessions, the latter to accommodate students who must work during the day. Modeled after the London Polytechnic, this Institute is doing a noteworthy work in practical education, its Trade Schools having proved a boon to many struggling young men. It also maintains a woman's department and furnishes instruction in cooking, millinery and dressmaking. Its work is eminently praiseworthy.

TECHNICAL SCHOOLS.

IN another column will be found the second letter from our Correspondent, T. T., in relation to Technical and Industrial education. At a first view of the situation it would seem as if a state of unrest pervaded the atmosphere of society to such an extent as to be liable at any moment to break out into a chaotic state of bewilderment and destruction; yet, upon investigation it will be seen that this aspect of affairs is the result of separate and individual opinions, where each in his own way is striving for the accomplishment of the same result. We have no record of such a revolution in the previous history of the industrial world, as that occurring at the present time, and brought about by the introduction of methods heretofore unknown. The laborer is being displaced more and more by the use of machinery, which leaves him all the more anxious to reach a higher plane. In all the lines of advancement which have made the last few years phenomenal in science and invention, the important question of special industrial education, which is one of the first to be affected remains the last to be taken up and pushed to completion on a platform broad enough and elastic enough to supply the wants created by the new condition caused by the advancement in other branches of knowledge. In art and handicraft we feel our deficiency, and more especially when we come to compete

with other countries. In machinery and some of the higher scientific attainments, the superior excellence of our products are recognized, but when we come to art and artisan work, the grotesque attempts at copies of the work of other nations, the inferiority of our work is at once apparent, and the evident cause unmistakable. Nations, where technical schools have been established for the education of the manufacturing classes, have reaped advantages in the different markets of the world in proportion to the number of the schools and the practical character of the instruction given. Where exceptions occur and our artisans excel it will, in many instances, be found that such articles owe their superiority to the craftsman who has received his instruction through a special course of training.

There is no reason why our native talent, if placed under proper training, should not surpass that of other countries in this respect as well as in certain other mechanical and scientific lines of action. In order to meet this state of affairs successfully, we must provide schools as guiding avenues to the active growing elements whereby it may be transformed into a cultured handicraft unexcelled by that of any other nation. Ultimate success requires schools of a high order where the senses and powers of the student may be brought to the greater degree of perfection through a thorough system of technical instruction combined with practical work to the end, that he may acquire the skillful use of the implements of his work. The excellence of our work will depend upon the successful combination of all the faculties of heart and ambition to engender a love and persistence in the work,—the thinking and calculating powers for constructive purposes, and the artistic conceptions for the gratification of the sense for the beautiful, which is inherent in every person. It must not be understood that these are all the faculties to be brought into requisition as many others will suggest themselves to the reader. * People know that a beautiful object increases their happiness, consequently an object devoid of that quality disappears in the usual way. The art and technical schools of some of the older eastern states have already had a beneficial influence on the manufacturing interests of those sections of the country. It may be said that our manufactures are not the immediate source of the wealth of the country, yet in order to hold our own market against importations we must, at least, furnish in all respects equal if not better articles than those placed in competition. It must be taken into consideration, the fact that as the nation increases in population, so will the manufactures increase in their relative importance but in a much greater percentage.

In all questions of importance to the welfare of mankind in general, there exists a certain individualism of opinion which especially marks the progressive spirit. The problem has now, however, reached a point where Legislative action should materialize and combine the isolated opinions and knowledge on the subject into one grand whole.

OLD MISSION CHURCH AT SONOMA, CALIFORNIA.

(CONTINUED FROM PAGE 3.)

In the January number of the CALIFORNIA ARCHITECT, the construction of the roof was merely touched upon, but is now continued in detail, in the following description. The rafters (*k*) in Fig. 2, are of round poles, or more properly, small logs about 10 to 11 inches in diameter at the butt end, which is placed at the apex of the roof as at (*A*) Figs. 3, 4 and 5, and lapped passed the adjoining one as in Figs. 3 and 5, and having a notch cut out of each rafter to form a lock where it rests on the longitudinal bearing timber at (*D*.) At (*C*) notches have been cut to receive the ropes for hauling the timber from the forests. A squared bearing timber or ridge pole, 11x11 inches (*D*), is placed longitudinally along the center of the building and rests on the posts as shown in the cuts. Fig. 5 shows the post notched out to receive the ridge bearer (*D*); Fig. 3 shows the end, and Fig. 4 the side of bearer (*D*), where they are jointed over posts. The butt joint of (*D*) being formed irregularly over the post, rests in a notch in the post cap formed to receive it. The posts are 9x9 inches, and the post cap (*a*) is 12 inches wide, 6 inches high, and 32 inches long to extreme points. Beveled wedge pieces (*b*), are placed over (*a*) and at side of (*D*). The different sections of (*D*) were drawn tightly together at the joining by the use of strips of raw-hide (*r*), through notches (*d*). One of these joinings remains complete as shown in Fig. 4, but the leather is very much decayed. These old strips now measure about ¾ inch in width, and some portions still showing the hair. About half way from the wall plate to ridge, is placed a bearing timber 11x11 inches as shown at (*f*) Fig. 2, lashed and bound to each rafter with raw-hide strips. This bearer acts as an equalizer for the different sizes and strengths of the rafters. The whole roof is covered with a layer of brush, ½ to 1 inch twigs, at present about 2½ inches in thickness laid crossing the rafters and at an angle of about 15 degrees with the ridge line. The rafters are set 2 feet 3 inches from centers, and midway between them is placed a pole (*f*) Fig. 4, about 1½ inches in diameter. The thatch is not fastened to the rafters (*A*), but the pole (*f*) is bound to it with raw-hide strips run through the brush of thatch and around (*f*) at a distance of 2 inches apart. The tiles at (*T*) are of burnt clay, set as shown in Fig. 4, each being 20 inches long, 9 inches wide at the wide or lower end, and 7 inches at small or upper end, and ½ to ⅝ inches in thickness. They show no indication of wear or decay. The tiles are not fastened in any manner except by their weight. The veranda at front and rear of the building is 9 feet wide, the posts at the lower end being set in the ground, and the top notched out to receive the bearing timber, as shown in Fig. 5, for roof, the plate being set same as (*D*). The splice for veranda plates is halved with the bearing surface horizontal, and about 14 inches long, and set over posts. The small end of the rafters extend over the veranda portions, and a strip of timber is run along over the ends of rafters at the outer line to receive the tiles, the thatch being stopped off 6 to 8 inches back from the outer line of eaves.

No. 2.

MR. EDITOR:—

The reader in studying the development of our modern economic thought should reflect on the fact that it is essentially the mission of a practical system of education to keep pace with the industrial and creative spirit of the times, and that the most important feature of a useful educational system should be the training of youth to become practically competent to enter en rappore with the technical advance of the age, and thereby not become inexperienced associates and victims of some ranting discordant element, incompetent to make a success of any system which requires industry and discipline.

We must also remark:—There are thousands of wealthy and well meaning people who seem not to recognize the mighty forces at work during the past and present generation, which in the great world of industry have displaced old methods of manual production and which are determining entirely new processes in all manufacturing and productive arts, and which are making unskilled labor less and still less in demand, until to-day seven-tenths of those generally out of employment, belong to the unskilled and uneducated portion of the community, constituting an army of discordant idlers. Hence—in this article, I desire to refer to the marvelous changes which *modern thought*, made manifest in science and invention, has brought about and the nature of which constitutes as a whole a mighty factor either to disintegrate or build society anew upon an illimitable base.

The statesman or the capitalist should reflect that society is being educated by events in spite of itself;—and an enlightened policy would be to enquire into the inevitable tendency of the times. It should be remembered that the soul and spirit of modern civilization is to foster and encourage inquiry and discussion, a fact that even Bismark could not forestall. He who would place a keg of powder over live coals and then *sit on it* to prevent it exploding, would act as sensibly as those who try to summarily stop the expansile action of *the thought of our age*. A wise and contemporaneous policy would suggest an *economic utilization* of the mental and physical forces set in operation by the genius of our time.

We ask the reader to look back in thought but a century ago. See humanity then, and now! Would any sane person ask us to return to the industrial customs or social ethics of that time? Yet dear reader it is for you to remember that ragged genius, and persecuted thought outworking itself in the many fields of discovery and invention, determined the fountain sources of modern wealth which our conscientious syndicate millionaire of to-day determines shall alone flow into his more than capacious maw.

The writer has no sympathy with the prating or with the impractical propositions of those animal jawed, Castle Garden agitators, whose vandal thought aims only at a vulgar leveling down of men of wealth to *their* base.

Nor would he deal with this subject but that he discerns whither the index finger of fate doth point, and it is for that reason I say that the millionaire who refuses to listen to the pulsations of the human soul as now voiced in the aspirations of the great producing masses of our nation, or will not hearken to their actual needs, fails emphatically to comprehend *the genius of our age*, as did the princely, purpled robed prelates of Luthers or Calvins time. By an irrevocable principle of evolution, society is to-day impelled to move along lines of progressive thought and action, the outcome of which in *an economic and equitable* sense, must bear its fruit for human emancipation as did the religious controversy of the 15th and 16th centuries.

Here we would incidentally suggest that where controversalists and statesman have failed, has been in their not comprehending the fact that man being materially and physically a dual being, that no *permanent* reform or progress can obtain until the normal conditions are established, by and through which man (as a physical and spiritual being) may have access to all the *accessories* or means by which the best possibilities of his dual nature may be exercised and unfolded.

But our times are pregnant with a mighty promise! A *new* civilization is about to be born, the symmetry and beauty of which that of all other ages will be as naught.

When we come to consider the marvelous influence of material conditions or *environment* on human character, and their potentiality for good or ill, we will then begin to appreciate their true worth. It is therefore that we now dwell on the fact that the last fifty years has given to the human race more labor-saving devices, and through *steam*, *chemistry*, *electricity* and *metallurgy*, a greater dominion over earth and all else in nature than all the *combined efforts* of the previous civilizations on our planet. And to chemistry (the offspring of alchemy) this is principally due. It especially has enabled the inventor, in every field of useful production, to rise god-like in his comprehension of possibilities within the elemental realm of Nature, and made possible the harnessing of forces to the inventors labor-saving device, or other agent of his will, until to-day the superstitious are left on the one hand in society prone before anti-diluvian shrines of fossilized creed or enervating wealth, while the student of science, on the other hand, stands facing the noon-day sun and even commands his subtile life-building rays do his bidding.

In considering our theme we have to place side by side the work of the alchemist or theologian of the Middle Ages with that of our modern Daltons, Faradays, Huxleys, Tyndales, and Edisons, or Stevensons, Besmers, McCormicks or Ericksons. At the same time we are willing to pay tribute to the aggressive genius of the Luthers and the Voltaires who helped through their work to give even to our times the mental impetus which the intellectual world has to-day acquired.

Thanks to the divine power of thought the age of charms incantations, spells, and anthemas has given way to our age of piston-rods, levers, cams, pullies, cables, furnaces, steam-hammers, and dynamos.

And now let me turn to the every-day side of the subject. It must be remembered that the radical thought of the utilitarian scientist has made possible the revolutionary or aggressive thought of many of the students of sociology; but here let me interject that "the revolutionary thought" of the true sociologist does not necessarily endorse *violence*. The student and thinker is a man of *peace*, while the man of few ideas (being more animal) generally favors *violent* methods, and in expression and action naturally voices a poverty stricken mind:—the outcome of kindred associations and environment. In the digestion of my theme I hold that the thought and inspiration of the grand students of physical nature has made an *intellectual audience* possible for the hypothesis and theories of the best minds in the present economic agitation throughout the world, and as the physical scientist developed the ideas which led to the material advancement of modern civilization, so also another cabal of aggressive thinkers, claiming the attention of the reflecting world as well as the dissatisfied, are endeavoring to prove that law is enforced more frequently to protect dead and senseless property rather than live sentient manhood and womanhood.

It is therefore necessary in the consideration of our subject to refer to the names of Laselle, Marks and Babel in Germany, of Boukanine, Stepniac and Tolstoi in Russia, of Hyndman,

Labouchaire and Davitt in Great Britain, of Swinton, Spies and Bellamy in the United States, as indicating that their agitation is largely the sequence of modern utilitarian development, inquiry and research, and that sociologists like their fellow students in the realm of material science, are operating in a field of discussion and controversy wherein the club of the policeman and the craft of the detective is as sure to fail in this age as did racks, thumbscrews, chains and dungeons in that age of regal and sacred tyranny which sought to stamp out the ever-questioning spirit of the human soul!

They but voice the freedom of thought, let loose by the martyrs of the dark ages, which secured and determined the *untrammeled* thought of our present age;—which in turn has materialized into the ten thousand devices of this pronouncedly progressive labor-saving era, as seen in the many International Expositions of the world. An idea being once recognized can never be "downed" by any method but by meeting your controversalist in the field of debate, and *by methods of logic* determine the value of your opponents propositions. The church, backed by the state, once tried its hand at that business. The record of history in the matter can speak for itself.

In view of the facts herein presented the writer suggests that as Labor and Capital constitute dual factors in the economy of the social compact, some principle of peer-ship should be recognized in the discussion of economic questions now occupying the mind of the world, and not permit under any circumstance, the growth of a rebellious and anarchical spirit especially where mutual interest should teach a modicum of reciprocity and equity.

The possible attrition between labor and capital indicated in this country, by their respective attitudes should be discountenanced by all fair-minded and patriotic citizens. That centralization of capital, and the management of industries on the most extended scheme possible, will continue, no sane man can doubt. Such methods are but contemporaneous with the marvelous growth of our time. The only solution of the trouble lies in regarding labor and capital as dual factors, and that the right of access to the *material means* of life on the part of an American Sovereign precedes all other rights.

In taking a brief retrospect of our theme it is seen that the main difference between barbarism and civilization lies mainly in the fact that cultured or civilized man rises in economic dominion over nature, and so secures an ample sufficiency of all those creature comforts which primitive or semi-civilized man is by the nature of circumstances denied.

In view of this self-evident truth, what are we to say of modern society which permits to thrive in its midst the barbaric forces which beget or determine ignorance and poverty, and the sequence, vice and crimeof the most hidious kind.

But whatever view the reader may take of the controverse now prevailing between labor and capital, the fact can not by ignored that *unskilled labor* is no longer a desirable factor in any comprehensive scheme of modern economic production.

It is to that end that the writer would dwell on the imperative necessity of Technical Schools of Training for our growing youth, who would then realize that they owed a solemn duty to the State which enabled them to become possessed of that practical knowledge which in turn made self-respecting, useful, law-abiding and wealth-producing citizens. and co-operative factors with capital. It is *incompetent ignorance* which forms the recruiting ground of your disintegrating anarchist.

Viewed from another standpoint the man of property should see to it that the youth of the state are taught the lessons which give that practical knowledge, by which both liberty and happiness may be attained, and which is determined by special training in some of the ten thousand fields of mental and material wealth which modern science and art has opened up; and not permit by an indifferent primary school education, our adult youth to go heedlessly and blindly groping in half-hoodlum fashion, looking like thousands of other incompetents for a job, and in the end to only swell the ranks of those who are through their ignorance more fitted to tear down than to *build up*.

A purely conservative sentiment impels the writer to say that of all people in the community, it should be the duty of our great capitalistic manufacturing and producing classes to immediately see to it, that our youth are given the most approved modern facilities for a thorough technical education in this purely practical and utilitarian age. It is a duty they owe to themselves as tax-payers, property owners and employers; and it is likewise a matter that concerns the public weal in view of the fact that so many rattle-brained and be-fuddled theorists are in the field with their ten thousand economic nostrums, whose cure all virtues are to suddenly make law-abiding citizens of the malcontent and anarchist, and as suddenly bring us face to face with *their* millennium, from which may the Lord in his mercy deliver us.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this Coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

The entrance of Mr. W. H. Crocker's house, corner of Jones and California streets, being a continual of our Series of Entrances.

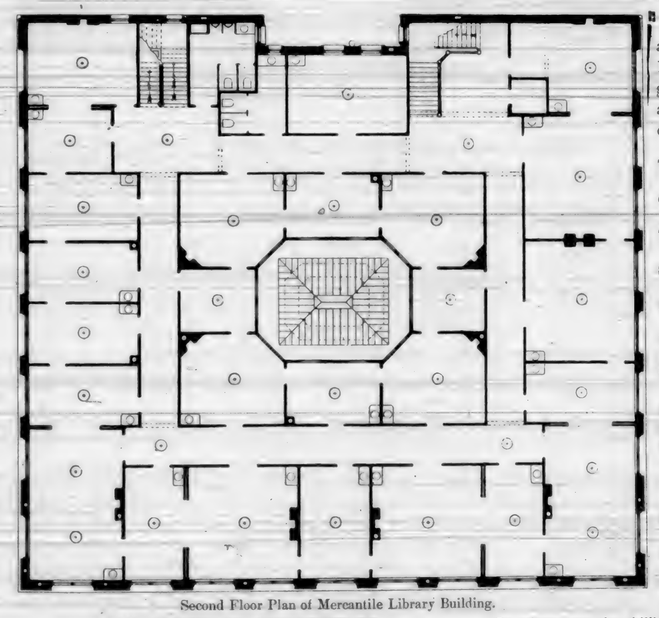
Our double plate, a "Chateau en Espague" is Architect Samuel Newsom's idea of the kind of gubernatorial residence the State should build for our Chief Executive.

We hope that the future will bring a realization of such a public building for the purpose intended.

The new building in which will be housed the Mercantile Library, is now in course of erection in this city, under the supervision of the architects, Messrs. Pissis & Moore.

The library will occupy the entire ground floor, while the second and third stories will be divided up into rooms.

The fronts are to be entirely of pressed brick, and terra cotta trimmings of a buff color.



Second Floor Plan of Mercantile Library Building.

THE POETRY OF ARCHITECTURE.

A paper read before the San Francisco Chapter of the American Institute of Architects, by Oliver Everett.

[CONTINUED FROM LAST NUMBER.]

One more quotation from Scott, as it admirably describes peculiarities of the Gothic style.

By a steel-clenched postern door,
They entered now the chancel tall;
The darkened roof, rose high aloof
On pillars, lofty, and light, and small;
The key stone, that locked each ribbed aisle,
Was a fleur-de-lys, or a quartre-feuille;
The corbells were carved grotesque and grim;
And the pillars, with clustered shafts so trim,
With base and with capital flourished around,
Seemed bundles of lances, which garlands had bound.
* * * * *
The moon on the east oriel shone,
Through slender shafts of shapely stone,
By foliaged tracery combined;
Thou wouldst have thought some fairy's hand,
'Twixt poplars straight, the osier wand,
In many a freakish knot, had twined;
Then framed a spell, when the work was done,
And changed the willow wreaths to stone.

Stepping across the Atlantic we find Longfellow thus describes the homes of Arcadia,

Strongly built were the houses with frames of oak and of hemlock,
Such as the peasants of Normandy, built in the reign of the Henries
Thatched were the roofs, with dormer windows; and the gables projecting
Over the basement below protected and shaded the doorway.

and in the Courtship of Miles Standish, the house of a pilgrim father,

Meanwhile, Alden at home had built him a new habitation,
Solid, substantial, of timber rough hewn from the firs of the forest.
Wooden barred was the door, and the roof was covered with rushes;
Latticed the windows were, and the window panes were of paper,
Oiled to admit the light, while wind and rain were excluded.

In strong contrast to the above simple and homelike architecture we have Meredith's beautiful description of the grandeur of King Solomon's Temple—and the return of the King thereto after dark:

Then the King rose. And lo, it was evening.
And leaning, because he was old,
On the sceptre that, curiously sculptured in ivory garnished with gold,
To others a rod of dominion, to him was a staff for support,
Slow paced he the murmurous pathways where myrtles, in court up to court,
Mixt with roses in garden on garden, were ranged around fountains that fed
With cool music, green odorous twilights: and so, never lifting his head
To look up from the way he walked wearily, he to the House of his Pride
Reascended, and entered.
In cluster, high lamps, spices, odors, each side,
Burning inward and onward, from cinnamon ceilings, down distances vast
Of voluptuous vistas, illumined deep halls through whose silentness passed
King Solomon sighing; where columns colossal stood, gathered in groves
As the trees of the forest in Libanus,—there where the wind as it moves
Whispers, "I, too, am Solomon's servant!"—huge trunks clad in garlands of gold,
On whose tops the skill'd sculptors of Sidon had granted men's gaze to behold
How the phoenix that sits on the cedar's lone summit 'mid fragrance and fire,
Ever dying, and living, hath loaded with splendors her funeral pyre;
How the stork builds her nest on the pine-top; the date from the palm-branch depends;
And the aloe's great blossom bursts, crowning with glory the life that it ends,
And from hall on to hall, in the doors, mute, magnificient slaves, watchful eyed,
Bowed to earth as King Solomon passed them. And passing King Solomon sighed.

And as a work of the imagination purely, there is the building of the Palace of Poseidon, by an English poet.

For him I built a palace underground,
Of iron, black and rough as his own hands.
Deep in the groaning, disembowel'd earth,
The tower-broad pillars and huge stanchions

And slant supporting wedges I set up,
Aided by the Cyclops who obeyed my voice,
Which through the metal fabric rang and peal'd
In orders echoing far like thunder-dreams.
With arches, galleries, and domes all carved,
So that great figures started from the roof
And lofty coignes, or sat and downward gazed
On those who strode below and gazed above—
I filled it; in the center framed a hall:
Central in that, a throne; and for the light
Forged mighty hammers that should rise and fall
On slanted rocks of granite and of flint.
Work'd by a torrent for whose passage down
A chasm I hew'd. And here the god would take
Midst showery sparks and swathes of broad, gold fire
His lone repose, lulled by the sounds he loved;
Or, casting back the hammer-heads till they choked
The water's course, enjoy, if so he wished
Midnight tremendous, silence, and iron sleep.

Now all things considered, I think the architect and the builder, and their mutual creations, have been fairly treated by the poet.

An occasional glimpse of perhaps well deserved sarcasm can nevertheless be found—Byron describes * * *

That Modern Goth, or rather Gothic
Bricklayer of Babel, called an architect,

to whose account possibly may be laid the designing of those

Rich windows that exclude the light
And passages that lead to nothing

mentioned by Grey, or the following still more severe arraignment of a shoddy church by William Allen Butler.

A building there is, well known, I conjecture
To all the admirers of church architecture,
Flaunting and fine, at the top of Broadway,
Cathedral like, gorgeous, and gothic, and gay,
Soaring sublimely, just as it should,
With its turrets of marble, and steeple of wood,
And windows so brilliant and polychromatic,
Through which the light wanders with colors erratic,
While within and without the whole edific glitters
With grandeur in patches, and splendor in fritters,
With its neat iron railing to keep out intruders,
And its parsonage "fixed" in the style of the Tudors,
And a genuine cloister recently added,
Lean red brick and plaster, with white marble padded;
O, who does not know it, the pride of Broadway,
The great architectural pasteboard display!

But when on the contrary, the poet desires to describe in terse language some particular quality or truism, he often succeeds in expressing a volume of meaning in a few well chosen words or a single happy phrase—as for instance Wordsworth's

Spires whose silent fingers point to heaven,

or Pope's description of the just requirements of proportion.

When we view some well proportioned dome
No single parts unequally surprise,
All comes united to the admiring eyes.

What warlike purposes are at once imagined on reading Scott's lines on Norham Castle, where he speaks of

The battled towers, the donjon keep,
The loop-holed grates where captives weep,
The flanking walls that round it sweep.

Pride and presumption are strongly marked in the assertion that

While stands the Colisseum, Rome shall stand,
When falls the Colisseum, Rome shall fall.
And when Rome falls, the world.

As a foretaste of the fate that will ultimately overtake our most ambitious attempts, here is described by Francis de Haes Janvier the site of the ruins of what once had been a Palace.

Where the Palace of the Caesars lies in shapeless fragments rouud—
Once a palace, whose fair columns rose in Majesty sublime,
Now a ruin, crushed and fallen, overcast with weeds and slime—
* * * * * * * * *
Prostrate columns, crumbling arches, tottering walls with ivy grown
Perished pride, and blasted beauty—Time's memorials round me strown.

Longfellow takes a more hopeful and cheering view of the subject and encourages us to exertions, saying—

All are Architects of fate,
Working in these halls of Time,
Some with massive deeds and great,
Some with ornaments of rhyme.

Nothing useless is, or low;
Each thing in its place is best;
And what seems but idle show
Strengthens and supports the rest.

In the elder days of Art,
Builders wrought with greatest care
Each minute and unseen part,
For the Gods see every where.

Let us do our work as well,
Both the unseen and the seen;
Make the house, where Gods may dwell,
Beautiful, entire, and clean.

As an ending to this paper I will read the beautiful description of a true architect's loving enthusiasm, in the Golden Legend—

The Architect built his great heart into these sculptured stones
And with him toiled his children, and their lives
Were builded with his own into the walls
As offerings unto God.

PROPOSED AMENDMENTS TO THE LAWS OF THE STATE OF CALIFORNIA, RELATING TO COTERMINOUS OWNERS,

AS RECOMMENDED BY THE

Joint Committee from the following Associations:

S. F. CHAPTER OF ARCHITECTS, A. I. A.
BUILDERS' ASSOCIATION, MILL MEN'S ASSOCIATION,
BUILDERS' EXCHANGE, LUMBER DEALERS' EXCHANGE,
BUILDERS' PROTECTIVE ASSOCIATION OF OAKLAND.

Amending Section 832 of the Civil Code of the State of California, as amended March 3rd, 1874, relating to excavations made upon lands, and the duty of protecting the lands of coterminous owners.

The people of the State of California, represented in Senate and Assembly, do enact as follows:—

Section I. Section 832 of the Civil Code is hereby amended so as to read as follows:—

Sec. 832. Each coterminous owner is entitled to the lateral and subjacent support which his land receives from the adjoining lands, subject to the right of the owner of adjoining lands, to make proper and usual excavations on the same for the purposes of construction on using ordinary care and skill.

In case such excavation being made, the person causing the same to be made shall first give reasonable notice to the owner of the adjoining land of his intention so to do, and thereafter he shall not be responsible for any damage that may happen to the lands, buildings or other improvements of such adjoining owner by reason of the making of such excavation, provided that he shall have used ordinary care and skill to prevent the same as herein set forth.

In all cities, cities and counties or incorporated towns where there exist ordinances or municipal laws establishing the grades of streets or highways, the exemption from liability of the person causing such excavation to be made as herein provided, shall not extend for a distance of more than fourteen feet below the official grade of the street or highway upon which the lands of such coterminous owners front at the point where such excavation is being made, but thereafter and to whatever distance such excavation may go below fourteen feet beneath such official grade, the person causing such excavation to be made shall take care of and support the land of adjacent owners, together with the buildings or other improvements thereon situated, and shall be liable for any damage or injury that may happen thereof, by reason of the making of such excavation.

Section II. This act shall take effect immediately.

And slant supporting wedges I set up,
Aided by the Cyclops who obeyed my voice,
Which through the metal fabric rang and peal'd
In orders echoing far like thunder-dreams.
With arches, galleries, and domes all carved,
So that great figures started from the roof
And lofty coignes, or sat and downward gazed
On those who strode below and gazed above—
I filled it; in the center framed a hall:
Central in that, a throne; and for the light
Forged mighty hammers that should rise and fall
On slanted rocks of granite and of flint.
Work'd by a torrent for whose passage down
A chasm I hew'd. And here the god would take
Midst showery sparks and swathes of broad, gold fire
His lone repose, lulled by the sounds he loved;
Or, casting back the hammer-heads till they choked
The water's course, enjoy, if so he wished
Midnight tremendous, silence, and iron sleep.

Now all things considered, I think the architect and the builder, and their mutual creations, have been fairly treated by the poet.

An occasional glimpse of perhaps well deserved sarcasm can nevertheless be found—Byron describes * * *

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

VARIATION FROM SPECIFICATIONS IN BUILDING CONTRACT.—Where a building contract specifies that the work shall be done according to the plans and specifications which are made a part of the contract, and the contract expressly stipulates that there should be no variation from the plans and specifications without the written consent of the owner, it is a breach of the contract to substitute a certain kind and make of columns which is different from the kind called for by the contract, when it appears that the kind called for could have been procured, although it is shown that those which were used were substantially like those called for by the contract, and equally as good, and where the specifications fix the size of the columns the contractor will not be permitted to show that columns of a different size were more in accord with the contract. In a case of this kind where the contract is in writing and in clear terms a court should construe the contract and instruct the jury what the rights and duties of the parties are, and leave the question of compliance for the determination of the jury.

Lynch v. Paris Lumber and Grain Co., Supreme Court of Texas, 14 S. W. Rep. 701.

CONSIDERATION FOR CONTRACT FOR EXTRA WORK.—Every contract must rest upon and give a sufficient consideration and a promise by a building contractor to put another coat of oil on the inside of a house, made after he had fully complied with his contract, and without any additional consideration, is a mere gratuity; and his failure to put on the additional coat will not preclude him from recovering the full amount due under contract.

Widiman v. Brown, Supreme Court of Michigan, 47 N. W. Rep. 231

REGULATION OF PROJECTING WINDOWS BY LAW.—A city ordinance which prohibits the construction of any "jut or bulk windows" projecting into the street more than twenty-eight inches is a reasonable regulation and is valid, but the explicit prohibition against building a projecting window more than twenty-eight inches carries with it an implied permission to build twenty-eight inches and therefore a window projecting that far and no farther is a lawful structure.

Livingston v. Wolf, Supreme Court of Pennsylvania, 20 At. Rep. 551.

ENFORCEMENT OF PARTY WALL CONTRACT.—A contract was entered into with reference to a party wall, by the terms of which one party agreed to furnish sewer connections for the other building in consideration of the agreement by the other party to close up the windows in the wall upon one years notice and payment by him of his share of the expenses. Notice and tender of such payment was given, but the contract with reference to sewer connections was not complied with, and upon an attempt to enforce the contract to close the windows it is held that this cannot be done until the sewer connections are made, as that was manifestly part of the consideration.

Appeal of Phillips, Supreme Court of Pennsylvania, 20 At. Rep. 426

CONSTRUCTION OF AGREEMENT CONCERNING PARTY WALL.—Where a person purchases a vacant lot, which supports the half of the wall of the building erected on the adjoining lot, and such purchaser is, by the terms of a previous party wall agreement entered into by his grantor, obliged to pay a part of the costs of the wall in order to use it, such agreement and wall constitute an incumbrance. A covenant against incumbrances covers incumbrances unknown to purchaser, as well as those known.

Burr v. Lamaster, Supreme Court of Nebraska, 46 N. W. Rep. 1015.

PARTY WALL BY IMPLICATION.—Where a wall between adjoining houses has for a long term of years been jointly used by the owners of the houses on both sides, it will be adjudged to be a party wall whether it stands equally on both lots or not. A plan made by a witness who identifies it and swears that it is correct may be introduced in evidence to prove the location of the wall.

McVey v. Durkin, Supreme Court of Pennsylvania, 20 At. Rep. 541.

NOTES & COMMENTS.

From the Honolulu Daily Evening Bulletin we clip the following:

IMPORTED PLANS REJECTED.

Mr. H. McIntosh, Superintendent of Public Works, declines to reverse the decision of his predecessor, Mr. W. E. Rowell, in refusing to approve the plans of the projected Central Union Church edifice. The plans of the projected Brewer block extension, by a Boston architect, also fail to pass the Superintendent of Public Works and the Fire Marshall, as they do not come within the requirements of our building and fire laws.

AMERICAN ECONOMIC ASSOCIATION.

ANNOUNCEMENT OF PRIZES FOR ESSAYS ON THE HOUSING OF THE POOR IN AMERICAN CITIES.

Friends of the American Economic Association have contributed five hundred dollars for prizes for the first and second best essays on the "Housing of the Poor in American Cities," the first prize to be three hundred dollars and the second prize two hundred dollars. The essays should describe the actual condition of the dwellings of the poor, especially of the wage-earning classes, a comparison of the present condition with the condition in the past, showing tendency towards improvement or deterioration as the case may be. Voluntary and legislative efforts to improve the dwellings should be treated. The effects of sanitary legislation should be considered, and plans for improvement discussed. It is desired that the limits of private philanthropy and those of legislation and administration should receive attention. While attention is to be confined chiefly to American cities, foreign cities and their experience may be treated, and any lessons derived therefrom pointed out.

The essays should not exceed 25,000 words, and must be in the hands of the Secretary of the Association not later than November 15th, 1891. It is desired, but not required, that they should be type-written. The Association reserve the right of publication and copyright of the successful essays, if it desires to publish them. Other essays will be returned if stamps for postage are sent.

Address all inquiries to

RICHARD T. ELY,
Secretary of the American Economic Association,
Baltimore, Md.

STEEL GIRDERS OF THE NEW CITY HALL.

Some exceptionally heavy girders have been designed for the New City Hall of San Francisco. One of them, a box girder, is now in place in the northwest wing, and is 105 feet long, 5 ft. 1 inch high, and 3 feet wide, and weighs 71 tons; the clear span is 95 feet 6 inches, and the safe load is 228 tons uniformly distributed.

There are three lengths of web plate in the girder, the angle irons are 6″ x 6″ x 1″ and are in two pieces, each 52 feet 6 inches long. The upper flange is composed of three plates having a total thickness of 2½ inches.

Another girder (in course of construction, and which will be the largest one in the building) intended for the northeast wing is 126 feet 9 inches long, with a span of 116 feet 9 inches; 6 ft. 5 inches high, and 3 feet 6 inches wide. The top and bottom plates are made of three plates each, ¾ inch thick, the webs are ¾ inches thick and 6 feet in height.

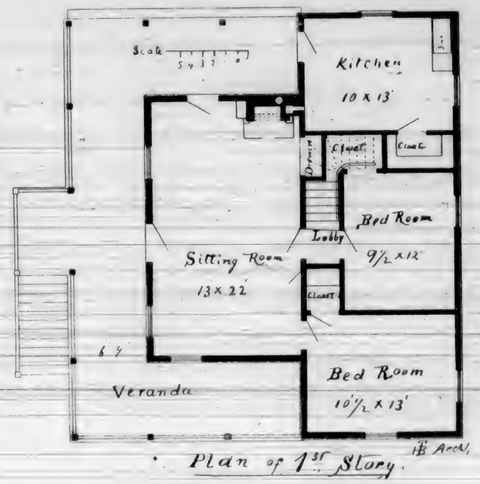
The angle irons, 8 in number, are 6″ x 6″ x ¾″. There are 20 stiffeners and strengthening plates in center of three thicknesses of half inch metal, which is all of open hearth steel. The weight of this girder is 118 tons, and it will carry a safe-load (uniformly distributed) of 310 tons.

These girders have been placed in position under the supervision of the present architect—WM. PATTON.

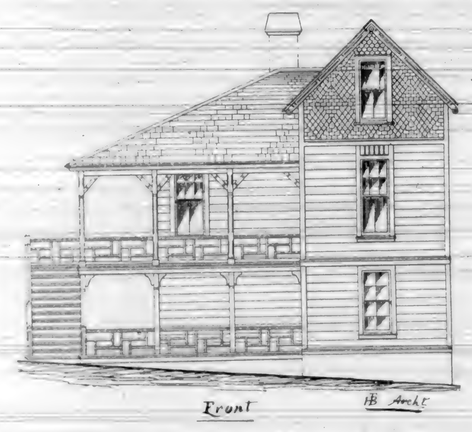
"THE GROVE."

The subject herewith presented is a summer cottage residence erected for Mrs. Dolliver and family, at Larkspur in Marin County, and about twelve miles from San Francisco.

This cottage is built in the midst of the trees and facing the main road on the sloping ground of one of the foot hills at the base of Mt. Tamalpias. The ground rises sufficiently to allow space for a finished room at the front, and a lower balcony, while the ground at the rear is nearly level with the floor of the main story. As this cottage is intended as a summer residence only, the reason is apparent why no door connects the main room with the kitchen, the only passage being by way of the veranda; yet, it is so arranged, that when desired, this portion

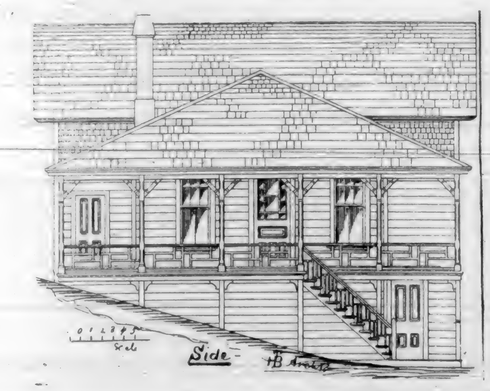


Plan of 1st Story.



can be partitioned off with solid walls, or sashes and doors set with glass, so as to become an inclosed portion of the house. The natural currents of the air during the warmest portion of the day are in the same direction as the veranda at the side, which having no obstruction at the ends admits an agreeable effect from the least movement of the air. The arrangement of the rooms is explained by the aid of the plans. The verandas are light and airy. The roof is shingled, and the exterior of the walls in some portions covered with rustic boarding; in other portions with ornamental shingles. All the exterior and interior finish for the cornices, railings, door and window casings, etc., is so formed that no special mill work should be required. The color of the exterior is worked in warm complementary tints to harmonize with the cool greens of the red wood and oak trees of the back ground.

Plan of 2nd Story



The tower of Babel was built 2247 years B. C.

Cadmus proceeded to Greece in the year 1493 B. C., and built the citadel of Thebes.

In 1222 B. C., the Olympic games were celebrated by Hercules.

The kingdom of Athens ended in the death of Codrus in the year 1070 B. C.

Solomon's temple was dedicated in the year 1004 B. C.

Phidon, king of Argos, is supposed to have invented scales and made measures, and coined silver at Aegina 869 years B. C.

The first coining of silver done at Rome was in the year 269 B. C.

Byzantium was built by a colony of Argives or Athenians in 658 B. C.

The canal between the Nile and the Red Sea was commenced by King Necho in 610 B. C.

On June 9th, 587 B. C., Jerusalem was taken by Nebuchadnezzer, after a siege of 18 months.

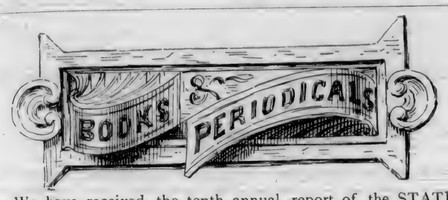
Education was encouraged at Athens, in consequence of which a public library was built in the year 526 B. C.

Sulla conquered Athens in 86 B. C. and sent its valuable libraries to Rome.

In 454 B. C., the Romans sent to Athens for Solon's laws.

In 445 B. C., Herodotus read his history to the council of Athens, and received public honors in the 39th year of his age.

Tyre and Egypt were conquered by the Macedonian prince in the year 332 B. C., and Alexandria was built.



We have received the tenth annual report of the STATE MINERALOGIST, WILLIAM IRELAND, JR. This report, in addition to the reading matter, contains a number of colored maps which show the geological formations of the principal sections of the State. The report contains a large amount of information which is of advantage to the mining and manufacturing interests of the Coast. Public reports of this character, which have been formulated with the care and faithfulness exhibited by Mr. Ireland, are of inestimable value to persons who are engaged in any pursuit where knowledge is required of mineral deposits which may be found in certain localities. We hope the Legislature will make a liberal appropriation for future reports.

The MUNICIPAL REPORTS of SAN FRANCISCO for 1889 and 1890 have been received. The printing and general features of the book are an improvement upon those heretofore received. We would suggest that in future reports, a tabulated statement of accepted streets and sewers, and the kind of sewers, and also a table of established grades would be of great benefit to intending purchasers of property.

The REAL ESTATE AND BUILDING RECORD, of this city, since changing ownership, shows a marked improvement. It has now become a business paper second to none on the coast in its particular field of action.

The INLAND ARCHITECT (of Chicago), for January, has been received, and as usual is replete with good architectural ideas, both in reading and plates; but the most prominent feature is a portrait and a review of the life of the late J. W. Root, of Chicago.

The SCIENTIFIC AMERICAN comes to us with its usual practical information.

PAINTING and DECORATING has a colored plate illustrating exterior decoration.

VICK'S FLORAL GUIDE FOR 1891. No lover of a fine plant or garden can afford to be without a copy. It is an elegant book of over 100 pages 8¼ x 10½ inches, beautiful colored illustrations of Sunrise Amaranthus, Hydrangea and Potatoes. Instructions for planting, cultivating, etc. Full list of everything that can be desired in the way of Vegetable and Flower Seeds, Plants, Bulbs, etc. The novelties have been tested and found worthy of cultivation. We advise our friends to send for Vick's Floral Guide, price only 10 cents, which amount may be deducted from the first order.

BUSINESS MOSAICS.

The coming season will show a more advanced taste in the decorative features of dwellings, than for a like period, during the growth of our city. The new style of plastic art for decorative purposes called L'UNIQUE, has so much to recommend it to favorable consideration, that any residence where an attempt is being made for artistic effect must of necessity use it. It can be made to harmonize with any style of furniture or tapestry fittings. Every person who intends to build, or decorate anew, should not fail to examine its qualification for rich effects. To see it is to use it.

The Pacific Water Closet Works of W. J. Rustemeyer & Co. are producing work that is becoming more and more a staple article of manufacture. Soon after the works were started, it was necessary to enlarge the plant and from present indications, another enlargement will be required in order to supply the market.

We notice some excellent wrought iron work in the form of iron fire escapes. These were made and put up by A. J. Dunbar & Co., 220 Fremont St.

The SAN FRANCISCO GAS LIGHT COMPANY have moved their show rooms from the old stand at First and Natoma street, to new and elegantly furnished show and salesrooms at 16 Post street, where those interested can see the application of gas for heating and cooking in all its different applications. The cut, herewith, represents one of the Co's patent Asbestos Grates as set in mantles. They are arranged to fit any mantle or nich as may be desired. They consume between three and five cents worth of gas per hour. The whole outfit costs $15.00 complete, the Gas Company running all necessary pipes. New buildings should be piped for all fire places or other gas appliances, thus saving future expense and dirt. In ordering, give size of opening top and bottom, and width. Call at 16 Post St., and see them in operation.

Windows, and their necessary adjuncts, are at the present time a matter of consideration for architects when formulating plans for future buildings. The old device of weights and cords has become so firmly established by usage, that by superior merit only can any other appliance be substituted therefor. The Gardner Sash Balance seems to possess all the especial advantages of the weight and pulley system, but the defect of cords is overcome by the use of a steel tape in place of such cords. These tapes are galvanized so as to prevent them from rusting, and are provided with convenient attachments to both sash and weights. They hold the sash in any position, and when raised, the upper sash is held in its place so that the lock will catch. Where a twisted or braided cord is used, the sash will drop a quarter or a half inch—or just sufficient to prevent the sash lock from taking effect.

The uses to which the P and B patent building, sheathing, and lining papers may be put, should be looked into carefully by interested parties. This paper being absolutely waterproof renders it a superior article, and more especially where dampness may be liable to cause trouble. It has no superior as a lining paper used under floors to keep out the moisture from the ground. The paint manufactured by this company has great preservative qualities and is thoroughly waterproof in its nature. It is an excellent paint to use where it is desired to keep wood or stone walls from the absorption of disease germs, or other objectionable matter as in stables, hospitals, graineries, etc. See advertisement on first page.

From Merchant & Co., the well-known tin and sheet metal merchants of Philadelphia, we have received a novel and unique little work called "The Brownies"— being a midsummer night's dream of the details of the process of which this excellent product has been brought to its present state of perfection. Plate No. 1 represents the wierd dance by moonlight, of three fairies over the pond lilies, their eyes showing wonderful powers of penetration as the full light of the idea impelled them forward. Then follows the orders for materials from all parts of the world, the furnaces come next. The three then meet under adverse circumstances, for consultation as to the best means for the continuation of the standard quality and to make further improvements if possible. For this purpose technical schools for the instruction of the operatives appears to have been decided upon, but here they encountered difficulties in the form of bad ventilation, the students become sleepy and utterly incapaciated for study, when the happy thought occurred to use the draught tubes of their furnaces as ventilators, these when improved into the form of "the star ventilator" as manufactured by them, and used for the ventilation of the school room, the changed aspect is at once apparent. From the picture it seems as if the school master could smoke his cigarette without its usual attendent pernicious influence upon the students. From this time forward, the processes used in the manufacture are of an improved order, and the manufacture of brass and copper rolls, tubes, wire, etc., is carried on—Scientific methods are shown for the accurate measurements for the interior and exterior dimensions while forming "seamless drawn tubing." The assorting and storing the finished pipe work is systematically done. The three fairies now have another wierd dance in the factory and by the light of the electric lamp, after which they take their bath amid expressions of pleasure. When all has been cleaned up they find the expenses and profits on the scales are about equally balanced. Here was a pretty state of affairs, an excellent article that every body wanted but the sales just balanced the expense. After a consultation with the printer a printer's dynamo was set up, which motored the coin right into the counting room of the manufacturers to such a degree that new offices and vaults were required for the increased business —see the card of Merchant & Co. on another page.—

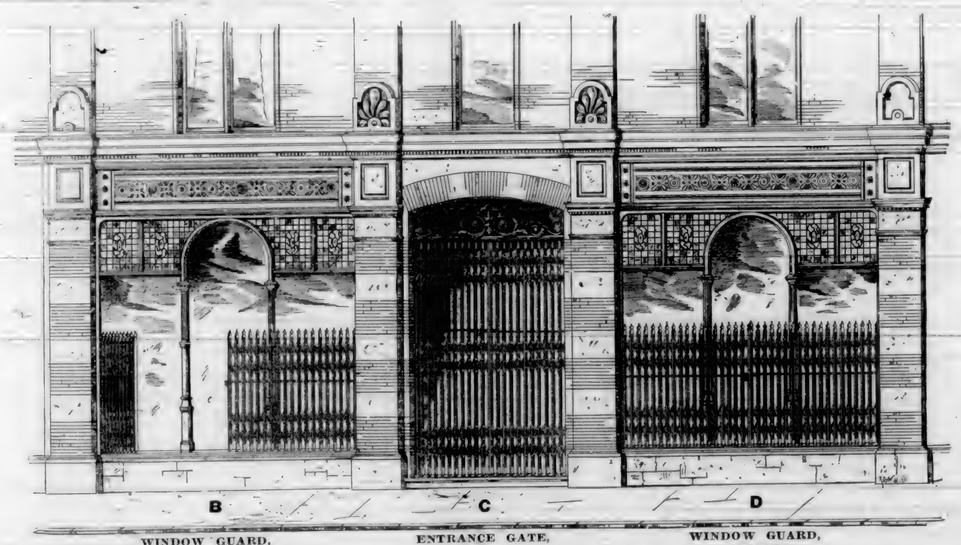
Architects when in want of the best materials and instruments for their use that can be found in the market, should not fail to call on Edward Denny & Co., at 418 Montgomery St., where a full assortment of Draughtsmans' and Artists' supplies may be had "Blue print" papers fresh and reliable.

Lengthening Metallic Beams.—Peter H. Jackson, S. F. No. 444,578. Dated Jan. 13, 1891. The capacity of rolling-mills limits the length of rolled beams and when beams are needed of greater length to span large rooms or other spaces, either a supporting column, pier or post must be used, or if such a support be inadmissible, it is necessary to build up what is known as a "plate" or "box girder" at an increased cost over the rolled beams and with a less reliable strength, on account of its being built of a number of pieces and riveted together. It is important when a number of beams or girders of great length are employed that there should be as little deflection as possible, and this improved construction is designed to increase the strength of the girder at the point where the joint is made.

Lengthening Metallic Beams and Girders.—Peter H. Jackson, S. F. No. 444,579. Dated Jan. 13, 1891. This invention relates to a means for lengthening iron and steel rolled and other metal beams and girders, and strengthening the joint at their abutting ends. It consists of a metallic band or bands inclosing the meeting ends of girders where single beams, or two or more, side by side, or super-posed, are employed, and in connection with these enclosing bands or cheek-pieces or filling pieces, and means for tightening the same between the bands and girders. This invention is especially adapted to rolled beams, which are made in a single piece, but of limited length, and it enables the inventor to substitute this class of beams for what are termed "box girders," which are built of iron plates riveted together so as to make any desired length, but which are to certain weaknesses on account of the rivet holes and their peculiar construction.

Folding Iron Gates and Guards are rapidly replacing the Cumbersom Iron door and Shutter, being more easily handled, are graceful in appearance, afford perfect security, light and ventilation, and occupy a very limited space when open. When used for elevators opening on the street, or for store doors and windows they are a sure safeguard. They can be opened so as to occupy a very small portion of the opening; when turned on a pivot, to swing round against the joint it is still further out of the way; and when not wanted, they may be taken from the hinges and entirely removed. As a protecting screen for windows, they present many features that are improvements over stationary guards—as by opening the screen the window may be cleaned.

By inspecting the cut herewith presented, B, is shown the whole shop front with a part of the front protected by the guard, and a portion with the guard partially opened. C and D show openings wholly protected by the closed folding guards. E. J. Robinson is the selling agent, at No. 79 New Montgomery St. See advertisement on another page.



WINDOW GUARD, PARTIALLY OPEN. ENTRANCE GATE, CLOSED. WINDOW GUARD, CLOSED.

Shingle roofs, when slightly decayed, may be preserved for a considerable time, by the application of Cabot's Creosote stains.

The addition of color to the creosote does not prevent its well known preservative action upon the wood, but will enhance the beauty and artistic effect of that most prominent feature of the building, the roof.

These stains need not be confined to roofs and shingle work alone, but may be used with advantage upon all wood work which is exposed.

Where exposed wood-work has begun to decay, paint confines the elements of decay which may be continued in their active state till the cellular portion of the wood is destroyed. The action of creosote destroys this active element, therefore the life of the wood is prolonged by its use in a much greater degree than where paint is used.

At this time of the year, when Architects are preparing the plans for next season's work, we would call attention to the ELEVATOR works of Wm. H. Birch & Co. These elevators are unexcelled for high speed and safety.

Hardwood Lumber can be had of John Wigmore & Son, 129 to 147 Spear St., S. F. This firm is one of the oldest and most reliable of any that we are acquainted with. While others have apparently dropped behind the times, this old, yet vigorous firm, is growing with the country.

On page iii will be noticed an advertisement for a hot water apparatus to be heated by gas. As this seems to be an article of such wide application on this coast, we call especial attention to it. Throughout the heated term in the rural districts, the air is heated to a high temperature, while the water in the streams is cold. In many instances a water back for heating water is impracticable under the existing condition. To heat water, for a bath, in kettles placed on the kitchen stove is another troublesome proceeding. This apparatus does away with all such methods, as the boiler can be set near the bath tub, and the gas turned on and lighted. In a few moments the tub is supplied with hot water; when finished the gas is turned off, and no further expense is incurred. Where gas stoves are used for cooking purposes, this arrangement may, with advantage, be set up to furnish hot water required for culinary necessities. The water can be fed continuously from the supply through pipes to and from the boiler. In cities and towns where gas is supplied the apparatus is fitted for gas; in districts out of the range of gas supplies, the apparatus is fitted with gasoline appliances.

Wanted to buy.

A portable railway of about 565 yards with cronings and six tipping cars. Address E. J. Meyer, Montgomery, Ala.

CITY BUILDING NEWS.

Broadway near Franklin. Mill work, etc; owner, Mahoney Bros.; architects, Shea & Shea; contractor, City Planing Mill Co.; cost, $4,500; signed, Jan. 7; filed, Jan. 9; payment, 75 per cent as work progresses; 25 per cent, 35 days.

Bryant Ave. near 23d. Frame building; owner, Elizabeth O'Brien; architect, Jno. T. Hogan; contractor, Jos. Donovan; sureties, Peter Gillogley & Geo. Godfrey, $1,500; cost, $3,735; signed, Jan. 14; filed Jan. 15; payments, $700, roofed; $700, front completed; $701.25, completed; $933.75, 35 days.

Capp. St. near 25th. One-story frame; owner, Mrs. C. Vandine; architect, T. J. Hamilton; contractor, T. J. Hamilton; cost, $1,050; filed, Jan. 5; payments, $300, framed; $350, brown mortared; $200 white mortared; $200 completed.

City Hall Ave. and Market St. Carpenter work; owner, R. J. Techan; contractor, Samuel T. Green; cost, $2,000; signed, Jan. 5; filed, Jan. 10; payments, 75 per cent of work done; 25 per cent, 35 days.

Chestnut near Dupont. Carpenter work; owner, Robt. Madsen; architects, B. McDougall & Son; contractor, K. C. Gardiner; cost, $3,100; signed, Jan. 14; filed, Jan. 14; payments, $500, framed; $700, floors laid; $600, white mortared; $525, completed; $775, 35 days.

Clement near 4th Ave. Two-story frame; owner, A. Roething; contractor, J. Schuler; cost, $1,550; signed, Jan. 27; filed, Jan. 28; payments, $400, rustic on; $400, plastered; $350, finished; $400, 35 days.

Cor. Market, Post and Montgomery. Marble work; owner, Crocker Estate Co.; architect, A. Page Brown; contractor, R. C. Fisher & Co; cost, $28,000; signed, Jan. 7; filed, Jan. 30; payments, 60 per cent each shipment from N. Y. upon sight draft when bill of lading & invoice & insurance papers are received; 15 per cent during setting of work; 25 per cent, 35 days.

Cor. Market, Post and Montgomery. Additional Marble work; owners, Crocker Estate Co.; architect, A. Page Brown; contractors, R. C. Fisher & Co.; cost, $17,547; signed, Jan. 15; filed, Jan. 30; payments, 60 per cent each shipment from N. Y. on sight draft when bill of lading & invoice & insurance papers are received; 15 per cent during setting work; 25 per cent, 35 days.

Cor. Merchant & Kearny. Brick, iron work etc.; owner, Wm. A. Piper; architect, John M. Curtis; contractors, Geo. D. Nagle & John Trotter; cost, $17, 240; signed, Jan. 20; filed, Jan. 20; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Cor. Merchant and Kearny. Plumbing etc.; owner, Wm. A. Piper; architect, John M. Curtis; contractor, Henry Williamson; cost, $1,131; signed, Jan. 21; filed. Jan. 23; payments, $565, rough work done; $283, completed; $283, 35 days.

Cor. Mission and Seventh. Five-story brick; owner, Pierre Depuy; architect, C. R. and J. M. Wilson; contractor, Thos. M. McLacklan; sureties, O. H. Greenwald and L. Levi, $40,00; cost, $61,000; signed, Jan. 12; filed, Jan. 12; payments, $9,000, first story joists on; $9,000, third story joists on; $9,000 tin roof on; $9,000, brown-coated; $9,750, completed; $15,250, 35 days.

Cor. Mission and 7th. Artificial stone work; owner, Pierre Depuy; architects, C. R. and J. M. Wilson; contractor, H. M. Paterson; sureties, Henry Pilster and C. R. Eagan, $2,000; cost, $3,656; signed, Jan. 13; filed, Jan. 14; payments, $1,700, foundations in; $1.037.50, completed; $912.50, 35 days.

Cor. Mission and Seventh. Plumbing and gasfitting; owner. Pierre Duprey; architects, C. R. and J. M. Wilson; contractor, H. Williamson; surety, J. H. Keefe, $2,000; cost, $3,994; signed, Jan. 27; filed, Jan. 29; payments, $1,479, rough work in; $1,479, completed; $986, 35 days.

Cor. Mission and Seventh. Elevator, wall and tank work; owner, Pierre Duprey; architects, C. R. and J. M. Wilson; contractor, A. Martinez; sureties, Geo. E. Beilmor and J. A. Bauer, $2,000; cost, $6,11?; signed, Jan. 28; filed. Jan. 29; payments, $800, boiler set; $500, rain casing in; $500, wood work ready for cage; $1,000, pumps set; $1,789, completed; $1,530, 35 days.

Cor. Mission and Seventh. Cement work; owner, Pierre Duprey; architects, C. R. and J. M. Wilson; contractor, Jas. Dunlop; surety, J. Wm. Lucas, $1,000; cost, $2,700; signed, Jan. 15; filed, Jan. 29; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Cor. Webster and Page. Three-story frame; owner, Paul Levy; architect, A. J. Barnett; contractor, Dan Chrisholm; Surety, E. P. Latson, $1,700; cost, $6,570; signed, Jan. 7; filed, Jan. 7; payments, $1,230, roof boards on; $1,230, brown coated; $1,230, white coated; $1,220, completed; $1,650, 35 days.

Diamond near Elizabeth. Two cottages: owner, John Caine; architect, Thos. Elam; contractor, Thos. Elam; cost, $2,948; signed, Jan. 28; filed, Jan. 29; payments, $737, framed; $737, brown mortared; $737, white coated; $737, 35 days.

Eddy near Larkin. Carpenter work etc.; owner, Mrs. M. A. Fumegass; architect, T. J. Welsh; contractor, Wm. Plinn; cost, $6,350; signed, Jan. 6; filed Jan. 10; payments, $1,500, rooted; $1,500, brown mortared; $1,760, ready for painters; $1,590, 35 days.

Eddy near Larkin. Plumbing, gas fitting etc.; owner, Mrs. M. A. Fumegass; architect, T. J. Welsh; contractor, Wm. F. Wilson; cost, $1,000; signed, Jan. 6; filed, Jan. 28; payments, $500, rough work in; $800, accepted.

Ellis near Powell. Artificial stone work; owner, Claus Mangels; architect, H. Geilfuss; contractor, H. Stettin; cost, $1,051; signed, Dec. 17; filed, Jan. 20; payments, first and fifteenth day of each month; 75 per cent as work progresses; 25 per cent, 35 days.

Ellis near Powell. Brick and stone work; owner, S. Trowfeld; architects, Salfield & Kohlberg; contractors, Riley & Loane; sureties, H. Remillard & Henry S. Loane, $2,000; cost, $9,987; signed, Jan. 12; filed, Jan. 14; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Ellis near Powell. Concrete work; owner. S. Frowenfeld; architects, Salfield & Kohlberg; contractors, Chatean & Gilletti; sureties, Byron Diggins & J. C. Diggins, $5,800; cost, $5800; igned, Jan. 12; filed, Jan. 12; payments, $?.0, excavated; $2,500, walls up; $1,100, completed; $1,490, 35 days.

Ellis near Powell. Plastering, etc.; owner, J. Frowenfeld; architects, Salfield & Kohlberg; contractor, J. J. Wyatt; sureties, J. S. Hare, D. C. W. Hodgkin, Kelley, Hare & Co., $2,000; cost, $2,800; signed, Jan. 12; filed Jan. 14; payments, $1,000, brown coated; $1,100, accepted; $700, 35 days.

Ellis near Powell. Carpenter work etc.; owner, J. Frowenfeld; architect, Salfield & Kohlberg; contractor, Henry Hoizenberg; sureties, J. F. Kennedy & L. T. Lewis, $2,450; cost, $9,800; signed, Jan. 12; filed, Jan. 14; payments, $500, second joists laid; $500, rooted; $2,000, floored; $2,000, standing trimming on; $2,350, completed; $2,450, 35 days.

Fourteenth near Castro. Two-story frame; owner, Bertha Munger; architect, J. C. Newsom; contractor, H. Jacks; sureties, A. J. Turner and A. L. Collins, $1,500; cost, $3,600; signed, Dec. 30; filed, Jan 10; payments, $900, framed; $900, brown mortared; $900, completed; $900, 35 days.

Fulton near Polk. Plumbing etc.; owner, H. Geilfuss; architect, H. Geilfuss; contractor, H. Williamson; cost, $1,194; signed, Jan. 27; filed, Jan. 29; payments, first day of each month 75 per cent as work progresses; 25 per cent, 35 days.

Green near Laguna. Two-story frame; owner, A. Lynch; architects, J. & T. Newsom; contractor, K. Engvick; surety, C. D. McGowan; cost, $3,350; signed, Jan. 13; filed, Jan. 26; payments, $837.50 framed; $837.50, rough plumbing in; $837.50 completed; $837.50, 35 days.

Green near Laguna. Carpenter work etc.; owner, A. Lynch, architects, J. J. & T. D. Newsom; contractor, K. Engrick; cost, $3,350; signed, Jan. 13; filed, Jan. 13; payments, $837.50, framed; $837.50, plumbing in; $837.50, completed; $837.50, 35 days.

Lyon near Grove. To build; owner, Mary Whalen; architects, Salfield and Kohlberg; contractor, G. G. Gillespie; cost, $1,175; signed, Jan. 13; filed, Jan. 22; payments, $400, brown coated; $200, completed; $575, 35 days.

Market near Golden Gate Ave. Mill work; owner, J. A. Donohoe; architect, A. Page Brown; contractor, A. Wilkie; signed, Jan. 15; filed, Jan. 15; payments, first day of each month, 75 per cent as work progresses; 25 per cent, 35 days.

Market near Golden Gate Ave. Extra mill work; owner, J. A. Donohoe; architect A. Page Brown; contractor, A. S. Wilkie; cost, $1,600; signed, Jan. 15; filed, Jan. 19; payments, first day of each month as work progresses; balance, 35 days.

Market near Golden Gate Ave. Sinking a well; owner, J. A. Donohoe; architect, A. Page Brown; contractor, S. H. Allen; cost, $6.50 per lineal foot; signed, Jan. 21; filed, Jan. 21; payments, 75 per cent as work progresses; 25 per cent 35 days.

Market near Golden Gate Ave. Artificial stone work; owner, Jos. A. Donohoe; architect, A. Page Brown; contractors, Gray Bros.; cost, $2,695; signed, Jan. 26; Filed, Jan. 27; payments, 1st and 15th day of each month; 75 per cent as work progresses; 25 per cent 35 days.

Market near Golden Gate Ave. Painting etc.; owner, J. A. Donohoe; architect, A. Page Brown; contractors, Fraser and Keefe; cost, $3,271; signed. Jan. 14; filed, Jan. 15; payments, first day of each month; 75 per cent as work progresses; 25 per cent, 35 days.

Market and City Hall Ave. Heating pipes; owner, R. J. Techan; architect, R. J. Techan; contractor, Harvey Heating Co.; cost, $1,500; signed, Jan. 2; filed, Jan. 10; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Mission near 10th. Carpenter work; owner, Thos. Doolan; architect, F. T. Daslan; contractor, F. T. Daslan; cost, $10,000; signed, Dec. 10; filed, Jan. 14; payments, $1,500, framed; $1,500, floored; $2,500, outside finish on; $2,250, finished; $2,250, 35 days.

New City Hall. A statue; owner, E. B. Mastick et al.; contractor, F. Harpersberger; cost, $100,000; signed, Jan. 21; filed, Jan. 21; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Nineteenth near Sanchez. Carpenter and brick work; owner, Andrew B. Knox; contractor, A. S. Cook; surety, C. E. Pilsbury, $500; cost, $2,800; signed, Jan. 8; filed, Jan. 9; payments, $700, framed; $700, brown mortared; $600, accepted; $800, 35 days.

Noe and Eighteenth. Carpenter work; owner, J. D. Davidson; architects, Gould and Colley; contractor, Wm. P. McPhee; cost, $2,730; signed, Jan. 20; filed, Jan. 20; payments, $682.50, framed; $682.50, brown coated; $682.50, completed; $682.50, 35 days.

No. 1812 Lyon St. Alterations; owner, A. S. Baker; architects, Gould & Colley; contractors, R. D. Miller & Co.; cost, $1,715; signed, Dec. 12; filed, Jan. 7; payments, $400, house raised; $500 ready for plastering; $400, brown mortared; $415, 35 days.

No. 322 Shotwell St. Alterations; owner, F. Andell; Architect, F. Andell contractor, F. Weinochl, surety, Martin Bahrt, $2,600; cost, $2,600; signed, Jan. 22; filed, Jan. 24; payments, $300, house raised; $400, brown mortared; $600, white coated; $600, completed; $700 35 days.

No. 1351 Post. Alterations and additions; owner, J. Napthtaly; architect, P. R. Schmidt; contractor, J. Furness; surety, E. Joost. $407.75; cost, $1,631; signed, Jan. 26; filed, Jan. 27; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Oak near Broderick. 3 dwelling houses; owner, Mark Levi; architect, Geo. C. Sargent; contractor, Louis Lander; cost, $9,600; signed, Jan. 16; filed, Jan. 16; payments, 75 per cent of value of work done; bal., 35 days.

Oak near Ashbury. 2-story frame; owner, W. A. Johnston, by atty.; architect, W. W. Rednall; sureties, S. E. Slade Lumber Co. & Jason. Springer & Co., $800; cost, $3,312 signed, Jan. 7; filed, Jan. 12; payments, $830, roofed; $830, brown mortared; $800, completed; $802, 35 days.

Pacific near Dupont. Brick building; owner, A. F. O'Connell; contractors, M. Fennell & Son; cost, $2,000; signed, Jan. 14; filed, Jan. 15; payments, $750, ready for ceiling joists; $750, completed; $500, 35 days.

Page near Lott. Carpenter work etc.; owner, Wm. Murasky; architects, Shea & Shea; contractor, J. T. Moore; cost, $4,794; signed, Dec. 29; filed, Jan. 5; payments, $862, framed; $862, brown mortared; $865, hard finished; $803, completed; $1,500, 35 days.

Palace Hotel. Hardwood finish for corridors, stairs etc.; owner, F. G. Newlands, trustee; architect, J. M. Wood; contractor, Carsley & East Manufacturing Co.; cost, $15,175; signed, Jan. 6; filed, Jan. 6; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Pine near Baker. Two 2-story frame; owner, Caroline Hirsch; architect, John Balezynski; contractor, Ivory Wells; cost, $3,850; signed, Jan. 16; filed, Jan. 19; payments, $760, framed; $760, partitions set; $760, white coated; $787.50, completed; $962.50, 35 days.

Sacramento near Spruce. Carpenter work; owner, Geo. Healing; architect, Geo. Healing; contractor, Jas. Healing; cost, $2,500; signed, Jan. 26; filed, Jan. 26; payments, $425, framed; $425, brown mortared; $425, 35 days.

Sacramento near Mason. To build; owner, E. A. Denicke; architect, P. R. Schmidt; contractor, J. H. O'Brien; cost, $8,200; signed, Jan. 12; filed, Jan. 12; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Scott near Waller. Two-story building; owner, Francis O'Neil; architect, John Foster; contractor, John Foster; cost, $7,000, signed, Jan. 26; filed, Jan. 26; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Seventeenth and Harrison. 3-story frame; owner, Mission Pottery Co.; architect, Chas. J. Devlin; contractor, J. F. Logan; sureties, C. A. Warren & Gustav Kartschoke; $1,500; cost, $5,993; signed, Jan. 5; filed, Jan. 6; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Sutter near Fillmore. Frame building; owner, Mrs. Dora Steckler; architect, J. J. Clark; contractor, F. L. Hansen; sureties, Wm. Crocker & Fabian Joost, $1,835; cost, $7,300; signed, Jan 12; filed, Jan. 16; payments, $600, framed; $1,250, floored; $1,250, brown mortared; $1,375, doors hung; $1,000, completed; $1,825, 35 days.

Sutter near Jones. Alterations; owner, C. M. P. Coleman; architect, Clinton Day; contractor, Wm. T. Commary; cost, $13,700; signed, Jan. 21; filed, Jan. 24; payments, $3,000, framed; $3,000, chimneys built; $4,275, completed; $3,425, 35 days.

Sutter near Webster. Two 2-story frames; owner, Mary A. Cotton;, architect, P. R. Schmidt; contractor, J. J. O'Brien; cost, $9,250; signed, Jan. 27; filed, Jan. 28; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Tenth near Folsom. Two-story frame building; owner, Michael Healy; architect, M. J. Welsh; contractors, Cuneo & Casaretto; sureties, F. Rate & A. Cuneo; $1,025, cost, $4,100; signed, Jan. 28; filed, Jan. 29; payments, $1,025, framed; $1,025, brown mortared; $1,025, completed; $1,025, 35 days.

Turk near Broderick. Plumbing and gas fitting; owner, J. A. Oliver; architect, P. R. Schmidt; contractor, R. A. Vance; cost, $1,750; signed, Dec. 23; filed, Jan. 6; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Twenty-second near Noe. Frame building; owner, E. Schwerin Jr.; contractor, Jas. Campbell; sureties, A. W. Starbird & J. B. Goldstein, $1,000; cost, $3,250; payments, $812.50, framed; $812.50, mortared; $812.50, completed; $812.50, 35 days.

Twenty-fourth and Castro. Frame building; owner, Jas. J. Manning; architect, J. J. Clark; contractor, W. Linden; surety, B. Joost, $1,084; cost, $4,338; signed, Dec. 22; filed, Jan. 17; payments, $1,085, brown mortared; $1,085, completed; bal., 35 days.

Twenty-fourth near Howard. 1-story frame; owner, C. A. Barnes; architect, M. J. Welsh; contractors, R. Doyle & Sons; cost, $1,144; signed, Jan. 22; filed. Jan. 23; payments, $582, brown mortared; $271, completed; $291, 35 days.

Willow Ave. near Polk. 2-story; owner, Jacob Haaf; architect, W. Winterhalter; contractor, Schmid & Hoelle; cost, $3,785; signed, Jan. 17; filed, Jan. 19; payments, $1,000, tinned; $785, rough plastered; $1,000, completed; $1,000, 35 days.

Alameda County.

Avery Tract, Berkeley. To build; owner, Henry C. Bascom; architect, A. H. Broad; contractor, A. H. Broad; cost, $3,450; signed, Jan. 12; filed, Jan. 23; payments, $900, framed; $900, brown mortared; $900,completed; $750, 35 days.

Block C, Leonard Tract, Oakland. Dwelling house; owner, John Rose; architect, C. M. Johnson; contractor, C. M. Johnson; cost, $1,450; signed, Jan. 13; filed, Jan. 16; payments, $350, enclosed; $350, brown mortared; $350, completed; $400, 35 days.

Block 16, Butles Tract, Oakland. 1-story cottage; owner, C. H. Klinkner; architects, J. J. & T. D. Newsom; contractor, G. B. Somner; cost, $1,625; signed, Jan. 5; filed, Jan. 8; payments, $400, roof boards on etc.; $400, first coat of mortar on; $418, completed; $407, 35 days.

Buena Vista Ave., Alameda. To build; owner, A. Brand; architects, A. W. Pattiani & Co.; contractors, A. W. Pattiani & Co.; cost, $2,289; signed, Jan. 22; filed, Jan. 23; payments, $650, rustic and roof shingles on and chimney built; $550, window frames set, brown mortar on; $519, completed; $570, 35 days.

Durant Ave. near Choate St. Berkeley. 2-story building; owner, Mrs. Ellen Blood; architect, R. Gray Frise; contractors, Oakland B'ld. & Imp. Co.; cost, $2,700; signed Jan. 24; filed, 24; payments, $675, enclosed; $675, brown mortar on; $675, last coat plaster; $675, 35 days.

Encinal Ave. near Grand St., Alameda. To build; owners, Mrs. M. F. & F. N. Delanoy; architects, A. W. Pattiani & Co.; contractor., A. W. Pattiani & Co.; cost, $2,570; signed, Jan. 23; filed, Jan. 24; payments, $700, floor joists in; $700, rustic and roof shingles on, chimney built; $600, window frames set, brown mortar on; $550, completed; $650, 35 days.

Paradise St. near Felton. Alterations; owner, C. W. Smith; architect, W. H. Lillie; contractor, C. H. Moore; cost, $1,550; signed, Jan. 15; filed, Jan. 15 payments, $500, building moved; $250, brown mortared; $250, completed; $250, 30 days; $300, 60 days.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

The process of evolution in the domestic architecture of San Francisco, has, from the comparatively short period of the City's existence, taken place much more rapidly than in the older cities of the eastern states.

Though San Francisco could boast of many extensive structures built before the destructive fire that destroyed a large part of the City early in the fifties, we will commence our review by referring to the time shortly after this event, when Russian Hill assumed the lead as the aristocratic residence portion of the city, and the *octogon house*, and its gravel walls, became the rage. From this beginning came the house of many angles, and the celebrated house with sixteen corners, which was still in existence a short time ago. The fashionable quarter however, soon shifted to Rincon Hill, and took the lead with brick residences and swell fronts, in imitation of the same class of buildings in Boston. South Park is still today a practical example of this style of architecture, which brings us up into the sixties—when the dwelling houses became provided with finished basements, more or less below the level of the sidewalk—and square fronts ornamented with long verandas and porches along the front, with large solid square columns.

On account of these verandas depriving the buildings of needful light and sun, and offering too great opportunities for the dust to be deposited in their corners, they were gradually supplanted by bay windows which have been modified and improved till the elaborately finished bay window of to-day resulted, which so completely fills the requirements by furnishing space, sun and view, that there is no doubt it will long continue to occupy its present high place in the opinion of the householder.

As the business part of the City began to encroach on the residence portions, and stores usurped places that should properly have been reserved for residences, the blocks assumed a more or less heterogenous appearance that was not desirable.

To obviate this disagreeable possibility, entire blocks of dwellings were built at one time, and disposed of to purchasers who wished to be assured of their surroundings.

The mistake made by these pioneer inovators, was that their buildings were all alike, and being all cast in the same mould, caused confusion and trouble to the dwellers therein.

It did not require much time, however, for the builders to vary the monotony of a long block by alternating two different designs, which were still further varied by being painted in different colors.

Even this did not prove entirely satisfactory, and now the enterprising builder secures the services of an architect who will design a row of houses, no two of which are alike, and yet not so dissimilar as to lack harmony which should always exist.

We have not touched on the changes in the arrangement and construction of office and business blocks, though they have been even more radical, and in place of the two and three story buildings we used to consider sufficient, we now have arrived at eight and ten story structures, with every prospect of seeing these heights doubled or tripled in the near future.

OLD MISSION CHURCH AT SONOMA, CALIFORNIA.

(CONTINUED FROM PAGE 16.)

The exterior walls show some of the peculiarities of construction of that period. Fig. 6, is the elevation of the rear wall with the veranda removed so as to show the position of the upper windows; Fig. 7, the elevation of the rear, complete; Fig. 8, the elevation of front wall with veranda removed and Fig. 9, the elevation of the front as finished and as it appears at the present date. The large opening, 11 feet wide, at one end

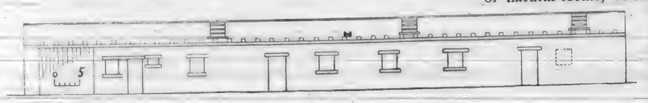

Fig. 6. Rear.

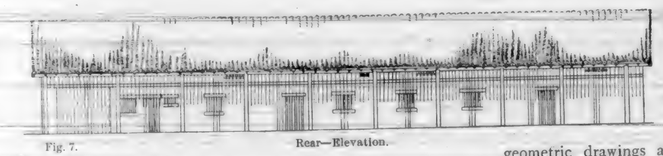

Fig. 7. Rear—Elevation.

can best be located by an inspection of the "plan" Fig. 1. The dotted lines represent former openings for doors or windows and which have at different times been changed or closed. The doorways are about 3½ feet in width by 7 feet in height, and the windows about 2½ feet in width by 4½ feet in height. The frame work for the doors and windows appears to be of more recent work. The sills for the windows are about 4 inches thick by 9 to 11 inches wide, and the lintels for openings for doors and windows, 7 inches thick, and the width of the thickness of wall which is 3 feet, and formed of three to four pieces. There seems to have been no rule for the length of bearings at

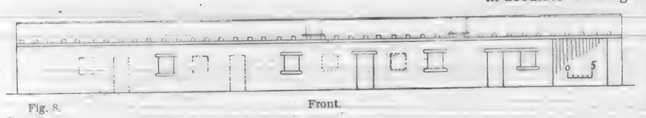

Fig. 8. Front.

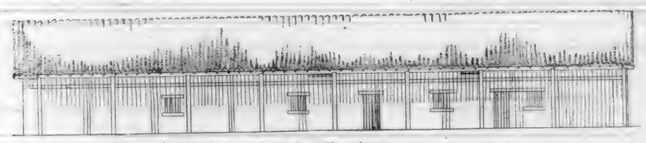

Fig. 9. Front—Elevation.

ends of lintels or sills, as some of them extend 9 to 22 inches, while others extend over two or three openings without a break. At the height of attic floor there are placed in the wall on the interior and exterior, and extending in an unbroken line, a timber or wall plate as shown in Fig. 2 at r and 4½ inches thick. The floor beams bear on the wall plates and extend through the walls. The ends of floor timbers and the wall plates, lintels, etc., are shown on the elevations. Openings were placed where desired and without regard to constructive bearing lines. The small opening at rear of attic was the outlet for the waste conductor from the attic story.

INSTRUCTION IN DRAWING.

A Critical Review of the Prang Course in Form-study and Drawing.—Continued from Page 125, Vol. XI.

Every object used in instruction is a vehicle for exercise in thinking and speaking; and the drawing-lesson is made the means of formal education and culture, drawing being itself a language.

As has been stated, modelling in clay and the shaping of paper into geometric forms are related to this course, being considered important adjuncts, and are indeed the first steps in the direction of manual training. In the third year the sphere, cube, and cylinder are thoroughly reviewed as basis for later instruction, and are treated accordingly, being among the most fundamental of natural forms, referred to continually during the course of the study. Natural objects are considered for representation, as the apple, the toad-stool, the leaf of the plantain; also objects of art, as a cubical basket, a Greek cross, a rectangular paste-board box, etc. In connection with the methodical study and understanding of such objects, instruction is given in the production of running or continuous designs for borders, etc.

In the fourth year the cylinder, four-sided prism, and vase forms are represented. By the use of these models the scholar reviews various geometric figures and different curves. From solids geometric drawings are made, and leaves and other parts of plants are drawn It will be observed that during the first four years of the Prang Course great stress is laid upon developing the observing powers through the study of *things*. This study awakens reflection, or thought, concerning the things observed, and this thought finds expression by means of modelling and drawing by oral expression. The sense of touch also plays its own inportant part in these exercises. In short, all is natural. It is characteristic of this stage that less importance attaches to accuracy of reproduction in drawing than to correct observation.

At the beginning of the fifth year the pupil is familiarized with fundamental forms, and his powers of observation are such that a more accurate study of details begins. From this time drawing becomes of more importance than heretofore as a means of expressing the results of observation, and systematic instruction in accurate drawing follows. The ellipsoid, ovoid, and three-sided prism are now the forms which are to be studied, to succeed those of the previous years. The appearance of cylindric models placed below the level of the eye is attentively studied, and in the line of decoration, rosettes, original arrangement of triangles, and flowers in full face. At this time the scholar is prepared to construct an objeot from a given drawing which contains three views of the object.

In the fifth year the cone and conical objects make their appearance as basic forms, and the study of the appearance of objects — that is, the beginning of perspective — is taken up. The development of ornament from plant forms is continued. After the first three or four years of study we find the power of observation greatly increased through the cultivation of the senses of sight and touch; and rule and compasses being unused, skill in free-hand drawing has been developed.

In the work of the latter school years instruction takes on a more practical form. Three different yet co-related aims are indicated, described in the Prang Course as Construction, Representation, and Decoration. By *Construction* is meant the study of the facts of forms leading to mechanical drawing for practical purposes of construction, and the purely industrial element prevails. Here it is especially interesting to observe how full constructive drawing is built up, or developed, from the study of the separate geometric views of objects begun in the first year. It is only the truth to say that the Prang Course was the first to present this phase of the study in this original and attractive way. It is presupposed that practical working drawings and descriptive geometry will be pursued later on, when a definite knowledge of the facts of form will prove of great importance.

Under the head of *Representation* the Prang Course treats of the principles of perspective and of harmonious grouping of objects. A circumstance which strikes one very agreeably is that at this stage little is said to the theory of perspective, the object of the method being to induce pupils to see perspective themselves, without troublihg themselves too much about the *a priori* theory. Thus by degrees they assimilate, as it were, the substance of the science easily and unconsciously, and can readily fit what is thus acquired to the complete formulated theory at the proper time. This idea may be called a masterly conception; for how many students pass without difficulty a severe examination in theoretical perspective without being able to draw even simple objects in perspective with any degree of correctness.

Under *Decoration* the Prang Course presents the elementary principles which should determine the selection, combination, and idealization of both geometric and natural forms for practical use in the decorative arts. For example, some historical (Gothic and Grecian) forms of ornament are given, and the learner is taught how to use natural objects for the purpose of conventional design according to the principles of aesthetics.

The work of the last school-year is, of course, in advance of the previous study, with the addition of the use of instruments and drawing to scale in the department of practical construction. The authors of the Course observe in their manual that at this point they would gladly introduce the study of light and shade and color, but that the conditions of school education in America will not yet admit of it, though they hope the time is near when they can carry out the fulfilment of their desires in these respects.

If we now consider the Prang Course as a whole, and compare it with corresponding methods provided for teaching drawing in elementary schools in Europe, the great superiority of the Prang Course cannot escape us. It is, in fact, a step in practical pedagogics surpassing anything which has been done in this direction in Europe. Unity, previously wanting, has been given to the study of drawing; and the fundamental principles of constructive, pictorial, and decorative drawing have been presented in their true relations.

It may be asked how it was possible that the comprehensive course we have been describing could have come into such general use and have met with such success in so short a time, as every new method of instruction, to be properly put in practice, cannot be well mastered and understood by teachers. This obstacle Mr. Prang recognized in good time; and after his Course had been approved by the principal educators of the country he set himself to supbly courses of instruction for teachers also. This was to be done by preparing them separately or together, according to circumstances, and to this end normal drawing-classes were established, the instruction being given by correspondence; and experience has proved this to be a practical way of meeting the difficulty beyond all expectation. It is shown that this method of normal instruction has certain advantages which personal instruction lacks. The student is left to depend more upon himself, and is therefore obliged to give his earnest attention and thought to the work in hand. Individuality under such conditions is free to develope its indescribable charm, where otherwise too fixed and formal standards of personal instruction might lead to lifeless uniformity. In short, Prang's Normal Drawing-classes have met with general recognition; and it is stated that nothing that has been done for the development of drawing-instruction in the American schools can show a wider influence or greater success. It may truly be said that The Prang Educational Company, as the originator of this undertaking, must always have the credit of introducing an ethical factor into the system of popular education in America which, without interfering with the practical progress of this sober-minded people, must elevate all its standards, and greatly add to its artistic perception and its aesthetic enjoyment.

Throughout this whole course of instruction, and animating the wise provisions for introducing it into the schools, there is apparent an earnest desire to inspire a love of beauty, and to honestly educate public taste. In this Europe of ours, where for a decade all the nations have been under arms, and technical ability is utilized in perfecting deadly weapons for slaughtering the masses, and milliards are spent for standing armies, and insecurity and poverty benumb whole peoples,—here in Europe there was no place for the work of such a man as Mr. Prang. He was therefore driven from the country of his birth to become a benefactor to the country of his adoption,—a country which goes on developing itself, not only in physical resources, but which is beginning to divert the stream of culture, stagnating in Europe, into the free fields of teeming activity in the new world. To America belongs the future. Soon will the United States surpass us in Art as well as in Science, if we do not arouse ourselves and strive with energy to reform and renew our common-school system, in spite of the depressing and unfavorable conditions and the present political complicationsof the old world.

Without progress and life in our primary and intermediate schools, and higher educational institutions can never prosper.

Therefore will not the whole body of Europeans unite and view these circnmstances, and strive for something similar to that which America is doing in Drawing in her public schools, owing to the wise provisions of Louis Prang? There is yet time, and we may yet be able to look back with pride on what has been accomplished here, in spite of all our difficult and untoward circumstances. There is not a moment to be lost in view of the close rivalry which exists and increases throughout the world. We must rally our forces and strive for something better; something so good that competition need not be feared even from America.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this Coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

The design for a City Club House is by Messrs. Mooser & Cuthbertson, Architects.

Our double plate is a block of six dwellings recently erected on the S. E. cor. of Oak and Lyon streets, from designs by W. H. Lillie, Architect for the Rountree Brothers.

MAISON DE CHASSE, ARDENNES.

This engraving herewith is a reproduction from the "Building News," London. The walls are of red bricks, the architranes and cornices are also of brick or terra-cotta. The engraving shows the details of the exterior finish. The size of bricks are 9 courses to 20 inches in height.

The illustrations on pages 28 and 30 of the "Twin Gables" and "Details of Residence" on the corner of California and Laguna streets are sketches from work erected from designs by Clinton Day, Architect.

GETTING THE STRENGTH OF WOOD.

BY W. E. PARTRIDGE.

De Long, in the journal which he kept on the Jeannette expedition, speaks of his ship as being "as strong as wood and iron could make her," and then gives a diagram showing how the ice crushed in parts of her framing. He was honest in his opinion, no doubt, and so have most constructors been, during the last thousand years. But honest opinions do not always make good workmanship. It would seem that we should be familiar enough with the properties of wood to know how to get the greatest amount of strength from it, but unfortunately we are not, excepting perhaps a few of the car builders.

The crushing strength of all wood in common use is several times as great upon the end as upon the side of the grain. This is a fact that every woodworker knows. Carpenters would laugh if one should state the fact to them, and yet from one end of the country to the other, builders and architects act as though they had never heard of it. They act just as De Long did when the strengthening timbers were placed in his ship. They make a strut bear directly upon the side of a timber. The bearing surface of the end comes fair upon the side of the grain. Long before the strut begins to feel the pressure, the side of the timber against which it bears has been crushed out of shape. Most people look at the crushed wood, remark, as did De Long, that the strength of the structure has been reached, and think no more about it. But the full strength of the timber is never brought out in such cases. The strut has not felt its load, while the other member has been crippled or perhaps destroyed. The car-builders, with a sense of the fitness of things, put a shoe upon the strut. Not one of wood which would crush just as soon as the timber it-self, but one of iron. This spreads out the foot of the strut or post, and gives it a large bearing. It is then able to transmit the whole load which it is capable of supporting to the side of the timber against which it rests. If the shoe has been properly proportioned, the strut will be just ready to spring when the shoe is being crushed into the side of the timber. Had this construction been adopted in that famous Jeannette, she would have been a great deal stronger without in the least adding to the quantity of timber in her hull. It would not, of course, have saved her from destruction but she would have been much nearer to the strength which she was supposed to have had.

Everywhere there are structures in which maximum strength of the materials is wanted—structures in which struts of wood or wooden posts bear upon the sides of the other timbers, and bear directly without shoes to spread their bearing surface. By making suitable shoes and enlarging the bearing surface against the side of the grain, the increase of strength can usually be counted upon as double, the size of all the timbers measuring the same.

Some years since, the importance of this was forced upon the attention of the car-builders of the country by a series of experiments. A number of model trusses, representing the sides of freight cars, were tested. It was found that many of the strongest trusses failed with the smallest loads, because the diagonals and posts pulled into the sills and plates, and thus crippled the timbers long before the limit of their strength had been reached. Upon reconstruction with shoes, to give larger bearings to the posts and diagonals, the strength was enormously increased with the same size of timbers, the only increase of weight being the cast-iron shoes. When thus put together, it was found that with a crushing load all parts were ready to give out at the same time. The posts and plates were just ready to buckle and the sills to break. It was an even thing which would go first. In actual practice it was sometimes a post, at other times a sill, and then again, a bolt. In a word, the whole truss was fairly balanced as regards strength in all its parts.

THE MECHANICAL NEWS.

The following is taken from the Northwestern Lumberman.

A REDWOOD EXHIBIT AT CHICAGO.

At the Institute of Building Arts, 65 Washington street, is a redwood exhibit, placed there by E. Spencer Sturges, 153 Washington street, which admirably demonstrates the decorative possibilities of that great California wood. The display consists of various natural specimens of veneer, finished and unfinished, including curly, root, blister and burl redwood. The beauty of the wood is practically shown by two handsome tables and a complete mantel, entirely of redwood, which for elegance could scarcely be exceeded by any wood, mahogany or otherwise. The exhibit is daily examined by a large number of visitors, who come to the institute because of the great variety of things among the building arts there displayed, and architects have taken great interest in the wood. The fact is that very little has ever been done in this city in the way of introducing redwood for the various uses to which it is adapted, and intending consumers are more or less at sea in regard to the practical details of its sale and utilization. A great many inquiries are made respecting the cost of veneers, how they can be supplied, etc., and as to how low wide, clear redwood can be sold, but it often requires a good deal of experimenting and figuring before it can be ascertained whether redwood can be used to advantage.

With the present high price of cherry many regard it feasible to substitute redwood in making counter tops, organs, etc. Architects might be induced to bring it into use for interior finish, and the veneers might be pushed in all sorts of ways, providing, of course, the cost of transportation does not bring the price up too high.

Mr. Sturges reports a great deal of local interest in redwood, but that little is understood about it here, and that California manufacturers have a field for doing a great deal of missionary work in the way of informing the public regarding the adaptability, peculiarities and methods of treatment of redwood.

THE CARAT.

The purity of gold is estimated by an Abyssinian weight called a carat Arabian, quirrat, a bean, the fruit of the carab tree, which is subdivided into four parts called grains. The term carat when applied to gold and silver is not a weight unit, but the mode of expressing the purity or fineness of the metal in twenty-fourths. Thus 18-carat gold is metal in which eighteen parts out of twenty-four (or three-fourths) are pure gold. This method of estimating fineness is traceable from the marc of Europe having been divided into twenty-four real carats or actual weight units. The present method is to estimate fineness in thousand; i. e., gold fine has 250 parts alloy, corresponds to 18 carat gold, three-quarters of the metal being pure gold in each case. Our gold coins are 21.19 carats.—TRADE JOURNAL.

OF PICTURESQUENESS.

The adjective "picturesque" is so often and so confidently applied in praise to buildings, that the endeavor to define wherein the quality exists, or to decide whether it be one that is in itself desirable, and to be sought after in our designs, may appear to many to be a work of supererogation and a waste of time and type. However, other minds, other thoughts; and some time since a well known architectural writer affirmed that the picturesque should not be aimed at in buildings so much as the "architecturesque"—which latter is a word not to be found in Johnson, but meaning apparently nearly the same thing as architectural—and he seemed to think that architecture (or beauty in building) was not only possible without picturesqueness, but that picturesqueness in a building was a foreign element that to some extent warred against and destroyed its architectural character. All nomenclature is conventional; the whole use of words is based on the supposition that men agree to understand thereby things that appear to them alike—feelings they possess in common. And yet (as has been often observed) it is very difficult to ascertain whether any two individuals mean by the use of any given word to describe exactly the same thing; and the more a word relates to that which is aesthetic and abstract the more does this difficulty increase. I believe that I understand by the word picturesque that which most other men understand thereby, but of this neither they nor I can be sure, though the opposite, if it be the case, may be proved; and what I here say of picturesqueness I say of that which I understand by the word.

If we endeavor to define the word "picturesque," we find that its etymological definition of "that peculiar kind of beauty which is agreeable in a picture, whether natural or artificial," does not express the whole idea that it now conveys to our mind. If it did so, the adjective might be as applicable to Murillo's "Madonna" as to his "Boy Catching Fleas," and more so to the subjects of Fra Angelico than to those of Teniers, or (to return to architecture) to the buildings represented by Botticelli, Benozzo, Gozzoli, or Ghirlandajo as to those limned by Prout or Birket Foster. There is no reason why "the peculiar beauty" of St. Paul's or London-bridge should not be "agreeable in a picture," and yet we should hardly apply to them the epithet picturesque. Whereas we might and do apply it to the way in which the spire of St. Martin Ludgate Church breaks up the view of the Cathedral from the foot of the hill. When we speak of the sky-line of a building being picturesque we generally mean that it is broken by jutting gable, dormer, pinnacle, or chimney-shaft; a picturesque plan is one broken by bay-window, recess, oriole, or buttress; a picturesque base-line is that broken by the inequality of the ground. In fact, we find the picturesque in that which is imperfect, incomplete—in the broken.

And, furthermore, a new building can never be so picturesque as an aged one. Even if we dismiss all sense of color from our consideration, and say that lichens and mosses, and other pencillings and adornments of nature, being extraneous to the building, not rightly appertaining thereto, but superadded, should not therefore be admitted, any more than its surroundings, into our consideration of its proper picturesqueness; yet, even then, the broken lines of hog-backed roof, of uneven tiling, and weather-worn stone will still make an old building more picturesque (in the ordinary acceptation of the term) than one that is new. The tatters of the beggar are more picturesque than the broadcloth of the squire. The wrinkles of senility are more picturesque than the bloom and strength of youth.

Picturesqueness, then, would seem to consist in imperfection, and to reach its climax in imperfection showing signs of decay and approaching dissolution.

And yet no one can deny that, in the eyes of most men, this incompleteness—this decay—has (so far as architecture is concerned) a beauty, or rather a loveliness, above that of the utmost perfection and strength. And it is easy to see some reasons why it should be so. Firstly, each man hopes that, after his death, others will think of him, and we think of our fore-runners and preserve their works as an example to our successors to think of us and preserve our works. That this is one main cause of archaeology will be seen when we consider that, were we certain the world would end five years hence, few, if any, would continue their researches into the past, and in the case of these few it would be because such research had become a matter of habit; whereas, if each were only certain that his own individual existence would end in that space of time, few antiquarians would desert their hobby, and it would increase in most men the feeling of love and reverence for the works of those who have preceded them.

But there is another and more direct cause for our partiality towards the imperfect and the worn. We are men conscious of imperfection in ourselves, and we are mortal; and the idea that stone and mortar should be perfect and immortal is repulsive to us. Each man may wish his own work to last, just as each man may wish his own children to outlive him; but this sentiment springs largely from two sources— rivalry with our fellows, envy that the children of others should live, and the works of others last, and ours not do so—and again the desire all men have for anything which they know that they can never possess. We know our works cannot be eternal, nor our descendants immortal, and so we would fain have them so; but put the case that we knew they would be immortal, eternal, and I believe our jealousy of their superior durability would soon turn to a hatred that would cause us to wish their destruction and death.

It would be opening a very wide subject were we to inquire into the cause of the feeling of jealousy or envy. It is sufficient here to state its existence; yet we may mention how that envy is nothing but a natural antipathy and repulsion from that which is unlike ourselves, either in quality or circumstance (which is but a form of quality). It is a sign of spiritual life. The most sensitive and spiritual races have it most. The envy, oftentimes to us apparently causeless, of the Easterns is proverbial.

But here it may be asked, "Did any mortal man ever feel jealous of cathedral or abbey, aqueduct or temple, or even of the Pyramids themselves?" No, for on all these we see the marks of Time's tooth and claw; but among buildings originally equal in beauty and strength we generally like best that which shows most signs of decay; and if it be answered that some of the strongest and oldest buildings are yet most attractive, it may be observed that there is more pleasure in seeing strong than weak things succumb to time, that envy is as much flattered by the slow (and apparently unwilling) decay of the former as by the more rapid and easy destruction of the latter—that it is more grateful to us to see pride and power abased, even if it be but slightly, than humility and weakness crushed into the dust.

But, it will be said, "the sight of Time's ravages on a building is not of itself pleasant to us. Our delight is in nothing where the strength of the wall, the bone and muscle of the masonry, still resists: in fact, it is with the building we sympathize, and not with Time, while we mark the conflict between the two." It is so; but sympathy can only exist between similar natures. Did the building show no signs of decay it would not be like us, and we could not sympathize with it. It is a difficult case even to imagine, for no building could exist without having in it causes of weakness, without showing signs, however minute, of approaching dissolution. Yet the shades of human feeling are so delicate and so complex that it is only by nothing extreme examples that we can judge whereon our ordinary sentiments are based, and the love of picturesqueness is a spiritual and not a mental liking. To build picturesquely the designer need not be intellectual but sensitive; and it is often the weakest characters that are the most sensitive. The love of the picturesque in nature and art is not so often found in the full-blooded and strong as in the consumptive and sickly, for these have most affinity and sympathy with decay and death.

So much for the picturesqueness of age, whereto the picturesqueness of imperfection is nearly akin, both in itself and that it appeals to our sympathy, we might almost say, to our pity. Picturesqueness in a design or new building is generally synonymous with quaintness—that is, if by quaintness we mean, not neatness, nicety, minute elegance of details, but rather oddity, strangeness, the unusual, and unexpected. Quaintness is often only ugliness brought to such a pitch that it becomes amusing. I will instance a case in point. When visiting a gentleman's house in the country a comrade of mine, very fond of the picturesque, whether in nature or art, was much struck with a large zinc chimney cowl of the most wondrously impossible design, and expressed in no measured terms his pleasure at its quaintness. We heard that to cure a smoky chimney the neighboring ironmonger's stock of chimney heads had been ransacked by the master of the house in the hope of finding something that would be at least unobtrusive and not jar with the rest of a very pretty old English mansion. Finding each worse than the other he in

despair chose the hughest and most hideous, and the result was what we saw—the picturesque.

And if quaintness be not always the same thing as ugliness yet it must always speak of thwarted human effort. At least true quaintness (that which comes unasked) does so. That spurious quaintness that is dragged in by the incompetent designer (pretty much as an incompetent cook might drown with pepper the nauseousness of his viands) speaks rather of a misdirection of human effort. One great reason why works of engineering are generally considered so unpicturesque is, that their authors appear to us to have perfectly succeeded in that which they attempted. Compare the bridge at Charing-cross with that at Albi. What trouble of mind, what anxious contrivance to overcome obstacles the builders of the former may have had, we see not: it only seems to us that they had a work to do and did it. An engineer may appreciate the difficulties they had to meet, and trace the means whereby they met such difficulties, and in his eyes the bridge may look picturesque, though since it is perfectly successful it never can look so to any very great extent, and to most men it is as uninteresting as a bridge can well be. That at Albi has been carried away by the floods of the Tarn I know not how often. The lower parts of the piers are of stone, but the pointed arches above are of brick, evidently built after some destruction of a former stone bridge, with its remains used here and there, and finally the bridge has been widened by throwing segmental arches between the piers outside the other. The result is a building that speaks plainly of a human struggle with the forces of nature. We appreciate the trouble, perplexity, and toil its makers went through. We pity them when we mark how, with bulky pier and heavy buttress, they painfully strove, by piling mass on mass, to withstand that weight of water which, when it rose, was yet too strong for them. We sympathize with them and their work (the more so that the river still flows below and may yet carry it away), and to save ourselves the trouble of defining our feelings we say that the bridge is picturesque. I do not know that it has been ever caricatured by the modern bridge-builder (the public, wisely enough, do not go for their bridges to those who delight in picturesque imperfections and decay); but, were he to copy it, the highest result he could reach would be that of spurious— false picturesque. He would be but calling upon men to sympathize with effort and perplexity he had never felt. Far better he should be true, nor pretend there is a difficulty, when he can, like a cunning spider, throw a suspension bridge (that most unpicturesque of objects) across.

Is picturesqueness, then, never to be aimed at in our designs? To this different men must make different answers. Leaving out of the question those who will reply, "The public like it—we must please our clients—let us put on our hook any bait that will attract moneyed customers and transfer some of their coin to our pockets"—leaving these on one side as animals that will follow any whither let others but show the way,—yet there will still remain a great diversity of opinion whether picturesqueness, even as I have defined it, is to be sought after or not. The feeling "Let us eat and drink, for to-morrow we die," is one that all men feel at times, and with some it is the main rule of life. Of course, in most if not all cases, the desire to be satisfied is something higher than mere bodily hunger or thirst; but, whether it be appetite for learning, fame, riches, power, or any other form of ideal happiness, the thought is still the same: "Let us satisfy such wants as we feel, nor create new wants for ourselves." Such men will naturally say "Let us build the picturesque, for our nature craves for it—it gives us pleasure." But if we consider the main object of our life—the one thing to be lived for—to be not the rendering happy the lives of our fellows while they exist, or the satisfaction of the existing wants of our race, but rather the advancement of that race to a higher level—in other words, the creation and cultivation of other and higher wants than those we now feel—wants which, though we may never be able to satisfy, those that follow us may— if we consider this, and if our main object and endeavor be to do this so far as in us lies in our art and handicraft, we shall (I think) leave on one side all thought of picturesqueness, of imperfection—all appealing to the sympathy of men—all endeavor to make our buildings harmonize with nature's flaws and raggedness (though we ourselves may be unable to help sympathizing with nature, and even liking its imperfections from association, for after all this is the only world we know; and, as Mrs. Croaker observed, "we were never in a pleasanter place.") We shall rather, ever and always, even in the smallest things, aim at a certain nobility and beauty which is very difficult, nay almost impossible, to describe in words, but which we can each more or less imagine—what we call perfection. Neither is it necessary that perfection be more expensive than imperfection. We need not place delicate mouldings or elaborate framework on the doors of pigsties; we know that beauty does not consist in ornament, nor in the absence of ornament, but there is no reason why the designer of a pigstye should not aim at the grand, and not be content with the pretty—why there should not be even in it something of the four-squareness that delighted the Hebrew prophet. The most perfect modern buildings we have are warehouses and such like buildings, whose general design has been kept unbroken for the sake of economy, whereas it is usually considered of the greatest importance in designing a dwelling-house, even though it be but a gate-keeper's lodge, to get it "nicely broken up on plan." Some of the most beautiful old Gothic houses I know are at Cordes; and yet I do not recollect a single buttress to any one of them. Their facades are kept perfectly unbroken, save by doorway, window, and string-course, and appear to have been finished at the top with a straight cornice. They are certainly very beautiful; but such picturesqueness as they possess is a natural consequence of their being built on steeply rising ground, a site for which their designers are not responsible. They are, in fact, too perfect to be picturesque, as I understand the word.

Nor need we think that we are bidding farewell to the picturesque for ever, simply because we desist from seeking it. Our work must yet for many a long day speak of thwarted human effort. We shall not be able to build grandly or beautifully, simply because we desire to do so; but we may reach a higher beauty (or rather, since there is but one abstract beauty, reach nearer to beauty), than if we confine our efforts to designing that which shall only please our fellows, and claim their sympathy. "Who aims the sky shoots higher far than he who aims a tree," but he hits not his mark. And if we aim at perfect beauty it is certain we shall not attain it; but, at the worst, our buildings will have that true picturesqueness that comes when an unattainable ideal is aimed at; and in this they resemble the works of those of old.

Let us dismiss, then, from our designs all that speaks of imperfection, all that hints at future decay. Let us not delight in buttresses—they are at best but confessions of weakness—place no pinnacles upon tower or parapet to break the squareness of their outline against the sky—no spiky finials on gable ends, to look like baby lightning-conductors presenting arms at the clouds. Let breadth, and not break, be our aim. Let there be some repose about our buildings. Amid the feverish restlessness characteristic of nineteenth century life—at least let stone, our future coverlet, speak to us even now of rest.

FRED C. DESHON.

WHO CAN BEST BE SPARED?

Young men, this is the first question your employers ask themselves when business become slack and when it is thought necessary to economize in the matter of salaries. "Who can best be spared?" The barnacles, the shirks, the makeshifts, somebody's proteges, somebody's nephews, and especially somebody's good-for-nothing. Young men, please remember that these are not the ones who are called for when responsible positions are to be filled. Would you like to guage your own future for a position of prominence? Would you like to know the probabilities of your getting such a position? Inquire within! What are you doing to make yourself valuable in the position you now occupy? If you are doing with your might what your hands find to do, the chances are, ten to one, that you will soon become so valuable in that position that you cannot be spared from it; and then, singular, to relate, will be the very time when you will be sought out for promotion to a better place.—PRINTING TIMES AND LITHOGRAPHER.

EDISON'S EXPLANATION OF THE AMPERE AND THE VOLT.

During a recent examination a lawyer put the following question to Thomas A. Edison:

"Explain what is meant by the number of volts in an electric current?" To which he replied:

"I will have to use the analogy of a waterfall to explain. Say we have a current of water and a turbine wheel. If I have a turbine wheel, and allow a thousand gallons per second to fall from a height of one foot on the turbine, I get a certain power, we will say one horse power. Now the one foot of fall will represent one volt of pressure in electricity, and the thousand gallons will represent the ampere or the amount of current. We will call that one ampere. Thus we have a thousand gallons of water or one ampere falling one foot or one volt or under one volt of pressure, and the water working the turbine gives one horse power. If, now, we go a thousand feet high, and take one gallon of water and let it fall on the turbine wheel, we will get the same power as we had before, namely, one horse power. We have got a thousand times less current or less water, and we will have a thousandth of an ampere in place of one ampere, and we will have a thousand volts in place of one volt, and we will have a fall of water a thousand feet as against one foot. Now the fall of water or the height from which it falls is the pressure or volts in electricity, and the amount of water is the amperes. It will be seen that a thousand gallons a minute falling on a man from a height of only one foot would be no danger to the man, and that if we took one gallon and took it up a thousand feet and let it fall down it would crush him. So it is not the quantity or current of water that does the damage, but it is the velocity or the pressure that produces the effect."—*Scientific American.*

Through the kindness of Mr. John M. Curtis, we herewith print the Law relating to party walls, etc., of the the State of Louisiana. It is not presented as a model law, but as hints for the consideration of Architects and Builders, when Laws of this kind are about to be enacted for this State.

STATE LAW OF LOUISIANA.

PARTY WALLS, DITCHES, FENCES, ETC.

SECTION 1

He who first builds in the cities and towns, or their suburbs, of this State, may rest one-half of his wall on the land of his neighbor, provided he builds with stones or bricks, at least as high as the first story, and provided the whole thickness of this wall do not exceed eighteen inches, not including the plastering. But he cannot compel his neighbor to contribute to the raising of this wall.

SECTION 2

If the neighbor be willing to contribute for his half to the building of the wall thus raised, then this wall is a wall in common between the proprietors. The neighbor who has refused to contribute to the raising of this wall preserves still a right of making it a wall in common, by paying to the person who has made the advance, the half of what he has laid out for its construction, according to the rules hereafter established.

SECTION 3

Every wall which is a separation betwixt buildings as high as the upper part of the first story, or betwixt the yard and garden in the cities and towns, and their suburbs, of this State, and even any other enclosure in the fields, shall be presumed to be in common, if there be no title, proof or mark to the contrary.

SECTION 4

The repairs and buildings of walls in common are to be made at the expense of all who have a right to the same, and in proportion to their interests therein.

SECTION 5

Nevertheless every co-proprietor of a wall in common, may be exonerated from contributing to the repairs and rebuilding, by giving up his right of common; provided no building belonging to him be actually supported by the wall thus held in common.

SECTION 6

Every co-proprietor may build against a wall held in common, and cause beams or joists to be placed within two inches of the whole thickness of the wall, saving to the neighbor the right of deminishing with the chisel the length of the beam till it do not exceed the half of the thickness of the wall, in case he himself should wish to fix beams in the same place, or to build a chimney against it.

SECTION 7

Every co-proprietor is at liberty to increase the height of the wall held in common, but he alone is to be at the expense of raising it and of repairing and keeping the part above the height of the wall in common, in good order; and besides he alone is liable for all expense arising from its being raised higher according to its value.

SECTION 8

If the wall held in common cannot support the additional weight of raising it, he who wishes to have it made higher, is bound to rebuild it anew entirely, at his own expense, and the additional thickness must be taken from his property.

A weak wall built by the owner of one lot, along and not over the dividing line between the two lots, may be demolished by the owner of the other lot in order to erect a strong common wall.

SECTION 9

The neighbor who did not contribute to the wall held in common, may cause the raised part to become common, by paying one-half the expense of such raising, and the value of the half of the soil employed for the additional thickness, if there is any.

SECTION 10

Every proprietor adjoining a wall has, in like manner, the right of making it a wall in common, in whole or in part, by reimbursing to the owner of the wall one-half of its value, or the half of the part which he wishes to hold in common, and one-half of the value of the soil upon which the wall is built, if the person who has built the wall has laid the foundation entirely upon his own estate.

SECTION 11

Neither of the two neighbors can make any cavity within the body of the wall held by them in common, nor can he affix to it any work without the consent of the other, or without having, on his refusal, caused the necessary precaution to be used, so that the new work be not an injury to the rights of the other, to be ascertained by persons skilled in building.

SECTION 12

Every one has a right to compel his neighbor within the cities and towns, and their suburbs, of this Statem to contribute to the making and repairing of the fences held in common, by which their houses, yards and gardens are separated, which shall be made in the manner which is or may be prescribed by the regulations of the police on this subject.

And if one of the proprietors has been alone at the expense of making the inclosure held in common, he may compel the other to make it in his town, and the presumption shall be that the inclosure was made by him on whose side it is nailed, unless there exists a voucher or proof to the contrary.

SECTION 13

In the country the common boundary inclosures between two estates are made at the expense of the adjacent estates, if the estates are enclosed; otherwise, the estate which is not inclosed is not bound to contribute to it.

Every fence, which separates rural estates is considered as a boundary inclosure, unless there be but one of the estates inclosed, or unless there be some title or proof to the contrary.

SECTION 14

Every ditch between two estates shall be supposed to be held in common, unless there be a voucher or proof to the contrary.

SECTION 15

A ditch held in common is to be kept at the expense of the two contiguous proprietors.

SECTION 16

Every proprietor in the cities, towns or suburbs of this State, is forbidden to plant on the boundary line which separates his estate from that of his neighbor, trees which may be of any injury whatsoever to his neighbor.

And if his neighbor suffers any damage from them, he can oblige the owner to have them torn up or the branches of them cut off, which extend over his estate.

If the roots only extend themselves on his estate, the neighbor has the right to cut them up himself.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute Architects, meets second Friday of each month at Academy of Sciences Building.

Seth Babson, Pres. W. J. Cuthbertson, Vice-Pres.
Oliver Everett, Sec. John M. Curtis, Treas

Technical Society of the Pacific Coast, meets first Friday of each month at Academy of Sciences Building.

John Richards, Pres. L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evening of each month at the Murphy Building.

W. C. Quimby, Pres. O. Brooks, Vice-Pres.
C. E. Purington, Sec. W. C. Crosett, Treas.

Builders' Association of California, meets every Monday at 330 Pine Street, Rooms 9–12, at 1:30 P. M.

S. H. Kent, Pres. A. Jackson, Sec.
L. A. Larsen, Clerk.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects, was held in the new rooms, in the Academy of Sciences building.

By invitation, Mr. Wright, a quantity surveyor, explained the customs and usages of his profession as practiced in England, and gave his views as to the desirability of a similar system being adopted by the architects of this city.

THE regular meeting of the Technical Society of the Pacific Coast was held at their rooms, on the 6th inst. The subject for the evening was, "The Modern Theory of Ocean Waves," by Mr. A. W. Stahl, U. S. Navy.

AT the regular meeting of the California Electrical Society held at their rooms on the 16th inst., the subject of transmission of Power by Electricity was discussed. The subject for the next meeting to be held on the 6th of April, will be Sub-Marine Mining by Electricity, by Mr. T. J. Allen.

UNDER the auspices of the Camera Club, a most interesting exhibition of views of the Yosemite Valley, was given on Feb. 26th. The lantern slides were made from photographs taken by the members of the Club. The lecturer gave a very vivid description of the beauties and wonders of the valley, as they were brought successfully before the eyes of the audience. The pictures sharply focused on the screen, frequently elicited applause and commendation, and the Club has reason to be pleased with the satisfaction expressed by its audience. Duplicate views of this series, have been made for exhibition and exchange with other clubs throughout the east and Europe. The Club proposes to give monthly exhibitions, including a complete tour of Europe, and the best work of the eastern societies. A new class of membership has been established by the Club, and known as subscribing members—for fifty cents per month dues, these members are entitled to four tickets to each exhibition.

OBITUARY.

CHARLES H. ACKERSON.

We regret to chronicle the death of Charles H. Ackerson, an old resident and a prominent contractor of this city. He was at one time the Chief Engineer of the San Francisco Fire Department.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

Lien Under Separate Contracts Against Same Owner.—The owner of two lots entered into two separate contracts with a builder for the erection of a house upon each. The builder entered into an entire contract with a material-man to furnish material for both. The sub-contractor filed a lien for the whole amount against both houses. Such a statement is invalid as a basis for lien against either lot, as it should have shown the specified facts necessary to give jurisdiction, with reference to each lot separately.

Knauft v. Miller, Supreme Court of Minnesota, 47 N. W. Rep. 313.

Abandonment of Mechanics' Lien.—Where a person who would otherswise be entitled to a mechanics' lien for materials furnished and used in the construction of a building, takes the notes of the owner secured by a chattel mortgage, he waives his lien, and his mortgage is subject to the mechanics' liens filed to secure debts arising out of the construction of the building.

Kendall Mfg. Co. v. Rundel, Supreme Court of Wisconsin, 47 N. W. Rep. 364.

Priority of Mechanics' Lien over Vendors' Lien.—Where a purchaser of real estate takes possession of it before the delivery of the deed, and with the full knowledge of the sellers, cause improvements to be made thereon without objection by the latter, and without notice by the latter to the contractors and material-men of their claim of title, the lien of the material-men and contractors is superior to the vendors lien for purchase price, and will be enforced as against the sellers as well as the purchaser.

Leonard V. Cook, Court of Chancery of New Jersey, 20 At. Rep. 855.

Flowage from Water Spouts.—It constitutes a trespass to so construct a building that the system of water spouts for carrying away the water which falls on the roof is arranged in such a manner that the water collected thereby is discharged upon the land of another.

Conner v. Woodfill, Supreme Court of Indiana, 25 X. X. N. E. Rep. 876.

BUSINESS MOSAICS.

Notice of the removal of the West Coast Wire and Iron Works, Smith and Trowbridge proprietors, from their old quarters 11 Drumm St., to that large and commodious brick building, Nos. 13 and 15 Spear St., near Market St. San Francisco, two blocks from ferry landing, has been received at our office.

This change has been necessitated on account of continuously increasing patronage, their business especially during the year just ended, having entirely out-grown the capacity of the old factory. The new quarters have fully quadruple the manufacturing capacity of the old works. They have greatly improved, and added to the manufacturing plant in every branch of Wire Working with the especial aim of excelling in the manufacture of every product pertaining to the wire working industry. They have also developed and perfected facilities for the manufacture of every description of useful and ornamental Metallic, Scroll and Grill Work, now coming so generally into use by bankers and others fitting out large and elegant offices.

Store Fixtures, Nickel Plated, Polished Brass and Bronzed Iron, will receive careful attention.

The Architectural Iron Works department will be developed and prosecuted more vigorously than heretofore, and will include the manufacture of the usual variety of Builders' Supplies in their line, such as Wrought Iron Fencing and Railing, Fire Escape Balconies and Ladders, Areal Grating and Iron Stairs, Iron Shutters and Doors, Roof Cresting, Finals and Tower Ornaments, also Cemetery and Lawn Furniture.

A Retail Store and Sample Show-room will adjoin the works, and a large stock of every grade of Iron, Steel, Brass and Copper, Wire Cloth and Galvanized Twist Wire-Netting, will be kept constantly on hand to supply the demand of the retail trade.

Furniture should harmonize with the general decorative features of the apartment.

Elegance and beauty of design and workmanship for furniture always commends itself to those who are able to appreciate the better class articles. This fact has been kept in view by the West Coast Furniture Co., L. and E. Emanuel, in their extensive business.

The furniture furnished by this firm for the ordinary rooming house and hotel purpose has a substantial and chaste make up, which is appreciated by the buyer. Their furniture for the better class houses, and the fittings for banks and offices show a high degree of art workmanship, great care being taken in the selection of the shades and grains of the different woods to obtain harmonious effects.

The Western Iron Works has been known for many years as one of the most reliable wrought iron works on the coast.

Their prison work, fire and burglar proof doors, shutters etc., have successfully withstood the test of time; and are at present the representative works in their line.

GALVANIZED VERSUS TINNED SHEETS.

It is an interesting fact just now for purchasers although not probably gratifying to makers of galvanized sheets, that the latter are netting American makers less for guaranteed sheets No. 27 guage than importers are getting for guaranteed brands of terne, or tin, roofing plates.

Galvanized sheets of No. 27 guage also have the advantage of being heavier than terne plates as to the original sheets used, and as to the coating thus rendering them far more substantial and durable.

As galvanized sheets are also much larger in size they are not only much more economical to apply but also far more effective for roofing.

Metal roofers should note this and profit by it, especially for guttering and spouting. Persons interested in metal covering will please note the removal of the offices of THE CINCINNATI CORRUGATING CO. to 89 and 90 Johnston Building, Cincinnati, Ohio, where they will be pleased to give information and estimates on their specialties, Iron and Steel Roofing and Siding, Arches, Lath, etc. Black and Galvanized Iron and Steel Sheets of their own manufacture.

CITY BUILDING NEWS.

Baker near Washington. One-story cottage; owner, N. King; architect, Samuel Newsom; contractors, McMillan & Maurer; cost, $2,750; signed, Jan. 31; filed, Feb. 2; payments, $412, frame up; $412, ready for lathing; $412, brown mortared; $412, plastered; $412, completed; $690, 35 days.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

ASSYRIAN libraries have been discovered in the remains of the ancient city of Ninevah. The books are composed of tablets of clay, on which the characters were finely drawn when the clay was plastic. The pages are numbered, as are the books of to-day. After the tablets are baked they afford an almost imperishable means of communicating knowledge to futurity.

Why not prepare the master-pieces of the literature of to-day in such a manner for deposition in the corner-stones of our public libraries that are yet to be?

THE SENSE OF BEAUTY.

BY CHANNING.

Beauty is an all-pervading presence. It unfolds in the numberless flowers of the spring. It waves in the branches of the trees and the green blades of grass. It haunts the depths of the earth and sea, and gleams out in the hues of the shell and the precious stone. And not only these minute objects, but the ocean, the mountains, the clouds, the Heavens, the stars, the rising and setting sun, all overflow with beauty. The universe is its temple; and those men who are alive to it, cannot lift their eyes without feeling themselves encompassed with it on every side. Now, this beauty is so precious, the enjoyments it gives are so refined and pure, so congenial with our tenderest and noble feelings, and so akin to worship, that it is painful to think of the multitude of men as living in the midst of it, and living almost as blind to it as if, instead of this fair earth and glorious sky, they were tenants of a dungeon. An infinite joy is lost to the world by the want of culture of this spiritual endowment. Suppose that I were to visit a cottage, and to see its walls lined with the choicest pictures of Raphael, and every spare nook filled with statues of the most exquisite workmanship, and that I were to learn that neither man, woman, nor child ever cast an eye at these miracles of art, how should I feel their privation; how should I want to open their eyes and to help them to comprehend and feel the loveliness and grandeur which in vain courted their notice! But every husbandman is living in sight of the works of a diviner Artist; and how much would his existence be elevated, could he see the glory which shines forth in their forms, proportions, and moral expression! I have spoken only of the beauty of nature, but how much of this mysterious charm is found in the elegant arts, and especially in literature? The best books have most beauty. The greatest truths are wronged if not linked with beauty, and they win their way most surely and deeply into the soul when arrayed in this their natural and fit attire. Now, no man receives the true culture of a man, in whom the sensibility to the beautiful is not cherished; and I know of no condition in life from which it should be excluded. Of all luxuries this is the cheapest and most important to those conditions, where coarse labor tends to give a grossness to the mind. From the diffusion of the sense of beauty in ancient Greece, and of the taste for music in modern Germany, we learn that the people at large may partake of refined gratifications, which have hitherto been thought to be necessarily restricted to a few.

OLD MISSION CHURCH AT SONOMA, CALIFORNIA.

(CONTINUED FROM PAGE 27.)

The view here shown represents the building as it appears at the present time, the enclosure fence being omitted. The chapel at the farther end is of later date. The tiles of the roof show displacement at or near the lower portions of the roof, while at the upper portions the tiles remain intact as laid some seventy-five or one hundred years ago. They are without any fastening whatever, being laid on layers of brush as described on page 15. It may be well to suggest that possibly laying the tiles upon an elastic bedding may account for the freedom from breakage after so long a time, while modern tiles set upon a rigid bearing and fastened with cleats, nails, etc., show many fractures after a few years. The timber, boards, etc., were all cut and prepared in the redwood forests about twelve miles distant, and were then dragged upon the ground by the aid of horses, the rider slipping the noose of his lariat in the groove, cut near the butt end of each stick of timber, the other end fastened to the horn of the saddle. This groove is shown in figures 3 and 5, page 15. All the boards, planks, or larger pieces, show the wear on the side in contact with the ground. The larger bearing timbers are hewn to a square form, varying somewhat from a right angle. Planks and boards are hewn to the required thickness—planks one and three-quarter inches, and boards seven-eighths inches in thickness. Throughout the wood work there are no signs that a saw was used in any case, all the timber, planks and boards having been worked with a narrow faced axe, which was used with so much expertness that the planks and boards are quite as evenly worked as if sawed. Some of the boards are sixteen and eighteen feet in length and from eleven to twenty-two inches in breadth. There is no visible sign of such a tool as an auger or other boring instrument in the frame work of doors, all having been done with the axe, and perhaps a chisel may have been used in some cases The iron work for the hinges of doors and some of the small interior closets are of primitive workmanship. The sanitary arrangement and appliances were somewhat crude, but sufficient remains exist to show that this necessary department was not neglected. The first or ground floor being on a level with the ground outside, gutters or open drains (formed of burnt tiles) were run along under the eaves and connected with a covered drain run through the passage or driveway. This drain was eleven inches in depth by a width of twenty-two inches, the bottom formed of two and a half inch, seven by fourteen inch tiles, laid flat, the sides of same tiles on the flat, and four courses high, the top covered with redwood planks about three feet long and three inches thick, mostly decayed. This drain discharged into a large open ditch outside the premises. In the attic near the floor at the rear, a solid log nine inches thick and one foot six inches wide, the upper surface hollowed out to form a waste or soil pipe and run to the gutter at rear. Ventilation was secured by means of open doors and windows, the windows being provided with round, wooden bars three to four inches in diameter, and set horizontally at a distance of from four to six inches apart. In the kitchen or cooking room the fire was built at or near the center of the room. No signs of a chimney or fire place appears in any portion of the building, except one of recent date. The smoke from the kitchen fire found its exit through the barred windows near the roof.

OLD MISSION CHURCH AT SONOMA, CALIFORNIA.

RADIATION IN ORNAMENT.

In the surface decoration of the Moors all lines flow out of a parent stem; every ornament, however distant, can be traced to its branch and root; they have the happy art of so adapting the ornament to the surface decorated, that the ornament as often appears to have suggested the general form as to have been suggested by it. In all cases, we find the foliage flowing out of a parent stem, and we are never offended, as in modern practice, by the random introduction of an ornament just dotted down, without a reason for its existence. However irregular the space they have to fill, they always commence by dividing it into equal areas, and round these trunk lines they fill in their detail, but invariably return to their parent stem. They appear in this to work by a process analogous to that of nature, as we see in the vine leaf, the object being to distribute the sap from the parent stem to the extremities, it is evident the main stem would divide the leaf as near as may be into equal areas. So again of the minor divisions—each area is again subdivided by intermediate lines, which all follow the same law of equal distribution, even to the most minute filling in of the sap-feeders. The Moors also follow another principle—that of radiation from the parent stem, as we may see in nature with the human hand, or in a chestnut leaf. The Orientals carry out this principle with marvelous perfection; so also did the Greeks in their honeysuckle ornament. And here we may remark a peculiarity of Greek ornament, which appears to follow the principle of the plants of the cactus tribe, where one leaf grows out of another. This is generally the case with Greek ornament. The acanthus leaf-scrolls are a series of leaves growing out one from the other in a continuous line, whilst the Arabian ornaments always grow out of a continuous stem. When styles become debased, neither of these laws are followed, as in Elizabethan ornament, where nothing is continuous, nothing radiates; all is haphazard.

Owen Jones.

A DISCOURSE ON CALCAREOUS HYDRAULIC CEMENTS.

BY CALVIN BROWN, C. E., U. S. N.

Mr. President and Gentlemen:—In accepting the polite invitation of the Executive Committee of your Society to address you on the subject of cements, I felt that in undertaking the task it would not be necessary for me to go into the matter to the full extent of its possible treatment. As engineers and architects, and in reference to the magnitude of its importance, applications in constructive works, all of you must have had considerable acquaintance with it, which supposition prompted me to limit what I ought to say more to my own experience than to attempt to lay before you, except in a very general and brief way, the details of its history, its chemical features and its economics.

Although the history of constructive engineering and architecture is marked by many interesting and even wonderful monuments of human skill, aided by science and genius, it appears to me that this nineteenth century in the discovery and application of hydraulic cements has far outstepped all previous centuries in the masonry of constructive works, taking into the account their utilitarian character, the rapidity of their erection and their comparative cost even, to say nothing of the surmounting of difficulties of location never encountered by the ancient builders. In all these results the application of hydraulic cements has entered, and the modern architect and engineer find in this material an ally whose help remained beyond the reach of their predecessors.

The ancients have been popularly credited with the possesion of superior cements, but as far as can be ascertained from history, and the investigation of their works yet extant, either whole or in ruins, there appears no evidence that their builders used any hydraulic cementing materials, except those found and applied in their natural condition after a simple pulverization, as pozzuolana, trass, etc.; all volcanic products which they mixed with common lime mortar to bestow a more rapid induration upon it and the capacity for hardening in damp situations or under water; they were not aware of, or at least they did not use, hydraulic limestone for the production of cement.

It was not until 1759, when the bold design of erecting a stone lighthouse upon the ocean-girdled Eddystone rock was undertaken by Smeaton, that the discovery was made by this able engineer of the existence of certain peculiar limestones, which, when calcined and pulverized and made into mortar possessed cementing qualities with the important characteristics of setting and hardening under water. His report of this discovery is given in the quaint language of old times: he says these stones after they are burnt and ground "afford a paste which hardens in a few days under water, but in the air they never acquire much solidity." It is reported that Smeaton discovered the causes of hydraulicity in limestones, but I do not remember the explanation he gave of it, but am impressed with the conviction that its complete description was given by very much later investigators. Smeaton used the natural products pozzuolana and trass for his cementing materials, but it is believed that for the strength of his great structure he relied more upon his system of dove-tailing the stoues in the work than upon the cement he put between them, which evidently was applied to bed and perfect their joints and so far prevent the water of the ocean from penetrating the masonry and thus preventing its hydrostatic effects.

It does not appear from any records I have been able to meet that much progress was made in the practical development of calcareous hydraulic cements until about 1780, when Dr. Higgins, of England, published a small treatise on what he called "water cements." If I recollect rightly he used common lime mortar treated with certain materials that conferred slight hydraulicity, such as pounded brick, etc. Sixteen years after this, or in 1796, a quick-setting hydraulic cement, resulting from the ordinary processes of burning and grinding certain limestones, was introduced by Parker, of England, and patented by him; he called this Roman Cement, under which name the article has continued in use down to this day, illustrating the charm of an impressive cognomen.

From the date of Parker's discovery forward, much attention seems to have been given to the search of limestones capable of furnishing a similar material, the general interest therein prompting several savans in England and on the Continent to engage in the work, the most conspicuous among them being the engineer J. L. Vicat, of France, whose elaborate researches commenced about 1812.

Vicat's well known publication shows how exhaustively he pursued his experiments, going into all the details of manufacture, manipulations and application of calcareous mortars, both hydraulic and non-hydraulic. Originally confined to the examination of materials which, taken in their natural state, yielded by the ordinary processes of calcination and pulverizing, cements of various qualities as to their powers of induration and hydraulic energies, his operations finally resulted in the grand discovery that although nature furnished throughout her lithological stores vast deposits of substances that in their natural state would supply a material with hydraulic properties, it was in the power of science to evolve an artificial combination of her various materials that in the highest degree would obviate the uncertainties of these single substances and secure a product at once adapted to all the purposes of the builder. It was well known that no pure limestone or simple carbonate of lime would furnish an hydraulic mortar, and in the fact that impure limestones would furnish such, though in varying degree, lay the hint that Vicat seized upon, namely, to ascertain what was the element or elements that at the same time contaminated the limestone and conferred upon it, upon proper treatment, that wonderful property of plasticity, adhesiveness and hardening under water. Analysis showed that these stones were a mixture in various proportions, of carbonate of lime, alumina, peroxide of iron, silica, etc., wherein lay the principle of hydraulicity, and hence, by an artificial combination of these ingredients, it was possible to manufacture an artificial hydraulic cement whose efficiency as a building material might be uniformly secured beyond any chances involved in the capricious accidents of geological conditions.

Vicat carried out his experiments with a triumphant verification of their prophecy; he found their results like that shown in the natural stone to be double silicate of lime and alumina, with certain traces of other substances whose presence in the composition might not be essential in its general characteristics though probably not impairing them.

I must hurry over the details of the subsequent development of Vicat's discoveries and simply mention that upon his views and experiments, several other eminent chemists and engineers in Europe entered upon similar investigations until almost the whole accessible domain of nature's rocks and earth was ransacked with the purpose of revealing other substances that might supply these invaluable qualities of adhesiveness and hydraulicity in building.

Vicat's system of manufacture of artificial hydraulic cements, or "lime," as he termed it, was soon installed, and in a short time several establishments for the purpose were set in operation. In these primary establishments they made use of quicklime and clay mixed in certain proportions with water into a paste which

was then molded into briquettes, dried, burnt in a kiln and then ground.

It will thus be seen that Vicat's method involved two separate burnings, the first for the production of the quicklime used in the composition instead of carbonate of lime or simple limestone, and the second for the briquettes formed by the combination of quicklime and clay. This system was necessarily attended with considerable expense of fuel, time and labor, but became superseded by the method carried out several years later in England by Mr. Aspdin, who, by calcining a dried mixture of chalk and the mud obtained from a river bed, and afterwards grinding the product, fabricated the now well known Portland Cement. In the meantime other English engineers occupied themselves in experiments with the same materials, but Aspdin appears to have been considered as the inventor of the article under this name, which has been introduced all over the world, and so named from the color of its mortar which resembles that of the stone found in the quarries of Portland, England.

In the interim between Vicat's discovery of natural hydraulic cement and that of the artificial product, and up to within the last few years, the natural cements, more or less, continued to be used; but in Europe especially, and in countries where European builders manage the works, Portland Cement has almost completely displaced them. In the United States, especially in the interior and where it can be cheaply produced, the natural article still holds its use, but it may readily be seen that the Portland, wherever it can be procured, and in consequence of its great superiority must everywhere command the preference of the builder.

Time will not permit me, gentlemen, to extend these remarks to a complete description of the various methods of manufacture in different countries for the production of Portland Cement. I can only mention that the two ingredients of carbonate of lime and clay being almost universally used are found in different forms in the different localities where the article is manufactured. The carbonate of lime in the condition of a very pure and soft chalk, is adopted in England where it abounds. On the continent of Europe chalk is also used where it can be obtained, but very many manufacturers there use a hard limestone either in a state of purity or otherwise. The clay, which besides the alumina, also contains the required elements of silica, iron, etc., is found in varying conditions, either as constituting the beds of salt water streams above low water level, or the soil of marshes, or as banks upon higher grounds.

In England the mixture of these two ingredients is effected by means of a heavy revolving harrow or stirrer operating in a circular tank, or wash mill as it is termed, wherein is placed the requisite quantity of water and a portion of clay as taken from its natural deposit. Into this wash mill, and after being properly pulverized and sifted, the chalk is introduced in right proportion to the clay. The charge of chalk and clay after a complete reduction of all the particles to an impalpable paste of semi-fluid consistency, is conveyed to large receptacles about 60 by 90 feet in dimensions and four feet in depth, and allowed to settle. Charge after charge of the chalk and clay mixture is thus prepared and placed in the receptacle until it is filled, the supernatant water of each layer being previously drained before a fresh one is added. The entire mass in the receptacle is left to acquire by evaporation a certain solidity, like stiff mud, in order that it may be shovelled into wheelbarrows and conveyed to the drying shed where it is spread in a layer of a certain thickness upon iron plates laid over flues, through which heat passes from fire-places, which frequently are coke ovens, and supply the coke for the final calcination in the kilns. When the mixture or raw cement is sufficiently dried, it is broken in convenient pieces as uniform as possible and charged in layers of about four inches thickness into large and lofty kilns; between each layer and below the bottom one is spread a layer of coke of about the same thickness, and when the kiln is fully charged it is fired, the calcination occupying several days. Several days are also required for the cooling of the kiln so that the burnt "clinker," as the cooked cement is called, can be handled and sorted, the properly calcined being separated from the portions that are not so. The selected clinker is then conveyed to the grinding apparatus, ground, and thus converted to powdered cement.

The process just described is termed the wet process, and I believe is exclusively used in England, and possibly to some extent on the Continent, although in the latter country, and especially where hard limestone is employed, the system called the dry process is better adapted to this sort of material. In this system the limestone by grinding is reduced to an impalpable powder, and the clay after being perfectly dried is reduced to the same condition. These two materials are then mixed in the requisite proportion of about 78 per cent. of powdered limestone, when this substance is a pure carbonate, and 22 per cent. of the dry powdered clay, these measures being by weight; they are then introduced to a pug mill with water and then incorporated into a stiff plastic paste, which as it leaves the mill is molded into square and hollow prisms or briquettes of a certain size, which after being dried are calcined, as in the wet process, and then ground.

The perfection of Portland Cement, primarily, of course, depends on the use of the proper materials and the true chemical proportions of the lime and clay in the mixture. If these conditions are not observed good cement is impossible; their intimate mixture, depending upon the fineness of the particles to which they are reduced and the trituration to which they are subjected, is also an indispensable requisite, and lastly its calcination, which must be carried far enough to produce an incipient vitrification or welding together of these ingredients. The grinding of the "clinker," as the result of the burning is termed from its resemblance to the blackish slag or cinder of an iron furnace or forge, is also important, as the degree of fineness of the ground cement affects its practical economies in several particulars, both as to strength and its capacity for sand, etc. Here, gentlemen, is a sample of Portland Cement in the condition of the clinker; you will notice its great specific gravity, scoriaceous texture and blackish color. One would hardly suppose such a substance by simple pulverization could be converted into a cement of such vast and varied utility as experience over the world for more than sixty years has proved it to be. Had the ancient Romans, Greeks, Egyptians, or any other ancient peoples, possessed such a building material, old Vitruvius would have extolled it as the acme of their engineering and architectural triumphs and challenged the efforts of posterity to produce its equal. I must, however, quit these classical contrasts and hasten with the more essential matters.

I have to speak of the operation of burning the raw cement, as involving one of the most important essentials of the integrity of the finished product. This constitutes the most expensive part of the manufacture, besides demanding the most careful attention on the part of the burner. Various forms and systems of kilns have been designed, both of the so-called perpetual and the intermittent sorts, the former being when the fresh charges of raw cement and coke are simultaneously fed to the kiln, as the thoroughly burnt portions are withdrawn, and the latter sort where the charge at once fills the kiln, and is not withdrawn until the whole of it is supposed to be completely calcined. The kilns are of numerous patterns, some of them still used are of fashions employed a century ago for burning quicklime. The so-called Hoffman kiln is an improvement on these antiquated forms, and is extensively operated for both burning bricks and Portland Cement. Into all these kilns the raw cement is charged in either lumps or in briquettes, but a late improved system of burning has been introduced into England by Mr. Ransome, wherein the dried raw cement is reduced to small particles and exposed to heat in such a manner that they are quickly converted to the clinker state, thus saving much of the time occupied by the older methods and facilitating with greater economy the operation of grinding.

Coke is the usual fuel used in burning. Ordinary coal will not answer the purpose, as the sulphur commonly contained in it would combine with the lime of the raw cement and thus tend to the production of a sulphate of lime and consequently of a cement of too rapid setting. For the production of the clinker an intense heat is necessary, which must be carefully regulated, in order that the calcination may be uniform and without overburning or underburning the material, the product in either case resulting in a failure of good cement.

Of the immense variety of purposes to which Portland Cement can be applied it seems almost unnecessary for me to refer to before an audience of architects and engineers. The wonderful characteristics of the material, its crushing and tensile resistances, its plasticity and cohesion in manipulation and adaptation to all sorts of mouldings, even to fine statuary, and its persistent but slow setting induration with its apparently eternal durability,

constitute the perfection of lithological building material both for its cementing bond, for all the various stones and bricks with which it can be used and for making blocks of stone themselves.

In this connection I must speak of the surprising discoveries of M. François Coignet, of France, and his applications of what he calls Béton Aggloméré, a calcareous composition into which besides the sand, enters Portland Cement and hydraulic lime—it is an inexpensive artificial stone and is rapidly becoming used for edificial structures of almost every kind among that scientific and enterprising people. Seventeen years ago I witnessed in that country works of a boldness of design and extent that I could not have supposed to be feasible with a simple combination of mortar and sand. I have brought with me photographic illustrations of an aqueduct of nearly forty miles in length and supplying water to Paris built with this béton, the supporting arches as well as the water pipe itself being monolithically formed with it. I had the good fortune to make the acquaintance of the engineer of this original and magnificent work, and was enabled to visit and inspect it at several points; the arch over the Orleans road, through the Forest of Fontainebleau, which I examined, was about 125 feet span without a joint in its construction. The only materials used in the construction of this aqueduct were Portland Cement in a very small proportion, hydraulic lime and the sand found along the route of the work. Another photograph shows a view of the church at Vesinet, also from foundation to the top of the surmounting cross built of the Coignet Béton. I might, if time permitted, mention other public massive works which I examined in France, all erected by the use of this material.

I have introduced these brief details of the history, manufacture and application of Portland Cement, gentlemen, supposing they might interest such of you as have not had an opportunity of an acquaintance with the subject in these particulars, and that you might find in them a recommendation for the extension of the application of this useful material in your own practice. I have felt obliged to omit many details in this part of my task which, however, you will readily find described in the literature devoted to the subject in French, English and German publications. I will now proceed to state my own experience both in the experimental manufacture and use of this valuable material.

[TO BE CONTINUED.]

A paper read by Calvin Brown, C. E., U. S. N., before the Technical Society of the Pacific Coast, at the September meeting 1890, and republished by permission from the Journal of the transactions of the Technical Society.

Swiss Log Cabin.

THE SWISS LOG-CABIN.

The illustration here presented is a sample of those log buildings to be met with in the Canton of Berne, in Switzerland, and although it differs somewhat in execution from those log-cabins of our own country, it presents, nevertheless, some points which might be made available in such construction. Many gentlemen desirous of introducing this most rustic and very picturesque style for gate lodges, gardener's house, etc., will see that, with a little care in the construction, a very desirable effect may be produced, and that with a liberal use of the saw instead of the axe, our log buildings may be made to present a much more acceptable appearance than they present throughout the country at this day.

This structure here shown is a barn, stable and cow-house, combined. It is comfortable, and very permanent. It will be observed that the logs lie close on each other, instead of leaving openings to be filled in with mud, as is the custom here. These logs are pinned down to each other with stout oak pins at regular intervals along their length, breaking joint alternately, as the layers are placed one upon another. Instead of our *shingling*, the Swiss log-builders lay the roof with boards from pole-plate to eaves, crossing them with lengths of scantling, upon which are laid rocks to secure these in their places. When the rocks are covered with moss the effect is very pretty. And indeed the rustic Swiss throughout presents points of attraction of peculiar grace.

NOTES ON THE BEHAVIOR OF STEEL RODS AT THE ELASTIC LIMIT.

BY LUTHER WAGONER.

In the transactions of the American Society of Civil Engineers, Vol. 3, is an account by Louis Nickerson of the examination of glass beams and rods under stress, by the use of polarized light. The principal fact shown in these experiments is, that the beams or rods are apparently not under uniform stress. In the case of glass rods or columns under stress, certain dark bands, normal to the direction of the force applied, were observed, whose interval of spacing varied with the load.

Mr. Nickerson's idea was that the dark bands were lines of no molecular disturbance, but no theory was presented as to their probable cause.

Having witnessed these experiments, the writer thought a possible explanation of the black bands might be due to interference of wave action; thus, if the present notion of molecular arrangement be correct (i. e., stresses are transmitted by wave action), there might exist nodal points in a rod under stress, where the stresses by interference would be neutralized, and in consequence there would be no change in the diameter. Hence, if a carefully turned and polished metal rod be pulled to a point slightly below the elastic limit, its surface should present a corrugated appearance; and if pulled to a point slightly above the elastic limit, the flow should take place between the nodes, leaving the latter unchanged in diameter.

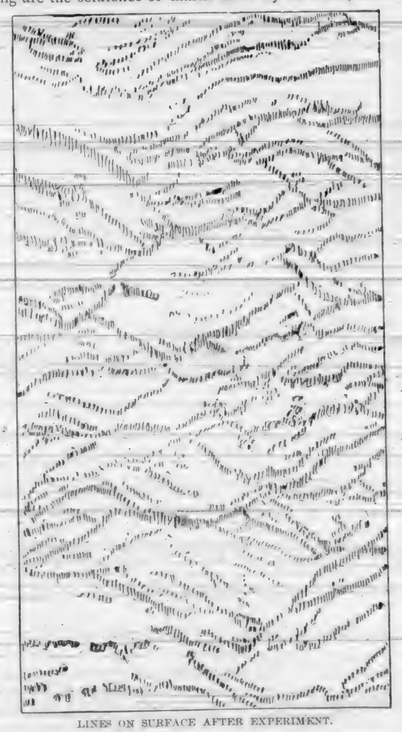
To test the matter, Lieutenant-Commander F. P. Gilmore, U. S. Navy, had prepared a number of rods of rivet steel (open hearth); the rods were twenty inches long, and turned and pol-

ished for a length of twelve inches, the diameter of the turned part ranging from five-eights to one inch.

The rods had an average breaking strength of 55,000 pounds per square inch, and the elastic limit was about 35,000 pounds per square inch. They were pulled in the testing machine at the Union Iron Works.

When nearing the elastic limit a slight difference of diameter could be felt, but this disappeared when the stress was reduced; at the moment of reaching the elastic limit the line of light reflected from the polished surface, which had been narrow and straight, suddenly became irregular and rather sinuous, the corrugations upon the surface being apparent to the touch. To develop these corrugations so that they would be visible at all points upon the surface, the rods were "honed," by carefully drawing a flat hone 1½ inches wide along the bar, thus touching all the high points and leaving the surface in a condition to be easily observed.

The accompanying engraving is an accurate development of the surface of one of the rods, for a longitudinal distance of 5.5 inches, the diameter of which was 0.93 inch; the lines in this drawing are the scratches or marks made by the hone, and also



LINES ON SURFACE AFTER EXPERIMENT.

the high or unaltered parts of the rod where there was little or no flow of metal.

Although somewhat irregular, it will be noticed that there is a general parallelism of the principal lines, and some degree of uniformity of spacing between them, perhaps as close as could be expected from an unannealed rod not perfectly homogeneous.

From the experiments made there is ground for the belief that *homogeneity of the metal will be indicated by the regularity of the lines thus obtained*, as the rods can be honed without removing from the testing machine; the method can be easily applied before testing to destruction, and in this way perhaps an additional test for QUALITY OF MATERIAL may be had.

Additional experiments upon carefully annealed bars appear desirable.

A paper read by LUTHER WAGONER, member of the Technical Society of the Pacific Coast, at the April meeting, 1890 and re-published by permission from the *Journal of the Transactions of the Tec. Society.*

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

Our double plate is a view of the New Building for the Hibernia Savings and Loan Society in course of erection on the corner of McAllister and Jones Streets in this city; built of granite, the columns are of granite, solid monoliths and fluted. Messers Pissis and Moore are the architects.

The Sea side dwelling, exterior and interior views is from designs by C. Swain, architect.

NOTES & COMMENTS.

A myrtle, even in the desert, remains a myrtle.

The cat and the rat make peace over a carcass.

Truth is heavy, therefore few care to carry it.

The soldiers fight, and the kings are heroes.

In the year 224 B. C., the colossus of Rhodes was thrown down by an earthquake.

Many a colt's skin is fastened to the saddle its mother bears.

Two pieces of coin in one bag make more noise than a hundred.

A NEW IDEA.—A recent contract provides for street lighting in Paris on a novel plan. Power is distributed by the compressed air system to a great number of small motors, each of which supplies electricity for a small number of lamps.

A photographic journal of 1877 cautions the photo fraternity to beware of a "Yankee trick" that has been played upon the public in relation to photographs taken by a Mr. Muybridge, of California, of the trotting horse "Occident" in one one-thousandth part of a second, and regrets that the horse may accidentally die before these wonderful pictures are placed on exhibition. Now, any boy with a "snap box" can take these wonderful pictures.

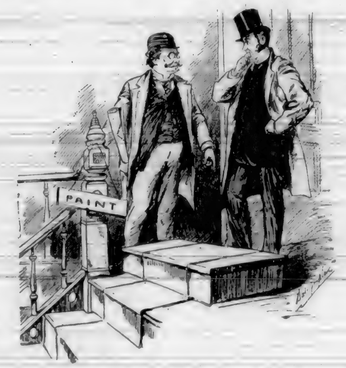
The inhabitants of Mars when looking at this earth probably think that California is the typical "Garden of Eden" they have heard so much about.

In architecture the rear column rarely becomes such a prominent feature as the rear column of the Emin relief expedition.

The camel desired horns and his ears were taken from him.

A prominent timber merchant has had his coat-of-arms painted on the panels of his carriage, with the Latin motto, "*Vidi*," which, by interpretation, is "I saw."

A young mother consults one of her friends upon the profession she ought to give her son. "The child troubles me; he is of a dreamy nature and taken with the ideal." "Make him an architect, my dear madame," replies her friend, "he will then be able to build castles in Spain."—*Ex.*



A LONG FELT FOR WANT.

MR. BILTON *(on the second story)*.—Why have you put that top step of the stairs above the level of the floor?

ARCHITECT.—I thought you wanted all modern improvements. That's the step a fellow always reaches for when he gets to the top of the stairs in the dark.—*Puck.*

First Tramp—If I had my way I'd have 365 national holidays in this year.

Second Tramp—You would, eh? And then there would be one working day in every four years. Oh, you are a nice one, you are! You would make a galley-slave of the poor laboring man, wouldn't you?

MEIGGS' WHARF.

WHAT IS LEFT OF THE OLD STRUCTURE TO BE TORN DOWN.

The old dilapidated wharf at the foot of Powell street known as Meiggs' Wharf, will soon be a thing of the past. The ravages of time have played sad havoc with the old structure, every storm that blew lately taking away pieces of it. What is left of it will be torn down in a few days to make way for the new section of the sea-wall which is advancing with rapid strides. For some years the wharf has only been used by boatmen to hang their boats on.

Meiggs' Wharf was built by Harry Meiggs, and was finished in 1852. In early days it was a great resort for young people, especially on a Sunday, one of the attractions being a menagerie kept there by "Old Warner." The first ship that ever docked there was the clipper ship Andrew Jackson in 1852. The first steamer that docked there was the California, whose advent inaugurated "steamer day." Part of the old wharf was washed away in 1860. It was repaired, and ferry-boats landed there until the year 1874.—*S. F. Call.*

AMERICAN ARTISTS HONORED.

LONDON, March 21.—The American artists in Paris have been officially invited to participate as a distinct body in the coming Berlin Art Exposition. The Americans are the only group of foreign artists who have been thus honored by the authorities at Berlin. After some consultation and deliberation the American artists in Paris, with one or two exceptions, will send specimens of their work to the Berlin exhibition It is expected there will be a total of one hundred pictures by Americans exhibited upon the occasion mentioned.—*Ex.*

PAINTING IN OIL a practical manual for the use of Students. Square 12mo. Cloth, $1.00

The thorough preparation that appears in Miss McLaughlin's writings, and her clear, direct style, have given her a place of distinction among makers of art books. In the present volume, she gives a lucid statement of the scientific theories and facts relative to colors, treating the whole subject broadly, as well as technically. This book is also largely realistic, enlarging on the material side of the subject, the tools which the student should use, and the best method of handling them.

Robert Clarke & Co., Publishers, Cincinnati, Ohio.

PROPOSALS FOR U. S. POST OFFICE AT SACRAMENTO CAL.

TREASURY DEPARTMENT.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C. until 2 o'clock P. M. on the 22nd day of May, 1891, for all the labor and materials required for the stone and brick masonry of the superstructure, the iron work of floors, ceilings and roof construction, roof covering, down and drain pipes, brick and terra cotta floor arches for the U. S. Post Office, &c., Building at Sacramento Cal., in accordance with drawings and specifications, copies of which may be had on application at this office, or the office of the Superintendent at Sacramento, California.

Each bid must be accompanied by a certified check for $500.

The department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposals for stone and brick masonry of superstructure, iron work of floors, ceilings and roof construction, &c., for the U. S. Post Office, &c. building at Sacramento, California," and addressed to,

H. C. McLEAN,
Acting Supervising Architect.

April, 13, 1891.

OBITUARY.

THOMAS DAY.

We regret to chronicle the death of Mr. Thomas Day. Some thirty years ago Mr. Day was the proprietor of the largest and most complete plumbing establishment in this city, situated on Montgomery street near Jackson. As business extended southwardly, Mr. Day moved to Sutter street where he opened the elegant show rooms bearing his name, and filled with the most artistic and high grade articles in that line to be found in the country. With advancing years the "Thomas Day & Co." was formed, and Mr. Day withdrew from active business.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute Architects, meets second Friday of each month at Academy of Sciences Building.

Seth Babson, Pres. W. J. Cuthbertson, Vice-Pres.
Oliver Everett, Sec. John M. Curtis, Treas.

Technical Society of the Pacific Coast, meets first Friday of each month at Academy of Sciences Building.

John Richards Pres. L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evening of each month at the Murphy Building.

W. C. Quimby, Pres. O. Brooks, Vice-Pres.
C. E. Purington, Sec. W. C. Crosett, Treas.

Builders' Association of California, meets every Monday at 330 Pine Street, Rooms 9–12, at 1.30 P. M.

S. H. Kent, Pres. A. Jackson, Sec.
L. A. Larsen, Clerk.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects, was held in their former rooms at 408 California street, on the 10th inst.

The executive committee was instructed to make arrangements for rooms in the new building of the Academy of Sciences.

THE regular monthly meeting of the "Architectural Sketch Club of San Francisco," was held Tuesday evening March 31st, President Wetmore in the chair.

The election of the Executive Committee took place. The following are the names of the Executive Committee: Chairman, R. H. Wetmore; Secretary, H. J. Van Vlack; Treasurer, C. A. Meussdorffer, and C. O. Hilpisch and S. C. Benson. Mr. M. L. Rosenberg, Edw. G. Duesenberg and E. L. Holmes were elected members of the Club.

At the February meeting of the Club, the name was changed from the "A. I. A. Sketch Club of San Francisco" to "The Architectural Sketch Club of San Francisco."

A very interesting paper was read by Mr. C. A. Meussdorffer on "Architectural Sketching by Students," which excited a spirited discussion by the members present.

There are now on the roll, sixteen members in good standing, and the Club is in a very prosperous state; much good work is being done to advance the professional knowledge of its members and to promote their intercourse and good-fellowship.

THE regular meeting of the Technical Society of the Pacific Coast was held at their rooms, on the 10th inst. The subject for the evening was "Street-paving in San Francisco, its defects and methods suggested for their remedy," by Mr. S. H. Smith.

AT the regular meeting of the California Electrical Society held at their rooms on the 6th inst., the subject for the evening being "Sub-Marine Mining by Electricity," by Mr. T. J. Allen. The author gave much valuable information in regard to mines anchored in channels or entrances to harbors and which may be exploded by means of electricity. The different systems were described and their defects or advantages pointed out.

The United Brotherhood of Carpenters and Joiners of America will hold their tenth annual picnic at Shell Mound Park, on May day.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country

Rights of Sub-Contractors to Mechanics' Liens.—Where a contract to build houses between the owners and principal contractors stipulated that, before the last payment shall be due, the contractors shall furnish releases from all persons having a right of lien against the houses or property on which they are located for any work or materials, sub-contractors were not deprived thereby of their right to file mechanics' liens.

Murphy v. Morton, Supreme Court of Pennsylvania, 20 At. Rep., 1049, (79M).

Provision for Arbitration in Contract.—Where a building contract provides that "any question in regard to the quality or quantity of the work shall be referred to the Superintendent, whose decision shall be final," the contractor cannot recover for a disputed claim under said contract, which he has refused to submit to the Superintendent. Where no exception is taken to the reservation of a point as a question of law, objection thereto cannot be taken on appeal.

Fulton v. Peters, Supreme Court of Pennsylvania, 20 At. Rep., 936.

Validity of Ordinance Creating Fire Limits.—Where the charter of a city provides that the city "shall have power to make regulations for the prevention of accidents by fire, to establish a fire department * * * * * to prevent all possible and proper means, danger or risk of injury, or damages by fire arising from carelessness, negligence, or otherwise, * * * and such other powers and privileges not herein specially enumerated, as are incident to municipal corporations of like character and degree." The city has implied power to pass an ordinance creating fire limits, and prohibiting the erection of wooden buildings therein. An ordinance forbidding the erection of any wooden building within the fire limits as there set out, except by special permission of the council, is valid.

City of Olympia v. Mann, Supreme Court of Washington, 25 Pac. Rep., 337.

Mechanics' Liens for Machinery.—Machinery placed in a building erected for a brewery under a contract with the owner thereof, and necessary for the operation of such brewery, becomes part of the freehold, and falls within the provisions of the mechanics' lien law of New York, giving a lien for erecting, altering or repairing a building, though portions of such machinery are removable. The erection of the machinery was completed, and the engine started on or about June 13th, but the engineer of the contractors remained in charge, making alterations, etc., until June 21st, when it worked satisfactorily, and, at the engineer's request, was accepted June 23rd. A lien filed within ninety days after June 21 was a compliance with the provision of the lien law requiring liens to be filed within 90 days after the completion of the work.

Watts-Campbell Co. v. Yuengling, Court of Appeals of New York, 25 N. E. Rep., 1060.

Usage of Trade in Construing Contracts.—Usage may be used as evidence to interpret a contract, but not to vary or contradict it. Its purpose is to ascertain the intention of the parties where it cannot be ascertained by the terms of the contract. In all contracts as to the subject matter of which known usages prevail, the parties proceed on the tacit assumption of such usages, but commonly reduce into writing the particulars of their agreement, but omit to specify those known usages which are included as of course by mutual understanding. Where in a contract to ascertain the net profits of a firm, it was provided, among other things, that "from the outstanding accounts five per cent. be deducted to cover losses and bad accounts," and it was proper to prove usage of the trade to show in such cases that "outstanding accounts" meant those from which the bad accounts had been segregated and charged to profit and loss.

McCulsky v. Llostermann, Supreme Court of Oregon, 25 Pac. Rep., 366.

BUSINESS MOSAICS.

Many devices have been invented and tried to dispense with the cords and weights in windows, but none were found that would displace, successfully, the old arrangement. Within the last few years innumerable inventors have come forward, each claiming to have the long looked for device that should be practical and durable. At this time it looks as if the secret has been opened, and the problem solved in the form of the California Sash Balance as made by the California Sash Balance Co., of this City.

In this invention no weights or cords are used, but in their place is substituted a coiled spring set in the rail of the sash while in the frame is set a ratchet—and pinion with coggs. The heaviest as well as the lighest sashes are easily raised or lowered by the slightest pressure, and firmly locked, burglar proof, in any desired position by means of the ratchet. Upper or lower sashes are worked equally well. The portions exposed to view are made in any style; and form in themselves a finished appearance. The trimmings do not intefere in any manner with the curtains, blinds, shades or shutters. No boxing for weights is required, as no cords are used. The sash runs can be finished to correspond with the other finish of the apartment.

RICHARDS' TRIPLE PLUNGER PUMP, FOR ELECTRIC MOTORS, GAS ENGINES, ETC.

The first essential quality to be attained in a pump that is to be driven by electricity is freedom from intermittent strains and shocks when running at a suitable speed, so that the resistance to the motor will be constant and not cause fluctuations in the transmission of the power.

The next requisite is to reduce the friction of the moving parts to the minimum, and produce a steady flow of water, thereby lessening its frictional resistance.

The other desirable qualifications are compactness and neatness of design, and a proper arrangement of the working parts, so that they will be easy of access and require but little attention.

It has been demonstrated by experience with many pumps in actual use that the Richards pump as made by W. T. Garratt & Co., and illustrated on page iii, that they combine all of these qualifications and are endorsed in the highest terms by those who have them in use; they have three plungers so that there are three discharges of water at each revolution; the valves and water passages are large allowing a free flow of water, and the connecting rods are long in proportion to the stroke, so that the angular thrust is very little. The end of the crank shaft projects through an oil tight stuffing box and can have any kind of a pulley or gear attached to it.

The moving parts run in oil and water, and require but little attention, in fact it does not require an experienced engineer to run it, but a janitor of a building, or a person of little or no experience can give it all the attention it requires.

They run noiselessly and without jar and this of itself is a very, desirable feature, particularly in an office or appartment building

The friction of the pump is very low, and it is said by some who are using them to be only five per cent, and in one case only two per cent. This of course leaves nearly all the power expended by the motor to be used in the actual work to be performed, and makes it a very economical pump.

They can be driven by electricity. Gas Engines, water wheels or motors, wind mills or any other power that can be obtained, and are capable of performing the highest duty.

Many of them are in use in buildings, for the purpose of raising water to the tanks of roofs for elevator and other uses, and are found to be without a superior for that purpose; but they will also be found to be an efficient and economical pump for mining, irrigating or any other place where a power pump may be desired.

Whosoever seeketh wisdom shall find it by careful attention to the advertisements in the California Architect.

We have received from Messrs., Merchant & Co., the well known dealers in metal roofing plates a beautiful and artistic colored sketch showing the seven greatest engineering achievements of the present century.

Persons in search of a plumber who understands and can do a good job of plumbing, both from a workmanlike and sanitary point of view, should call on Thos. Clark & Sons. See card on page X.

THE PULLMAN SASH BALANCE IS THE BEST. IT BEATS EVERYTHING FOR OLD OR NEW WINDOWS.

What it Is.—It is a compact device for sustaining a window sash by the tension of a carefully tested coiled spring.

What it Saves.—It saves time and money, as by its use, boxes, pockets and dividing strips in frame are rendered unnecessary, and it is much more quickly and easily applied than are the clumsy weights and cords. It saves the trouble and annoyance inseparable from frayed and broken cords and noisy pulleys.

How it Works.—It is guaranteed to balance a sash more perfectly than weights or any other device. It is perfectly noiseless.

Its Durability.—Being constructed of the very best materials and thoroughly put together with the friction of a counterweight overcome, it will last a life time.

Its Adjustability.—The pressure of the tension band on the tape [regulated by the screw in the face plate] adjusts the Balance to the varying weights of sash. This renders it unnecessary to fit a sash tight or loose and prevents a sash from being pushed too violently against the top of the frame.

The Top Balance.—Shown above is for use in places where there is not sufficient room at the side. Its use in mullion windows, as shown in the cut, enables an architect to introduce light where it is the most needed, by reducing the amount of wood. See advertisement.

Hall's Safe and Lock Co., are putting in the Fire and Burglar proof safe and vault work for the new Hibernia Bank building, in course of construction on the corner of McAllister and Jones streets.

The Vulcan Iron Works are supplying the market with a superior make of stable fittings of all kinds. See advertisement on page xiv; also metal weather vanes, finials, and all manner of architectural and ornamental metal work.

The new Hibernia Bank building in course of construction, attracts attention on account of the excellent quality of the granite work. The large columns, each formed of a single piece of granite, are conspicuous features of the facade. The contractor for the granite and brick work is Mr. O. E. Brady.

Hotels that are being fitted up with heating and laundry appliances, of the most modern patterns, and where economy in fuel and attendance is desired, should communicate with Dundon's San Francisco Boiler Works.

The West Coast Wire Works, Messrs. Smith & Trowbridge, stands at the head of the list for thorough, practical work, combined with artistic excellence. Some ornamental wire work recently made by this firm, is second to none in the city, and at prices below Eastern Manufacturers.

The rose grows among thorns. (Latin, cepe sæpe sub sepe crescit.)

Persons in want of gold, silver or nickel plating, should call on E. G. Denniston, 653-655 Mission St.

The Cincinnati Corrugating Co., long and prominently known as manufacturers of high grades of corrugated and other forms of iron and steel sheets for roofing purposes, last year added a galvanizing plant complete, and we are gratified to learn that they have succeeded in establishing for their galvanized sheets the same high reputation previously established for their corrugated and other roofing sheets.

Their plant is well located for shipping. They carry a large and varied stock and are at the head of the list for promptness and excellence in executing orders. Their "Piqua" brand of galvanized sheets compares favorably with any brand in the market.

The cross-cut saw gets dull in spite of its teeth.

Composite Colors.

The effects obtained by these colors, or rather by this method of staining, are much like the effects of watered silk, looking perhaps green in some positions, and then changing into red or brown in another light.

One of the oldest of the Eastern architects declared that no advance in exterior coloring equal to the introduction of exterior staining, over a decade ago on the discovery of the Creosote stains, has been made in the last fifty years. This new discovery, made by the Creosote people, bids fair to make as great a revolution as the original one.

Patent right for sale—Rights for City, County and States for a preparation to prevent efflorescence (saltpetre) on brick buildings. Address for circular and information, American Brick Coating Co., Lincoln Inn Court, Cincinnati, O.

CITY BUILDING NEWS.

Broadway near Franklin. Mill work; owner, Mahoney Bros.; architects, Shea & Shea; contractors, City Planing Mill Co.; cost, $2,650; signed, March 19; filed, March 20; payments, 1st and 15th day of each month 75 per cent of work done; balance, 35 days.

Broadway near Franklin. Painting; owners, Mahoney Bros.; architects, Shea & Shea; contractors, Wm. Armstrong & Son; cost, $2,957; signed, March 24; filed, March 30; payments, 1st and 15th day of each month; 75 per cent as work progresses; 25 per cent, 35 days.

Bush near Jones. To build; owner, A. Mayer; contractor, L. A. Secor; surety, $750; cost, $7,500; signed, March 16; filed, March 16; payments, $1,500, 1st tier of joists on; $1,500 frame up; $1,500, brown mortared, $1,500 completed, $1,500 35 days.

California St., Nos. 2125 & 2127. Carpenter work; owner, Louis Taussig; architects, Salfield & Kohlberg; contractor, Wm. Plums; cost, $1780; signed March, 11; filed, March 13; payments, $1280, completed; $500, 35 days.

California near Buchanan. Carpenter work; owner, Clinton Jones; architect, J. H. Littlefield; contractors, Currie & Loomer; cost, $10,000; signed, March 26; filed, April 3; payments, 15th and 30th of each month, 75 per cent. of value of work done; balance, 25 days.

California near Buchanan. Plumbing; owner, Clinton Jones; architect, J. H. Littlefield; contractors, S. Ickelheimer & Bro.; cost, $1544; signed, March 26; filed, April 3; payments, on 15th and 30th day of each month, 75 per cent. of value of work done; balance, 35 days.

California near Buchanan. Masonry; owner, Clinton Jones; architect, J. H. Littlefield; contractor, Wald Tarp; cost, $-280; signed, March 26; filed, March 27; payments, 75 per cent. as work progresses, on 15th and 30th day of each month; 25 per cent. 35 days.

Castro near 16th. To build; owners, Capt. A. & O. F. Huber; architect, W. H. Lillie; contractor, Arthur C. Soule; surety, $1196; cost, $4784; signed, March 3; filed, March 18; payments, 1st and 15th day of each month, 75 per cent. as work progresses; 25 per cent, 35 days.

Capp near 23th. To build; owner, Thos. E. Kealey; contractors, Clark & Sons; cost, $3100; signed, March 6; filed, March 7; payments, $-00, frame up; $800, building enclosed; $600, brown mortared; $600, completed; $800, 35 days.

Castro near Beaver. Carpenter work, etc.; owner, Henry E. Holmes; architect, Fred. B. Wood; contractor, C. E. Dunshire; surety, $350; cost, $2200; signed, March 30; filed, March 31; payments, $350, frame up; $350, brown mortared; $350, completed; $350, 35 days.

Castro bet. 19th & 20th. Alterations; owner, Chris. Schmidt; architect, Gust. Pavel; contractor, Gust. Pavel; cost, $1066; signed, March 19; filed, March 19; payments, $401, house raised and brickwork done; $401, front up except stairs; $401, completed; $462, 35 days.

Chestnut near Dupont. To build; owner, Henry Wellman; architect, C. M. Rousseau; contractor, K. C. Gardner; surety, $9000, cost, $4775; signed, March 31; filed, April 1; payments, $1094, frame up; $1094, brown mortared; $1093, building accepted; $1094, 35 days.

Clayton near Page. To build; owner, C. E. Knickerbocker; architect, W. H. Lillie; contractor, H. Kendall; surety, $1560; cost, $2205; signed, March 24; filed, March 28; payments, 1st and 15th day of each month, 75 per cent. of value of work done; balance, 35 days.

Clay near Filmore. To build; owner, Maria Keogh; architects, Shea and Shea; contractor, Dan'l Chrisholm; sureties, Jas. McKinnon, C. G. Athearn, guarantees; cost, $6662; signed, March 4; filed, March 9; payments, $947, rough frame up; $947, brown mortared; $947, hard finished; $948, completed; 1263, 35 days.

Clay near Filmore, Brickwork etc.; owner, Maria Keogh; architects, Shea and Shea; contractor, Rhody Ringrose; cost, $880; signed, March 7; filed, March 11; payments, $322, brick foundations completed; $323, chimneys completed; $215, 35 days.

Clay near Leavenworth. Plastering; owner, Hugh Huddleston; architects, Percy & Hamilton; contractor, Chas. Dunlop; cost, $2360; signed, March 16, filed, March 23; payments, 75 per cent of value of work done; balance 35 days.

Clay near Leavenworth. Plumbing; owner, Hugh Huddleston; architects, Percy & Hamilton; contractors, Duffey Bros.; cost, $3460; signed, March 17; filed, March 23; payments, 75 per cent of value of work done; balance, 35 days.

Clay near Leavenworth. Masonry; owner, Hugh Huddleston; architects, Percy & Hamilton; contractor, David Pierce; cost, $2250; signed, March 18; filed, March 23; payments, 75 per cent of value of work done; 25 per cent, 35 days.

Clay near Leavenworth. Brickwork; owner, Hugh Huddleston; architects, Percy & Hamilton; contractor, Orrin E. White; cost, $17,935; signed, March 16; filed, March 23; payments, 75 per cent of value of work done; balance, 35 days.

Cor. Broadway and Larkin. Plumbing; owner, Golden State Land Co; architects, Geilfuss & Zimmerman; contractor, H. Williamson; cost, $2160; signed, March 13; filed, March 17; payments, 75 per cent as work progresses, 25 per cent 35 days.

Cor. Collingwood and 19th. To build; owner, F. T. Houschildt; architect; Gust. Pavel; cost, $3640; signed, March 16; filed, March 16; payments, $900, frame up; $900, brown mortared; $900 accepted; $940, 35 days.

Cor. Ellis and Powell. Steam boilers; owners, E. E. & S. V. Parsons; architect, H. Geilfuss; contractors, Union Machine Co.; cost, $3900; signed, March 2; filed, March 7; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Cor. Fulton and Broderick. Brickwork etc.; owner, Henry Hilderbrandt; architects, Geilfuss & Zimmerman; contractor, Ferd Klatt; cost, $9865; signed, March 19; filed, March 20; payments, $1396, frame up; $1500, enclosed; $1500, brown mortared; $1500, completed; $2470, 35 days.

Cor. Fell & Steiner. To build; owner, Jas. Scobie; architect, Chas. I. Havens; contractor, Peter Crichton; cost, $14,195; signed, March 14; filed, March 16; payments, $3250, rough frame up; $3250, standing finish on; $3,945, completed; $3750, 35 days.

Cor. Grove & Webster. To build; owner, Jas. Lang; architect, W. H. Armitage; contractor, Jas. McConnihey; cost, $3400; signed, March 19; filed, March 24; payments, $850, rough frame up; $850, brown mortared; $850, completed; $850, 35 days.

Cor. Haight and Devisadero. To build; owner, Dr. F. W. Harris; architect, L. H. Littlefield; contractors, H. A. Johnson & Co; cost, $5900; signed, Feb. 18; filed, March 17; payments, $1800, frame up and roof on; $1500, white coat of plaster on; $1125, completed; $1475, 35 days.

Cor. Haight and Devisadero. To build; owner, Dr. F. W. Harris; architect, L. H. Littlefield; contractors, H. A. Johnson & Co; cost, $5900; signed, Feb. 18; filed, March 17; payments, $1800, frame up and roof on; $1500, white coat of plaster on; $1125, completed; $1475, 35 days.

Cor. Laussat Ave. and Steiner. Alterations, etc.; owner, Louis A. London; architect, W. Winterhalter; contractor, B. Mardin; cost, $1900; signed, March 6; filed, March 7; payments, $500, raised and framework up; $400, outside finish and 1st coat plaster on; $500, completed; $500, 35 days.

Cor. Market & 2nd. Cabinet work; owner, W. J. Sullivan; architect, Chas. I. Havens; contractors, T. W. Kreling & Son; cost, $5600; signed, March 21; filed, March 24; payments to be made on 20th day of each month; 75 per cent. as work progresses; 25 per cent. 35 days.

Cor. Market & 2nd. Plumbing; owner, W. J. Sullivan; architect, Chas. I. Havens; contractors, Duffey Bros.; cost, $1217; signed, March 9; filed, March 16; payments, $450, rough gas and water pipes in; $450, completed; $317, 35 days.

Cor. Mason & Jackson. To build; owner, L. F. Kimball; architects, Shea & Shea; contractor, L. M. Weismann; sureties, J. Doelger and J. Staude, guaranteed; cost, $6375; signed, March 4; filed, March 6; payments, $1195, frame up; $1196, brown mortared; $1195, hard finished; $1196, completed; $1594, 35 days.

Cor. Mason and Sacramento. Brickwork, etc; owner, E. A. Denicke; architect, P. R. Schmidt; contractor, R. Ringrose; cost, $1,666; signed, March 30; filed April 1; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Pine and Devisadero. Plumbing; owner, Frank Maskey; architect, Chas. I. Havens, contractor, H. Williamson; cost, $3,384; signed, March 13; filed March 16; payments, $800, rough gas and water pipes in; $800, bath tubs in; $884 completed; $900, 35 days.

Cor. Pine and Devisadero. Brickwork, etc.; owner, Frank Maskey; architect, Chas. J. Havens; contractor, Jas. McInerny; cost, $22,850; signed March 13; filed March 16; payments, $4,250, brick foundation and frame up; $4,250, brown mortared; $4,250, hard finished; $4 350, completed; $5,750,35 days.

Cor. Pine and Devisadero. Painting etc.; owner, Frank Maskey; architect, Chas. J. Havens; contractors, Swan & Stein; cost, $1,800; signed March 13; filed March 16, payments, $600, inside work 2nd coated and outside 3 coat work 2nd coated; $700, completed; $450, 35 days.

Cor. Pine and Powell. To build; owner, Thos. V. O'Brien; architect, John Gash; contractor, Ira Fancher; cost, $8550; signed, March 16; filed March 16; payments, $1000, frame and brick work done; $1000, brown mortared; $1000, white plastered, $1000 standing finish; $1000, windows hung; $1322, completed; $2228, 35 days.

Cor. Perry and 5th. Alterations; owner, Biaggeo Cirimello; architect; Angelo Banchero; contractor, G. Massoletti; cost, $3890; signed, March 7; filed, March 9; payments, $700, 1st floor joists in; $1000, brown mortared; $690, painting done inside and out; $1,000, 35 days.

Cor. 6th and Minna. Plumbing; owner, Wm. Plums; architects, H. Guilfuss; contractors, Ford Brothers; cost, $1185; signed; Feb. 25; filed, March 11; payments, 75 per cent as work progresses; 25 per cent 35 days.

Cor. Sacramento and Montgomery. Brickwork etc., owner, Pac. Mut. Life Ins. Co.; architects, Wright and Sanders; contractors, McGowan & Butler; cost, $56,000; signed, Feb. 17; filed, March 7; payments, 75 per cent as work progresses; 25 per cent; 35 days.

Cor. Turk and Hyde. Iron beams, etc.; owner, J. O. Sullivan; architect, H. Gellfuss, contractor, P. H. Jackson; cost, $1129; signed, March 10; filed, March 12; payments, 75 per cent as work progresses; 25 per cent, 35 days.

Cor. 5th and Harrison. To build. Owner, Mrs. Rose Byrne; architects, T. J. Welsh; contractors, Brennen Bros.; cost $9,090; signed, March 4; filed March 7; payments, 1st Wednesday of each month 75 per cent. as work progresses; 25 per cent. 35 days.

Cor. 7th and Mission. Brickwork, etc.; owner, T. M. McLachlan; architects, C. R. and J. M. Wilson; contractor, J. J. Conrad; cost, $16,900; signed, Jan. 12th; filed March 6; payments, $4,000, 1st floor joist on; $4,000, 3rd floor joists on; $4,000, roof on; $675, building accepted; $225, 3 days.

Cor. 16th and Valencia. Graining, etc.; owner, A. L. Campbell; architects, C. K. Kirby; contractor, Wm. Winter; cost, $1,550; signed March 4; filed, March 18; payments, $300 when primed; $400 2nd coated; $400 accepted; $450, 35 days.

Cor. 20th and Eureka. To build; owner, David Barry; architect, T. J. Welsh; contractor, P. J. Griffin; surety, $1,213.50; cost, $4,854; signed, April 1; filed April 2; payments, $1,000 frame up; $900, brown mortared; $800, white plastered; $800 accepted; $1,354, 35 days.

Devisadero near Fell. Carpenter work, etc; owner, P. Rothermel; architect, C. M. Rosseau; contractors, I. E. Kingsley, et al.; surety, $3,000 cost, $3,465; signed, March 25; filed March 27; payments, $900, building framed; $800, brown mortared; $800, accepted; $865, 35 days.

Devisadero near Sutter. To build; owner, T. Jacobs; architects, Salfield & Kohlberg; contractors, Wolton & Havard; cost, $1,666; signed March 3, filed, March 11; payments, $750 frame up; $735, enclosed and floors laid; $1,000, brown mortared; $1,000, completed; $1,165, 35 days.

Dolores near 23rd. To build; owner, H. M. Freck; architect, H. M. Freck; contractor, A. Jackson; cost, $2,860; signed, March 21; filed, March 23; payments, $700, foundations laid; $700 floors laid and brown motar on; $737.50, white plastered; $712.50, 35 days.

Eddy bet. Scott and Devisadero. Alterations; owner, J. F. McGinty; architect, C J. Devlin; contractor, John Massey; cost, $1,895; signed, March 5; filed March 11; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Eddy near Taylor. Painting; owner, J. A. Bergerot, et al.; contractor, L. Paint; surety, $500; cost, $1,250; signed March 30; filed March 30.

Eddy near Taylor. Plastering; owner, J. A. Bergerot; contractor, Chas. Dunlap surety, $4,000; cost, $4,000; signed, March 24th; filed, March 30.

Eddy near Taylor. Plumbing; owner, J. A. Bergerot; contractors, Geo. Humphreys; surety, $1,000; cost, $2,795; signed March 30th; filed March 30.

Building News 59

WITH this May number of the CALIFORNIA ARCHITECT, we commence a series of illustrations and descriptions of the early architecture of this coast, by our special correspondents "Tres." The subject for this issue is the Old Church of the Mission Dolores, at San Francisco. These ancient structures mark the progress of civilization in the earlier periods. It is the intention to continue these representations of the ancient architecture as furnished by our correspondents, as they may journey through California and Mexico.

FROM time to time for a number of years we have been admonished that the old and well tried "Iron" was to be superceeded by the new and untried "Aluminum" but the practical benefits have not been at the present time, so far realized as to replace the other metals. Within a short time experiments have demonstrated that Aluminum when combined with certain other metels forms an alloy which can be rolled into sheets which for lightness, ductility, and durability renders it invaluable for roofing on any place where sheet metal is used. An alloy called Stan-Alumin when rolled into sheets is readily bent and worked into any form; it will not corrode, therefore does not require painting as a protection from the elements.

This material from its durable and other superior qualities is destined in the near future to adapt itself to the requirements of the building trades.

The Master Painters and their employees are endeavoring to effect a more general recognition by the public, of the value of good work and materials, and awaken them to the fact that to obtain the best work, honest and competent men must be employed.

The evil of adulterated and worthless mixtures that are very often palmed off on the ignorant or unsuspicious public, does exist, and in the present effort of the Painters to obtain the aid and assistance of the Architects in securing a high standard of work and material, is worthy of the best help of the Architecural Profession and the public they serve.

An honest painter, using pure stock and not trying to rob his employer by substituting worthless compounds, technically termed *dope*, cannot compete with a dishonest man, and the property owners will find it to their advantage in the end, to support the best class of mechanics, as it is true of this as of almost everything, that *the best is the cheapest*.

We believe the Master Painters and their employees have taken a stand in the right direction. Anything that tends toward a higher standard of excellence for any class of work, must of necessity be of general good to the community.

The Painters should, and probably will be supported by all right thinking men.

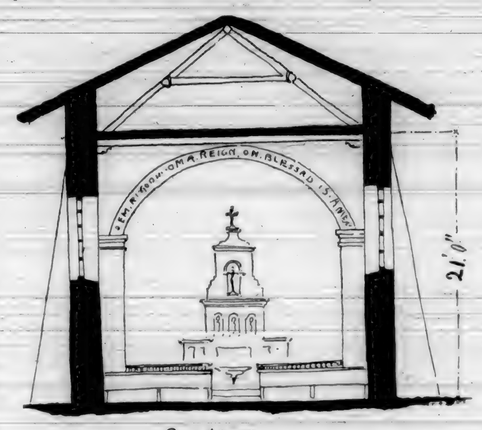
OLD MISSION DOLORES CHURCH, SAN FRANCISCO, CAL.

Of the many Missions scattered up and down the coast of California, the Mission at San Francisco is probably one of the least interesting, especially if looked at from an architectural point of view. If, however, we study it from its historical aspect as marking the most northern limit of civilization as established by the Spaniards on this coast, it at once becomes more interesting. Few indeed were the materials at hand in these early days; and it is well to reflect on the fact, that with no advantages save earnest perseverance these temple builders of a hundred years ago, were able to create that which has made so permanent an impression both on the landscape and history of this western country.

Plan
Mission Dolores.

The Mission Dolores in plan is a paralellogram, 28 x 116 feet and about 22 feet to the eaves, with flat pitch roof covered with pantiles which project some three feet beyond the wall. Exteriorally no attempt whatsoever has been made at architectural effect except at the east front where at the height of the gallery or choir loft a cornice supported by four columns divides the upder from the lower story. Above the vertical lines are maintained in a similar manner by four columns rising to the height of the eaves. In the spaces thus formed by the columns and at the height of the gable are three square openings in which, lashed to wooden cross-beams, hang the church bells. I have not heard their music, but be it harsh or sweet, I doubt not that the sounds of joy or sorrow that their iron tongues have rung out from the ocean to the bay these hundred years, they have brought sweet quietude to many of such who live beneath the shadows of the cross.

The interior is more interesting, for although there are no beautiful traceried windows casting their delicate shadows against a sky of blue and admitting just sufficient of God's perfect sunshine to illuminate without dazzling those who seek for the precious treasure within its walls. These temple builders have signified by their scanty use of light the spirit of the age they live in. An age in which the mysteries of life were rendered more mysterious by looking at them as through a glass darkly, rather than in these modern times closely scrutinizing and endeavoring to analyze the hidden meaning of the old philosophers. A rude segmental arch resting on pilasters projecting about two feet from the wall separates the nave from the chancel, the rear wall of which latter is entirely occupied by the reredos, an elaborate carving in wood, by the early fathers. In six niches, separated from one another by vertical shafts and moulded horizontal bands, stand the images of saints departed, the center niche being occupied by the patron, Saint Francis. To say that these carvings are beautiful, one would have to depend more on his imagination than on his judgment, but remembering the manner in which these beatific characters have been represented on altar and stained glass windows the world over, one is not inclined to be hard on these sculptors, who wrought so diligently to embody the sweet or sad expression of some ideal on this high altar. On each side of the nave and near the chancel arch are two side altars of classic design and apparently of modern construction, for there is an air of machine made mouldings about them that seems to breath of contract-work and strikes. The ceiling of the church is formed of 6x8 beams, spaced about two feet apart—resting at their ends on corbels



Section
Mission Dolores.

and covered over with planks, both beams and spaces being crudely decorated in diagonal bands and triangles in blue, buff, white and brown. There are two reasons, says Ruskin, why they may be considered beautiful; first, because it contains within itself both in mass and form that perfect proportion that brings us pleasure in beholding, and secondly because it is the silent witness that a human soul has labored, joyed and sorrowed and at last triumphed in the production of some thing, which if not beautiful in itself, was at least born of the highest motive, love to our fellow man, and so with our old Mission.—*Tres. San Francisco, May 6, 1891.*

HISTORICAL DEVELOPMENT OF ORNAMENTAL ART.

Dr. Zerffi delivered the first of the ninth series of forty lectures on "The Historical Development of Ornamental Art," in the Lecture Theater, South Kensington Museum, in 1877. After some preliminary remarks the lecturer said that, passing back even to the remotest periods of the development of humanity, we should find certain traces of art expressed as poetry in popular songs, or in attempts at ornamentation, amongst all nations, even during their most primitive savage state. The farther we went back the more closely should we find æsthetical and religious feelings intermingled, so that it was exceedingly difficult to separate art and religion; as we advanced, however, we should find that the necessity for a "division of labor" had made itself felt, and art and religion had not only separated, but even assumed apparently antagonistic positions. This antagonism, however, was merely artificial, and had no lasting vitality. Art and religion were outgrowths of our emotional element, they

were twin-daughters of our higher and most elevated worship of the Creator and His works. The artist worked in absorbing impressions from *without* and reproducing them in new forms from *within*. This process of ideal filtration of the impressions of nature constituted the very essence of art, and transformed a mere *work of imitation* into a *work of art*. This process had to be carried out subject to the rules of taste, and these rules, scientifically systematized constituted æsthetics, for taste was based on the refined, well-trained action of the intellect, stimulated to activity by the imagination. It was impossible to deny that this process had had its historical development, and this development was intimately connected with the gradual progress of human civilization. Many of his (the lecturer's) hearers might possibly still say to themselves, "Of what use can a knowledge of Chinese customs or Greek mythology be to me? So long as I can draw and copy what I see I know as much as I want." If they wished to become mechanical draughtsmen, and not intelligent artists, it was undoubtedly true that they need not know much of Chinese customs to enable them to reproduce Chinese patterns correctly; but if they wished, not merely to reproduce, but to work in the Chinese style, it was essential that they should be able to follow the very mode of thinking of the Chinese artist in order to be able to produce an original Chinese work. Mere imitation, only, then became independent artistic work when such work had grown out of that clear consciousness which stamped a copy of the outward impressions of nature as a product of our inward mental power. The history of art scientifically treated should be as seriously and earnestly studied as the mixing of colors, the drawing of correct outlines, or the general practice of art. History taught us, beyond a doubt, that art had only succeeded in reaching the highest climax of classical or romantic beauty when the technical capacities of the artists were well-balanced by their intellectual powers—when science and taste had combined to guide the merely mechanical in the artists, and had aided them to bring thoughts and ideas into forms. If art did not improve our refined taste for beauty, soften our rude customs, banish vulgarity, and elevate our minds, then, indeed, the study of art would be a mere question of fancy or trade, unworthy the expenditure of physical or mental labor. But an art in which taste tried to grasp the beautiful, and imagination endeavored to give it form, was well worthy of our highest efforts. The ideal of spotless beauty, which should be the aim of art, was not to be found in nature. This did not mean that the elements of beauty were not given us in nature, but the selecting intellect of the artist had to find them, combine, and free them from the accidental, ugly, and grotesque, in order to change the forms given by nature into consciously conceived and created works of art. He (the lecturer) much regretted that he found it necessary, after eight years' teaching, still to remind his hearers that art history and æsthetics were sciences as strictly as botany or chemistry. Like the other sciences, art history and æsthetics were based on observation, on a correct classification of phenomena or facts, and on the careful tracing of certain effects in certain cases. That they allowed a broader range of opinion, and did not apparently directly influence our appetites, the safety of our property, or the material welfare of our body, did not in any way weaken their title to rank as sciences. We were not merely composed of phosphorous, chalk, lime, iron, oxygen, hydrogen, carbon, and—money, but we were endowed with consciousness, which we attained, through ideality, poetry, and art, the most glorious fruits of our intellectual capacity. Poetry and art led us into a world of possibilities and probabilities more beautiful than reality. Supposing that we know all the languages in the world, but were unacquainted with the poetical works of all nations, what dreary philological machines we should be! If reality were our sole end and aim, art would be superfluous; yet art had been practiced by man from the moment he had been able to use his intellectual faculty. Just as the rose had its innate beauty in color and fragrance, so man had his innate power to produce works of intellect and emotion in science and art, united by religion, by faith, and an ever firm belief that the culture of our higher faculties was the most sacred duty of an intellectual being. That mere work could be disregarded in a work of art no one could attempt to assert. It would be as absurd as to seek to give shape to a beautiful creature without using visible materials for its representation. The idea, however, the spirit, the soul, must manifest itself in the work of art as did the Deity in the universe. The beautiful was the representation of the infinite in the finite, and in this in itself lay the close connection between ethics and æsthetics.—*Building News.*

A DISCOURSE ON CALCAREOUS HYDRAULIC CEMENTS.

BY CALVIN BROWN, C. E., U. S. N.

CONTINUED FROM PAGE 42.

My interest in the general subject of hydraulic cement was awakened by my acquaintance with Col. Sylvanus Thayer, of the United States Engineers, in 1840. I think it is to this eminent engineer we are indebted for the extensive introduction into the public works of the United States of this material in the preparation of concrete, although in his time we had only the natural cements of which the "Rosendale" constituted perhaps the most popular brand, the Portland not being then known in this country. I had no opportunity, however, for experimenting in the production of hydraulic cement until I came to California in 1861. The Benicia manufactory was then in operation, being the only one for making hydraulic cement on this Coast, and turning out a natural cement which could be mixed for mortar or otherwise in only small quantities, for use, on account of its rapid setting and hardening. The contrast of this native cement with those of slower induration I had employed in the East, led me to suspect there might, in other localities of the State, be found a substance that would yield a less energetic hydraulic cement. I set about their discovery and collection and subjected various specimens to treatment with varying results.

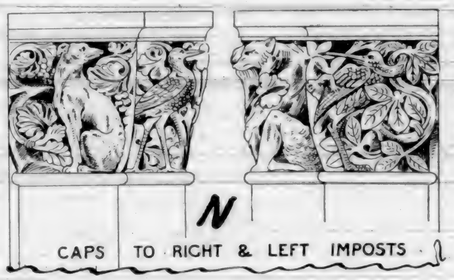
I pursued these investigations for several years, ascertaining that the country abounded with hydraulic limestones, calcareous marls, etc., several of them capable of furnishing cements equal to any then imported article. I also found that several of these limestones would supply, in large quantities, a superior hydraulic lime like the celebrated Theil and Seilly limes so extensively used in Europe and to some extent in the eastern part of the United States. This hydraulic lime as I found it was both of a pure white, like ordinary quicklime and also of a soft buff or cream-color; it will not slack in water like common fat lime and therefore would require grinding for purposes of mortar or other use.

Upon my return from a visit to Europe in 1873, where I had the best opportunities for observing the manufacture and application of Portland Cement, I occupied myself in experiments to determine the resources of this coast in regard to their adaptability to its production, and inquiry about which I had little doubt in consequence of my knowledge of the abundance of natural materials I had previously found here. In these experiments I realized the necessity of a strict observance of the chemical principles involved in the production of the article, and amid the great variety of materials eligible for use, realized the importance of chemical analysis in each case in order to determine their proper combination. Every grade of limestone, from that of almost pure carbonate down to that mixed with various ingredients of alumina, magnesia, silica, iron, etc., I found to exist abundantly in the State; a calcareous tufa was also found in several localities well adapted to the manufacture, and I was also presented with samples of a native carbonate of lime in a pulverulent condition said to exist in abundance in the southern part of the State. Suitable qualities of clay as shown by their analysis, were also found in large deposits, so that the presence of all these native materials gave undoubted assurance as to the feasibility of the desired manufacture.

In my operations, besides a careful observance of the involved chemical conditions, I found actual experience in manipulation to be the only means of acquiring a correct judgment in some of the more critical details in order to obtain satisfactory results. Such practical knowledge cannot be learned from any literature I have come across, nor could I obtain it from my correspondence with foreign manufacturers either in England or in Germany. After many trials, especially in the operation of burning, I succeeded in establishing a process that gave uniform and satisfactory results, and thus demonstrated the certainty of the

native resources of the State for the supply of a superior Portland Cement in all the abundance that its building interests will ever require. By referring to the notes of my operations, I could show you, gentlemen, the record of samples of cement made from California materials that far excelled in tensile strength the average of the reported trials made in foreign countries. I have the record of samples, which, after an immersion in water of 28 days stood a strain of 720, 786, 803, 806, 985, 988 pounds to the square inch, one sample going as high as 1112 pounds to the same area before it broke. All these specimens were subjected to the strains of a perfectly correct and standard testing machine owned by Mr. William Jones of this city, who, with other gentlemen, engineers and architects, were present at the trials. They were prepared from materials found on Mr. Jones' property in Alameda County, where they exist in great abundance.

Referring now to my experience in the application of Portland Cement to constructive works, I must take the occasion to express the obligations I owe to the late General B. S. Alexander, of the U. S. Engineers, for his sound recommendation to me to adopt a concrete in laying the foundation of the Mare Island Dry Dock, upon which I was then engaged. At that time, in 1872, Portland Cement was but little used on this coast; the only hydraulic cement we then, as a rule, employed, was the native Benicia and the imported Rosendale. This dry dock had been designed with a foundation of rubble masonry, in conformity with the usual practice in the buildings of the United States Navy, but subsequently, bearing in mind this able engineer's suggestion, and after seeing the widely extended use of concrete or beton in both foundations and superstructures in Europe, I determined to adopt his recommendation. In my first deposit of concrete to this work, and in the absence of Portland Cement in this market, I was obliged to use the Rosendale and the Benicia manufacture; but one day meeting an acquaintance in this city, who was an importer, I was informed by him that he had several hundred barrels of Portland Cement for which he could not find a purchaser, as nobody seemed to know anything about it, and would I try it. I was glad of this chance for obtaining even so small a quantity as was offered of this superior article, and accordingly procured the authority for its purchase. It was the first I had used on a large work, and proved so eminently superior to anything of the kind I had ever before employed that its preference became an established conclusion. The Government requisitions for it made at a time coeval with its demand for other purposes then about being introduced in this city, soon instituted its regular importation, and the market began to be well supplied.



N

CAPS TO RIGHT & LEFT IMPOSTS

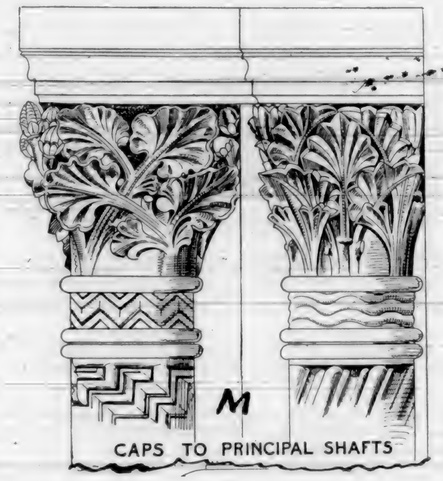
You have lately been favored, gentlemen, with an account and description of the Mare Island Dry Dock, and I need only refer to its concrete foundation for the purpose of illustrating the method of its preparation. The essential features of this operation are the materials employed, their mixture and desposition in the work. Experiments were first made to determine the proportion of the materials, which were a hard and angular broken stone, of quite uniform size, tolerably fine beach gravel, and cement with the water, the object being to find the most economical quatities of these ingredients, especially of the cement, which constituted the most expensive part of the mixture, at the same time the most essential one. It was also desirable to determine what quantity of the aggregate of the materials was necessary to be originally taken in order to make a given bulk in place after ramming, say a cubic yard. Thus, with the broken stone and gravel as the matrix, it was found that 13 measures of the former and fifteen measures of the latter, or in actual quantities say 17½ cubic feet of stone and 20 cubic feet of gravel with 200 pounds of Portland Cement and the water necessary for moistening the mixture, would exactly make one cubic yard in place after ramming. It will be seen in this case that the solidification by ramming was about 72 per cent. of the original uncompacted mass of the ingredients, and that the proportion of the cement in the solid concrete was about one in thirteen, or twelve of the stone and gravel to one of the cement. This concrete as thus prepared and laid in place weighed 144 pounds to the cubic foot, or very near the weight of ordinary well laid rubble masonry; the stone used in the concrete at Mare Island was very solid and heavy. When there was occasion for removing any portion of the concrete for obtaining a bed for the granite superstructure, it was found to be of admirable strength and hardness, requiring powerful efforts with sharp picks and gads for its displacement. It was absolutely impervious to water. Besides broken stone and instead of it, a heavy mixed coarse and fine river gravel of extra sharpness was used, with the economical result of requiring less cement than the combined broken stone and beach gravel—the quantity of gravel thus used in the entire matrix was thirty-one and thirty-two hundredths cubic feet, and of cement 157 pounds for one cubic yard of concrete in place, or about one in seventeen.

The concrete was mixed half a cubic yard at a time by means of its passage through a fall of about 37 feet in a tremie—this convenient apparatus, available wherever a fall can be had for it, is fully represented and explained in the published transactions of your Society, and needs no further account from me. Neither is it necessary for me to describe particularly the operation of depositing the concrete in place, except to imitate one or two precautionary observances, which should be taken in this operation, namely: where masses of concrete are required of considerable depth and are built of successive layers, each layer should have ample time for solid induration before the superincumbent one is added, each layer being kept wet and shielded from a hot sun, as a rapid drying damages the exposed surface by rendering it pulverulent, and thus presenting to the succeeding layer an incoherent film, which prevents the bond that ought to exist in the joints between the two and so throughout the work. To reduce as much as possible, on account of the joints, the number of layers in a deep mass of concrete, and at the same time to effectuate thorough ramming, the thickness of each layer should be regulated to meet those important conditions. We found at Mare Island that a layer of about ten inches thick was most favorable for the effective force of the rammers used on the work—a much thinner layer offering too little resistance for the preventation of a lateral scattering effect of the blow, while in a much thicker layer the force would not act on the lower portions.

Another observance, which seems necessary to intimate, is involved in the use of the water for mixing the concrete. It is to be remembered that the mortar of hydraulic cements is a hydrate, and that its perfect crystallization requires an exact equivalent of its water, any excess being thrown off and any deficiency leaving it devoid of strength from incoherency. Recent investigations in France have shown that the ultimate strength of Portland Cement depends greatly upon the proportion of water used in its conglomerates or when mixed neat. In my own practice in making and testing neat cement, I have used of water from 20 to 33 per cent. by weight of the loose powder, the smaller quantity giving the best results. In preparing concrete my practice was to add only water enough to a little more than moisten the whole mass, so that in ramming a very slight excess would appear upon the rammed surface. The disadvantages of too much water are several. In the first place in the ramming a jelly like mass is produced, rendering proper solidification impossible; in the second place, following of course the first named effect, the porosity of the mass renders it weak and pervious. These precautions are often overlooked by the ordinary users of Portland Cement conglomerates and in its neat applications; impressed with the erroneous notion that a large quantity of water is needed for a strong cement, and not understanding the principle of its crystallization, they literally drown their mixtures, thus placing them beyond proper solidification and rendering them honeycombed and weak. The entire system of mixing the ingredients of a concrete in the practice of certain operators is highly vicious; a pile of broken stone, perhaps, mixed with gravel or sand, or perhaps the gravel or sand alone,

is spread and covered with a quantity of cement, more or less according to the guess of the workman, then turned or shoveled over when dry, and finally is deluged with water squirted through a jet nozzled hose, which forces the cement to the bottom of the mass, where most of it remains, rendering its equal dissemination impossible by any amount of hand shoveling in the effort of mixing. It ought to be obvious to the slightest consideration of the effect of this torrential treatment that the amount of water should be limited and carefully applied by the gentle action of a rose nozzle pipe; in this manner a stronger concrete would be produced and with a less quantity of cement.

In the manufacture of Portland Cement I have mentioned the importance of exact proportions of its ingredients as contained in the lime and clay. I have now to speak of the effects of their disproportions when they vary from certain narrow limits allowable in the preparation of the raw cement. It is evident that any undue excess, especially in the lime or alumina, causes the existence of an element which may not only be superfluous but detrimental; if there be an excess of clay or alumina added in the mixture the product is likely to be a quick-setting cement and deficient in strength. With European engineers one of the tests of Portland Cement governing its acceptance for their works is that it must not set within a given number of hours, except in cases where a rapid set is required, as in water currents. It might seem that the initial setting is an indication of the subsequent hardness and strength of the material, the slow process promising best results in these respects. From certain native limestones abounding in clay, I have made a natural cement whose powder would instantly be converted to a hard stone the instant water touched it—placed under water it would remain for several months in this state, but upon being removed would crack and fall to pieces. An excess of lime in Portland Cement, or lime uncombined, results in a slacking process of this excess, which, taking effect in work built with the material, causes it to swell or "blow," as it is technically called, showing itself in reticulations upon the exposed surfaces and sometimes in cracks throughout. The obvious remedy for this excess of lime is to eliminate its causticity by the process of air slacking, which is done by exposing the cement in powder spread in a moderately thin layer to the air or a few days before it is used. It is the manufacturer's duty to see that this aeration is done before the cement is packed for the market, and honest men of this class will not neglect it. Not fully confiding in the integrity of the entire fraternity of makers, it was the practice at the dry dock works at Mare Island to be certain of this aeration by exposing all purchases of cement to the process described. In illustration of the behavior of an over-limed cement when used too soon after its manufacture, and the remedial effects of aeration, I have to show you this photograph taken of samples of my own preparation.



M

CAPS TO PRINCIPAL SHAFTS

I am aware, gentlemen, that I have presented to you but a hasty and crude statement of the subject upon which I was invited to speak; knowing, however, that its more exhaustive treatment has been undertaken by abler hands and expressed in the extensive literature of your respective professions, I was conscious you could avail yourselves of this resource to supply the deficiencies of this brief address. It ought to be a matter of felicitation among you that massive concrete works have already been undertaken in this city, and that one of the members of your Society, and formerly its President, has had the boldness and sound judgment to propose and carry into practical construction an original public structure by the exclusive employment of this material. It is to be hoped that we shall not long be dependent for the supply of Portland Cement upon foreign importation, and that the resources of the State for its manufacture will be appreciated by capitalists and the necessary works for its production be established.

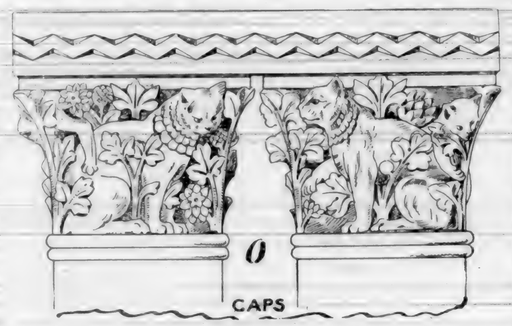
A paper read by Calvin Brown, C. E., U. S. N., before the Technical Society of the Pacific Coast, at the September meeting 1890, and republished by permission from the Journal of the transactions of the Technical Society.

EXPRESSION IN ARCHITECTURE.

It is not unusual to hear a person exclaim, "How heavy that building is, or how light! it is more fit for a prison, or it has the look of a music-hall." Such opinions come from those who are perfectly ignorant of what architecture is, as well as from others critically conversant with the art. However unintelligible the language of architecture may be to the uninitiated, these outer forms of expression are well understood by the majority of them at least. In our times, however, a kind of spurious expression is admitted. Thus we hear of such-and-such a building spoken of as having too much of the club-house character, or as being too like a church, simply from the association accidentally attached to those structures. An able writer on design has well stated this fallacy of confounding the few causes of expression in architecture with association. The ideas of expression which the uninitiated majority—and, indeed, all who are capable of perceiving distinctions—have, are totally different from the ideas which the sentimental study of art invokes. These last are based really on a very superficial study of a few examples without going any deeper. The writer alluded to says: "It is most important for all who attempt to practice or understand this art to be perpetually on their guard against the insidious attacks of this error, the mistaking (*i. e., acquired*) expression for that which is natural, and therefore permanently true. I cannot but consider this the chief source of the acknowledged great utility of travel to the architect. Its use is not to show him much of the world, but to teach him how little of it he has seen. Nothing but the emancipation from narrow local prejudice will set a man thinking and searching in earnest to distinguish what is local and accidental, in beauty and expression, from what is universal and essential." Just now there seems to be a greater prevalence of this false estimate of design, and architects and writers generally appear to fall into the same mistake in distinguishing buildings. It is a species of hypercriticism that has become the bane of *soi-disant* critics, and some amateurs. Is smacks of a meagre acquaintance with a few examples, instead of a generalized study of all styles. Thus the first adverse critics indulged in lampooning porticoes to churches, *because* they were first used in front of heathen temples, as another set stigmatized the earlier works of the Gothicists, forasmuch as they recalled mediæval superstition. It was not uncommon for the critics of forty years ago to apply all sorts of pseudonyms and sobriquets to any buildings that savored too much of some typical or well known example, as if the resemblance detracted from the merit of the composition as a whole. To be brief, we must spurn this kind of comparison if we are to benefit at all in an age essentially eclectic like the present. What matters if a building is adorned with a cupola too much like those which crown the facade of Wilkins' National Gallery? They may look "pepper-casters" upon the aforesaid structure, but it would be unwise, as well as foolish, to denounce the adaptation or even copy of one of them as too much like a pepper-box is it suitably met the conditions of a new structure. To apply this kind of stricture is not at all to the point, however clever and smart

it may appear. Unfortunately art-writers are a little too much addicted to the "sensational," too fond of conjuring up likenesses, however far-fetched, and flavoring their remarks with illustrations and analogies that unfortunately often cut as much one way as another. There is one excuse for this, however: it is an easy way of dealing with a dislike when more substantial reasons cannot be adduced. Architectural or art disquisitions would be sometimes a little wearisome, and too much like theological subtleties, for the easy digestion of most people, if examples were not given; but let them, at least, be well chosen.

Architectural expressions, then, are considerably narrowed when we have struck out these spurious ones—in fact, they cannot for a moment be considered so numerous as the multitudinous wants of all our buildings—that is to say, it would be absurd to suppose there was an expression suitable to each kind of building. If our domestic buildings are sometimes like convents, and occasionally like club-houses, there is nothing to complain of, for individual tastes are equally as diverse. Neither should we be so fastidious as to censure the proclivities of church-builders, who in one instance embodied the extremest sacrificial type of plan, and in another the congregational auditorium. These are differences for which there are ample apologies to be found; and yet in both cases our ideas of true art expression would be shocked if these extreme religionists carried their tenets so far into the fabrics as to violate what would be considered to be proper architectural adaptations in plan or external features. Thus it is possible to admit a certain degree of diversity into our designs, even if we appear to trespass upon the character of other buildings so long as we confine ourselves to justifiable expressions.



Let us here consider for a moment the range of these architectural expressions, and how far we may make them intelligible. Mr. Fergusson, in his "Essay on the Principles of Beauty in Art." divides the arts into five classes: the technic, as carpentry; the technic and æsrhetic, as plain architecture and gastronomy; the technic, æsthetic and phonetic, as sculpture; the æsthetic and phonetic, as poetry; and the phonetic simply, as rhetoric. This ingenious classification embraces all the arts. To the highest class of architecture this author awards equal proportions of the three merits—that is to say, of technic or mechanical merits; æsthetic or those giving pleasure; and phonetic, those capable of telling a tale. But the author says this is only the case when architecture *per se* is connected with sculpture or painting, and the Greek architecture is selected as fulfilling this condition. As justly observed by Mr. Garbett, the system, however ingenious, fails to show in what respect the architect is superior to the picture-frame maker or the cook, and the same writer points to an intermediate kind of expressiveness in architecture—one that is capable of doing more than simply please by exciting different emotions, and yet incapable of speech. This kind of "dumb expression," as he terms it, is common to all the fine arts; we see it in architecture as well as in instrumental music. It is a language common to all the arts of form and sound—it appeals to everybody alike, there can be no ambiguity about it. The pyramids and temples of Egypt convey an impression that cannot be mistaken of one extreme kind, while the aerial fancies of the Arab or the cunning artifice of the Hindoo palace or temple are equally apparent in awakening a different impression. Thus, after looking at the ruins of Karnac, with their massive forms based upon the square and circle, a sense of majesty or solemnity steals over us; not like the impression felt upon viewing a mediaeval cathedral or that awakened by the splendid remains at Delhi. One over-awes by its mass, the other captivates. But we may illustrate three or four well distinguishable expressions of great historic periods. There are those represented by Thebes, Athens, Rome and mediaeval Europe, all well marked—that is, the impressions or feelings they are calculated to convey or arouse apart, from association, are readily defined in language. Thus, awe in the first, majestic repose in the second, grandeur and sumptuousness in the third, and aspiration in the fourth, are well understood sensations, which none but the most deadened to art influences can fail to have experienced. If we inquired we should find the greatest ignoramus was influenced by those works of architecture in the same or nearly in the same degree as the educated, showing that associations have nothing whatever to do with these broad and simple forms of expression. But let us next inquire into some of the sources of these various effects. Unfortunately there have been various deadening influences, such as association and the indiscriminate employment of different styles as the fashion of the day, leads which have dulled our perceptions; and so, if a gentleman wishes to build a country residence any of the styles or expressions we have indicated may be used just as well as any other, regardless of the occupant's tastes and feelings, and at variance with the scenery Expression is not studied by the architect, because his pet style is adopted and carried out in accordance with his own idea—that is to say, if a regular-featured Classic kind of exterior was best adapted it would be ten to one rejected for a broken, picturesque house; and, where irregularity of outline and sharp contrasting features would be a charm, a regular or placid-looking edifice would be designed. Now, the true avocation of an artist, rightly so called, and we presume every architect believes himself to be one, is an ability to convey an impression—not any sort, but the right one in the right place—just as he may use his pencil in conveying an expression of countenance or giving a clear idea of a portrait or a group of figures by a few well understood touches. Above all things an artist, like a rhetorician, should be enabled to convey an impression in the shortest way. He should make the study of form and color or sound, in their various effects upon the eye or ear, and through it to the sympathies and feelings, the great one; he, in fact, should become a physician in the art of allaying and soothing and giving pleasure or excitement to the emotions, or of swaying them in a pleasing manner. If he cannot do this he is no artist, and if he prescribes the wrong style he is unskillful if not an impostor. The alphabet of expression consists of but a few characters. We have rectangular forms, or those in which the horizontal lines are continuous, and the vertical discontinuous, as in the Greek styles of composition. "A severe purity reigns supreme." Such an expression may be found in the Grecian Doric, and it appeals to the soberer qualities of the mind. In the Roman and Palladian we find a milder repose.

The vertical features are more prominent and less massive, the circular and angular features break the extreme simplicity of the Greek composition. Under Scammozi and the Venetian artists we find the curved or circular forms breaking still more into the severe rectangular treatment of the Greeks, as in the Vandramini Palace, Venice. Here the voids encroach largely upon the solids or walls, and if we study the Venetian palaces we shall find the arcade and the fenestration as conspicuous as the solid portions. In the court of the Ducal Palace, and in the earlier semi-Renaissance, a playful picturesqueness prevails. In the first building the introduction of the arch and the paneling of the piers give a light and playful expression to the façades, and this is increased by the admixture of semi-circular and pointed arcades. Again, we have an inviting and extremely elegant expression in the Palladian style, as we see it in the Barbarano Palace at Vicenza, and in the arcaded fronts of the Vicentine basilica. The superimposed orders, so favorite a treatment of Palladio, eminently suggest a festive and domestic expression—one admirably fitted for civic and palatial purposes no less than for buildings destined for music and the drama. Now, in both these extreme expressions of the Classic school, a repose though of different degrees prevails, the features and architectural lines all partaking of a contrast, rather of gradation than of suddenness. The angles, for instance, are generally right angles, or obtuse ones, suggesting ideas of sublimity and

repose rather than energy and unrest as in the Pointed styles. In the latter the forms are more angular, the lines meet at sharper angles, indicating rigidity and energy; thus the vertical features of buttresses and shafts rise uninterruptedly, no horizontal members disconnect them or stop them, as we find in the column and entableture of the Classic orders; the buttresses spring beyond the bounding lines of the building, and terminate in pinnacles, and these converge in their turn to points. Again, in the pointed windows and the spire the same piercing energy or character is seen; their angular apices and points indicate an upward growth—a dynamic rather than static condition; the whole composition, indeed, of such an edifice as Salisbury or Amiens Cathedral is one suggesting energy and force, not repose. We may briefly enumerate a few of the abstract principles upon which architectural expression depends. Alison and other writers on the subject have agreed upon certain kinds of form which suggest ideas to the mind. Thus angular forms and lines express strength, energy and force; the same qualities produce strong contrasts of light and shade on surfaces, and these sharp transitions characterize rocky scenery and Gothic buildings. The contrary kinds of form—those that are curvilinear and winding, and which give rise to gradation of light and shade—indicate delicacy, ease, grace and refinement, and characterize the Italian modes of Classic treatment. The Greek character, as seen in the Greek Doric, shows a combination of these opposite forms; we get the square and circular forms combined as in the Doric order. In the Roman styles the curvilinear and rectilinear are equally blended, producing grandeur and richness of expression; and in the Gothic forms they are again united, though the angular forms are predominant. In one extreme we have contrast, expressive of grandeur, force, and exciting qualities, and in the other extreme of gradation, elegant and soothing qualities. The architect should be master of these combinations, and be able to apply such varieties of form as will best conduce to a particular expression. Unlike painters and sculptors, architects are the professors of abstract design, and, as we have said, should be able to discover the general laws of expression in the same manner as the physicist does with inert matter. Another principle well worth noticing is the proportion of opening to solid wall in our buildings; and we dwell upon it here as it has scarcely been noticed by other writers. We have styles in which the wall is everything, and others in which the openings dominate over the design. In the Greek, the openings were merely apertures compared with the wall; but in the Venetian Italian it becomes a framework only—so extreme is the difference. In the early Gothic the windows were mere piercings and slits in the walls; but in the later Gothic—the Perpendicular, for instance—they occupy by far the largest area, the wall spaces being reduced to attenuated piers or mullions. This principle is indiscriminately applied by architects, as we see in churches. In one, we find all window in the clerestories and aisles; in another all wall space. It is generally an excess of one or the other that is to be condemned. If the admission of light had anything to do with it we would not complain; some architects prefer "a dim religious light," and to this they conform their design. But the principle has a great deal to do with expression also; a windowless building like Newgate prison has a forbidding expression, a repelling character not unsuited in that case; but a building full of windows has an inviting cheerful aspect no one can mistake. The Italian schools illustrate not only the formal principles of expression we have enumerated, but this one of lighting also. Thus, in the Florentine, there is scarcely any arcuation, though the style is astylar; windows bear a small proportion to the wall space, while, in the Venetian schools, arcuated effects are largely used, and the window is an important feature. The Roman holds a kind of intermediate ground between these two. In the Florentine we have almost Doric simplicity and severity in structural features; in the Roman a more varied treatment; and in the Venetian highly broken lines, large windows and picturesque features. As an English style for country residences, and when ample light and cheerful expression are wanted, the Venetian is best suited, and it has been largely adopted by English architects of the Renaissance; for town and civic structures, in which a more severe expression is required, the Florentine or the Roman is better adapted. In the Gothic styles we have quite as large a range to choose from. Of course, in regard to windows, lighting must always be mainly regarded, though these may be expressed variously, and the architect may always give his buildings their own suitable expressions by selecting the proper formal element of those we have referred to.—*London Building News.*

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways

The double plate shows the elevation and plans for a residence on the N. E. corner of California and Webster streets for Mrs. Wieland, from designs by N. A. Comstock, architect.

The design for four dwellings on the N. E. corner of Pine and Powell streets for J. V. O'Brien, is from designs by John Gash, architect.

The Mission Dolores Church is from sketches from our special correspondent, "Tres."

The cuts M, N and O are from the terra cotta capitals from the Museum of Natural History at Kensington, England.

Architectural Iron and Steel, and its application in the construction of buildings is a new work on construction, by Wm. H. Birkmire, and published by John Wiley & Sons, 53 East 10th street, N. Y.

It is a neatly bound book of 200 pages, 6x9 inches, on fine heavy paper and is fully illustrated. The work is intended for those who wish to keep pace with the science of buildings where iron or steel enters into the construction. The tables for reference and formulas have been carefully revised and adapted to this work. It is a book that no architect or builder can afford to be without.

Palliser's Architectural Designs and Details is a book of 90 pages, 10x14 inches, publishhd by Palliser, Palliser & Co., at 24 East 42nd street, N. Y.

This work contains designs for a great variety of buildings, villas, cottages, barns, stables and out houses. Price in paper, $2.00.

NOTICE OF MEETINGS.

Seth Babson, Pres. W. J. Cuthbertson, Vice-Pres.
Oliver Everett, Sec. John M. Curtis, Treas.

Technical Society of the Pacific Coast, meets first Friday of each month at Academy of Sciences Building.

John Richards Pres. L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evening of each month at the Murphy Building.

W. C. Quimby, Pres. O. Brooks, Vice-Pres.
C. E. Purington, Sec. W. C. Crosett, Treas.

Builders' Association of California, meets every Monday at 330 Pine Street, Rooms 9–12, at 1.30 P. M.

S. H. Kent, Pres. P. G. Martin, Vice-Pres.
A. Jackson, Sec'y. Wm. B. Kreger, Treas.
L. A. Larsen, Clerk and Financial Sec'y.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects, was held in their new rooms at the building of the Academy of Sciences, on Market St. on the 8th instant. The Architectural Sketch Club submitted competitive designs for suburban school houses. A committee was appointed to examine same and report at the next meeting of the Chapter. The following communication was received from the Master Painter's Association of San Francisco.

San Francisco, April 30, 1891.

To the San Francisco Chapter of Architects A. I. A.

Gentlemen:—The Master Painter's Association of San Francisco, realizing the absolute necessity that some efficient and adequate means should be adopted calculated to correct a grievous and long existing evil and abuse, hitherto by far to extensively prevailing in the painting trade in this city, by men claiming, but not honoring the name of Master Painters, in the substitution and use of impure and worthless admixture as paint, called by the common name of "dope," which is in no way allied to, nor contains one particle of pure lead and oil paint materials.

We as Master Painters, willing and desirous always to fulfill honorably and squarely the requirements of every specification placed in our hands, ask you gentlemen of the Architectural Profession, and the source through which comes to us the greater number of our contract engagements, that you lend us your aid and assistance in rendering it possible for honestly inclined men to compete squarely for work offered, without being subject to the humiliation of business classification with men possessed of no worthy mechanical principle or ambition.

In the move now being made, the journeymen's organization known as the Brotherhood of Painters and Decorators of America, Union No. 140 & 175 of San Francisco, have taken a worthy and aggressive stand in the matter, and will to the extent of their opportunities, expose and refuse to work for those who use the impure and meritless stuff called "dope" in any of its manifold forms, for it is Hydra headed in that its components are without formula and as varied and vile as the minds that control their manipulations and use.

Hence, if you, gentlemen of the Architectural Profession, standing in your high and honorable position as between the good and the bad, will by your influence and acts, close and lock the door, the key of which is held almost absolutely in your grasp, and shut out from competition on works under you charge, every one who is not beyond all question, honest and honorable in all transactions and where mixtures of paints will not bear the closest scrutiny and analysis.

Be kind enough gentlemen to express to the Master Painter's Association your views upon this to us, and by reasonable presumption to you, most important matter. You want good work, executed with good material, and these you can get only at the hands of good men. Will you aid us?

Awaiting your reply, we remain,

Yours respectfully,

Master Painter's Association of the Pacific Coast.
H. G. Jarman, Sec. E. M. Gallagher, Pres.

After a general exchange of views on the advantages to be derived from a higher standard than that hitherto prevailing for painter's and decorator's work, the action of the Master Painter's Association was considered a material advance in the right direction, and the following resolution was unanimously adopted.

Resolved, That this movement on the part of the Master Painter's Association is approved by the Chapter, and that we as individual members of the Chapter will do all possible to further the aims of the Association.

THE Masters Painter's Association of the Pacific Coast held a special meeting on April 30th, to consider the subject of a more general use of pure material in the painter's and decorator's art. A resolution was adopted and a communication ordered sent to the San Francisco Chapter of Architects requesting the co-operation and assistance of the architectural profession in their efforts to obtain a more general recognizance and appreciation of the benefits to be derived from the use of pure materials.

The following resolutions were also offered and adopted.

Resolved, that the Master Painter's Association of the Pacific Coast, do adopt the "California Architect and Building News," as their Official Organ.

Resolved, That the Secretary be instructed to send to the manager of the California Architect and Building News a copy of all the proceedings of future meetings for publication.

For resolution and communication to S. F. Chapter of Architects, see report of meeting of S. F. Chapter, A. I. A.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

Enforcement of Mechanics' Lien.—In an action to foreclose a mechanic's lien for work done and materials furnished under a contract, a counter claim may be set up for damages for omissions and defaults in the performance of the contract. In such a case, a judgement for the damages recovered in another court is conclusive evidence of the amount.

Bulkly v. Healy, Supreme Court of New York, General Term, Second Department, 12. N. Y. Supp. 54. (70-C)

Sale of More Than Debtors Interest under Mechanics Lien.—Where the statute prescribes that only the interest of the person causing the buildings to be erected, or materials to be furnished, shall be subject to the lien therefor, it is error to decree a sale of the whole property under a lien for materials furnished to one in possession under a contract of purchase, without ordering payment of the unpaid purchase price.

Bremen v. Foreman, Supreme Court of Arizona, 24 Pac. Rep. 539. (844.)

Performance and Construction of Contract.—When a contractor in good faith substantially performs a building contract, he can recover on the same, less a just reduction for slight defects or omissions. A provision in a contract that "all flooring to be made smooth and level, and free from knots," means free from all kinds of knots, both hard and soft. The evidence as to the number of knots being conflicting, it was for the jury to determine whether such knotty condition was a trivial or material violation of the contract.

Rust v. Wagner, City Court of Brooklyn, 12 N. Y. S. 2. (1014)

Liability for Falling Buildings.—The owner of a building is responsible for the damage occasioned by its fall, when it is caused by his neglect to properly brace it so as to prevent its fall; but the damage may be reduced according to circumstances if the owner of the thing has exposed it imprudently. When a building threatens ruin, the neighbor has a right of action against the owner to compel him to cause such a building to be demolished or propped up. In the mean time if there be danger of any damage by its fall, he may be authorized to make the necessary works, for which he shall be reimbursed, after the danger shall have been ascertained.

Factors' and Traders' Insurance Co. v. Werlein, Supreme Court of Louisiana, 8 South Rep. 435.

Construction of Building Contract.—A provision in a building contract that "no new work of any description done on the premises, nor work of any kind whatsoever, shall be considered as extras unless a separate estimate, in writing, for the same before it is commenced shall have been submitted by the contractor to the superintendent and proprietor, and their signatures obtained thereto," may be consequently waived by parties by verbal agreement.

The owner of a building is liable for work and materials furnished by the contractor in its construction not called for by the original written contract, where the owner or his authorized agent, by a subsequent oral agreement, promised to pay therefor, or knew that the contractor would charge for the same as extras, and assented thereto or permitted the same without objection. Where a contractor omits to furnish materials called for by his contract, he is liable therefor in damage to the owner. The contract provided for the completion of the buildings by a specified date, "provided there be no interference from labor strikes." The fact that the mechanics quit work upon the building on account of the contractor failing to pay them their wages, as agreed, did not release the contractor from completing the building by the time agreed upon.

McLeon v. Genius, Supreme Court of Nebraska, 47, N. W. Rep. 473. (2244)

BUSINESS MOSAICS.

The Vulcan Iron Works, 135-145 Fremont Street, of this city, are at the present time manufacturing a great variety of work in the line of machinery, such for instance as Corliss steam engines, Meyer cut-off engines, saw mill, mining, cable road, power transmitting, ice and refrigorating machinery. These works also have facilities for light and extra smooth castings, and a large number and variety of patterns for new or repair work.

As the season of the year is upon us when the country residence is in demand, we beg leave to call your attention to Fay's waterproof building manilla as a covering. With it you can build much cheaper than all wood, and it is as suitable for small houses as for large ones. Write to the Company for catalogue and samples.

See advertisement, page vi.

Kitchens at the present time are being fitted up with the latest improvements for the use of gas in lieu of the wood and coal range. Plans are being made by an architect of this city for a residence which when completed will have many novel features. The heaters for all kinds of cooking are arranged along one side of the room which is well lighted; over the cooking appliances a hood and ventilators are arranged for collecting and conveying away the gases generated. Each part of the apparatus is arranged for its special purpose so that it shall not require any surplus heat for heating some deparment that may not be wanted at such times. All waste heat from any or all the heaters is to be conducted to a central point where it is to be utilized for partially heating the water before entering the water heater direct.

This set of apparatus is to be a combination of the cooking and heating appliances as furnished by the San Francisco Gas Company and may be seen at their show rooms No. 16 Post Street.

Stan-Alumin is a new metal or alloy manufactured by the Stan-Alumin Metal Co., of Canton, Ohio. This metal is a com-

bination of Aluminum with other metals, as its name implies, and has such desirable qualities for many purposes as will before long bring it into general use. It is very flexible, and possesses great tensile strength, is easily cut and worked, and does not require painting for protection. We have received a sample of the sheet metal which appears to fulfill all that the company claim for it. This company will furnish pure Aluminum, or Aluminum Alloys. Architects, builders and metal workers should send to this company for catalogue and price list.

We have received from Samuel Cabot, the manufacturer of creosote stains, at Boston, a view of a cottage as it would appear when stained with these stains. As we should naturally suppose with these beautiful stains the effect is harmonious and artistic. Creosote is coming into use as a preservative for wood more extensively as the years go by. When these stains are used the preservative effects of the creosote is utilized and at the same time the beauty of the structure is enhanced.

Chimney cowles of various patterns was recently the subject of experiment at the "Kew Observatory." The results proved that none of them caused a velocity of current exceeding that in an open pipe.

The Gardner steel ribbon and attachments for sash hangings, have recently been used for hanging some heavy vertically sliding doors weighing some 300 lbs. or more. All the methods heretofore used having proved defective, the Gardner appliance was tried with entire satisfaction.

The man who is willing to work and able to reason is too independent to beg others to take care of him. It is only those of weak mental structure and wanting in energy who are unable to take care of themselves. Yet, with this self-confession of inferiority they insist upon entire equality and right to compel the more enterprising and successful to share with them, not on the ground of equal service, but upon that of equal necessity. No one whose efforts bring him a surplus at the end of the year ever turns Socialist. It is the man with the annual deficit that insists upon becoming more worthless and more dependent by having the community take care of him and get any work out of him that they can.—*Brickmaker.*

Tin of American make is about to be introduced to the building trade. The old and well-known house of N. & G. Taylor Co. will in a few weeks at most, be prepared to furnish American tin and Terne plates at their own works in Philadelphia, Pa. The standing and reputation of this firm as furnishing for many years superior grades of roofing tin and sheet metal is a guarantee that the product made under their own immediate supervision will be the best that our advanced state of knowledge and machinery can produce.

Blue prints of large size and superior quality are now made by Edward Denney,& Co., 418 Montgomery street, for architects and civil engineers, from drawings as furnished.

CITY BUILDING NEWS.

Bluxome between Fourth and Fifth. Carpenter work, etc.; owners, Bridge & Beach Manufacturing Co.; architects, Percy & Hamilton; contractor, A. H. Plummer; cost, $5,677; signed, April 14; filed, April 20; payments, first Saturday of each month 75 per cent. as work progresses, 25 per cent. 35 days.

Broadway near Franklin. To build; owner, Winfield W. Coulter; architect A. J. Barnett; contractor, K. Thaler; surety, $1,000; cost; $4,095; signed April 16; filed, April 22; payments, $1,070, frame and roof rafters ready; $1,000, brown mortared; $1,000 completed; $1,025, 35 days.

Broadway near Scott. Brickwork; owner Wm. F. Herrin; architect, Julius E. Kraft; contractor, G. C. Sweeny; surety, $1,000; cost, $2,014; signed April 6; filed; April 20; payments, $700, rough work done; $80 , completed; $515, 35 days.

Bush near Laguna. To build; owner, W. J. Simmons; architect, J. Carther Newsom; contractor, H. Jacks; surety, $4,500; cost, $8,790; signed, April 15; filed April 16; payments, $1,098.75, floor joists in; $1,098.75, rough frame up; $1,098.75, enclosed; $1,098.75, brown mortared; $1,098.75, white coated and outside primed; $1,098.75, accepted; $2,197.50, 35 days.

Bush near Laguna. Painting; owner, M. J Simmons; architect, J. C. Newsom; contractors, Chapman Bros.; cost, $620; signed, April 13; filed, April 17; payments, $270, exterior finished and first coat on interior; $350, completed.

California near Van Ness Avenue. To build; owner, Leon Sloss et al.; architect, Clinton Day; contractor, C. Chisholm; cost, $55,250; signed, April 24; filed, April 25; payments, $9,000, second story joists set; $7,000, brown mortared; $9,000, white plastered; $11,000, standing finish ready for painters; $6,434, completed with 75 per cent. of any extra charges; $13,812, 35 days.

Capp near Twentieth. Brickwork, etc.; owner, W. Z. King; architect, A. J. Bryan; contractors, Bryan & Montgomery; cost, $1,023; signed, March 31; filed, April 4; payments, $250, brick foundations laid; $500, frame up; $500, roof finished; $750, plastering set; $750, plastering finished; $523, completed; $1,000, 35 days.

Capp near Twenty-first. To build; owner, George Christie; architect, H. B. Schomuckert; contractor, H. B. Schomuckert; surety, $6,900; cost, $6,910; signed, April 7; filed, April 8; payments, $1,350, frame up; $1,350, brown mortared; $1,350, white coated; $1,133, accepted; $1,727; evidence given that bills are paid, 35 days.

Church near Twenty-second. To build; owner, B. Cocks; architect, G. A. Birdwell; contractor, J. M. Williston; cost, $8,197; signed, April 15; filed, April 18; payments, $700, frame up; $600, brown mortared; $197, white plastered; $600, completed; $800, 35 days.

Clay between Hyde and Leavenworth. Concrete work; owner, Hugh Huddleston; architects, Percy & Hamilton; contractors, Gray Bros.; cost, $1,087; signed, March 30; filed, April 20; payments, first Saturday of each month 75 per cent. as work progresses; 25 per cent. 35 days.

Clay between Hyde and Leavenworth. Ornamental concrete work; owner, Hugh Huddleston; architects, Percy & Hamilton; contractors, Chatain Giletti Stone Co.; cost, $1,000; signed, March 30; filed, April 20; payments, 75 per cent. as work progresses; 25 per cent. 35 days.

Clay between Hyde and Leavenworth. Painting; owner, Hugh Huddleston; architects, Percy & Hamilton; contractor, Paul Agnar; cost, $1,475; signed, April 16; filed, April 20; payments, first Saturday of each month, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Davis and Sacramento. Cement work; owner, Sol Wangenheim; architect, Jas. E. Wolfe; contractor, George Goodman; cost, $3,900; signed, April 14; filed, April 20; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Cor. Devisadero and Waller. To build; owner, Thos. H. Cornish; architects, Currie & Loomer; contractors, Currie & Loomer; cost, $1,99?; signed, April 8; filed, April 15; payments, $500, enclosed; $500, rough mortar on; $500, completed; $499, 35 days.

Cor. Fell and Baker. Carpenter work, etc.; owner, Monroe Greenwood; architect, Fred B. Wood; contractor, George R. Lang; surety, $4,000; cost, $16,000; signed, April 28; filed, April 29; payments, $3,000, frame up; $3,000, brown mortared; $3,000, building finished outside; $3,000, completed; $4,000, 35 days.

Cor. Fell and Baker. Plumbing; owner, Monroe Greenwood; architect, Fred B. Wood; contractor, G. C. Sweeney; cost, $1,500; signed, April 29; filed, May 1; payments, $565, rough work in; $560, completed; $375, 35 days.

Cor. Filbert and Sansome. Iron work; owners, Judson Manufacturing Co.; architects, Wright & Sanders; contractor, J. W. Wissinger; cost, $4,155; signed, April 3; filed, April 14; payments first day of each month 75 per cent. as work progresses.

Cor. Howard and Creek Lane. To build; owner, Mary McCarthy; architect, William Armitage; contractor, J. O'Connell; surety, $700; cost, $2,775; signed, April 29; filed, April 29; payments, $690, when rough frame is up; $690, brown mortared; $690, completed; $706, 35 days.

Cor. Jackson and Mason. To build; owner, John Bullwinkle; architects, John & Balzanski; contractor, Adam Miller; cost, $6,500; signed, April 23; filed, April 24; payments, $1,200, frame up; $1,200, floors laid, partitions set and enclosed; $1,200, white plastered; $1,275; finished; $1,625, 35 days;

Cor. Jones and McAllister. Wrought iron work; owner, Hibernia S. & L. Society; architects, Pissis & Moore; contractors, Western Iron Works; cost, $13,725; signed, April 20; filed, April 24; payments first day of each month, 75 per cent. as work progresses; 25 per cent. 35 days.

Geilfuss & Co.; contractor, Henry Rohling; cost, $6,272; signed, April 17; filed, April 18; payments, $940, frame up; $940, enclosed and partitions set; $940, porch and fence work done; $940, inside standing finish done; $940, completed; $1,572, 35 days.

Sutter between Taylor and Jones. Interior finish; owner University Club; architect, A. Page Brown; contractor, Wm. T. Commary; cost, $4,551.85; signed, April 18; filed, April 21; payments, 75 per cent when work is completed; 25 per cent. 35 days after completion.

Sutter between Taylor and Jones. Painting; owner, University Club; architect, A. Page Brown; contractors, Frazer & Keefe; cost, $1,400; signed, April 20; filed, April 21; payments, on completion of work.

Tenth avenue near Clement street. Carpenter work; owner, E. F. Dennison; architect, Jordan E. Lyon; contractor, J. S. W. Saunders; surety, $1,250; cost, $1,850; signed, April 18; filed, April 22; payments, 75 per cent as work progresses; 25 per cent. 35 days.

Tenth between Howard and Folsom. Alterations; owner, Elizabeth Roche; architect, Bryan J. Clinch; contractor, T. R. Bassett; cost, $2,878; signed, April 4; filed, April 4; payments, $707, frame up; $700, additions completed; $700, completed; $778, 35 days.

Twelfth near Clement. To build; owner, Robert Haslett; architects, Shea & Shea, contractor, R. Sinnott; surety, $675; cost, $2,700; signed, April 22; filed, April 25; payments, $506, frame up; $506, brown mortared; $506, hard finished; $507, completed; $675, 35 days.

Twentieth near Capp. Carpenter work, etc.; owner, G. H. Richards; architect, Charles I. Havens; contractors, Miron & Robertson; cost, $10,000; signed, April 18; filed, April 29; payments, $3,000, rough frame up; $3,000 outside finish up and brown mortared; $3,000, mill work done; $3,000, completed; $4,000, 35 days.

Twentieth near Capp. Painting; owner, G. R. Richards; architect, Charles I. Havens; contractors, Swan & Stein; cost, $1,025; signed, April 17; filed, April 20; payments, $350, inside roof done; $400, completed; $275, 35 days.

Twentieth near Capp. Plumbing, etc.; owner, C. H. Richards; architect, Charles I. Havens; contractor, H. Williamson; cost, $2,074; signed, April 17; filed, April 20; payments, $750, rough gas and water pipes in; $750, completed; $574, 35 days.

Twenty-third near Guerrero. To build; owner, Margaret M. Willis; architect, Wm. H. Armitage; contractor, S. T. Greene; surety, $882; cost, $3,530; signed, April 20; filed, April 21; payments, $880, rough frame up; $880 brown mortared; $880, entire work completed; $890, 35 days.

Twenty-third near Florida. To build; owner, Alex Duffy; architect, Frank Pierce; contractor, Robert Giles; surety, $2,625; cost, $2,625; signed, April 20; filed, April 28; payments, $656.25, frame erected; $656.25, brown mortared; $656.25, inside finish on; $656.25, 35 days.

Twenty-third near Mission. To build; owner, Mrs. C. Warnkee; architect, A. C. Lutgens; contractors, P. Droge et al.; surety, $995; cost, $3,980; signed, April 7, filed, April 9; payments, $746, roof boarded; $746, first coat of plaster; $746; second coat; $747, completed; $995, 35 days.

Warren near Grove. To build; owner, Edwin Liddle; architect, John Hayes; contractor, John Hayes; cost, $1,350; signed, April 25; filed, April 27; payments, $400, building roofed; $400, rough mortared; $550, receipts shown to owner.

Alameda County.

Academy Homestead, Oakland. Cottage; owners, E. Lacazette and wife; architect; J. A. Eastman; contractor, J. A. Eastman; cost, $1,595; signed, April 8; filed, April 8; payments, $395, frame up; $400, brown mortared; $400, completed; $400; 35 days.

Alice and Seventh, Oakland. Two-story frame; owner, Vincent Chlonpek; architect, J. C. Matthews; contractor, J. C. Bassett; cost, $2,260; signed, April 29; filed, April 29; payments, $565, frame up and roof sheathed; $565, first coat mortar and first coat paint; $565, completed; $565, 35 days.

Associates' Tract 50, Oakland. Six-room cottage; owners, Charles H. Blaker and wife; architect, C. W. Coldwell; contractor, C. W. Coldwell; cost, $1,550; signed, April 21; filed, April 23; payments, $400, frame up; $40, first coat mortar; $400, completed; $350, 35 days.

Buena Vista avenue and Oak street, Alameda. Two-story frame; owner, Geo. F. Taylor; architect, C. M. Jenkins; contractor, John Sath, cost, $2,350; signed, April 3; filed, April 4; payments, $587, frame up and rustic on outside walls; $587, enclosed and brown mortared; $587, woodwork done and priming coat paint on; $589, 36 days.

Beuna Vista avenue near Oak street, Alameda. Two-story dwelling; owner, Capt. J. Jensen; architect, Charles H. Shaner; contractor, P. Christensen; cost, $2,095; signed, April 22; filed, April 23; payments, $523.75, frame up and rafters and sheathing on; $523.75, brown mortared; $523.75, ready for painting; $523.75, 36 days after completion.

Blake Tract No. 3, Berkeley. Two-story dwelling; owner, F. E. Armstrong; architect, A. H. Broad; contractor, N. L. Freese; cost, $2,987; signed, April 8; filed, April 9; payments, $746, frame up and enclosed; $746, brown mortared; $746, completed; $749, 35 days.

Blake Tract, Oakland. Dwelling; owner, S. Hoeppersberger; architect, J. J. Rose; contractor, J. J. Rose; cost, $1,510; signed, April 20; filed, April 21; payments, $400, frame up; $310, first coat plaster; $400, completed; $400, 35 days.

Block 57, Town of Niles. Two-story frame; owner, J. J. Martin; architect, J. S. Wellbye; contractor, Robert Irvine; cost, $2,400; signed, April 8; filed, April 17; payments, $600, frame up; $600, first coat plaster; $600 completed; $600, 35 days.

City San Jose, on road to. Additions; owner, Mrs. S. Rainey; architect, T. J. Welsh; contractor, John J. Dunn; sureties, B. Joost and R. L. Taylor; cost, $9,399; signed, April 2; filed, April 10; payments, 75 per cent. of value of material furnished and work done first day of each month; 25 per cent. 35 days.

Cor. Encinal avenue and Paru street, Alameda. Two-story dwelling; owner, L. Van Orden Jr.; architect, G. A. Bordwell; contractor, John J. Boyle; cost, $3,336; signed, April 22; filed, April 23; payments, $834, frame up; $834, plastering done; $834, completed; $834, 35 days.

Cor. Filbert and Seventh, Oakland. Cottage; owner, George Louis Yager; architect, Howard Burns; contractor, Charles W. Ormsby; cost, $1,660; signed, April 20; filed, April 21; payments, $350, frame up; $350, first coat of plaster; $350 second coat plaster and windows in; $350, 10 days.

Cor. Railroad avenue and Nineteenth street, Alameda. Two-story frame; owner, Thomas K. Stauder; architect, Fred. P. Fisher, contractors, D. Straub & Son; sureties, J. M. Robertson and J. Cory; cost, $2,803; signed, April 4; filed, April 9; payments, $675, roof completed; $675, plastering done; $675, completed; $808, 35 days.

Cor. Seventh and Franklin, Oakland. Altering in "Ruedy's Hotel; owner, Henry Ruedy; architect, Julius Frey; contractors, Smith & Lake; cost, $3,200; signed, February 17, filed, April 18; payments, $600, roof raised and enclosed; $600, outside finish done and brown mortared; $600, ready for painting; $600, completed; $800, 35 days.

Eighteenth street near Encinal avenue, Alameda. Two-story house; owner, W. H. Palmer; architect, Charles Shaner; contractors, Brehant & Diamond; sureties, E. B. Dunning et al.; cost, $2,850; signed, April 27; filed, April 28; payments, $600, rough frame up; $600, enclosed; $600, windows in, etc.; $337.50, ready for paint; $712.50, 35 days.

Fifth avenue near Ninth street, Clinton. Two two-story dwellings; owner, O. C. Kirk; architect, F. A. Brown; contractor, F. A. Brown; cost, $5,600; signed, April 18; filed, April 14; payments, $1,400, frame up; $1,400, first coat mortar on; $1,400, completed; $1,400, 35 days.

Mendenhall place, Livermore. One-story brick store; owner, Louis Schaffer; architect, Henry H. Meyers; contractor, J. F. Meyers; cost, $2,125; signed, April 7; filed, April 10; payments, $400, brick on ground and first tier joists on; $400, walls up and second tier on; $400, roof shingled; $850, completed; $575, 36 days.

Mountain View Cemetery. Tomb; owner, estate of S. Merritt; architect, H. P. Merritt; contractor, Knowles & Hosmer; cost, $38,600; signed, April 2; filed, April 13.

Peralta Heights, Oakland. Two-story frame house; owner, Thomas A. Deasy; architect, F. A. Brown; contractor, F. A. Brown; cost, $2,750; signed, April 17; filed, April 20; payments, $687.50, frame up; $687.50, brown mortared; $687,50, completed; $687.50, 35 days.

Prospect avenue, McClure street, Oakland. Two-story dwelling; owner, J. C. Martin; architect, Charles Mau; contractors, P. Ahern & J. Moore; cost, $9,850; signed, April 13; filed, April 14; payments, 75 per cent. value of work done on first day of each month; $2,462.50 balance, 35 days.

San Antonio avenue near Union, Alameda. Two-story dwellings; owner, G. H. Murdock; architect, Geo. A. Bordwell; contractor, J. J. Boyle; cost, $7,940; signed, April 6; filed, April 8; payments, $735, frame up; $735, plastering done; $735, completed; $735, 35 days.

San Leandro road, Fruitvale. Two-story house, 7 rooms; owner, Geo. A. Douglass contractor, Henry C. Barker; cost, $2,200; signed, April 25; filed, April 27; payments, $500, house enclosed; $500, brown mortared; $500, completed; $500, 35 days.

Santa Clara avenue between Fourth and Fifth streets, Alameda. Two-story frame; owner, Carl A. Joseph; architect, A. R. Denke; contractor, A. R. Denke; cost, $2,580; signed, April 8; filed, April 9; payments, $700, frame up; $500, first coat plaster on; $680, completed; $700, 35 days.

Shattuck avenue near Cedar, Berkeley. Two-story dwelling; owners, J. and S. Pierce; contractor, Ira A. Boynton, cost, $3,400; signed, April 14; filed, April 29; payments, $850, frame up and rustic on; $850, outside finish on; $850, inside ready for paint and outside completed; $850, 35 days.

Taylor avenue, McPherson street, Alameda. Two one-story cottages; owner, Henry Mobius; architects, Marcuse & Remmel; contractors, Marcuse & Remmel; cost, $3,000; signed, April 16; filed, April 17; payments, $750, frames up and roof on; $750, white plastered; $750, completed; $750, 35 days.

Telegraph avenue near Twenty-second street, Oakland. To build; owner, B. Wright; architect, Charles Mau; contractors, Concanon & Shay; cost, $14,449; signed, April 14; filed, April 14; payments, $2,709.75, one-quarter materials furnished and one-quarter work done; $2,709, one-half materials furnished and one-half work done; $2,709, three-quarters materials furnished and three-quarters work done; $2,709, completed; $3,612.25, 35 days.

Thirteenth street near Encinal avenue; Alameda. Two-story house; owner, F. H. Patrick; architects, Judd, Hamley & Co.; contractor, John Sath; cost, $3,650; signed, April 29; filed, April 29; payments, $912.50, frame up and sheathing on roof; $912.50, roof shingled and ready for plastering; $912.50, priming coat paint on; $912.50, 36 days.

Twelfth street near West, Oakland. Two-story frame; owner, Mary S. Bartlett; architect, M. S. Libbey; contractor, M. S. Libbey; cost, $4,100; signed, April 11; filed, April 15; payments, $1,025, one-third materials furnished and one-third work done; $1,025, two-thirds furnished and two-thirds work done; $1,025, completed; $1,025; 35 days.

Union near Tenth, Oakland. Three-story frame; owner, Giles H. Gray; architects, J. J. and T. D. Newsom; contractor, Thomas R. Bassett; cost, $11,165; signed, April 11; filed, April 15; payments, $1,395, frame up; $1,395, roof finished; $1,395, floors laid and rough plumbing done; $1,395, first coat plaster and outside primed; $1,395, plumbing and plastering done; $1,398, completed; $2,792, 35 days

View Homestead, Oakland. Two-story dwelling; owner, A. W. Havens; architect, W. J. Mathews; contractor, C. L. Lombard; cost, $4,339; signed, April 8; filed, April 10; payments, $813, one-quarter of work completed; $813, one-half of work completed; $813, three-fourths; $1,087, 35 days.

Villa (2) lots adjoining University. One-story frame; owner, Robert Forbes; architect, Robert Seidel; contractor, Robert Seidel; cost, $1,100; signed, April 22; filed, April 23; payments, $600, brown mortared; $250, completed; $250, 35 days.

Williams street near San Pablo avenue, Oakland. One-story frame; owner, C. Hooley; architect, Charles Mau; contractors, J. Brandin & G. Eber; cost, $1,850; signed, April 27; filed April 28; payments, $550; one-fourth materials furnished and one-fourth work done; $550, one-half furnished and one-half work done; $350, three-fourths furnished and three-fourths work done; $337.50, completed; $462.50, 35 days.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

THE question of how to dispose of the garbage with the least offense is as yet unsettled. We know of no method adopted which is devoid of objectionable features. The offensive and unhealthy nature of garbage begins as soon as made, and continues with increasing virulence till its final disposal. In most, if not in all Eastern Cities, the garbage is placed in receptacles made of wood, which are at intervals placed on the street to be removed by the scavengers. These receptacles become saturated after a time, with the decaying refuse matter, from which emanate continuously offensive odors and disease-breeding germs.

In San Francisco the usual custom is to have an iron box to receive the refuse of the house. These boxes are placed in basements, back stairs, rear balconies, etc.; and, upon being opened to receive a new deposit, they send off the pent-up fumes of decaying matter. Thus they become reservoirs of decomposing filth, continually generating noxious miasma, and forming a generating center of disease germs to permeate the building. A great portion of the more objectionable material which accumulates in the swill box, can and should be burned in the kitchen range. This course would probably meet the necessities of the case so far as the house alone is concerned.

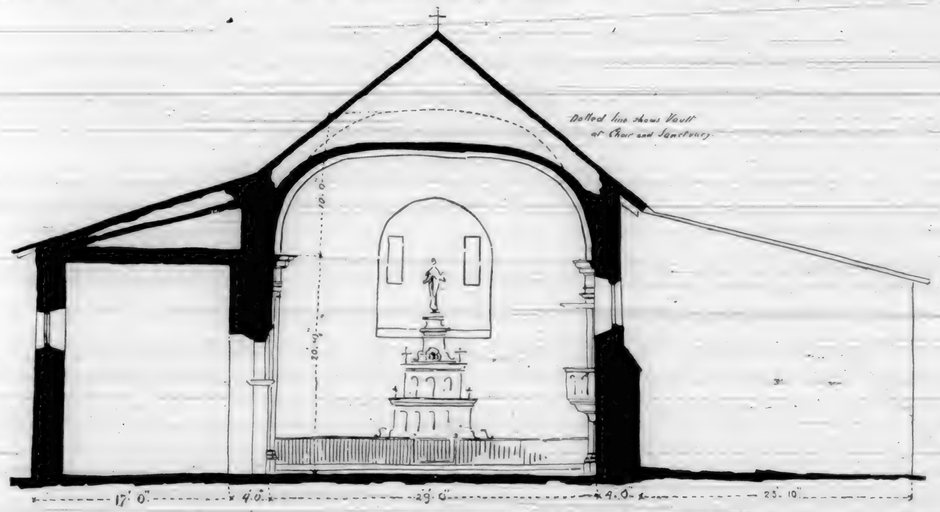
The city ordinance requires the scavengers to have closed tanks on the carts, which is correct as far as it goes; but the tanks and covers are of wood, which, after a time, become saturated and give off offensive odors and putrefying effluvia, which vitiates the air and becomes an active feeder for preventable diseases. The principal dangers which arise from the saturated receptacles on the carts could be overcome, in a measure, by the substitution of iron tanks and covers for those of wood.

While our Public Health Officials have been zealous in their desire to have the owners of property adopt every precaution against danger to health, we feel confident they will see the necessities arising from this most important sanitary requirement and adopt some regulations for securing this essential sanitary provision; and issue some rule for the guidance of persons engaged in the removal of accumulated refuse material, so that it shall cease to become a source of annoyance and danger.

MISSION OF SAN CARLOS DEL CARMELO, CAL.

Over a hundred years have passed since the religous enthusiasm that overflowed its native Spain and filled all Mexico, spreading even as far as Northern California, sank back to the more congenial surroundings of the tropic South, leaving only a few ruins, many names and here and there an existing building to attest the fact that those healers, more skilled than the waters of Bethseda's far famed pool, had labored for the spiritual healing of the brethren in these parts. So in the year of our Lord, 1891, retracing the steps of those pious fathers, steps all but obliterated by time, we come from San Francisco to the Bay of Monterey, and find there, not the mission but only the cross; for although the Mission was established here in 1770 after many fruitless searches for the famous Bay, the building was never erected, and we learn that not satisfied with the site, the Fathers determined after a few months occupancy, to remove about four miles southward to the mouth of the Carmel River. The road now over the hills is an easy one, and in an hour after leaving the town of Monterey, either on foot or on horse, you can stand at the doorway of the old Mission Church stay at Rome, a ten years' preaching in old Mexico, and gathered there their architecture; and so they built, and here in part to-day we still can see how thought and labor formed itself in stone a hundred years ago. History tells us that this Mission of San Carlos was built in the year 1771, but this structure was only of wood and dobe and it was not until some years later, probably fifteen or twenty, that the present stone building was erected. Our sketch is as seen from the east, the most prominent feature being a tower about twenty feet square, in the lower portion of which is the baptistery and above the belfry which has three openings for bells, and at the rear a doorway with stone stairs leading to the ground. The old bells have long since disappeared, and a modern bell claiming to be cast from the old metal of the originals, has taken their place.

From the belfry there was originally a doorway leading to the choir loft, but this is now filled up at the extreme right. Another and smaller tower, with belfry over and circular stone stairs leading to the gallery, encloses the nave or main body of the building, which originally was roofed cylindrically or barrel vaulted as indicated by the facade, the gable over being an addition of recent construction. A classic doorway with shallow pilasters,



·SECTION·

of San Carlos del Carmelo, deep down in a green hollow opening out to meet the sea. From the doorway one look east, and away up the valley, hill ascends behind hill, until the mountain fastnesses shut off all further progress, and the limit of man's wanderings is reached in that direction. To the west a little bay half a mile distant, a rocky headland, a beach of golden sand, and beyond the illimitable ocean, blue almost to painfulness with its intensity. Here on one side the rugged pathway of the mountain, the forest and the glebe, with its hewing of wood and drawing of water; and on the other, the wide, open, tractless sea, across which the imagination may travel at will, reaching far beyond the encircling rim of blue, where sky and ocean seem to meet, into the star world and the depths of heaven, and here an emblem of the work they came to do; they built their watch tower, twixt the sound of merry axe at wood tree ringing, of lowing herds and things natural, and far off depths of sky and ocean blue symbolic of all things most spiritual and made themselves a bridge to join these two.

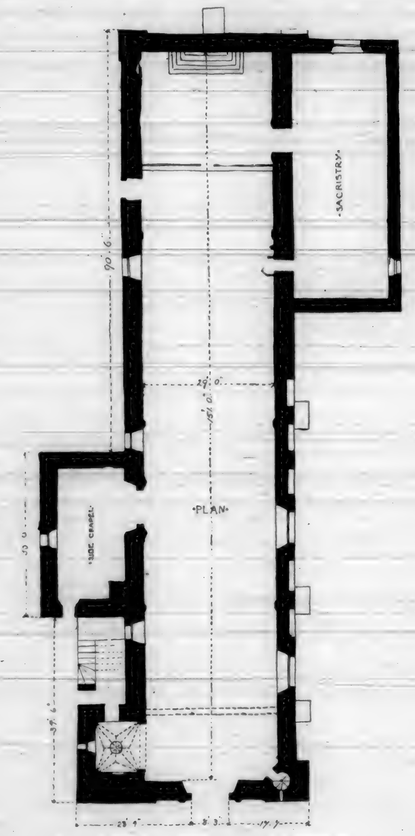
And so these Fathers came, weary and way worn, travel stained, from their native isles of Spain, from college, a short Doric capitals and entablature and a star shaped window over, lighting the gallery, include all that is of interest architecturally outside. The nave walls for the most part are about four feet thick, built of a soft sand stone and covered with stucco, and are strengthened here and there with heavy buttresses stoped off at the top after the manner of Gothic building, showing with other things, that the designers were not altogether consistant in the style adopted.

The principal mouldings, such as the cornice round the tower and above the semi-circular end wall of the nave, the pilasters and arched doorway of the principal entrance, are carved directly on the stone, so also at the cornice and finials of the belfry. The dome apparently is formed of concrete, or, if of stone, it is coated with stucco both inside and out.

The interior was probably never very interesting, but it has become doubly uninteresting by dis-use, and the trimness and neatness of everything proclaims most sorrowfully that the restorer has been at work, that the building has no further use in itself, and that the silent witness of its stones has been greatly marred by an over zeal in endeavoring to assure to posterity the

privilege of studying the thoughts and actions of men long since passed away.

Still the main features of the building are more or less intact and we must try to ignore as much as possible the Portland cement stucco, and yellow paint of vandalism, and report that which if it has not great beauty has at least a history, from that which has neither age nor beauty to commend it to our fancy. The interior consists of a nave 29x151 feet, with no chancel or transept whatsoever, nor line of demarcation dividing the sanctuary from the body of the church. The walls are broken at irregular intervals by pilasters, with capitals and cornice mouldings, which latter runs all around at the springy line of the ceiling. The projection of these pilasters, which is about three

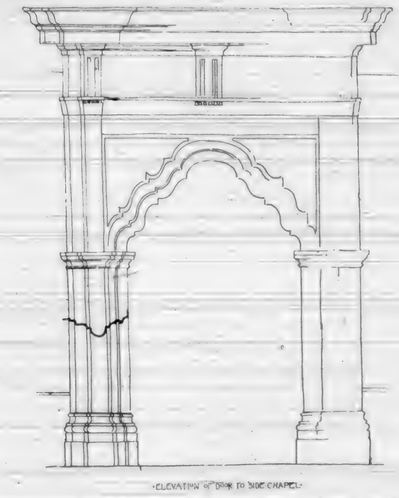


PLAN OF MISSION OF SAN·CARLOS·

inches, is carried across the barrel vaulted ceiling dividing it thus into panels. The walls of the building are peculiar from the fact that at about half their height they curve forward some four or six inches to resist apparently the thrust of the vaulted ceiling. Externally this ceiling was covered over by a tile roof of flat pitch as compared with that shown in the drawing, the ridge coming only to the top of the arch. The nave is lit by five small square windows placed irregularly along the side walls near the cornice, two small embrasures over the altar and the star shaped window before alluded to over the gallery. Attached to the Church is the baptistery, a square room with arched doorway in stone, and vaulted Gothic ceiling springing from three quarter columns at the four angles and forming a groin with moulded ribs. Near the center of the Church and on the left hand side is the chapel of the crucifiction, the doorway of which we give a sketch, near the altar is a segmental arched doorway leading to the vestry. Besides these there is nothing worthy of note.

But again we would bear in mind that it is not so much the intrinsic value of the building, nor its great beauty that make it all that it is of worth, but rather, that as, we hope, looking to the future, we draw inspiration looking to the past. It is the history of a country that gives it the courage to endure and the energy to accomplish, and as we come to-day and weep unseen tears over the decay of old Carmelo, thinking of the unselfish zeal of these pious workers, so would we have in the years to come, that pilgrims from afar way stop for a moment at the buildings on which we have labored, and if they cannot always say this indeed is a thing of beauty they may at least say it was conceived and erected by honest men.

Monterey, June 3, 1891. TRES——.



THE FLY IN THE CATHEDRAL.

A fly, while walking on the dome
Of great St. Peter's Church at Rome,
Exclaimed: "To me this lofty pile
Of stones seems built in wretched style:
I scarce find one smooth place o'er all
The surface of this crooked wall:
Go where I will, I still detect
Some excrescence or some defect."

A spider, from his web o'erhead,
Had heard the critic speak, and said:
"'Tis not for you, poor puny flies,
To judge of things of such a size.
This structure was not raised for you,
But creatures in whose larger view
The workmanship you censure so,
No sign of ruggedness may show;
While they see what you never can,
The beauty of the building's plan."

Thus, often, narrow-minded men
Will judge of things beyond their ken;
They spy slight faults that cannot mar,
But see not where high beauties are.

—*Evans.*

THE construction of the Panama, and later the Nicaragua Canal, has demonstrated the fact that the forests of those sections are comparatively useless as timber for constructive purposes. While it is true that good size mill logs may be cut from some of the valuable hard woods, as mahogany and others of that kind which are more suitable for furniture than for lumber, the great distance between the trees precludes their general use. Thus far both these stupendous engineering works have drawn their timber supplies from the Pacific Coast districts, and as the lines of commerce become more concentrated at these points, the requirements for lumber will increase to such an extent as to become in itself an important line of trade, and more particularly so because, as far as known, the most available source of supply exists in this direction.

SALT LAKE CITY.

To the Editor of California Architect,

Dear Sir:

A few impressions of the quondam Mormon Capital would not perhaps be amiss to your readers. The first impression of Salt Lake City, is a city of "magnificent distances," more so even than the city of Washington.

Here we have large blocks swallowing up four San Francisco blocks, all perfectly square, and divided by wide streets, none less than 120 feet wide, nearly all of which are traversed by electric roads running in the centre, and those out of the business centre lined on both sides with trees and running brooks, so that on meeting a friend one has only to step to the curb to listen to his conversation, to the accompaniment of the rippling water and whisperings of the umbrageous canopy, which is a much better position than standing on Market street, amongst the dust and dirt and sun glare. In the evening the effect is still more delightful; the glittering of the moonlight through the trees, the sheen of the same on the passing water etc. transporting one far from the cold fact that one is walking in the midst of a large city. Added to this is the romance attaching to the place, as the seat of the religion of Brigham Young, an experiment in social life which had developed to quite an extent, and still leaves its marks upon the place.

Here we have the rambling house of many doors, suitable for a man of many families, also the capacious grounds, with cottages dotted about around the main residence, when the owner could afford to give each of his families a house of its own, and not depend only on a partition to keep each separate; and dominating all, the fantastic looking Temple, flanked by the wierd looking Tabernacle, monuments to the ability and energy of the Mormons.

The Tabernacle, a place with no windows above the line of entrances yet well lighted, with a smooth surfaced ceiling like the inside half of an egg shell cut horizontally and still in which one can hear a low voice in any part and an organ and choir magnificently.

Leaving the Gentile improvements or otherwise to later on I will dwell upon a few lessons which may be learned I think from the Mormon regime.

The chief one is economy of labor and time. The city is divided into wards of small extent each with its assembly hall, school house, and co-operative store, so that the inhabitants have all their wants supplied right in their midst and no necessity exists of going down town unless for some extra articles which are supplied at Zions great co-operative store, a large room divided by columns into aisles and lighted by skylights.

Multitudinous stores with their attendant wastes of clerks, salesmen, gas, electric lights, and other needless expenses too numerous to mention are thus done away with.

Architectural effects of course can be obtained by this system to a much larger extent also, as all genius, wealth and size can be concentrated to form one magnificent whole, instead of being frittered away into the pettinesses of contending shopkeepers.

In the country also an effect has been obtained which I suppose could not be obtained by any other means than that adopted; the ignorant of northern European countries have been transformed into the landed proprietor and the desert has been changed into the garden.

During the last two years since the Gentile predominence, Salt Lake City has advanced wonderfully in a material sense, a number of fine architectural buildings having been erected which will compare favorably with any city.

A recital of the doings of the convention of Architects who met here about the time of the consideration of the plans for the new City hall and Court house would continue this letter to an indefinite length, so I will have with regret to leave the wit, joviality and general bonhomonie of that convention with its lobby of the brightest intellects of Salt Lake to oblivion; and since the boom is now in abeyance will have myself to stroll back to San Francisco.

Yours truly,
Stroller.

UNIVERSITY OF PENNSYLVANIA.

Through the kindness of H. W. Spangler, U. S. N., of the Department of Mechanical Engineering, of the University of Pennsylvania, we have received the following concise description of certain proposed improvements in that institution.

"In the improvements in contemplation at the University of Pennsylvania, the plans for which are now under way, two of the needs of the University which have lately made themselves strongly felt, will be provided for.

One is the necessity of improving the heating and ventilation of existing buildings and providing for that of new buildings, either in process of construction or to be erected in the immediate future. The other is the need of providing for the growing demands of the Department of Mechanical Engineering. This department, which was established sixteen years ago, grew slowly, though steadily, until within the past three years when the numbers of students began to increase rapidly. Additional facilities were provided, but in the last year the numbers have still further increased, and the Department has found itself greatly hampered for lack of room.

With characteristic energy, the Trustees determined to meet both of these needs at the same time. Heretofore each building has been heated by a separate plant in its basement, and has been lighted by gas. It has been decided to build a central heating station, with a present boiler capacity of 1,200 H. P., from which to heat all the buildings, at present eleven in number. In addition the buildings are to be lighted throughout by electricity, and to be thoroughly ventilated by the use of large ventilating fans in the basement, which are to be driven by steam or electric motors; while the ventilating flues in the old buildings are to be changed to accord with the best modern practice. The engines and dynamos for this purpose are to be placed on the ground floor of a separate building, the two upper floors of which will be used by the Mechanical Engineering Department. These two buildings are so designed that additions may be made to them as need arises. The entire plant is to be put in, not only for the purpose of furnishing light and heat in the most economical manner, but in addition it is designed especially for the purpose of instruction, for which it will at all times be available.

The boiler house will be one hundred feet long and fifty feet wide, and one story high, furnished with a stack of sufficient size for a plant of 1,200 horse power, to provide for future growth of the University. The provision for coal bins, ash vaults and weighing scales will be made in the most complete and convenient manner for the purpose of testing and instruction. The boiler plant (1,200 horse power) will contain examples of the Galloway, return tabular, marine, and sectional boilers, ample in capacity for heating the present buildings, as well as the new Hygiene building, now under construction, and the large dormitory or apartment house, about to be erected. Steam will be generated at 100 pounds, used in the engines, and, when exhausted, will be used for heating, so that the power used in generating electricity for lighting will be obtained at a minimum of cost, and the lighting of the buildings will be very much better than at present. Owing to the configuration of the land, it is possible to get a gravity return of the water from the condensed steam from all the separate buildings to a well in the boiler house, from which it will be pumped into the boilers. The piping between the central station and the several structures will be on the Holly system.

Separated from the boiler house by a distance of fifteen feet is the building for the Mechanical Engineering Department, which will contain in its basement the engine and dynamo room. This building will at present have a length of eighty feet and a width of forty-five feet, with a provision for any desired extension in the future. In the dynamo room will be located two 100 horse power compound engines, and two engines of high speed type, similar to the Porter-Allen, Straight Line, or Armington & Sims. The Corliss engines now in the Department will be removed to this floor, leaving the Porter-Allen engine where it now is, for the purpose of furnishing power to the Mechanical workshops of the Department, which will remain for the present in the basement of the Scientific building. These shops are to be considerably enlarged and improved, so that instructions may be furnished in Carpentry, Wood Turning, Chipping, Filing, Blacksmithing, Pattern Making and Moulding, to fifty students at the same time, if this should be desired.

The electric lighting will be partly on the alternating and partly on the direct current system. Two 500-light 1,000 volts, alternating and four 500-light direct current dynamos are to be employed. As with the boilers and engines, it is proposed to use several types of American machines. The two alternating dynamos will be connected to a separate switch-board, and so arranged as to run either singly or in parallel, or one may be run as a motor; The direct current machines will be compounded, but so arranged that by throwing a switch they become shunt machines. These will also be so connected to their switch-board as to run separately or in multiple. One alternating and one direct machine will be connected by belt to each of the compound engines; the remaining dynamos will be driven each by its separate engine. By this arrangement either dynamo or either engine may at any time of the day be used for experiment or instruction, as is the case with the boilers. This plant, in addition to the machines already belonging to the Department, and including the mortors for driving fans, will be larger and more comprehensive than that of any institution in the country. Students will have actual practice in the handling of the entire apparatus, and will be enabled to obtain a very considerable familiarity with the details and the peculiarities of the systems of the principal American manufacturers. This familiarity is of great value to the student, and can generally be obtained, with much less effort on his part, from the actual working apparatus than from any drawings or description.

All the engines and dynamos will be mounted on very heavy foundations, so as to obviate to the greatest possible extent any jarring of the building. The only shafting in the building will be on the second floor and will be very light, as it is only for furnishing power for testing in the Mechanical Laboratory rooms, which are to be situated on this floor. Recitation rooms, the Department Office and toilet rooms will occupy the remainder of this floor.

On the third floor will be placed a drawing room, recitation room, office and the electrical engineering laboratory, the latter occupying a space of 1,600 square feet. On one wall a special switch-board will be placed, so arranged that any or all of the dynamos can be connected at will with any measuring instrument or apparatus in the laboratory. It will be provided with a photometric room for measurements upon both arc and incandescent lamps, with many different types of which the department is supplied. The apparatus for electrical measurement is already quite extensive, and is continually and rapidly increasing Each student is required to complete quite an extended course in elementary, electrical and magnetic measurements; after which, if he is deemed competent, he will be given facilities for original research, either alone or in company with another student.

An important factor in the instruction of the student is the Department Library. This supplemented by the loans of the officers of the department, contains a large number of the modern works upon mechanical and electrical engineering. It was begun only a short time since, but has grown very much within the past year, and additions will be made as occasion demands. Most of the engineering periodicals are regularly received and kept on file.

The feeder wires both alternating and direct current, which convey the electrical energy from the dynamo room to the various buildings, will be carried underground. The arrangement of the lamps in the buildings will be made by the architects, Wilson Bros, who have also drawn the plans for the entire plant. The plant, when completed, will be under the immediate charge of a superintendent, to whom the officers of the department act as advising and consulting engineers.

It is believed, when the above plans are carried out that the University of Pennsylvania, as regards its Mechanical and Electrical Engineering, will take the front rank amongst educational institutions for the completeness of equipment and facilities for instruction in those branches.

AN ARCHITECT'S DREAM.

Few of us can expect to live in houses built of polished granite, porphyry and jasper, and adorned with precious stones; but we may expect to live in those protected and embellished with enamelled terra-cotta, glass slabs, or glass mosaic, and that our streets may at least present us with a clean, gay and cheerful appearance, even if they do not quite realize M. Charles Garnier's dream of a transformed Paris:

"I imagine the day when the tawny tones of gold will pick out the monuments and construction of our Paris; I imagine the warm and harmonious tones that will tremble under the delighted gaze. One will have renounced those grand straight-lined streets, beautiful, no doubt, but cold and unnatural as the ceremony of a noble dowager. The inflexible Commission of Ways will have its period of reaction, and without anyone being hurt, every one will be allowed to build his house without making it match those of his neighbor; the grounds of cornices will shine with eternal colors, the piers will be enriched with glittering panels, and the gilded friezes will run the whole length of the buildings; the buildings themselves will be clothed in marble and enamel, mosaic will make every one love sparkle and color. This will not be false and petty luxury, it will be opulence, it will be sincerity. The eye, familiarized with all the marvels of tints and splendors of color, will insist that our dress shall be modified and colored in its turn, and the entire city will have an harmonious reflection of silk and gold. But, alas! I look around me. I see a grey and sombre sky; I see newly-painted houses; I see the shadows quite black, that wave in the interminable boulevards; I see, in short, Paris as it is! And from my artist dream I fall again into vulgar reality."

This dream is by no means impossible. When I was at Berlin a good many years ago, I say a mansion that the Italians would call a palace, wholly covered with a facing of compressed tiles in patterns, the dressings of the windows and the oriels wholly composed of Minton's majolica, with a glass mosaic frieze, adorned with subjects in color on a gold ground. I

could not help saying to myself, "Here is a palace adorned with colored materials, all but the mosaic certainly of English manufacture; but we at home have neither the taste nor wit to use them." It is true that most of our majolica leaves much to be desired in beauty of shape, in quality, tone and arrangement of color; but these defects could be amended if there were demand enough for skilful architects, designers and colorists. Enamelled pottery does not do well as a rule with dull granulated surfaces. Even when new it requires a very able architect to use it properly, and in London it becomes staring as the rough material is blackened by soot. Where granulated surfaces must be used, enamelled pottery might still be applied in very small pieces to give value to the colors of the main materials; just as Nature colors a pistil, a stamen, or a spot with one complimentary primary to set off another, or a secondary, or a tertiary.

PROFESSOR G. AITCHISON, A. R. A.

SEMI-ANNUAL SUMMARY OF BUILDING OPERATIONS.

The first six months of this year has been more prosperous than the indications at the beginning of the year promised. By a comparison with former years the contracts filed foot up more than for last year.

	Brick Building			Frame Building			Alterations & Additions			Total Value.
	No. of Buildings	No. of Contracts	Value.	No. of Buildings	No. of Contracts	Value.	No. of Buildings	No. of Contracts	Value.	
Jan'ry	3	10	$ 98,106	30	45	$ 174,294	6	7	$ 14,415	39	62	$ 286,725
Feb'ry	5	21	305,554	33	32	130,664	5	6	23,151	43	59	459,369
March	7	16	221,001	48	58	333,075	13	14	53,586	68	88	607,662
April	8	8	119,192	50	80	372,799	12	14	44,389	65	102	536,381
May	3	14	236,989	49	79	298,794	15	17	100,165	67	110	637,947
June	5	23	211,032	88	123	635,499	16	16	42,358	109	162	888,889

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at Academy of Sciences Building.

SETH BABSON, Pres. W. J. CUTHBERTSON, Vice-Pres.
OLIVER EVERETT, Sec. JOHN M. CURTIS, Treas.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS Pres. L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

W. C. QUIMBY, Pres. O. BROOKS, Vice-Pres.
C. E. PURINGTON, Sec. W. C. CROSETT, Treas.

BUILDERS' ASSOCIATION OF CALIFORNIA, meets every Monday at 330 Pine Street, Rooms 9–12, at 1.30 P. M.

S. H. KENT, Pres. P. G. MARTIN, Vice-Pres.
A. JACKSON, Sec'y. WM. B. KREGER, Treas.
L. A. LARSEN, Clerk and Financial Sec'y.

MASTER PAINTERS' ASSOCIATION OF THE PACIFIC COAST.
E. M. GALLAGHER, PRES. H. G. JARMAN, SEC.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways

The illustration for the bank building for the German Savings and Loan Society is from the designs of Messrs. Kennitzer and Kollofrath, architects.

The design for residence to be erected in Tokio, Japan, is by Kanegoro Nagaye, a young Japanese architect of this city.

The Mission of San Carlos is from sketches from our special correspondent, "Tres."

The cuts C and H are from the terra cotta capitals from the Museum of Natural History at Kensington, England.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

MECHANICS' LIEN—FILING ACCOUNT.—Although the mechanics' lien is given on "the building" by Mansf. Dig. Ark., it is not necessary, under an entire contract, to furnish materials for seven houses situated on contingous lots, to file a separate account of the material furnished each house, but the whole seven may be charged with the lien by filing a single account of all the materials furnished.

Tenny v. Sly, Supreme Court of Arkansas, 14 S. W. Rep. 1091.

MECHANICS' LIEN ON SEPARATE LOTS.—Under the code of Virginia 1873, which provides that persons "performing labor or furnishing materials for the construction, repair or improvement of any building, or other property, shall have a lien upon such property." A sub-contractor who furnishes materials for the construction of two houses erected under a single contract on lots on opposite sides of the street has a joint lien on both houses and lots for the entire amount of materials furnished for both houses.

Sergeant v Denby, Supreme Court of Appeals of Virginia, 12 S. E. Rep. 402.

MECHANICS' LIEN—FILING LIEN—ACCOUNT.—While material was being supplied from time to time, as needed, for the construction of a building pursuant to a contract not specifying the price, certain material was supplied for the same purpose upon an agreement then made between the same parties specifying the price. So far as concerns the right of lien, the furnishing of all the material may be treated as an entire transaction, and the filing of the lien account within the prescribed time after the last delivery is sufficient.

State Sash & Door Manufg. Co. v. Norwegian Danish Evangelical Augsburg Seminary, Supreme Court of Minnesota, 47 N. W. Rep. 796.

DANGER SIGNALS WHILE CONSTRUCTING BUILDING.— Where a building is in process of construction and it becomes necessary for the contractor to so obstruct the sidewalk as to render it dangerous, if the contractor protects the public by such proper guards and signal lights as will render it possible for persons in the exercise of ordinary care to avoid the danger, the

contractor is exempted from liability and the city has as much right to plead the protection afforded by such signals in defense to an action against it to recover damages for personal injuries, as it would have had, had it placed such guards and signals there itself. The question is as to the sufficiency of the protection, and not as to its authorship.

City of Kansas v. Bermingham, Supreme Court of Kansas, 25 Pac. Rep. 568.

INJURY OF WORKMEN BY DEFECTIVE STAGING.—Several actions by workmen against their employer for injuries received by them from the fall of defective staging were tried together. There was evidence that one of the plaintiffs had said that the fall of the staging was caused by a stone let fall by him and another. This declaration was admissable against him alone, and an instruction that plaintiffs could not recover if the accident was so caused was properly refused. Where the staging itself was defective through defendant's negligence, the fact that the fall of the stone was a contributing cause of the accident will not defeat the workman's recovery.

Dronimie v. Hogan, Supreme Judicial Court of Massachusetts, 26 N. E. Rep. 237.

INJURY OF WORKMAN BY NEGLIGENCE OF FELLOW SERVANT.—Plaintiff was engaged as a mason in constructing the foundation for a machine in defendant's mills. A carpenter had erected a staging near where plaintiff was working for the use of the machinists, and in so doing had used a horse about eight feet high, and had placed a piece of scantling loosely upon its top. After the machinists had finished their work, their foreman directed the staging to be removed, and while the workmen were attempting to lift the horse the scantling fell upon plaintiff's head. It did not appear that the foreman's attention was called to the block on top of the horse. This was sufficient to warrant the court in finding that the injury was caused by the negligence of fellow servants.

Cunningham v. Washington Mills Co., Supreme Judicial Court of Massachusetts, 26 N. E. Rep. 235.

ACTION FOR PRICE OF BUILDING MATERIALS.—Building materials, for the price of which action was brought, were delivered from plaintiff's dock at defendant's house, within sight of the dock, by teamsters, who took receipts for the contents of each load sent. One of the plaintiffs helped unload part of the material and saw other portions of it carried to the house, and there was testimony that the brick delivered there equaled the quantity alleged. Defendant, when informed of the amount of plaintiff's bill, after an interview with his contractor, promised to pay it. This was evidence for the jury of the delivery of the whole bill.

Henderson v. Wasserman, Supreme Court of New York, 13 N. Y. Supp 151.

CONSTRUCTION OF PENALTY CLAUSE.—A building contract provided that, in case of non-completion by a certain time, the builder should pay a certain sum as liquidated damages. After default the parties entered into another contract, providing that, if the buildings were not completed by a certain day, the "sum or penalty" due under the former contract should be a stipulated amount "by way of liquidated damages." After a second default the parties entered into a third contract, which recited that the builder claimed that the "penalty" should not be exacted for a certain reason, and settled all questions between the parties "except the one question of penalty." Under these circumstances, the amount agreed to be paid in case of default was not a penalty, but liquidated damages, from which the builder could not be relieved on the ground that performance was prevented by act of God.

Ward v. Hudson River Bldg. Co., Court of Appeals of New York, 26 N. E. Rep. 256.

LIABILITY FOR DISTURBANCE OF BUILDING.—The owner of two adjoining lots with buildings thereon, part of one of which was occupied by a tenant under a written lease, contracted for the removal of the other building, giving the contractor sole charge of the work and requesting him not to interfere with the walls of the adjoining building. In an action by the tenant against the owner for injuries to his property by the removal of the walls of the other building, leaving part of his premises exposed, it did not appear that the lease contained any covenant to repair or keep in repair the premises, or that the adjacent property should remain in the same condition as at the time of hiring, nor was it claimed that there were any false representations as to the condition of the premises; and the evidence justified a finding that no disturbance of such premises was contemplated by the owner when he made the contract, or was necessarily involved in doing the work under it. There was nothing in this showing to justify a recovery by the tenant from the landlord.

Ratter v. Goerltiz, Common Pleas of New York, 12 N. Y. Supp. 210.

BUSINESS MOSAICS.

The Roche Harbor lime has been used throughout the northerly section of the Pacific Coast for the last nine years, and on account of its superiority has given satisfaction to all parties. The persons interested in the building trade in that section are from all parts of the U. S. and all proclaim it the best they have ever used, and highly praise its many good qualities for plastering, and its extra strength for brick work. At the World's Fair at New Orleans, this lime was awarded the gold medal and first prize. The out put is 450,000 barrels per year. The Kilns are situated at San Juan Island, Puget Sound. The agents are C. L. Dingley & Co. 29 Stewart Street.

Decaying wood is one of the factors in the propagation of disease which has engaged the attention of Sanitarians wherever wood is used, and more especially for this section of the country on account of the general use of wood in the construction of nearly all classes of building. A new material named Carbolineum Avenarius has been introduced through the agents Muecke & Co., 319 California street. It is a preventative of dry-rot or decay, and is proof against fungus on Wood or Stone. It forms an excellent remedy against damp walls. Teredoes, and all sorts of insects or vermin will not attack wood preserved with this preparation. For fence posts, telegraph poles and all wood in any way exposed to the earth or weather when coated with it will last much longer than by any other method.

L'Unique the new Plastic decoration, is leading far ahead of the old plain styles, and houses where any pretention toward artistic effects for the interior decorations are sought for, are the class of buildings where the new style is being adopted.

The Byrkit-Hall Sheathing lath, John F. Byxbee Agent, 42 Market street, is one of those improvements that should not be lightly passed over. The laths are worked out of one by six inch boards, with grooves to receive the plastering. Where used on the inside of exterior walls they form a substitute for the double sheathing. Where extra strength is requisite in walls or partitions these laths may be placed in such positions as to add strength. For walls of stores or store rooms where fixtures or shelving is liable to be put up and taken out, these laths are especially adapted for the purpose.

Builders Hardware of all kinds is kept in stock by the Dunham, Carrigan & Hayden Co. 17-19 Beale street. All the kinds of Bronze and fine grade hardware of the Hopkins & Dickinson Manufacturing Co. can be had at this establishment. Bronze and Artistic hardware is made a special feature and a show room provided for the exhibition of superior qualities of this line of manufacture.

Ornamental wrought iron work for buildings, is one of those departments where good work is especially desired at any time, but all the more important where fire escapes and railings are required for high buildings, and where the full strength may at times be placed on the materials used. Ornamental iron work of the best quality may be had of A. J. Dunbar & Co. general House-Smiths, 220 Fremont street.

The California Sash Balance Co. have recently made very important improvements in their Sash Balance, which cheapens as well as simplifies the application of the device. The Balance is in use in many buildings in this city to the satisfaction of owners and architects. Interested persons are invited to call at the office of the Company 33 and 38 Chronicle Building, where a working model can be seen.

About this season of the year the question of roofs for the new buildings in course of erection is of considerable importance. Where a tin roof is to be used it becomes necessary, if a good roof is wanted, that competent workmen should perform the work. The Forderer Cornice Works 224 and 226 Mission street uses the best of materials, and have thoroughly qualified workmen for any work in their line.

While passing one of our largest buildings in course of erection, we were particularly struck with the excellent quality of the material and workmanship of the wrought iron and girder work. This iron work is being furnished and put up by J. K. Firth & Co. 225 and 229 First street.

A new planing mill has been established on Eighteenth St. between Howard and Folsom, by Geo. Evans & Co.

The California Electrical Works, 35 Market Street, is one of the oldest and most reliable supply depots for Electrical appliances of all kinds. Persons using such apparatus and those who wish to experiment in this direction, would do well to call upon or send to them.

Rapid Contractors and Builders, and indeed all buyers of sheet metal building material, are deeply interested in prompt execution of their specification. They will, therefore, appreciate this, an example of rapidity, which easily beats the record.

Our friends, the Cincinnati Corrugating Co., received on March 23d an order for No. 16 galvanized corrugated arches, which they shipped within 48 hours. The sheets being rolled, annealed, pickled, galvanized, corrugated and curved, and shipped within two days from receipt of the order.

Where promptness is desirable we can recommend the Cincinnati Corrugating Co., for they have experience, energy and unrivalled facilities.

Mr. Oscar S. Levy of 525 and 527 Market street, San Francisco, who is the agent in this city, and carries a heavy stock of all the brands of Merchant & Co's. roofing tin, informs us that he has constantly on hand suffiicient quantities for all requirements in that line, and that reports to the contrary are misleading and calculated to deceive interested parties regarding the true state of the supply.

The old, well tried, and reliable brand of Dyckerhoff, Portland cement, can be had in quantities to suit, of Chas. Duisenberg & Co. at 314 Sacramento street.

Ornamental wire works of all kinds for railings, door and window screens, elevator guard, store door guards, etc., is manufactured by Smith & Trowbridge 13 and 15 Spear Street.

Hotels and country resorts when fitting up their establishments, should make it a point to use Dundon's Patent Economic Boilers if they wish to save expense in fuel and attendance. These boilers are especially useful for heating the bath waters for health establishments.

Pacific water closet works of W. J. Rustemeyer 126 Main St., are making an excellent quality of water closets, either pan, plug or wash out closets. The work of this company is guaranteed for two years.

The Swinging Hose Reel of W. T. Y. Schenck has been put up throughout the Academy of Science Building on Market Street. They make a fine exhibit on each landing and when mounting to the upper floors the effect on the mind is reassuring and pacific.

Tracy Bros. & Co., the well known manufacturers of vitrified iron-stone sewer and water pipes, chimney tops etc., have fully recovered from the effects of the fire some few months ago at their establishment. There was necessarily some inconvenience at first, but at present all departments are in working order, and with new buildings their facilities have been increased to fill all requirements.

Furniture manufactures and others using hardwood finish should look into the subject of using more of our native ornamental woods, and those from Mexico and Central American districts. Dieckman & Co., 114 California street, have recently imported a quantity of Primavera, white mahogany, which can be cut into large or small sizes as desired.

Builders should inspect the price list of C. A. Hooper & Co. on page XIX, as a change has been recently made and the price reduced for some of the articles.

A FEW WORDS ABOUT GRAPHITE PAINT.

The life of an ordinary roof or outside paint runs all the way from two to five years, and it should be of personal interest to many to know of a paint that will resist acids or alkalies and withstand the wear and tear of the elements for 10 or 15 years.

This seems to be a remarkable length of time but the statement is vouched for by well-known people who have used Dixon's Graphite Paint made by the Jos. Dixon Crucible Co., of Jersey City, N. J.

They claim that Graphite Paint is not only durable but handsome and equally useful for all outside wood or metal work where a dark paint can be used.

Wall paper, window shades, Lincrusta Walton, etc, are very important adjuncts for the completion of the building and conduce to its artistic effects. Rooms having forbidding aspects may be made cheerful by agreeably tinted wall paper, and from that on to almost any degree of artistic finish.

Persons in want of this class of materials would do well to call upon or send to the well known paper hanging and frescoing establishment of Jas. Duffy & Co. 811 Market St.

The ACME Instantaneous water heaters of the Chicago Ills. Co., for heating the water for baths and domestic purposes generally are a great improvement over former methods. They can be used with Gas or if gas is not convenient they can be safely used with gasoline. See advertisement on page III.

Builders in want of galvanized sheet iron, should call on W. W. Montague & Co. 309-317 Market St. This firm deals in Mantles, Grates, plain and art tiles, heating apparatus and ranges.

A. Lawson & Co. 334 Geary street recently laid some complicated and artistic parquetry or inlaid floors of hard wood, which for good workmanship and fine finish is of a superior character. Architects and others who want a good job done in this material should try this company.

A New material termed Lucol has been placed on the market. This material is calculated to be used as a substitute for linseed oil. The claims of the manufacturers seems to be substantiated in the trials we have made with it, while in some important particulars it is much superior to linseed oil. See their advertisement on page XIII.

TENDERS TO BE RECEIVED.

Bids are being received for Record Hall for Sutter Co. to be built at Yuba City, also for an eight-roomed school house at Alameda. Plans of both are in the office of the architects Messrs Mooser & Cuthbertson.

CITY BUILDING NEWS.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

AT no former period in the history of San Francisco has there been such a spirit of progress among property holders in the outlying districts as is apparent at the present time. Improvement clubs have been organized in every direction for the purpose of devising methods and directing a concentration of energies for the enhancement of values in the immediate locality of each club.

That many of these associations are moving in the direction to cause great changes in certain districts is evident to anyone who can read the signs of the times.

One of the most prominent schemes and one which will place some of the most desirable residence sites within reach of persons of moderate means is likely before long to shape itself. It is well known, that on account of improper grades for the streets and a consequent defective drainage system, improvements have been retarded in the region lying at the north side of Golden Gate Park, extending from the Park to the Government reservation, and from the cemeteries westerly to the ocean.

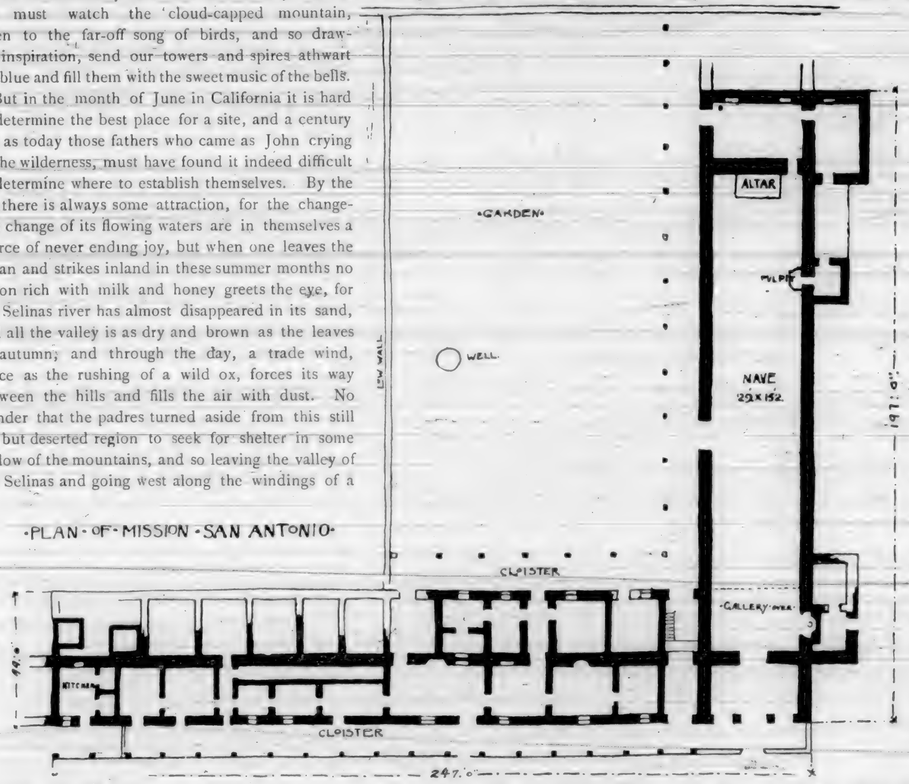
It is now proposed to level off "Lone Mountain" and the hills adjacent, fill in the lower places, and establish new grades for the streets whereby a sanitary drainage system can be formed which will in the years to come make this the most healthy portion of the city. The Park Commissioners have many changes and improvements under consideration which if carried out will give the public additional facilities for visiting and enjoying this favorite resort. On the sloping ground at the southerly side of the park and extending to the ocean, great changes are in contemplation which in conjunction of the extension of Market street in a straight line to the Ocean and the grading down a portion of "Twin Peaks" and the range of hills in that vicinity will make a district which for residence purposes cannot be excelled.

A few years will develop such gigantic changes in the configuration of the surroundings of San Francisco as to astonish the oldest inhabitant.

MISSION OF SAN ANTONIO, CAL.

The missions of California are nothing if they are not picturesque, and they owe it largely to their surroundings and rightly so, for the site of a building is as much part of it as its walls or roof. The building may be the central idea, but the scenery is its back ground and it is because these buildings complete the picture and add to the perfect harmony of their surroundings that we call them picturesque. Climate, with its sunshine or gloomy days, its balmy breezes or raging storm, the roaring of the tall pine trees or the flitting of bright birds from flower to flower, the snow-capped mountain or far-stretching sea, all have their influence upon us, and in no small degree, form part of us; and if we are to express ourselves harmoniously and not discordantly with these things, we must watch the 'cloud-capped mountain, listen to the far-off song of birds, and so drawing inspiration, send our towers and spires athwart the blue and fill them with the sweet music of the bells.

But in the month of June in California it is hard to determine the best place for a site, and a century ago as today those fathers who came as John crying in the wilderness, must have found it indeed difficult to determine where to establish themselves. By the sea there is always some attraction, for the changeless change of its flowing waters are in themselves a source of never ending joy, but when one leaves the ocean and strikes inland in these summer months no cañon rich with milk and honey greets the eye, for the Selinas river has almost disappeared in its sand, and all the valley is as dry and brown as the leaves in autumn; and through the day, a trade wind, fierce as the rushing of a wild ox, forces its way between the hills and fills the air with dust. No wonder that the padres turned aside from this still all but deserted region to seek for shelter in some hollow of the mountains, and so leaving the valley of the Selinas and going west along the windings of a



PLAN OF MISSION SAN ANTONIO

tributary, until within a mile of where the mountains converge and the shallow pools and gentle ripples of the San Antonio give place to the great bolders and rushing waters of a mountain torrent, they, in the year 1771 stayed their wandering, sang their first mass and erected the emblem of their faith. A pretty valley indeed is the San Antonio, far away among the hills, pretty even though without the pale of civilization and the clang of railway engine, and it is as peaceful to-day as it was a century and a half ago, for naught but the ruins of the old mission remain to tell us of the busy hum of human life that once moved to and fro around it. Behind the Mission and against the setting sun rise the mountains, four or five thousand feet and to the east, roll gradually away diminishing it in altitude as they go, till finally they become lost, as the waving of a blue ribbon against the distant sky, and all around the garden wall, the sighing of green willows and the merry laughter of the brook.

I know not to what extent these fathers planed their buildings and drew them with scale and square, but that they must have required a good deal of study we can readily infer. San Antonio is one of the most extensive as may be seen by the plan, and covered with its church, dwellings, outhouses and enclosed garden about an acre of ground. The Mission, as usual, faces the east. On the right in our sketch is the church with its gable end and small belfreys on each side, between this and the main wall a semicircular arched ceiling forms the vestibule. To the left are the priests' quarters with its many arched cloister affording a cool yet airy retreat from the summer's sun.

The foundation walls are for the most part about two feet below the surface and are made of bolders six to twelve inches in diameter cemented together with dobe. The floor of the Mission and dwellings are on about the same level as the ground without. On the top of this masonry foundation rest the bricks of which for the most part the walls are built. These bricks are composed of unburnt clay, mixed with gravel and bound together with straw, and measure 10½ x 10½ inches and 4 inches thick with larger bricks 21 inches long to form bond.

At the joints are imbedded in the mortar small sharp stones to form a key for the plaster finish. The front of the church with its belfreys as well as the piers and arches of the cloister are of red burnt bricks or tiles 9 x 9 inches and 2 inches thick laid with lime mortar, both bricks and mortar being as hard as the best now found in common use. The caps of the piers at the cloister, as well as those at the entrance to the church and

the small cornice at the height of the ceiling in the latter are formed of two courses of moulded bricks a layer and smaller quarter round in combination. The interior of the church is of itself unworthy of mention, consisting simply of four plain walls pierced by four small window openings near the ceiling, and three exits. At one time a flat arch of light lattice work at the height of the ceiling and above the other rail did service as a line of separation between the nave and chancel, but this now with the roof above lie on the floor a complete wreck. Where once the altar stood, a few slight sticks support the solitary figure of the patron saint, who, from his airy position and equally airy costume appears more as if prepared to begin some feat of athleticism than as one chosen to be the patron of a holy mission

The roof as seen by the section consists of a main truss formed of a tie beam 12 x 14 inches, principal rafters 10 inch round poles and king post 8 inches round. The tie beam goes through and projects beyond the walls about 2 feet and has a key piece 4 x 6 inches and 3 feet thick going through it, against which the principal rafters abut. At the top these latter are halved together, and the king post is mortised into the tie and ridge pole, the whole resting on corbels 8 x 12 inches, with moulded ends. These trusses are about 14 feet apart and between them the intermediate beams carrying the ceiling are untrussed. On the top of the principal rafters at the line of the walls and ridge pole, rest purlins 8 inches in diameter, supporting the common or secondary rafters. These latter are about three feet apart and are spanned by light boughs 1½ inches in diameter on which are placed the tiles of the roof. The whole construction is held together by thongs of raw hide, which even after the lapse of a century are still strong enough to resist the full strength of a man. The roof tiles are about 20 inches long, semi-circular in section and taper from 11 inches to 8½, being about 1 inch in thickness, thus allowing them to lap and still retain the same level. They are laid in alternate rows with their convex and concave sides uppermost. The ceiling of the church as seen by the section is slightly arched in straight lines and the projection of the roof members and ceiling joists placed alternately every seven feet divide it into panels. The under side of these ceiling timbers is rudely moulded and between where horizontal, and resting on the top where sloping, the ceiling boards 1¾ x 8 to 14 inches are placed.

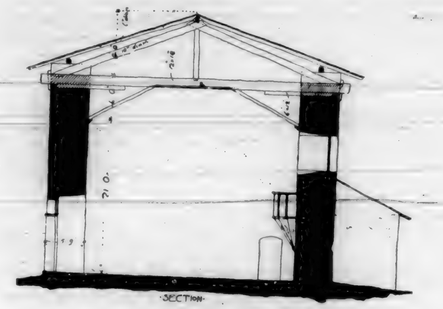
At the east the gallery which as usual is perfectly level is supported by 9 x 10 inch joists resting on corbels and wall plates; a stair from the passage between the church and dwellings reaches the same. The walls of the interior are plastered with white lime mortar, about one-half inch thick and the floor is of red concrete. At one time a baptistery was attached to the building where now in the thickness of the wall stands the font. At the rear is the vestry with its single window high up near the ceiling carrying the same line as those of the church, and on one side within the wall are two cupboards with semicircular heads and folding doors and many rows of shelves, looking dreary and desolate in their array of empty bottles, sad emblem of departed sweetness and of many makings glad of the hearts of men. In the belfrey a single bell yet remains with its rawhide cord attached, ready to the hand of the passing stranger to send as of old its message to the mountain, and on it the inscription

"S. Antonio Ave Maria Purissina, 1799."

In an oak tree, some three miles distant, you will find its mate, but the skepticism of the age has changed the tone of its summons, and no longer does it call to the worship of the perfect man, but rather to the attaining of that knowledge through which all may become perfect. The principal rooms of the dwellings are those facing the east and next to the church, and these have their ceilings of 8 x 10 inch beams, boarded over, their walls plastered and their floors of wood.

In the inferior rooms the floors are laid with red tiles 10½ x 10½ inches and 3 inches thick. The cloister to the south and west has no arches, but consists simply of brick piers and wooden lintels carrying the roof. The garden is enclosed by a dobe wall roofed with tiles, it evidently being found necessary in all cases to prevent the dobe from becoming saturated by rain.

Beneath the wine vats shown on plan is a tunnel, arched with brick, which in some manner I know not how, facilitated the process of wine making, but of its why and wherefore none remain to tell, for no longer do the merry barristers tread the wine press, in the well the frog has made his home, among the



pear and rose trees the gopher has his run, and beneath the northward shadow of the church the heaving turf or timbers crossed; without name, or date, or other token of departed greatness, have naught to tell us of these bye gone times. But it is enough that only a boulder from the creek should mark the spot, for in the old building itself we find the epitaph and though the cross above be silent as the grave beneath the fallen beams and ruined walls of the old Mission speak to us as were we face to face, with those who fashioned the timbers and bound them together after the image of the soul within, a hundred years ago. Tres—1891.

AMERICAN ART FROM AN ENGLISH POINT OF VIEW.

The following remarks, made by Professor Herkomer, an associate member of the English Royal Academy, will be read with interest. They refer to the impressions made upon him when visiting the United States for the purpose of investigating the progress of art on this side of the Atlantic.

Much of the work in the schools of Europe just now, he said, was done by American students. They had the most artistic temperament, they adopted the latest phase of art and they presented a clearer view of the newest craze in European art than could be obtained in Europe itself; but when these artists returned to America their art had a tendency to drift away from them and it was necessary for them to come back to Europe to refresh themselves. They studied mostly in France, Germany and Italy—never in England. The cause of this failure of power was difficult to state. There was something in the atmosphere of the United States which was contrary to the instincts of the painter. It was hard and electric and every object was clearly seen. Light seemed to devour all the half-tones. The portrait of the lady in a black dress and yellow gloves, exhibited in last year's Academy, he had painted in America, but he had almost to exclude light from his studio. Much of his work done

there, he admitted, was hard and edgy until he thus counteracted those failings In addition to the difficulties of light, there was a want of confidence on the part of Americans in their own artists. They declined to encourage American artists until they brought their credentials from the other side. The American who patronized his own painters occupied a unique position. Not ten per cent of the artists resident in the United States got their living by painting alone. They were teachers also.

Prof. Herkomer acknowledged that sculpture and architecture flourished in America. Americans had been able to read the old masters better than we had, particularly through one man, Richardson, who, with his real genius, brought out almost a new kind of work on the old lines. He would rather have architecture right than painting right, and he placed architecture first, then sculpture, and then painting. Architecture was the making of a country. In America men were wishful to have better houses than their fathers and their neighbors, and in time there would be room for pictures by American painters who would have earned reputations. Here the Professor narrated some amusing incidents in connection with his portrait painting experiences. He said the American would be painted naturally and not in attitude, as to which and also in regard to dress there was a great deal of anxiety manifested by sitters in this country. He commended the great pains taken in the preparation and printing of American illustrated books, and in conclusion expressed his belief that, although America would never have any picturesque ruins or history shrouded in mystery, it would be, in his estimation, the leader of all nations in the future in art and in all other things.

J

FRIEZES.

We must refer to the differences in mural ceiling designs the circumstance that there are friezes that look well in lighter tints than the wall color; but the general practice is to have the coloring stronger than the latter. One rule applies to either mode, and that is that the forms should be distinct, however vague the general wall design. Where the general hue of the frieze is lighter than the former, a few touches of bright color will often restore a balance. It was a true burst of artistic taste that led to the present depth of friezes instead of scrimping bands. It is here worth noting that the proportions followed by the Romans and illustrated at Pompeii were allotted one part of the height of wall to dado, three parts to the field and one and a half to the frieze, proportions adapted to the heavy Roman architecture. Where the mouldings of a room are unusually heavy, we have known decorators to introduce grey and lightsome friezes of a more than ordinary depth, to lessen the too heavy effect. The fault of dull and dark friezes is being steadily corrected. It is usually better that the field and frieze should not wholly correspond in color, but the ground of frieze may be the same if of a deeper color than the fold.

Beck's Journal of Decorative Art.

ARCHITECTURAL TERRA COTTA AS COMPARED WITH STONE.

BY F. P. MEYENBERG.

Some writers on the application of building materials have the impression that architectural terra cotta can be used in the same sense as stone in construction, substantially as well as ornamentally. This, however, is not a fact, as the following examination of the subject will explain: —

There are tests on record proving that terra cotta will stand an equal crushing strength to any granite, to the square inch in solid material. That cannot be denied; but when we enter into the construction of so-called stone buildings, or application of stone in all its various forms, with the required dimensions as necessary in the use of stone to carry out successful designs and plans prepared to be in harmony with the character and appearance of such construction, then, under the same conditions, terra cotta would be unfit on account of its uncertainty of strength when in large pieces.

Aside from strength in large pieces it can further be said that it is difficult to make it true, once passing its limit of easy manufacture. And then, too, if made beyond its strength appealing feeling, it must be acknowledged that terra cotta bears the impression rather of artistic tone, than the cold cast suggesting strength as conveyed by stone.

In the erection of weighty buildings, where strength in the construction is one of the chief requirements, and the adopted building material stone and bricks, it has been found necessary by experience to limit the dimensions or stone, as the bond must be the same as the height and the length not to exceed six times its height How impractical it would be to attempt such proportions in terra cotta!

In cases where stone appears as trimmings, being a mere veneering of a structure, it does not directly become a part of the carrying capacity of the walls; the bonding or connecting of the stone facing with the brick masonry is mostly by means of iron anchors, permitting a slight separate action of variation in shrinking of brick masonry without materially affecting the position of the stone work. Entering upon the application of architectural terra cotta as a general building material in the sense of using it like stone, in connection with its adaptness, its character actually and sensibly considered as a building material—recognizing the difficulties, expense and imperfectness of solidity experienced in its manufacture,—if the proportions of its economical limits are exceeded, in no cases can large pieces of architectural terra cotta enter upon equal basis as to strength with stone, where terra cotta, like stone, becomes a part of the carrier of the structure itself.

Supposing the corner of a weighty building 150 feet high were laid up with terra cotta hollow quoins 15 inches high. Such height of wall would represent 120 courses of the described quoins and equally as many joints; the same height built up of common bricks would make 720 courses or six times more mortar joints and shrinkage to that of the quoins. It can readily be seen that such uneven shrinkage must be damaging to the lower courses of the terra cotta, as the load of the wall will tear down upon the flimsy (generally only one inch thick) partition or struts of the terra cotta blocks, which might, if bedded solidly against a resisting material, carry a weight of 12,000 lbs. to a square inch, but under the described position. Often only a few pounds pressure will break away the part and cause cracking of the block.

Were it possible and practical, from a manufacturing standpoint, that architectural terra-cotta could be made solid into large blocks, of uniform hardness and free from cracks, that only crushing tests could be taken into account, but as long as transverse strength depending upon numerous imperfections by drying and burning, contracted and damaged struts, is the relied upon agent for safety, terra-cotta will always be faulty whenever used in connection with heavy building materials to be made answerable to bear weight such as would be safe even of very inferior stone work.

Terra-cotta blocks made in small sizes, 4 and 6 in. thick, of which the manufacture is easy, cheap, and without the imperfection caused by unequal drying, producing breaks in every direction, it may be said, can be built up to any height as architects and engineers have deemed it economical and practical for modern conditions and requirements of the most lofty buildings. And, further, in such sizes it can be made and furnished at favorable prices, while in the form of large stone work it would cost much more than granite and failure in its use.—*Brick, Tile and Pottery Gazette.*

PHOTOGRAPHY AS AN EDUCATOR OF ARTISTIC TASTE.

The latest International Annual of Anthony's Photographic Bulletin contains an article by Geo. I. Woolley on photography as an aid to the cultivation of artistic taste, which we herewith present in full.

Amateur photography is usually regarded as of use solely for pleasure; but we find that it is of value in many ways and among these in an educational way. It admits one into many of the secrets of chemical nomenclature, cultivates neatness and care, and develops an enormous fund of patience and perseverence. But besides these things it is of great assistance in the cultivation of an artistic taste.

To the possessor of taste in an artistic line, the world is full of beautiful scenes, not only those which are famed, but multitudes of little nooks and corners often regarded as commonplace. Such scenes, perhaps, as an old hut backed by woods, a little waterfall, a forest road, or a wide sweep of hill and valley dotted with farm houses and specked with grazing cattle. Scenes like these may linger forever in the mind of the artist, while many would pass them and never see their beauty. And then the well-known scenery of the world, the Alps, and in our own country the Yellowstone, how much more keenly does the artist enjoy these things than he who finds nothing pleasing in the scenes which meet him every day! An in an art gallery, how much more does he see in the master pieces of celebrated painters and sculptors!

Aside from contributing so much to a person's enjoyment, an artistic taste is of much practical value. If we are selecting a picture, our taste is in constant requirement; and in decorating, in building houses and in furnishing them, the man with the eye of an artist has infinitely the advantage over one who has not. Indeed, to do these things at all, some taste is required and the more taste one has, the better he can do them.

That photography, if we take it up in the right manner, does contribute to our education in an artistic way, no one who has had any experience will gainsay.

When one has learned to produce a photograph fairely good in mechanical details, he is constantly looking about him, as he walks or rides, for some view which he may take. Many scenes which he has passed unmindful of, a hundred times before, possess a new fascination for him. He grows both observing and discriminating. He sees wherein the beauty of a thing lies, and learns to use his growing taste in the selection of the point of view best adapted to show this beauty.

In order, however, to have photography help us in an artistic way, we must try hard to make our pictures models of artistic beauty. We must not, as so many young photographers do, select a view haphazard; but we must look critically at it, consider whether it will make a good picture, and if we decide that it will, take pains to find the best point from which to take it. It is not within the province of this article to speak of the various rules laid down for the selection of views, the chiaro oscuro, or theory of light and shade, and many other things very puzzling to beginners; but as may be well to say that kind and intelligent criticism may be of great help. If the novice at photography feels that his views are lacking in artistic merit, let him submit them to an artistic friend, or better, get this friend to select some views for him. Then by studying these, he will be much helped in obtaining a good composition.

It is not long since the introduction of amateur photography, and already we find many photographers almost rivaling in their compositions, the views of painters. It is not to be expected that an amateur can attain such proficiency in the selection of views as does the painter; but if he is determined, he may be very successful, and contribute much, not only to his own enjoyment, but to that of others.

MUSICAL REQUIREMENTS IN CHURCHES.

FROM THE R. I. B. A. JOURNAL.

The report of the organists' and architects' joint committee on architectural arrangements affecting the musical requirements in churches is one which it is hoped may prove of interest as well as of value, in hinting at some possible variations in church planning. Though the report may ultimately be issued by the Council of the Institute, they cannot be held responsible for its statements, inasmuch as it contains the combined wisdom of organists as well as architects. The names of those forming the committee have been stated in order that the true value and weight of the report may be recognized, and the opinions expressed therein accepted for what they are worth. The organists engaged on the committee are all distinguished men, of great practical experience, and specially qualified to deal with the musical aspect of the subject in question.. They have from time to time conferred with other eminent organists not on the committee, who have confirmed their opinions and verified their experience.

Many of the conclusions arrived at in the report may occasion some surprise, but it was felt both by the architects and musicians that if there is to be any improvement in the arrangement of churches it must be in the directions indicated. They desired, however, to leave the method of development to the genius of the architect and the enterprise of building committees. Their "Recommendations" have been framed for an ideal church of large dimensions, where there are no restrictions, and

K

unlimited funds at the disposal of the fortunate architect. It is obvious, for instance, that only in a church exceeding 150 feet in length could the height be so proportioned as to allow "Recommendation No. 4" to take effect, and ample height is so necessary that the committee consider the roof of the nave and chancel should be continuous. This, the usual "chancel arch" arrangement does not contemplate, and the avoidance, therefore, of the low divisional arch, and the adoption of other methods to mark the division between nave and chancel, is recommended.

The committee have advisedly refrained from giving any definite opinion as to where the organ should be placed, but they were bound to state where, musically, it is found to be most effective; and the fact may serve as a guide to a right decision. The sound, moreover, is best distributed when the organ is placed under the main roof, whether it be at the west end on a "roof-loft" or at the east end, provided the other conditions laid down are also observed. Good examples of organs in these several positions are easily recalled.

Though the result of the deliberations (extending over twelve months) of the joint committee may reverse many of the notions and theories previously held, and appear opposed to accepted methods, yet they hope it may eventuate in evolving new dispositions which will meet modern requirements and, developing

ecclesiastical architecture, break away from mere archæological trammels.—*John Belcher.*

REPORT OF THE COMMITTEE FOR ARCHITECTURAL ARRANGEMENTS AFFECTING MUSICAL REQUIREMENTS IN CHURCHES.

The general provision for the musical arrangements in modern churches has been acknowledged to be unsatisfactory, and the many points upon which there are conflicting opinions or increasing doubts have made it desirable that some definite principles and practical suggestions should be formulated by those competent to deal with the subject.

With this purpose in view, the Council of the College of Organists, as a consequence of Mr. Belcher's excellent paper on the subject of "Musical Requirements in Church Planning," read before the Royal Institute of British Architects, proposed to the council of that body that a committee should be jointly nominated by their respective councils to inquire into and consider the improvements and developments which might be adopted in the future.

The Council of the College of Organists nominated on their part certain Fellows of their College, viz.: Dr. Martin, of St. Paul's Cathedral; Mr. Walter Parratt, of St. George's Chapel, Windsor; Mr. James Higgs and Dr. Turpin. The Council of the Royal Institute of British Architects nominated on their part certain Fellows of their Institute, viz.: Messrs. J. Belcher, R. H. Carpenter, J. D. Sedding, H. Stannus, and H. H. Statham.

The committee added to their number Mr. Somers Clarke, Dr. F. E. Gladstone, and Rev. W. Russell, succentor of St. Paul's Cathedral, as authorities on many points of importance.

The committee have also had the advantage of a conference with Mr. Micklethwaite, and Mr. St. John Hope.

After a careful review of the arrangements which are now usually made for the accommodation of the choir and organ, the committee desire to record the following observations:

(*a*) That the arrangements are generally defective.

(*b*) That there is much misconception as to the best positions for the choir and organ in their relation to each other and the congregation.

(*c*) That the space allowed for the modern organ is often insufficient.

(*d*) That on musical grounds the old position at the west end for both organ and choir is, in general, the best.

(*e*) That although for ritual purposes (following the ancient English Cathedral and Collegiate arrangements) a vested choir is placed in the chancel, yet, that where there is a chancel arch, central lantern, or transepts, the sound becomes intercepted instead of passing into the body of the church; moreover, where the chancel is narrow, antiphonal singing cannot produce its proper effects.

(*f*) That when the placing of the choir in the chancel (according to recent custom) has involved the removal of the organ also, it has usually resulted in cramping the organ within some confined space, or "chamber," by which the tone has been damaged, and its beautiful qualities and real efficiency impaired.

(*g*) That the arrangement alluded to above is not the most advantageous for the support and encouragement of congregational singing.

(*h*) That these defects are more or less the result of adapting new customs and requirements to *old* buildings and are not always to be avoided.

(*i*) That as a result of the general improvement in knowledge and taste, the increased facilities for the musical rendering of the services, and the more frequent bringing together of large bodies of singers and instrumentalists, the provision of better accommodation for them is a problem which must be considered.

AS TO NEW CHURCHES.

The main object of this committee is to promote the improvement and development of the arrangements of *new* churches, and they have taken as their basis the musical requirements of a large town church; these requirements would necessarily be modified for small town or country churches.

There would appear to be but five positions in which the choir can be conveniently placed in a church:

(*1*) At the west end of the nave.

It is commonly admitted by musicians that the most effective position for the organ is at the west end; but this position is not always advisable, if the choir be retained in the chancel.

(*2*) In galleries facing each other in the nave.

The advantages claimed for seating the choir in galleries (similar to the ancient "minstrel galleries") on the north and south sides of the nave are as follows: (*a*) the better support of congregational singing; and (*b*) the opportunities afforded for antiphonal effects.

(*3*) Immediately outside the chancel screen.

(*4*) In the chancel aisles.

(*5*) In the chancel.

With regard to these latter positions, it is advisable, in planning a new building, in order to obtain the openness and space requisite for the sound to reach all parts of the building, that a "chancel arch" should be avoided, and the choir thus placed under the same roof as the congregation. This will enable the clergy as well as the choir to be properly heard.

In churches exceeding 150 feet in internal length the plan of placing the main choir at the west end, and a "ritual choir" in the chancel, may be adopted.

AS TO EXISTING MODERN AND ANCIENT CHURCHES.

In dealing with existing churches, whether ancient or modern, the principles set forth in the "Recommendations" should, as far as possible, be observed; but each case should be individually considered. In those places (for example) when there remain a western organ and gallery of interest, at a distance of not more than fifty feet from the choir seats in the chancel—it is desirable that such should be retained *in situ* and used; and where the distance is more than fifty feet, a small additional eastern organ to support the choir is recommended.

In buildings lacking adequate height, a position should be chosen for the organ which will give the best available space for sound to develop itself above the pipes and to pass into the nave.

The committee have carefully considered and have drawn up principles of the subject before them, and have formulated the following "Recommendations," which have been agreed to by every member.

RECOMMENDATIONS.

No. 1. That the organ and the choir be so placed in the church that they may most effectually assist in the services.

No. 2. That it is essential to acoustic success that in the erection of new churches ample height should be provided for.

No. 3. That in arranging any position for the organ, ample space should be allowed as regards area, "speaking-room," and height.

No. 4. That no "open-flue" pipe should have less than its own speaking length (the speaking length of an "open-flue" pipe is the length from the slit or mouth above the conical foot up to the top of the pipe) above it.

No. 5. That the organ should be concentrated, and not divided into two or more parts at a distance (excepting to place the choir organ in advance of the main instrument in the architectural design of the case.)

No. 6. That the ground space to be provided for an organ, exclusive of engines employed as blowing apparatus, should not be less than 600 superficial feet for an organ of 60 stops, of 310 superficial feet for an organ of 40 stops, and of 180 superficial feet for an organ of 20 stops.

No. 7. That the organ should never be placed in a "chamber," but that the best position for an organ is that which has a sufficiency of open space above it and on three sides, and a solid unpierced wall at the back.

No. 8. That the term "organ place" be adopted, because it is more comprehensive (including gallery, etc.,) and because the term "organ chamber" is misleading, inasmuch as a chamber (or enclosed place) has been determined to be *not* suitable for an organ.

No. 9. That the internal surface of the roof above the organ should not be of wood, but of stone, plaster, or other non-absorbent material.

No. 10. That in order to avoid noise and economize space, the organ "feeders" should be placed at some convenient distance from the organ, and outside the main body of the building.

No. 11 That the air supplied to the "feeders" must be derived directly from the church itself, in order to obtain the same temperature.

No. 12. That the organ should be placed at a short distance from the choir, and that the best distance is about twenty feet.

No. 13. That the organ should never be placed between the choir and congregation.

No. 14. That the sound of the organ should not have to pass over one-half of the choir to reach the other.

A. J. BARNETT ARCHITECT

No. 15. That when possible the organ should be equidistant from both halves of the choir.

No. 16. That the choir be placed on raised floors, or in low, projecting galleries architecturally treated.

No. 17. That the height of the platform, steps or gallery on which the choir is placed should be regulated by the length of the church.

No. 18. That provision should be made for the accommodation of large bodies of voices for special occasions to be seated in due musical relation to the choir and organ.

No. 19. That it is desirable in churches of adequate size that provision should be made for an orchestra on special occasions.

No. 20. That the orchestra should be in the organ gallery, in front of the organ, or in some similar and approximate position.

The Committee in framing the foregoing "Recommendations" for the guidance of those about to erect large churches, have made them as general and as wide as possible, that the same principles may be followed in the erection of small churches or alterations of ancient ones.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways

The double page illustration of the Administration Building for the Preston School of Industry, at Ione, Amador County, California, is from the design of Mr. Henry A. Schulze, Architect, of this City.

The residence for Mrs. M. A. Fritz, on "Ashbury Heights," is from designs by Mr. A. J. Barnett, Architect, of this City.

For the April competition of the San Francisco Sketch Club, "Terra-Cotta" was awarded first mention. This design was submitted by Mr. Wm. H. Topkee.

The cuts J and K are from the terra cotta capitals from the Museum of Natural History at Kensington, England.

BOOKS & PERIODICALS

BITS OF CANTERBURY CATHEDRAL. Drawn by Walter Tallant Owen. 1 vol., 12 plates; size, 6x9½: illuminated boards. Price, $1.00. New York: Wm. T. Comstock, 1891.

The history of Canterbury Cathedral, as well as the variety and beauty of its architecture, renders it one of the most interesting in England. The site upon which the cathedral stands was early consecrated to Christian worship, as there are records showing the existence, in the second century, of a church used by the Roman Christians. From this small beginning grew the present magnificent building. St. Augustine in the sixth century, and Archbishop Cuthbert in the latter part of the eighth, were the earlier builders, and the succeeding ages had the help of Odo, Lanfranc and Anselm in repairing, rebuilding and enlarging.

The styles of the different periods have all had an opportunity for display, and the cathedral to-day exhibits nearly all the classes of Norman architecture, while parts are impressed with the purely English style. It was here that, after the fire in 1174, the pointed arch was first introduced into England, having been employed by certain artists or artificers summoned from France, and here also are seen some of the best and most characteristic forms of purely English window tracery found in the cathedrals of England.

The church formerly was rich in saintly relics, and tragic memories lurk by every arch and column. Many famous tombs still exist, and, although the shrine of Thomas à Becket was destroyed centuries ago, the curious mosaic pavement which led to the shrine still remains, and the stone steps, worn by the knees of countless pilgrims, stand as a monument not only to the martyr but expressive of the religious freedom that followed. The crypt is famous from having been opened by Elizabeth for a refuge from Spanish persecution for French and Flemish Protestants, who, for a long time, carried on silk-weaving there.

It is easy to understand the attraction that this place has for the traveler, be he artist or layman, and this little book is a record of a few things seen and appreciated by Mr. Owen during a brief visit to Canterbury. There is a view of the entire cathedral, and of the separate "bits" that follow a glimpse of the pinnacles through Mercery Lane, and the "Bell Harry," which is the central tower of the cathedral, and so called from a small bell hung in the top. This was formerly the "Angel Steeple," having a gilt figure of an angel crowning it, and is said by Fergusson to be, for poetry of design and beauty of proportion, the best in England, and superior to any of its class to be found elsewhere.

A view of the cloisters, the northwest tower, baptistery, turret on southwest transept, Norman stairway, ruins of old cloisters, and the Prior's gateway, are among the plates. Before each plate is a title page, adorned with some detail of construction, or of some ornament or object in the building. Among these will be found mosaics from the floor, panel from ceiling, wrought iron work, carved woodwork, a chair, a hinge, and the armor of the Black Prince.

Mr. Owen exhibits a fine and discriminating taste in his selection of various subjects for his sketches, and shows his ability as a draughtsman to be of high order. The drawings are well reproduced upon fine paper, and aside from the pleasure to be drawn from a casual inspection, they will be of practical service to those who wish them for a study.

We have received several numbers of an Architectural publication from Tokio, Japan. In comparison with the publications as usually seen the Japanese journal makes a favorable showing. To read the book we must begin at the last page and read towards the front. The latest number contains articles on various subjects, as follows: Japanese Imperial flag; designing of Japanese tea room; on sand stone recently discovered; lesson in shading; Egyptian Architecture; the principle of building in Japan 2000 years ago; New York buildings 1890; fires in theatres 1890, in Europe and America; fires in Tokio; building laws; and marbles in the U. S. We are indebted to Mr. K. Shimoda, a Japanese architect of this city for the translation of contents.

NOTES & COMMENTS.

The wheat field on the Glenn ranch in Colusa County is twenty-six miles in length by twelve miles in breadth. These large tracts of land will before long be cut up into farms of suitable size for families.

Near Hamilton, Washington, there are large timber tracts of "birds eye" maple for suitable size for lumber, and preparations are being made for placing this beautiful variety of hard wood in the market.

MODEL OF STATUE OF "WORLD BUILDING."
Carl Bitter, Sculptor.

At the meeting of the Technical Society of the Pacific Coast held in June, the Hon. Warner Miller, president of the Nicaragua Canal Company, addressed the Society on the subject of the Canal, its history, and the financial difficulties which had been overcome. Commander Taylor of the U. S. Navy gave a technical description of the Engineering features of the work, entering into the details of its construction and manner of working. The remarks were accompanied with maps and diagrams illustrating the methods and progress of the work. On the following day by special invitation of Mr. Adolph Sutro, the Society was entertained at his grounds on Sutro heights which commands a view of the Pacific ocean and the Golden Gate. At this place we viewed the process of raising water without the aid of machinery, from the ocean to a height of fifteen feet to supply three large aquariums with salt water.

After lunch the speeches were rife with technical and engineering points. Mr. Sutro gave an account of the great Sutro tunnel under the gold and silver mines in Nevada and which was carried to a successful termination by himself after having overcome difficulties that seemed insurmountable. Hon. Warner Miller and Commander Taylor addressed the assembly and pointed out many features of resemblance between the great tunnel which had been finished and the Canal which is now under construction.

Mr. Sutro stated that to carry out the great project only three things are necessary, first—plenty of money, second—more money, third—more money. After looking through the grounds the members returned to the city.

NOTICE OF MEETINGS.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

Refusal of Architects to Issue Certificates.—Where the contract of a builder provides that he shall only be entitled to payment on account of the work thereunder upon the certificate of the architect that the work so far as completed has been done in accordance with the provisions of the contract, the right of the contractor to earned payments cannot be defeated by the mere arbitrary refusal of the architect to issue such certificates. The contractor may recover upon showing that he has so complied with the contract that the architect should have issued the certificates, as the certificates are only intended as an evidence of compliance.

Michoelis vs. Wolf, Supreme Court of Illinois, 26 N. E. Rep. 384. (113—C)

Delay of Building Contract By Owner.—Where a building contract provides for a penalty to be enforced against the contractor for failure to complete the building within a specified time, before the owner can enforce the penalty he must establish the fault of the contractor, and where it appears that something was to be done by the owner which he failed to do, the delay resulting from his failure, he cannot assert the penalty as he, and not the contractor is in fault. Courts look with distrust on penalty clauses, and will avoid them whenever possible.

Huckenstein vs. Kelly & Jones Co., Supreme Court of Pennsylvania, 21 At. Rep. 78. (104—C)

Liability For Safety of Premises.—When the owner of premises which are under his control employs an independent contractor to do the work upon which from its nature is likely to render the premises dangerous to persons who may come upon them by invitation of the owner, the owner, by reason of the contract, is not relieved from the obligation of seeing that due care is used by the contractor to protect such persons. The owner cannot continue to hold out the invitation without being bound to exercise due care in keeping the premises reasonably safe for use according to the invitation. A landlord who contracts with a plumber to perform work requiring excavations about the premises is liable for injuries sustained by a visitor to one of the tenants from falling into an excavation negligently left unguarded by the contractor.

Curtis vs. Kiley, Supreme Judical Court of Massachusetts, 26 N. E. Rep. 421. (146—C)

Liability of Subcontractor For Defective Work.—The owners of a piece of land contracted with a builder to erect a building according to plans and specifications prepared by an architect, and to provide all the materials therefor. They subcontracted with a mason for the mason work and materials. The builder sued them on their contract to recover damages for defective work and materials, including defects in the mason work. They gave the mason notice in writing of the pendency and object of the suit, and requested him to come in and help defend.—He did not unite in the defense of this suit, and plaintiffs defended alone. At the trial, by direction of the court, the jury, by their verdict, specified how much of the damages awarded was for the defects in the mason work, and how much for other work. The builder entered his judgment for the gross amount of damages awarded him, ignoring the special findings of the jury apportioning the damages. The owners not having paid the builder's judgment, bring an action against the mason on his subcontract, in which it is held by the court (1) that the verdict was competent evidence of the special finding of the jury of the amount of damages awarded against the owners for defects in the mason work; (2) that the plaintiffs might maintain this suit, and have damages awarded to them for damages recovered of them for defect in the mason work in builder's suit, without paying the judgment he recovered against them; (3) that the defendant, having notice of that suit, was concluded by the record in that suit with respect to the fact that the mason work was done in compliance with the plans and specifications, and that, in consequence thereof, the damages as found by the jury accrued therefrom, and as to all matters of defense against the demands of the builder that might have been presented in that suit; but (4) that the mason might insist and prove that his contract with the owners did not in that respect embrace the liability the plaintiffs incurred under their contract with the builder, and that the defective workmanship or materials used in the mason work were occasioned by the owner's own acts.

Hoppaugh vs. McGrath, Supreme Court of New Jersey, 21 At. Rep. 106. (370—C)

Liability of Contractor for Safety of Scaffold.—Where a contractor provided his workmen with proper material in sufficient quantities to construct a scaffold to be used in work on which they were engaged for him, he is not liable for damages resulting from an error of judgment by the foreman in selecting a particular piece for a particular place in which it proved to be insufficient, by reason of which the scaffold fell, and a workman was injured.

Ross vs. Walker, Supreme Court of Pennsylvania, 21 At. Rep. 156. (85—C)

Right to Reject Lowest Bid.—Where the statute governing the letting of contracts for public works provides that such contract shall be let to the lowest responsible bidder, and the advertisement for bids reserves the right to accept or reject all bids as the best interests of the city may demand, all the bids may be rejected and another advertisement made, without in any manner incurring any liability to the lowest responsible bidder under the first advertisement.

American Artificial Stone Pavement Co. v. Wagner, Supreme Court of Pennsylvania, 21 At. Rep. 160. (88—C)

Lien on Work Abandoned by Owner.—Where "material" required for the construction or completion of a building is prepared or manufactured therefor by a contractor, in conformity with the terms of a contract between him and the owner, and the work of preparation and furnishing proceeds at the yard or shop of the contractor with the express or implied consent of the owner, such work of preparation and manufacture should be deemed a part of the construction or "furnishing" under the contract, and in such case it is immaterial, as between the parties to the contract, in respect to the contractor's right to a lien, subject to the final completion of the contract, that the work was not done on the premises. And where the work of construction is thus in progress, no loss of lien for what has already been done under the contract is occasioned where the work is stopped or abandoned through the fault of the owner. The purchasers or assignees of the owner, who purchase expressly subject to such claims for liens, will be bound thereby, and stand in his shoes; and if they refuse to permit the contractor to complete the work, he will be entitled to a lien to the extent of the loss sustained.

Howes vs. Reliance Wire-Works Co., Supreme Court of Minnesota, 48 N. W. Rep. 448. (203—C)

BUSINESS MOSAICS.

When thou art the only purchaser then buy; when other buyers are present be thou nobody.

Hardwood lumber for furniture and natural wood finish can be obtained in any quantity to suit, from the E. D. Albro Co., Cincinnati, Ohio This firm has a world wide reputation in that line.

The Pullman Sash Balance is a great improvement over any other spring balance, and is rapidly gaining on the weight and cord system.

The J. L. Mott Iron Works of New York and Chicago, so long known for the excellent quality and finish of any article manufactured by them, have established an office in San Francisco, in the Flood Building on Market street, Room 44.

Gas Fixtures and hardwood mantels in all the latest styles, and in great variety can be seen at the elegant show rooms of the California Gas Fixture Co. 123 Geary street.

We invite the attention of Architects and other interested parties to the *Bostwick Patent* steel lath which is made in a manner to form a firm key for the plastering and without unnecessary waste of material See advertisement.

The Sidney Norris Co. are making special sash pullies for all requirements. These pullies have grooves for ropes, chains, ribbons, or for any other purpose. The quality and finish of these pullies have given universal satisfaction wherever used, and have therefore become the standard pulley.

Belts and Dressings. Belts should be cleaned regularly, and after cleaning, a good belt-dressing should be applied to keep the belt soft and elastic, and cause it to hug the pulley and transmit its greatest power. The use of a good belt-dressing is superior in economy to any other method for correcting a slipping or slightly loose belt. The custom of tightening a belt whenever it slips is not a good one. The belt is liable to be made too tight, which heats the bearings and strains the belt. Great care, however, should be taken in selecting a belt-dressing. Castor oil is an article in very general use, but experts have found that it contains an active acid principle, and is drying in its nature. The use of soap, rosin, tar, etc, cannot too strongly be condemned. They are only temporary stimulants and eventually destroy the belt. A belt-dressing that is guaranteed to prevent slipping, and at the same time to keep the leather soft and elastic, is certainly worthy of careful consideration. Such is Dixon's Belt-Dressing, made and sold by the Jos. Dixon Crucible Co., Jersey City, N. J. There is no trouble in applying it, and all who have used it commend it in the highest terms.

The weakness of thy walls invites the burglar.

TENDERS TO BE RECEIVED.

TREASURY DEPARTMENT.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M. on the 23rd day of July 1891, for the labor and materials required for sidewalks, street curbs and gutters, of the approaches to the U. S. Poplar near 8th, Oakland. Cottage; owner, J. D. Scott; architect, R. G. Frise; contractor, John Langland; cost, $2,268; signed, June 17; filed, June 24; payments, $567, frame up and enclosed; $567, 1st coat plaster on; $567, 2nd coat on and inside finish on; $567, 35 days.

Santa Clara ave near Union, Ala. 2-story frame; owner, G. W. Shreve; architect A. W. Pattiani; contractor, A. W. Pattiani & Co; cost, $3600; signed, June 6; filed June 10; payments, $1000, rustic and roof shingles on and chimney built; $900, window frames set and brown mortar on; $800, completed: $900,35 days.

Shattuck ave. Dwight wy, Berkeley. 2-story and basement; owners, Stewart & Trowbridge; architect, W. H. Wellbye; contractor, W. H. Wellbye; cost, $20,920; signed, May 26; filed, June 13; payments, $5230, 1st floor joists on; $5230, brick work done and roof on; $5230, plastering done; $5230, 35 days.

Thirteenth ave near 18th E. Oakland. Cottage; owner, Mrs. C. Schnoor; contractor, D. H. Matheson: cost, $1500; signed, June 18; filed, June 18; payments, $375, frame up; $375, 1st coat mortar on; $375, completed; $375, 35 days.

Tremont Ave. and Channing Way. To build; owner, R. R. Swain; contractor, P. Maloney; cost, $8,370; signed, June 2; filed, June 10; payments, $800, frame up; $800, brown mortared; $800, inside completed; balance, 35 days.

Twelfth near Jefferson, Oakland. To build; owner, Hugh Hamilton; architects, Baker & Frise; contractors, Smille & Smilie; cost, $13,570; signed, June 24; filed, June 24; payments, $3,392.50,brick work done; $3,392.50, 1st coat plaster on and outside primed; $3,392.50; 2nd coat painting done; $3,392.50, 35 days.

Twentieth St. Telegraph Ave., Oakland. Two-story frame; owner, B. K. Allen; architect, Chas. Mau; contractor, Fibrish Bros; cost, $2,800; signed, June 10; filed, June 11; payments, $525, ¼ materials furnished, ¼ work done; $525, ¼ furnished and ⅓ done; $525, ¾ furnished and ¾ done; $525, completed; $700, 35 days.

Twenty-third Ave. and 16th St., East Oakland. Additions; owner, J. Belydorn; contractor, John Bauman; cost, $2,425; signed, June 5; filed, June 6; payments $600, frame up; $600, brown mortared; $600, completed; $625, 35 days.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

THE subject of sewerage for San Francisco is one that demands the serious attention of all citizens. During the winter rains the sewers in the low-lying portions become over-charged and in many instances premises are flooded and goods damaged causing a corresponding pecuniary loss to merchants and an increase in the death rate.

During the dry season the sewers become choked with mud and decaying matter, the water in the catch basins and traps becomes exhausted through evaporation, leaving the effluvia, stench, and disease-breeding atmosphere to be wafted through the streets by the wind. However absent-minded the pedestrian may be at intervals an extra strong whiff of noxious vapor becomes a reminder that a catch basin or man-hole has been placed there as a protection to the health of the residents of that vicinity.

Once or twice in several years the authorities have ordered a few gallons of water to be run into the sewers causing a decided decrease in the death rate. At the present time it would require a limited amount only to flush the catch basin traps. The whole system, if system it may be called, is defective. In many cases the present sewers can, with some slight changes, be made more serviceable. All the newer districts should be sewered in accordance with the most advanced knowledge in sanitary science and arranged upon some definite system. It seems to us that some competent person should be commissioned to arrange a system sufficiently comprehensive to include the whole city—old and new. It seems to us that the person best fitted for the position would be our present City and County Surveyor, Chas. H. Tilton, who, through his long connection with the surveyor's office and knowledge of the streets and grades is thoroughly versed in the existing defects as well as the requirements for the future.

MISSION OF SAN MIGUEL, CAL.

LEAVING the valley of the San Antone and going east we pass through a park-like country thickly studded with live oaks, round and solid looking in their dark green covering, and affording a pleasing contrast to the hot barren back-ground of withered grass; but as we journey forward and approach San Miguel the cool shadows of the oaks become fewer and fewer and further between until every green thing has disappeared and nothing save the sun scorched hills are left, the burning sky above and the parched earth beneath and one longs, as the psalmist of old for rivers of water in a dry place and the shadow of a great rock in a weary land. But one may long in vain, for the curse of God has gone forth over the land, the mighty tempest of his wrath and the flaming fire of his tongue has passed over it so that the grass has withered away and the earth has refused to cloth herself with verdure. Thus as we near the center of the furnace, and the Mission of San Miguel, the heat increases and the beauty of the landscape diminishes, until as we stand by its doorway and beneath the shadow of its old walls we can see naught but barren hills; bear from the depths of their hollows to the last boulder on their summits. Even the river has forsaken its course and now instead of journeying along, ministering sweet refreshment to waving willows and bending

·MISSION·oF·SAN MIGVEL·

flags, in far off space it has become so etherealized that from day to day the eye may look in vain for the faintest sign of its heavenward flight on snowy wings, or coming back again to earth. Not, however, with such trifles as a reed shaken by the wind, nor with the vanities of such as cloth themselves in fine linen and purple vestures, nor even with the seductive influences of a sylvan scene did these men of old concern themselves, but rather that they might raise a cry, uplift a cross and sound in these desert places of the earth a song of joy a note of harmony amidst the desolation and discord of mens' minds. Stern characters no doubt were these old friars, and they choose not to remain beneath the vine and fig tree of heredity, tilling where their fathers had tilled before and living in quiet ease and happy luxury, the world unknowing to the world unknown, but rather in the desert where no sower yet had sown nor happy reaper drawn his sickle through, their task was set, to make the wilderness blossom as the rose, and trees to spread their branches out as cedars in far Lebamon. And so as for their heavenward road they choose the narrow way; the rock encumbered path; on earth the mountain gorge and sandy desert track. If not "what sought they thus afar." We are told that in the early days of this Mission there were about 5,000 Indians in the neighborhood and it was for these that in this sun dried valley of the Salinas these fathers built the Mission of San Miguel. Our sketch as seen from the east shows the Mission to be similar in general arrangement to that of San Antone given in a former number, but poorer in architectural features. The plan also is similar, the principal difference being in the placing of the church so much further in advance of the residence portion of the Mission. Originally the building inclosed a quadrangle but most of those at the rear have now disappeared. The interior of the buildings as usual is plastered and in order to form a good key for the mortar, the adobe is grooved diagonally in squares about two feet wide. The interior of the church is perfectly plain, no projections of any sort breaking the uniformity of its four walls, save at the altar where a monstrosity in wood combines the severity of the classic, the savageness of the Egytian and the general ignorance of such as fly too high and like Icarus scorch their wings against the sun and fall to earth. The walls are frescoed to represent a colonade, but the methods of obtaining distance, perspective and depth are so primitive that one cannot get an inch beyond the surface of the adobe wall though far off vistas of fair lands a id sunlit slopes are there intended.

Of the San Luis Obispo Mission we give a perspective as it was about 1875. Almost nothing of the original now remains. The veranda and columns which are the principal features of the building have been torn down and now a wall of rustic with modern doors and windows form the elevation to the street. The church also has been so renovated as to be out of all resemblance to the old structure. For this reason we do not give a plan, but simply show the east front as it was originally. San Luis is about 12 miles from the coast 30 miles from San Miguel and is separated from the latter by a mountain range at the southern foot of which it is situated. Towards the south the country is flat, but is broken by cone-like mountains rising abruptly steep and rugged to a height of several thousand feet above the plain.

But it is no longer the Mission that claims attention here, for the town has grown around and nearly engulfed it and now the stranger may wander half a day before he will discover the old ruin hid away and disguised in its new vesture; and all around the clatter of horsemen and the sound of traffic, the grinding of cart-wheels and the sweet silvery tone of the shining dollar, tell us that the god of our fathers has fallen from his throne and some other ideal has been set thereon. The angelus now peels in vain at eventide for no grateful laborer bends his weary head, to thank the Giver for the sun shine past and ask sweet blessings for the coming night and still repose beneath the twinkling stars.

TRES.

PLUTARCH AND PHIDIAS.

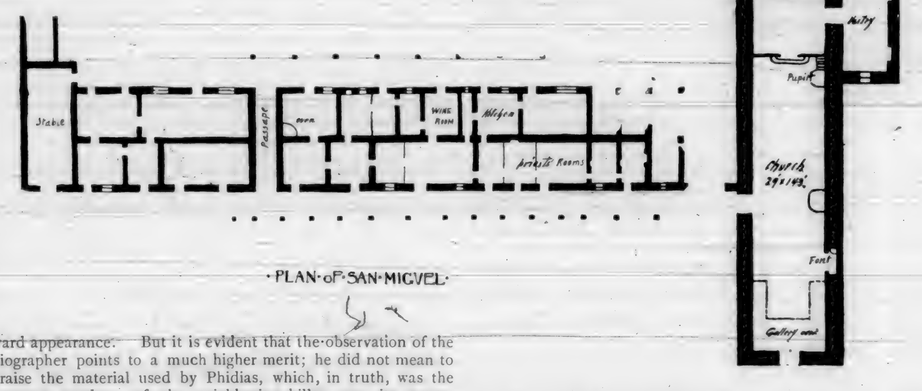
There is a passage in Plutarch's life of Pericles which has never, I think, been fully understood, and has therefore given rise to, or affected in one way or another, the various theories on the ornamental architecture of the Greeks.

The biographer sums up his eulogy on the talents and success of Phidias in embellishing Athens under the direction of Pericles in the following manner. After alluding to the short space of time which, beautiful and perfect as they were, was consumed in the erection of the Parthenon and the Propylæa, he says, "Hence we have the more reason to wonder that the structures raised by Pericles should be built so quickly, and yet built for ages; for as each of them, when finished, had the venerable air of antiquity, so even now they retain the strength and freshness of a modern building. A bloom is diffused over them, which preserves their aspect untarnished by time, as if they were animated with a spirit of perpetual youth and unfading elegance."

This expression has been quoted as a proof that the marble of which these edifices were constructed was capable of resisting the effects of time more than any other material; others, again, make use of it in reply to the assertions which have been made that they were covered more or less with a coating of color, and the several mouldings picked out with various hues of red, blue, yellow and gold; for if this, they say, had been the case, we cannot suppose that such colors could have remained uninjured for six centuries, which must have materially affected the outward appearance. But it is evident that the observation of the biographer points to a much higher merit; he did not mean to praise the material used by Phidias, which, in truth, was the common produce of the neighboring hills; nor its superficial brilliancy; nor the skill of the painter, if this additional decoration had really been employed; nor the mechanical expertness of the artisans; but he gave his willing testimony as a philosopher and as a man of taste who was well acquainted with all the rival edifices of the same nature, which abounded at that time throughout the Roman world, that the buildings of Athens shone pre-eminently above them all by their inimitable beauty and perfection, by the magnificence with which they were designed, as well as by the elegance of their execution; that these eternal monuments of her glory were founded upon the true, universal, and eternal principles of science, order and beauty; that, therefore, as from the first they had no especial character of novelty or extravagance, so to the last would they preserve the *purpureum os* of perpetual youth. The conceptions of genius had discovered the true point where massiveness, harmony and tasteful ornament were happily combined; where every part of the architecture could readily be accounted for on principles of reason and the demands of science; and where the minutest examination contributed only to increase the admiration produced by the first impression.

Plutarch judged of a work of art as Cicero and Quintillian judged of eloquence, that that degree of ornament only was allowable "quod non plus minusve est, quàm decet"—that nothing improper or out of place was ornamental, and that true beauty could never be separated from utility.

W. R. HAMILTON.



·PLAN·oF·SAN·MIGVEL·

IMPROVEMENTS IN THE NEW YORK QUARANTINE.

We are indebted to the *Sanitarian* of July for the following description of the improvements in the New York quarantine as reported by Dr. William M. Smith, Health Officer of the Port, to be so far advanced as, seemingly, to render the service more facile and more effectual than at any previous period in the history of the establishment.

"The value of this improvement cannot be appreciated except by those who had charge of Hoffman Island while the cholera-infected immigrants were detained there in 1887. The pine floors of the dormitories, embracing an area of 66,856 square feet, on which more than 2000 gallons of a solution of mercuric chloride were used in 1887 to destroy the contagion of cholera, which the floors might otherwise have retained by absorption, have been rendered impervious and non-absorbing by a covering of asphalt.

"The four sections of the south building have been so arranged that the occupants of each section may be isolated from every other section and yet have access to fresh air, dining-tables, and closets.

"The sixty eight metalic bath tubs which are located on one side of the vestibule at each end of the dormitories, are connected with water tanks in the upper part of the buildings. They afford a refreshing contrast to the fifty or more half barrels used for bath tubs on former occasions. The 720 canvas-covered-double-tired-galvanized-iron-folding bunks, which are triced up against the walls and supporting pillars when not in use, will be a great improvement on steerage mattresses laid upon the floors, as they have been in time past. Canvas bottoms laced upon the rails take the place of the vermin-filled mattresses. After use the latter were generally destroyed, on account of the difficulty of cleansing them. The canvas bunks now in use, like the hammock of the sailor, can be quickly removed, folded, cleansed in the disinfecting-room, and when replaced be as good for further use as when new.

"The emergency hospital, consisting of several rooms and twenty beds, which have been arranged above the boiler-room in the old administration building, will supply a much-needed convenience for immigrants who are suddenly taken ill while detained for observation. The rooms are isolated from the superintendant's rooms, although in the same building with them. This hospital affords an agreeable contrast to those improvised in the wash-rooms of the dormitories for the cholera-stricken immigrants of 1887.

"The new two-story administration building, each floor of which has an area of 5559 square feet, has several times during

the past year been tested in respect to its usefulness for which it was intended, and has fully answered the expectations of those who designed it.

"The 1538 steerage passengers that have been under observation at Quarantine during the past year, for fifty-five days in the aggregate, have afforded the occasion of testing to a considerable extent the serviceableness of the improvements made in connection with that building.

"The dining-rooms of this building will seat several hundred passengers; an extensive kitchen is adjacent to the dining-rooms, with range, steam-heated kettles and boilers sufficient to cook for a thousand people. The store-rooms in connection with the kitchen are ample to contain supplies for the same number.

"A large laundry on the same floor, with stationary tubs, each furnished with hot and cold water faucets, cloths racks and steam drying coils supply every needed facility for securing cleanliness. Formerly the sea constituted the immigrants' wash tub and supplied the water, the sea-bathed rocks around the island their wash boards, and the rip-rap walls their drying racks.

"Along the east side of the old, and on the north side of the new administration building, thirty-two wash basins have been provided, each supplied with a cold and hot water faucet, and are supported over wash troughs, that connect with waste pipes; the lids are closed and locked when not in use.

"The annex closets, forty-eight in number, are set over porcelain-lined troughs, which have an incline of one-fourth inch to a foot to the sewer end; when it is necessary to disinfect the dejecta, as it would be if cholera-infected immigrants were under observation, a valve is arranged which will close the opening into the sewer until that object has been effected.

"Experience in the detention of passengers for observation, who have been exposed to some contagious diseases, particularly cholera, shows the necessity for dividing them into groups, having reference to the greater or less extent of their exposure or liability to the disease. This division is of little use if the isolation of the group is not complete under all circumstances. The annex closets in each dormitory accommodate four groups, or the occupants of four sections, each of which is isolated from the others by galvanized iron partitions. Iron reservoirs in the upper part of the dormitory afford an ample supply of sea water for flushing the closets.

"The portable iron partition across the island, from the head of the slip to the rip-rap wall on the east side, is erected midway between the north and south dormitories, which, when necessary, prevents any communication between the occupants of the dormitories. At other times intercourse is uninterrupted between the buildings, by doors at the east and west ends of the partition.

"The need of such an arrangement in 1887, when two steamers were in Quarantine, each with several hundred infected immigrants, compelled the detention of the last arrived steamer for some time, for want of a Quarantine of Observation, to the great discomfort and danger of the passengers, who had already been nineteen days in a crowded steerage. The necessity for the agents of the detained steamer to fulfill their charter obligations finally compelled them to charter a ship and fit it up for the reception of the immigrants on board the steamer, at several thousand dollars expense to the company.

"*The disinfecting plant* is composed wholly of iron and is located in the second story of the new administration building above the boilers and pumps.

"The disinfecting-rooms are made as nearly air-tight as possible. The ceilings and partitions are made of three-sixteenths iron, well lapped and riveted, caulked and thoroughly fitted. The ceiling, floors, and partitions are lined with iron, and with doors of the same in partitions and for shutters to windows. The doors and room are calculated to withstand the pressure of seven and one-half pounds per square inch. The partitions are secured in place by four-inch beams and angle irons, held in place by bolts and rivets bolted to the beams. Each door dividing the sections are hung and set in such a manner as to be perfectly air-tight when closed. The window shutters are made and hung the same as the doors; all have rubber stops.

"One hundred and eight galvanized iron baskets of No. 14 wire and one-inch mesh are in a position for use. Each with sufficient capacity for the baggage of one person or one family; or, more exactly, each basket is six and one-half to four and one-half feet long, frame in wire with stiffening bands. Each series or set of three baskets is suspended and run on the same overhead tracks, so arranged as to slide out their full length.

"Gauges and thermometers are so placed as to indicate the pressures and temperatures of the disinfecting-rooms. For this purpose are used three high ranged thermometers, three vacuum gauges, and three pressure gauges, each having necessary valve and pipe connections with dial boards and fixtures complete.

"A drying-room 109 by 51 feet for baggage and clothing after it is disinfected is connected with the disinfecting chamber by a short hall, in which a small railway and car is to be constructed, to carry the basket from the disinfecting-room to the drying-room.

"*First test of the Steam Disinfecting Plant*—September 19th, 1890—Anthrax bacilli and anthrax spores were used; four gelatine culture tubes of the former and two of the latter were placed in the interior of steerage mattresses; these were rolled up, tied together and put in the baskets of the sections. The vacuum pump was started at 1.24 P. M., the pump exhausting all three sections at the same time. At thirty-five minutes past 1 o'clock the vacuum gauge indicated five pounds pressure. The vacuum pump was then stopped and moist steam introduced into all sections at a steam pressure of 87 pounds. At 2 P. M. the boiler gauge indicated 100 pounds steam. At 1.45 the pyrometer reached 232° Fahr. Moist steam was then shut off, and dry heat maintained for thirty minutes longer.

"The steam pressure within the sections showed that the doors of the middle section were defective in their fastenings.

"A thermometer placed in a mattress and rolled together indicated 228° Fahr.

"Four tubes with live anthrax in gelatine, and two with anthrax spores in the same culture, placed inside of mattresses, rolled and firmly tied together, were entirely sterilized.

"*Second Test*—March 7th, 1891.—The doors that were insufficiently secured on trial September 19th, 1890, having been improved, the disinfecting plant was again tested with boiler pressure at 100 pounds. The three sections were closed and tested at the same time. Anthrax baccilli and spores, each in glass tubes, closed with sterilized cotton, were placed inside of ordinary steerage mattresses, and the mattress rolled up and firmly tied. The same class of germs, anthrax and spores, one culture tube for each, were put in several blankets, such as are commonly used by immigrants in the steerage, and folded so that each tube was wrapped in six or eight thicknesses of blankets. These were placed in the centre of the sections, midway between the heating coils at the end of the sections. A thermometer was hung in the centre of the middle section. Six minutes after the vacuum pump was started the vacuum gauge indicated the desired exhaustion of air from the sections. The vacuum was maintained fifteen minutes, when live steam was introduced at 100 pounds. In one hour and thirty minutes the index hand of the pyrometer gauge of the middle section made connection with the indicator, set at 230° Fahr., and rang the bell in the engineer's room. The steam gauge on the sections indicated two pounds pressure at this time. The low temperature of the iron walls of the sections, and of the brick walls which were in immediate connection with them externally, when steam was introduced, increased the time in reaching 230° of heat fully one-half. Each of the sections have an interior superficial area of 1511 square feet and an aggregate area of 5535 square feet. The iron which encloses this area constitutes a considerable mass of metal to warm up before the heat of the interior can be raised to a disinfecting point. Sections 1 and 3 are end sections; they did not reach a disinfecting heat until one and one-half hours after the middle sections reached 230° Fahr.

"These sections are enclosed on three sides by brick walls and are in close connection with them. For this reason the heat was considerably longer in reaching 220° Fahr. than the middle section was in reaching 230° Fahr.

"The thermometer which hung in the middle of the second section indicated a heat of 230° Fahr. The effect of the brick wall, through which the arm of the pyrometer passes to reach the section, and into which it projects four inches, in lowering the temperature by conduction of heat from that portion of the section in contact with the wall, is shown by the difference in the heat as indicated by the pyrometer (230°) and the thermometer (253°). When the first tests were made and the thermometers were hung by the side of the pyrometer, there was a variation of but one degree in the instruments.

"To secure a disinfecting heat quickly when the sections are cold this trial indicates the necessity of heating the disinfecting chambers by dry heat, long enough before moist steam is admitted for disinfecting, to raise the temperature somewhat of the great mass of iron enclosing the sections and thus to some extent warm the walls adjacent to the sections.

"The following note from the bacteriologist shows that the tests made March 7th were successful in destroying the most resisting disease germs known:

HOAGLAND LABORATORY, BROOKLYN N. Y., March 26, 1891.

"*Dr. William M. Smith, Health Officer, Port of New York, Quarantine, Staten Island.*

"DEAR SIR: As the result of the bacteriological tests of the disinfection plant on Hoffman Island, made September 19th, 1890, and March 7th, 1891, respectively, it gives me pleasure to state that the disinfection was thoroughly effective in each instance, totally destroying the vitality of anthrax, both in dried blood and in old dried-out agar cultures containing an abundance of spores. The control cultures grew in every instance, while those subject to the process were, without exception, killed.

"Yours very truly,

"GEORGE T. KEMP, M. D. PH. D.

"*Associate Director.*"

BLEACHING OF PHOTOGRAPHS FOR THE USE OF PHOTO-ENGRAVERS.

In the preparation of drawings for reproduction by a number of the photo-engraving processes in vogue at the present time, it is a great saving of time to the draughtsman to be able to draw the lines directly upon a photographic picture, the photographic portion being then bleached out leaving the black line of the drawing clearly defined against a white background and which may be used by the photo-engraver the same as an original drawing for that purpose. Many formulas and directions have been published, each and all of which are deficient in some particular. We present the following method by *Prof. Charles Ehrmann, Chautauqua School of Photography*, as given in the latest issue of the *International Annual* of *Anthonys Photographic Bulletin*:

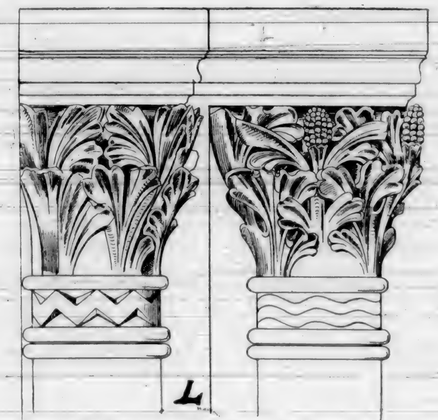
"The silver deposit of photographic prints rendered into line or stipple with pen and ink is preparatory to photo-mechanical reproduction, bleached out with an alcoholic solution of bichloride of mercury, to which the silver yields readily, provided the proof has been fixed in a solution of good hyposulphite of sodium. A mere trace of gold prevents bleaching and the ground will retain a tone of more or less intensity.

Recently I was called upon to bleach a number of very elaborate and costly pictures of that kind, which inadvertently had been subjected to a hypo-solution used previously for the fixing of a whole day's work of gold-toned proofs. The mercury solution preformed its usual work but partially, not sufficient, however, to produce that clear and absolute whiteness necessary to make a sharp and distinct black and white negative.

These prints (twenty or more, probably) had all been subjected to a variety of treatment, and presented, in every instance, a muddy ground. After several unsuccessful experiments to produce the desired effect, I resorted at last to an old and well known remedy to remove silver—that with sodium and potassium cyanide. The latter being but sparingly soluble in alcohol of 95 per cent., made me think first a sufficient amount of it would not be taken up. But I proceeded in the following way to prepare an alcoholic solution carrying the utmost possible amount of cyanide. I made first a saturated aqueous solution, and of it dropped as much into the alcohol as it would bear without forming a deposit. Cyanide being soluble in water in the proportion of 1.5 and the alcohol being of 95 per cent., the alcoholic solution was then one of 1 per cent. After soaking the print first in a weak alcoholic solution of sodium of about the color of sherry wine, it was flooded repeatedly with the cyanide solution. The effect was astonishing, the result perfectly clear and white grounds, without the least deterioration of the draughtsman's work or injury to the sharpness of lines.

Were I to do such work regularly or frequently, I would certainly discard the old mercury method and substitute for it the one above described. Sodium and cyanide destroys the photographic deposit completely, and if the bleached print is washed in several changes of alcohol, it remains white permanently. Chloride and, as has been recently proposed, bromides, change color on exposure to light and if the bleached print is not reproduced immediately, it becomes useless after a time.

The method with sodium may be more costly, on account of the alcohol used for washing the print, but it is safer.



1. CAPS TO PRINCIPAL SHAFTS

STREET PAVING IN SAN FRANCISCO.

THE DEFECTS, AND METHODS SUGGESTED FOR THEIR REMEDY.

By S. HARRISON SMITH, MEM. TECH. SOC. P. C. [Read April 10, 1891.]

Republished by permission, from th Journa of Transactions of the Technical Society of the Pacific Coast. San F ancisco, California.

INTRODUCTION.

Perhaps there is at this time no subject (with the exception of sewerage) which calls for more interest and attention from our public generally than that of street paving. For many years back we have been struggling with this problem, under what seems to me to be very unfavorable conditions, and experiment after experiment has been tried with but doubtful success. In fact, in nearly every case such experiments have proved absolute and expensive failures. But the time appears to have arrived when the municipal authorities have concluded to alter these conditions, and careful investigations have been instituted by them in order to obtain the opinion of experts and men of science upon this complex question, so that hereafter such pavements as may be laid shall be of the most lasting material and of the best construction.

It is not intended by the author of this paper to embody therein any scientific or theoretical questions, but to draw out a discussion on purely practical grounds.

In order to consider this subject in the manner proposed by me, it is only necessary to give a short description of what has been done, of what is being done and of what it is proposed to do in this connection, and to make such suggestions as may seem proper.

EXPERIMENTS TRIED IN SAN FRANCISCO DURING THE PAST DECADE.

In 1870 there was a special committee of the Board of Supervisors appointed to examine street pavements, and recommend some class of the same for general adoption. The report of this

committee has been read by me with much interest, and extracts therefrom may be quoted from time to time in this paper. The following named pavements are known to have been tried in San Francisco: Nicholson wood, Stow foundation, ordinary plank, Williams' composite, cobble, basalt block, composite limestone and asphaltum, and bituminous rock. There are many other classes of pavements whose merits have been advocated by their respective inventors or other parties in interest; but one of the objects of this paper being brevity, it has been deemed unnecessary to take notice of any classes of pavements other than those which have been actually experimented with in San Francisco.

NICHOLSON PAVEMENT.

The method of laying this pavement is as follows (the ground upon which it is to be laid having been brought to an even surface of the proper shape): The floor, which consists of pine planks of uniform thickness—generally two inches—is laid lengthwise of the street, covering the entire ground. These planks are covered with tar by means of a broom; they are then turned and tarred on the other side. Then blocks of the same wood six inches long, three inches thick, and eight or ten inches in width, are set lengthwise across the street in rows, each block being well coated with tar before being placed. As each row of blocks is laid, a pine strip six or eight feet long, three inches wide and three-quarters of an inch thick is placed against and nailed to the blocks; then another row of blocks is laid, and so on. This leaves a groove between each row of blocks which is filled with a mixture of heated asphaltum or tar and clean gravel, which while hot is rammed with an iron of suitable thickness to fill the groove. The whole surface is then covered with coal tar, over which is spread a coating of coarse sand or fine gravel.

The special committee appointed by the Board of Supervisors when speaking of this pavement in its report, says: "The Nicholson has proved a failure, principally from the rapid dry rotting of the fir blocks used." "On Bush street, between Powell and Mason, the Nicholson was laid in 1867, and long since it became evident that it must prove an unsatisfactory and expensive pavement. It has been several times repaired, and now," (in 1870), "requires a liberal outlay of the people's money, with the prospect of abandonment ere long." They also found that this pavement swelled during the rainy season to such an extent, as to cause great damage to surrounding improvements. They allowed four years as the limit of its life.

STOW FOUNDATION PAVEMENT.

This pavement when laid is, in appearance, almost identical with the Nicholson, but in fact differs considerably therefrom. The main differences consist in this pavement having no foundation beyond the preparation of the earth into a regular and smooth surface; the blocks being laid directly thereon with the fibers of the wood vertical, and that between each row of blocks, wedges made of boards, about six inches in length and nearly the width of the blocks, are driven some inches below them (the blocks). The remainder of the construction is similar to that of the Nicholson; the space between the blocks being filled with gravel and asphaltum or tar, and the whole surface covered in the same manner as the previously described pavement.

The committee, before referred to, preferred this pavement to the Nicholson, but only estimated its life at from five to six years. The following, taken from its report, may be of interest: "The Stow on Battery, between Vallejo and Green streets, was laid in January, 1869, and has been subjected to the excessively heavy transportation incident to Battery street and the North Point Docks and Warehouses. Your committee has closely watched for evidences of weakness in this pavement at this point, and has failed to discover any under the heaviest loaded trucks." But in spite of this account the pavement has passed into disuse, and we can only judge that a more extended experience showed similar or as great defects as were found in the Nicholson.

ORDINARY PLANK PAVEMENT.

It is hardly necessary to give a detailed description of this class of pavement, as it is familiar to all, having been but recently in general use in our city and in many localities still appearing. It consists of a framework of scantling, upon which redwood planks are nailed. There is little or no pretense at any previous preparation of the surface, or any exact method of construction. The troubles with this pavement are too well known, and its abandonment of too recent date to need further remarks.

WILLIAMS COMPOSITE PAVEMENT.

This pavement is one with a foundation of concrete (Williams called it stone) and a wearing surface of wood, combined by a mixture of asphaltum, and covered by a coating of the same mixed with sand. It was claimed by the inventor that wood pavements perished more from decay at base than from the wear on the surface, and that as the reverse was the case with stone pavements, he had succeeded in solving this great problem. This pavement was only tried in one or two localities, notably New Montgomery street, in front of the Palace Hotel, and on McAllister street. The failure can only be supposed from the abandonment.

COMPOSITE LIMESTONE AND ASPHALT PAVEMENT.

This is a patent pavement just being brought before the notice of the public. It consists of blocks (or bricks) compressed by machinery, composed of an admixture of limestone and Trinidad asphalt; these blocks are laid in rows upon the ground prepared for them; they are then compressed, bringing them to an even and compact surface. A specimen of this pavement can be seen on O'Farrell, at its intersection with Grant Ave. and Market street, which seems to have stood its few years' use tolerably well. It is claimed by the inventors of this pavement, that it can be laid as cheaply as the ordinary bituminous rock.

The remaining pavements are those that are at present being used throughout the city, viz: Cobble, basalt block and bituminous rock. Description of the methods of laying these is unnecessary at the present stage of this paper, as the reference (which is proposed) to the specifications in use by the city, will clearly bring out all points connected therewith.

PAVING SPECIFICATIONS, ETC.

Up to January, 1890, the cobble was about the only class of pavement having any permanent specifications or regulations governing its construction. These regulations simply provided that the stones should be selected, that they should not exceed nine inches, or be less than seven inches in length; that they should be set upright, smaller end down, close together in a bed of good, clean sand, not less than twelve inches deep; that they should be well rammed three times, well watered before the last ramming; then after being swept, the surface should be covered two inches deep with beach gravel or finely broken rock. For the other classes of pavement specifications were made as required.

In June, 1890, the then Board of Supervisors passed an order adopting specifications for all classes of street work, excepting sewers. In these specifications are included among other classes of work, macadamizing, cobble, basalt blocks and bituminous rock pavements.

The first mentioned (macadamizing) it is not thought advisable to notice, as it has never been considered by the author as a pavement. The specifications for cobble are identical with those previously mentioned, thus leaving only the basalt block and bituminous rock specifications to be noticed.

BASALT BLOCK PAVEMENT.

The specifications for this class of work adopted in January, 1890, provide that the roadway shall be excavated fourteen inches below the grade. A bed of concrete is then to be laid six inches in depth, and in the proportions of 1, 2 and 7 of Portland cement, sand and broken stone. Upon this foundation, and bedded in sand, the basalt blocks are set; the regulation size being, depth from seven to eight inches, thickness from three and three-quarters to four and one-half inches, length not less than eight inches. A light coat of beach gravel or finely broken rock is then to be spread over the entire surface, and lightly rammed; the work is then to be inspected by the superintendent, after which more gravel or finely-broken rock is spread over the surface and broomed in, after which it is to be thoroughly rammed, and gravel or finely broken rock spread an inch deep over the entire area.

BITUMINOUS ROCK PAVEMENT.

The specifications adopted in 1890 for this class of pavement provide that the roadway shall be excavated eight inches below the grade. Then a concrete foundation of six inches in depth shall be laid, said concrete to be composed of 1, 2 and 7 parts respectively of Portland cement, clean sand and hard rock. On this foundation shall be laid a covering of bituminous rock two inches in depth. They also provide that this rock shall contain

DESIGN FOR MUNICIPAL BUILDINGS.

MONTREAL BOARD OF TRADE BUILDING COMPETITION.
DESIGN SUBMITTED BY MR. J. RAWSON GARDINER, MONTREAL.

14 per cent. of bituminous matter. The preparation of this material shall be by means of hot air, hot water or other process, but it shall not be reduced by any process liable to burn it.

In February, 1891, the present Board of Supervisors amended these in so much as to leave out the concrete foundation under the blocks. The dimensions of the blocks were slightly changed to the following width: not less than three and three-quarters or more than four and one-half inches, depth not less than seven or more than seven and one-half inches. The remainder of the specifications were left the same as formerly.

This order embodying these specifications was not signed by the Mayor, but after several consultations held in his office between interested parties and experts, he returned the order, suggesting numerous changes to be made in the specifications for bituminous rock.

The principal suggestions were an increase of one inch in depth of original excavation;

The removal of all decomposed matter and debris;

The testing of the cement;

The restrictions placed upon the quality of stone to be used;

The moistening of the surface of the concrete foundation for seven days;

The increasing of the bituminous rock covering to three inches.

I have hastily reviewed about all the important steps that have been taken in the matter of street paving up to the present time, and it now only remains for me to make the suggestions that seem proper and to draw the conclusions to which the known facts seem to point.

CONCLUSION AND SUGGESTIONS.

As said before in this paper, we in San Francisco have had many expensive and futile experiments in street paving, and it would seem about time that some plan should be adopted for such work by the proper authorities that will insure an economic and durable roadway. There is no doubt but that what would be advisable for one section of our city, would be entirely unfit for others; therefore we have to consider more than one class of pavement. But before any pavement can succeed, it would appear to the author that a proper cross-section should be adopted for the streets which would be based upon the following rules: The crown of the center of the roadway should in no case be much, if any, higher than the curb of the sidewalk and sloping on either side of this center line toward said sidewalk with a curving and ever increasing slope, and regular formed gutter-ways should be planned, sufficient in area to carry off all waters liable to fall on the surface. In considering a roadway, it must strike the most casual observer that there are two qualities (apparently opposed to each other) requisite for the formation of a good pavement; these are solidity or rigidity, for resistance to heavy loads and constant traffic, and elasticity, for the preservation of vehicles and stock.

Until these qualities are combined in their proper proportions no perfect pavement can be obtained. Allowing this as an axiom it may then be assumed that where the wearing surface is rigid, the foundation or bed should be more or less elastic and, conversely, that where the wearing surface is elastic the foundation or bed should be rigid in proportion.

In determining the sections of our city in which either a rigid or elastic wearing surface should govern, it is necessary to consider the amount, weight and rapidity of the traffic prevalent in such sections.

In those portions of our city having a great amount of heavy and slow traffic, such as trucking and general business hauling, the rigid wearing surface is necessary. In our residential districts, where there is little except pleasure driving, the smooth and elastic surface would seem to be the best. But here again comes in another feature, namely, the amount of grade allowable on such smooth surface. It appears to me that six or eight per cent. grades would be the greatest advisable in this climate for such surfaces as bituminous rock or asphaltum; although Eastern experts fix the maximum at considerably less. As a great portion of our residence districts have grades greatly in excess of the above, it would seem that some special class of pavement should be adopted for such cases. This would, however, open up an almost endless field of discussion. I will therefore (in the present paper) simply confine myself to a consideration of the two classes mentioned above.

Of the classes of pavement having rigid wearing surfaces the most prominent are granite and basalt blocks. The former of these is greatly preferred by the author, as in wearing it is not likely to assume a smooth and slippery surface. But the proper rock of this kind is so scarce in this neighborhood that the expense of laying such a pavement would be very great. We can, however, consider these two wearing surfaces as identical with regard to their construction, so, for convenience they will both be considered as basalt, this being the one used with us on account of the expense incurred.

Taking, therefore, basalt blocks as our wearing surface, the author wishes to submit to the Society his suggestions as to the size of blocks and the proper methods of laying the same.

The size of blocks should be as near as practicable: length, seven inches; width, four inches, and depth six inches. They should have rectangular faces, and should be well dressed on all sides; a variation or projection of half an inch is the greatest that should be allowed.

In considering a foundation for this pavement, we have three classes of ground upon which to build, viz: that which has been filled in and is, therefore, liable to settlement; sand, which is shifting and unstable; earth of clay and rock.

Upon the filled-in ground I would suggest two methods: first, to excavate the ground to a depth of eighteen inches, such surface to be brought by rolling or tamping to a curved plane parallel with the proposed finished face; over and in contact with this to be laid a bed of concrete eight inches in thickness, whose tamped and completed surface shall also be parallel to the finished surface of the proposed pavement. Upon this bed of concrete, after it is well set, shall be spread four inches of fine sand, on which the blocks shall be laid at right angles to the street, in courses, each course to break longitudinal joints with the one preceding; fine gravel or coarse sand will then be swept over the surface into the joints, the blocks to be driven to the proper finished contour; after this has been thoroughly done, coal tar shall be poured into all the joints, then a thin layer of gravel should be spread over the entire surface.

The second method spoken of is the substitution of planking for the bed of concrete; in other respects the process and material would be practically the same In places where the foundation is sand, I would excavate to the depth of twenty inches, roll the bed thoroughly, fill in (in place of concrete) with good clayey earth to a depth of twelve inches, more or less, as required to make a surface, which, after being thoroughly watered, rolled and rammed, shall be ten inches below the proposed surface of the roadway; the remainder of the work to be finished as described above.

Where we encounter rock upon, or too near the surface, the roadway should be excavated to a depth of some twelve inches, all inequalities carefully filled in with concrete; then the surface shall be filled in with a bed of good sized gravel, said bed to be three inches deep when rolled; over this spread a bed of sand, also three inches deep when rolled, the setting of the blocks and the remaining processes to be as before.

Of the classes of pavements having what we have termed elastic wearing surfaces, those most in use in the Eastern States are a composition of asphalt with sand and lime (the Trinidad and Cuban asphalts being the ones generally preferred). In Paris they use an asphalt which in its natural state contains a large percentage of lime. In California we use what is known as bituminous rock; this is a natural product, and is mostly composed of sand and volatile oils. It has, however, a small percentage of bituminous matter in its composition. This last mentioned material, owing to its plastic qualities, makes by no means so durable or satisfactory a pavement as the preceding ones. But however these substances may differ in their component parts, the necessary foundations and the methods of laying them are the same, with the exception that where laid in sheets, Trinidad or Cuban asphalt should be from two to three inches in depth; where, as in the case of bituminous rock, nowhere should its depth exceed two inches. The reason for this is due to the plastic qualities of this material; for where exposed to the softening influence of the sun, the greater the depth of any plastic body, the more sensitive it is to unequal compression upon its surface. Asphalt pavements are laid in two forms, sheeting and blocks. These we will consider separately.

Asphalt sheeting should be laid between two or three inches in thickness for Trinidad or Cuban asphalt, and from one and one-half to two inches for bituminous rock, with a base of ce-

ment concrete six inches in depth. Previous to the laying of the concrete-bed, the roadway should be properly prepared as described in the suggestions for other kinds of pavement.

The concrete should then be put in and compressed to a surface exactly parallel to the proposed finished surface of the street, and should be properly covered and protected until set.

Upon this should be spread a thin layer of pure asphalt, and then the wearing surface proper, which should be thoroughly compressed, after which a small quantity of cement should be swept over it, and the surface well rolled.

The gutter-ways should be formed of selected stone blocks laid as headers, which shall form a broken line toothing into the asphalt; the joints of such blocks to be filled with cement or coal tar. Where the street is traversed by a car track, a strip of stone blocks should be laid next to said tract, after the same manner as those forming the gutter-way.

In the classes of asphalt blocks generally used I have little confidence, as they are mostly covered by patents; and so much depends upon the care with which they are manufactured It has been held in some of the Eastern cities where these blocks have been used, that their failure is attributable to experiments in different qualities of asphalt, even when the chemical analysis of these asphalts were almost identical with the best known material. It would seem to the author, however, that there must have been some fault in the method of manufacture.

I understand that it is proposed in this city to lay block asphalt without a foundation. This I think exceedingly ill advised, for if it has any qualities not belonging to other pavements which would render a foundation unnecessary, I fail to see them.

In conclusion, I will state that I have now hurriedly reviewed this subject of street paving, not to its fullest capacity by any means, but to such an extent, I hope, as will bring out such a discussion as the Society may think proper.

I have attempted to show the futility of experimenting with patent pavements. Also to narrow down the advisable classes of pavement for use in this city to two, viz: the granite block for the portions of the city subject to heavy traffic, and the asphalt for those subject to the lighter classes of vehicle. It, therefore, remains only to ask of the Society such comment as its individual members may see fit to make.

An extended discussion followed, which is too lengthy for our columns.

NOTES & COMMENTS.

Europeans and their descendants love retired home life, and we should not neglect the means whereby those homes may be made beautiful. Happy home life presents a more beautiful picture than any public hall.

The artist like the savage goes direct to Nature for his ideas and inspirations.

"Tapestry weaving is older than history, and the tapestry loom, like the ancient potter's wheel, has suffered scarce any alteration since the remotest times."

"Hand-painted interior decorations will always have an excellence of its own unattainable by any machine work, and is therefore more suitable for friezes."

"Nothing is finally successful which does not satisfy the mind as well as the eye."

"In Europe, in the 15th century, the great strength of art lay in its intense devotion to the noble, whether in nature or religion. Men painted from the heart those subjects in which their hearts were absorbed; but by-and-by obstacles intervened in the progress of art, and the energies of the latter were diverted into a wrong channel, bringing on general European degeneration."

On the roof of the Club house of the Manhattan Athletic Club, there is a skating rink covering a surface of about five thousand square feet. The ice is formed four inches in thickness, and the building was designed with the strength necessary to carry this load.

As the roof is over a hundred feet above the street, a fine view is had during the day, and the sport can be enjoyed at night as well, by the light from electric lamps.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute Architects, meets second Friday of each month at Academy of Sciences Building.

Seth Babson, Pres. W. J. Cuthbertson, Vice-Pres.
Oliver Everett, Sec. John M. Curtis, Treas.

Technical Society of the Pacific Coast; meets first Friday of each month at Academy of Sciences Building.

John Richards Pres. L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evening of each month at the Academy of Sciences Building.

W. C. Quimby, Pres. O. Brooks, Vice-Pres.
C. E. Purington, Sec. W. C. Crosett, Treas.

Builders' Association of California, meets every Monday at 330 Pine Street, Rooms 9–12, at 1.30 P. M.

S. H. Kent, Pres. P. G. Martin, Vice-Pres.
A. Jackson, Sec'y. Wm. B. Kreger, Treas.
L. A. Larsen, Clerk and Financial Sec'y.

Master Painters' Association of the Pacific Coast.
E. M. Gallagher, Pres. H. G. Jarman, Sec.

THE regular monthly meeting of the San Francisco Chapter of the American Institute of Architects, was held Friday evening, August 14, 1891.

Mr. Percy of the trustees, reported that arrangements would probably be made to invite the Chapter to visit, some time in the near future, the works of the Leland Stanford, Jr., University now in progress at Palo Alto.

Nominations of officers for the coming term were made. The election will be held at the annual meeting in the month of September.

A donation was received from the California Architectural Publishing Company of a bound volume of the California Architect of 1890, and from the Technical Society of the Pacific Coast, a Journal of the Transactions of that Society for the first six months of the present year.

THE California Electrical Society held their regular meeting the 17th inst., a full attendance being present. Prof. Keith continued his lecture on the evolution of the Electric Light. The question whether Ladies were eligible for membership was decided in the affirmative by a unanimous vote, and that they would be subject to the rules of the society the same as other members. Any information in regard to the Electrical Society can be had on application to the officers and members, or at the office of this Journal.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways

The double page illustration of a design for Municipal Building is from Messrs. Mooser & Cuthbertson, architects of this city.

The Old Mission Church of San Luis Obispo.

Montreal Board of Trade Building from design by Mr. J. Rawson Gardener, architect of Montreal, reproduced by permission from the Canadian architect.

The cut L is from the terra cotta capitals from the Museum of Natural History at Kensington, England.

LEGAL DECISIONS.

Affidavit and Time for Lien.—Where the statutes furnish a form of affidavit for mechanics' and material-men's liens. It must be followed in all matters of substance though the exact language need not be used. If it is required that a lien claim be filed within a specified time after the material is furnished it will not make any difference that a portion of it cost more than the rest, if the materials are all of the same kind and quantity, purchased for and used in the completion of the same building contract. So far as concerns the construction and application of the lien law, the furnishing of all the materials in such a case may properly be deemed to have been substantially continuous and indistinguishable, rather than as independent transactions.

St. P. & M. Brick Co. v. Stout, Supreme Court of Minnesota, 47 N. W. Rep. 974.

Liability of Sureties on Building Contract.—The liability of a surety on a contractors bond is not affected by alterations in the plans, where the original contract provides that the owner may make such alterations as they desire, the same to be agreed upon in writing. Nor is his liability affected by the allowance to the contractor of extra compensation for work called for by the plans and specifications but omitted from the original bid. While any material change in the relation of the parties from that contemplated when the bond was executed, would, without full notice to the surety invalidate the bond, changes of minor details will not have this effect.

Moore v. Fountain, Supreme Court of Mississippi, 8 South, Rep. 509. (123 C)

Negligence with Reference to Elevator.—A Workman was injured in using an elevator in a building in course of construction. There was an elevator completed for use, but when it was out of repair, as was sometimes the case, an uncompleted elevator equipped with a temporary floor was used. It was while using the latter that the accident occurred. The owners of the building are charged with the notice of the fact that it was necessary, from time to time to use the uncompleted, elevator, and are responsible for permitting it to be used without putting it in proper condition.

Ferris v. Aldrich, Supreme Court of New York, 12 N. Y., Supp. 482. (103-C)

Entitled to Protection of Mechanic's Lien.—A statement showing claimants were lumber merchants and that the materials charged consisted of lumber used in building a house, being made out in the usual manner of bills and accounts of lumber is sufficient, for a mechanic's lien. If the original contract was for the materials for the house generally the lien would cover "extras" ordered subsequently. It is not necessary to show an assignment of the account from one person or firm to another where evidence is furnished that the one claiming the lien is successor to the one originally entitled to it. The holder of a mortgage who is a non-resident of the state, cannot when made a party to the suit, plead that time has barred the action as to him. Neither will the borrowing of money by the owner of the soil to pay for it give the holder of a mortgage for the money any right over the persons entitled to the mechanic's lien, that being first acquired.

Wetmore v. Marsh, Supreme Court of Iowa, 47 N. W. (61-C) 51.

BUSINESS MOSAICS.

Cabot's creosote shingle stains have gained in popularity on account of their superior merit as a stain and preservative. The long periods of wet or dry weather being very trying to the ordinary paints, a durable color preservative becomes an artistic necessity.

The Parafine Paint Company has during the past year coated 20,000 piles with their patent P. & B. Teredo-proof preparation.

The office of the California Sash Balance Company has been removed from the Chronicle Building to the business portion of the city, No. 421 California Street.

CITY BUILDING NEWS.

Alabama near 23rd. Alterations; owner, Mary Schulz; architect, M. J. Welsh; contractor, I. Wells; surety, $3 5; cost, $1,300; signed, Aug. 1st.; filed, Aug. 3rd; payments, $325, building ready for plastering; $325, brown mortared; $325, completed; $325, 35 days.

Baker near Washington. To build; owner, Mary E. Dunne; architects, Mooser & Cuthbertson; contract r John Bruce; surety, $1,200; cost, $4,560; signed, June 30; filed, July 20; payments, $855, entire frame up; $855, brown mortared; $855, priming coat of paint on; $855, completed; $1,140, 35 days.

Bannan, bet. Dupont and Stockton. Mill work; owner, K. C. Gardner; architects, Townsend and Wyneken; contractors, N. Fashie & Co.; cost, $1,000; signed, July 27; filed, July 29; payments, $100 on 1st payment of original contract; $450, 2nd; $250, 3rd; $200, two weeks after completion.

Belcher, bet Ridley and 14th. To build; owner, Louis Barnett; architect, Louis Barnett; contractor, Francis M. Schweitzer; cost, $2,660; signed, July 20; filed, July 22; payments, $600, frame up and building enclosed; $600, brown mortared; $700, outside and inside window work completed; $760, 35 days.

Broadway and Gough. Alterations; owner, D. F. Walker; architects, Smith & Freeman; contractor, F. W. Kern; cost, $1,640; signed, July 1; filed, July 9; payments, $1,500, basement studded and completed; $1,800, ready for plastering; $180, completed; $1,160, 35 days.

Broderick near Fulton. To build; owner, Margaret McElroy; architect, John J. Clark; contractors, J. Sandy & Gillogley; surety, $1,000; cost, $4,295; signed, July 7; filed, July 15; payments, $1,000, frame up; $1,000, brown mortared; $1,000, completed; balance, 35 days.

Buchanan St., Nos. 708, 710. Alterations; owner, Annie Buchanan; architect, Wm. H. Armitage; contractor, S. F. Greene; cost, $1,357; signed, July 15; filed, July 15; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Bush St., No. 905. Alterations; owner, Mrs. C. B. Gregory; architect, Chas. I. Havens; contractor, Jas J. O'Brien; cost, $910; signed, July 7; filed, July 31; payments, $910, when entire work is finished, completed and accepted.

Bush St., No. 1719. Carpenter work, etc.; owner, D. Samuels; architect, P. R. Schmidt; contractor, Chas. E. Dunshee; cost, $1,660; signed, July 29; filed, July 30; payments, 75 per cent as work progresses; 25 per cent., 35 days.

Bush St., Nos. 2508, 2510. Alterations; owners, S. Goldstein & Cohn; architect, N. A. Comstock; contractor, Wm. McPhee; surety, $1,000; cost, $3,170; signed, July 14; filed, July 17; payments, $800, building raised and frame up; $800, brown mortar on and rough plumbing done; $770, completed; $800, 35 days.

Bush and Steiner. Brick work, etc.; owner, Rev. J. P. Callaghan; architect, T. J. Welsh; contractors, Butler & McGovern; cost, $15,700; signed, Aug. 5; filed, Aug. 5; payments, 75 per cent. as work progress; 25 per cent., 35 days.

Bush and Steiner. Carpenter and tinning work of towers; owner, Rev. J. P. Callaghan; architect, T. J. Welsh; contractors, John Roberts; cost, $8,480; signed, Aug. 5; filed, Aug. 5; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Bush and Steiner. Plastering; owner, Rev. J. P. Callaghan; architect, T. J. Welsh; contractor, Chas. Dunlop; surety, $1,625; cost, $6,250; signed, Aug. 5; filed, Aug. 5; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Bush and Steiner. Timber for towers; owner, Rev. J. P. Callaghan; architect, T. J. Welsh; contractors, Mahony Bros.; cost, $6,250, signed, Aug. 5; filed, Aug. 5; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Bush and Steiner. Wrought iron work; owner, Rev. J. P. Callaghan; architect, T. J. Welsh; contractor, H. Ralston; surety, $920; cost, $3,695; signed, Aug. 5; filed, Aug. 6; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

California, near Sansome. To remove building, etc.; owner, Mutual Life Ins. Co. of N. Y.; architect, Clinton Day; contractor, Jas. E. Whittier; signed July 27; filed July 30; payments, should said contractor fail to perform contract, he is to pay owner $750, but he shall own all building.

California near Sansome. Fencing, piling, etc.; owners, Mutual Life Ins. Co. of N. Y.; architect, Clinton Day; contractor, Jno. P. Sheldon; cost, $800, and $18.50 for each pile driven, capped, etc.; signed, July 27; filed, July 29; payments, $600, when adjacent walls are shored in; 2nd, payment when ½ of proposed piles are driven, 79 per cent of estimated value; 3rd., completed; 4th., 35 days.

Capp and 23d. Mill work; owner, Howard Street Presbyterian Church; architects, Percy & Hamilton; contractor, W. J. Thompson; cost, $4,930; signed, July 14; filed, July 16; payments, first Saturday of each month, 75 per cent. as work progresses; 25 per cent. 35 days.

Castro, near 20th. To build; owner, Mary Withington; contractor, Jas. Campbell; cost, $1,130; signed, July 6; filed, July 6; payments, $1,032.50, frame up and roof sheathed; $1,032.50, brown mortared; $1,032.50, completed; $1,032.50, 35 days.

Church and 17th. Carpenter work, etc.; owner, John Barry; architect, T. J. Welsh; contractor, T. J. Hamilton; surety, $610; cost, $2,440; signed, July 29; filed, July 30; payments, $610, frame up; $610, first coat of plaster; $610, completed; $610, 35 days.

Clay and Laurel. Carpenter work, etc.; owner, Mrs. F. Deuprey; architect, J. C. Newsom; contractor, W. E. Lane; cost, $7,700; signed, July 30; filed, Aug. 3; payments, $1,275, when rough frame is up; $1,500, enclosed; $1,000, brown mortared and rough plumbing done; $1,000 white and last coat of plaster on; $1,000, accepted; $1,925, 35 days.

Clement and 5th Avenue. To build; owner, Richard Wallman; contractor, Fritz Roettger; surety, $3,000; cost, $3,520; signed, July 17; filed, July 18; payments, $660, frame up. $1,090, enclosed and brown mortared; $1,000, completed; $920, 35 days.

Pacific and Montgomery Avenue. Sidewalk; owner, N. Cousin; architects, Mooser & Cuthbertson; contractors, Ransome & Cushing; surety, ——; cost, $2,080; signed, July 14; filed, July 17; payments, $780, beams in place; $780, completed; $520, 35 days.

Page, near Webster. Carpenter work, etc.; owner, Wm. McCracken; architect, W. H. Lillie; contractors, H. M. Kirkwood and Geo. Connor; surety, $1,375; cost, $5,500; signed, July 17; filed, July 22; payments, $825, frame up; $824, enclosed; $825, brown mortared; $825, standing finish on; $825, completed. $1,375, 35 days.

Penna Avenue and Nevada. Carpenter work, etc.; owner, Jeremiah Twomey; architect, Jeremiah Twomey; contractor, Sivert Fossum; surety, ——; cost, $2,187.50; signed; June 25; filed, July 2; payments, $880, frames up and rustic on; $800, brown mortared; $587.50, 35 days.

Pfeiffer, near Dupont. Carpenter work, etc.; owner, Peter Christensen; architect, Andrew Christensen; contractor, A. Christensen; cost, $1,500; signed, July 17; filed, July 20; payments, $375, frame up; $375, brown coat on; $375, completed; $375, 35 days.

Post, Nos. 1706, 1708, 1710. Alterations in rear; owners, F. W. Vale and wife; architects, Townsend & Wyneken; contractor, J. R. Whalen; cost, $1,277; signed, Aug. 3; filed, Aug. 5; payments, whole amount paid when accepted.

Point Lobos Avenue near 12th Avenue. To build; owner, Nellie Craig; architect, A. R. Pfarrer; contractor, R. Pfarrer; cost, $2,800; signed, July 8; filed, July 18; payments, $700, frame up; $700, brown mortared; $700, finish on; $700, 35 days.

Ridley and Elgin Park. Carpenter work, etc., owner, Mrs. J. Lundy; architect T. J. Welsh; contractors, R. Doyle & Son; surety, $1 388; cost, $5,54 ; signed, June 30; filed, July 3; payments, $1,040 25, frame up; $1,040 25, brown mortared; $1,040 25, white coated; $1,040 25, accepted; $1,388, 35 days.

Russ near Folsom. Brickwork, etc.; owner, Catherine Boyer; architect, S. Hatfield; contractor, Jas. A. Shepley; surety, $3,500; cost, $5,680; signed, July 2; filed, July 10; payments, $1,000, frame up and rustic on two sides; $1,100, enclosed and chimneys up; $1,000, windows in and white plastered; $1,160, completed; $1,420, 35 days.

San Jose near 15th. Alterations; owner, Board of Education; architect, Chas. I. Havens; contractor, C. L. Crisman; cost, $7,781; signed, July 15; filed, July 21; payments $1,200, roof raised and outside partitions set; $2,200, hard finished and outside primed; $2,288, completed and accepted; $1,896, 35 days.

Shotwell near 20th. Carpenter work, etc.; owner, J. J. McCormack; contractors, W. A. Griffith & Co.; cost, $3,700; signed, July 3; filed, July 6; payments, $700, frame up; $600, brown mortared chimneys up; $600, mill work done and 1st coat paint on; $800, completed; $1,000, 35 days.

Shotwell, between 24th and 25th. To build; owner, Patrick Donahue; architect, Patrick Donahue; contractor, Wm. Helbing; surety, $2,000; cost, $6,725; signed, July 2; filed, July, 8; payments, $1,600, enclosed and roofed on; $1,600, brown mortared; $1,625, white plastered; $1,150, completed; balance, 35 days.

Sixteenth and Alabama. Carpenter work, etc.; owners, Society for the Prevention of Cruelty to Animals; architects, Townsend & Wyneken; contractor, J. R. Whalen; surety, $1 100; cost, $4,377; signed, July 30; filed, Aug. 3; payments, $800, brickwork up; $700, frame up and chimneys set; $800, enclosed; $977, plumbing done; $1,100, 35 days.

Spear St., Nos. 128, 130. Iron roof, etc.; owner, Henry B. Schindler; architect, Henry B. Schindler; contractor, W. H. Wickersham; cost, $1,200; signed, July 23; filed, July 23; payments, $600, roof on; $300, completed; $300, 35 days.

Spear, between Mission and Howard. Walls, etc; owner, Henry B. Schindler; architect, Henry B. Schindler; contractor, Wald Tarp; cost, $1,500. signed, July 18; filed, Aug. 1; payments, $600, when walls and 1st story completed; $525, brick; work completed; $375, 35 days.

Stockton and Sutter. Carpenter work, etc.; owner, Sam'l Theller; architects, Smith & Freeman; contractor, A. Johnson; cost, $16,955; signed, July 7; filed, July 14; payments, $1,400, 2nd story joists on; $1,700, 4th, on; $2,000, roof completed and tinned; $2,700, ready for plastering; $2,000, panel work completed in four upper floors; $2,600, ready for painter; $916, completed; $1,239, 35 days.

Stockton and Sutter. Painting; owner, Sam'l L. Theller; architects, Smith and Freeman; contractor, G. V. Daniels; cost, $1,567; signed, July —; filed, July 14; payments, $500, when two coats are on; $672, when completed; $395, 35 days.

Stockton and Sutter. Plastering; owner, Sam'l Theller; architects, Smith & Freeman; contractor, Chas. Dunlop; cost, $2,830; signed, July 7; filed, July 14; payments, $1,000, brown mortared; $900, 2nd completed; $290, partitions done and plastering accepted; $720, 35 days.

Stockton and Sutter. Plumbing; owner, Sam'l L. Theller; architects, Smith & Freeman; contractor, Wm. F. Wilson; cost, $1,700; signed, July 8; filed, July 14; payments, $1,500, rough plumbing done; $1,275, completed; $925, 35 days.

Stockton and Sutter. Stone work, etc.; owner, Sam'l Theller; architects, Smith & Freeman; contractor, Crawford Ferris; cost, $22,473; signed, July 7; filed, July 14; payments, $5,000, basement columns set; $2,800, when ready for 2nd story joists; $2,000, ready for 3rd story joists; $2,000, ready for 4th story joists; $2,000, ready for 5th story joists; $1,500, ready for ceiling joists; $500, fire walls topped and completed; $1,034, building completed; $5,619, 35 days.

Stockton and Sutter. Terra Cotta work; owner, Sam'l Theller; architects, Smith & Freeman; contractor, Union Pressed Brick Co.; cost, $3,186; signed, July 8; filed, July 14; payments, $750, terra cotta work is set for lintels; 3rd story windows; $850, when 5th story windows are in; $788, completed; $795, 35 days

Tenth Avenue, near Clement. To build; owner, C. F. Moore; architect, C. F. Moore; contractor, Jas. Campbell; cost, $1,700; signed, July 20; filed, July 22; payments, $637.50, frame up, roof sheathed and brown mortared; $637.50, completed; $425, 35 days.

Treat Avenue, No. 1022. Additions; owner, Thos. Floyd; contractor, T. H. Marshall; cost, $1,435; signed, July 8; filed, July 25; payments, $500, plastering finished; $500, completed; $435, 35 days.

Treat Avenue, near 21st. To build; owner, S. F. Dohmke; contractor, A. Klahn; cost, $3,875; signed, July 14; filed, July 14; payments, $1,000, frame up; $1,000, brown mortared; 1875, building finished; $1,000, 35 days.

Twenty-third and Capp. Brickwork; owner, Howard Street Presbyterian Church; architects, Percy & Hamilton; contractor, Thos. W. Butcher; surety, $2,000; cost, $6,420; signed, July 9; filed, July 14; payments, 75 per cent. as work progresses on first Saturday of each month; 25 per cent. 35 days.

Twenty-third and Capp. Carpenter work; owner, Howard Street Presbyterian Church; architects, Percy & Hamilton; contractor, J. C. Gibson; surety, $5,000; cost, $9,700; signed, July 9; filed, July 14; payments, first Saturday of each month, 75 per cent. as work progresses; 25 per cent. 35 days.

Twenty-third and Capp. Painting; owner, Howard Street Presbyterian Church; architects, Percy & Hamilton; contractor, Paul Agmar; cost, $1,200; signed, July 9; filed, July 14; payments, first Saturday of each month, 75 per cent. as work progresses; 25 per cent. 35 days.

Twenty-third and Capp. Plastering; owner, Howard Street Presbyterian Church; architects, Percy & Hamilton; contractor, D. O'Sullivan; cost, $1,200; signed, July 9; filed, July 14; payments, first Saturday of each month, 75 per cent. as work progresses; 25 per cent. 35 days.

Union between Stockton and Dupont. Carpenter work, etc.; owner, A. Garbini; architects, Townsend & Wyneken; contractor, K. C. Gardner; surety, $2,000; cost, $6500; signed, July 18; filed, July 20; payments, $1500, frame up and chimneys built; $1675, floors laid and building enclosed; $1700, completed; $1625, 35 days.

Vicksburg near Twenty-Third. To build; owner, G. H. Wilson; architect, G. H. Wilson; contractor, Jas. Campbell; cost, $2850; signed, July 6; filed, July 6; payments, $712.50, frame up and roof sheathed; $712.50, brown mortared; $712.50, completed; $712.50, 35 days.

Washington Street, No. 1615. Alterations; owner, A. R. Durbrow; contractor, C. L. Parent, Jr; cost, $1165; signed, June 27; filed, July 13.

To build; owner, Jas. Sullivan; contractor, Chas. Anderson; cost, $3000; signed, July 14; filed, July 16; payments, $750, frame completed; $750, brown coated; $750, building completed; $750, 35 days.

Alameda County.

Beaver Tract, Berkeley. 2-story frame; owner, J. W. Warnick & wife; architect, W. H. Weilbye; contractor, W. H. Weilbye; cost, $1165; signed, July 24; filed, July 25; payments, $1041.25, frame up and roof on; $1041.25, 1st coat plaster on; $1041.25, plastering done; $1041.25, 35 days.

Camden Tract, Oakland. 2-story frame; owner, Jos. M. Harley; architect, Jos. M. Harley; contractor, J. A. Eastman; cost, $1239; signed, July 13; filed, July 14; payments, $500, frame up; $800, completed; $520, 35 days.

Channing Way & Choak St., Berkeley. To build; owner, Mrs. McShane; architects, Estey & Co.; contractor, Fred. J. Maurer; cost, $3975; signed, July 25; filed, July 28; payments, $/4, frame up; $/4, brown mortared; $/4, completed; $/4, 35 days.

Dwight Way, near Audobon St., Berkeley. Cottage; owner, Mrs. E. M. Paget; architects, Polk & Gamble; contractor, R. J. Malone; cost, $2800; signed, July 16; filed, July 17; payments, $600, frame up; $500, ready for lathing; $500, plastering done; $500, completed; $700, 35 days.

Grove St. near 10th. 2-story frame; owner, Mary B. Bartlett; architect & contractor, A. W. Pattiani & Co.; cost, $2600; signed, Aug. 4; filed, Aug. 4; payments, $650, rustic and roof shingles on and chimney built; $650, brown mortared; $550, completed; $650, 35 days.

Hobart & Grove Sts., Oakland. Church; owner, Rev. Thomas McSweeney; architect, Chas. J. Devlin; contractors, Rinaldard Brick Co.; cost, $38,995; signed, July 22; filed, July 22; payments, $5500, ready for floor joists; $8250, ready for sills, etc. $10,000, ready for roof; $7250, completed; $9995, 35 days.

Lot 12. Belleview Tract, Alameda. 2-story dwelling; owner, Mrs. E. A. Pesoli; architect, Geo. A. Bordwell; contractor, J. J. Boyle; cost, $2284; signed, July 16; filed, July 21; payments, $571, frame up; $571, plastering done; $571, completion of house; $571, 35 days.

Louisa St. Berkeley. 2-story frame; owner, Mrs. P. H. Vollmer; architect, W. H. Lillie; contractor, C. W. Mitchell; cost, $2240; signed, Jan. 23; filed, July 27; payments, $550, frame up; $550, brown mortared; $550, completed; $550, 35 days.

Main and Neal Street, Pleasanton. Two-story brick and frame; owner, Druids Hall Association; architect, J. L. Weilbye; contractor, McDonald & Eggleston; cost, $7155; signed, July 23; filed, July 29; payments, $1343, foundations laid, etc.; $1343, roof on, first coat plaster, etc.; $1343, material on ground and second joist in; $1343, completed; $1803, 35 days.

Nell and Park streets, Oakland. Frame building; owner, Mary Suter; architect, Henry Herbst; contractor, Henry Herbst; cost, $1850; signed, July 21; filed, July 22; payments, $462.50, frame up; $462.50, brown mortared; $462.50, completed; $462.50, 35 days.

On road from Oakland to San Jose. Two-story frame; owner, M. W. Dixon; architect, T. J. Welsh; contractor, T. H. Downie; cost, $3700; signed, July 14; filed, July 17; payments, $900, frame up; $900, brown mortared; $900, completed; $1000, 35 days.

Ravenswood near Livermore. To build; owner, C. Buckley; architect, T. J. Welsh; contractor, J. J. Dunn; surety, $1987; cost, $7993; signed, July 30; filed, July 31; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Santa Clara Avenue near Prospect Place, Alameda. One-story frame; owner, Mrs. Lizzie Walker; architect, A. R. Denke; contractor, A. R. Denke; cost, $2357; signed, July 27; filed, July 28; payments, $500, frame up and rustic on; $500, brown mortared; $500, completed; $940, 30 days; $137, 6 mos. after completion.

Thirteenth Ave. near 12th, E. Oakland. To build; owner, T. F. Whelan; architect, H. J. Murr; contractor, H. J. Murr; cost, $2,200; signed, —; filed, Aug. 5; payments, $575, frames up, brick work done, rustic and roof boards on, etc.; $575, brown mortared; $575, completed; $575, 35 days.

Town of Niles. Frame building; owner, John Astrue; architect; Jas. E. Wolfe; contractor, Thos. Downing; cost, $3,700; signed, July, 8; filed, July 11; payments, $600, frame up; $800, brown mortared; $700, white plastered; $675, completed; $925, 35 days.

Twelfth Ave. near 15th, E. Oakland. Gallery for church; owners, Brooklyn Presbyterian Church; architect, Geo. A. Bordwell; contractor, Ingerson & Gore; cost, $2,707; signed, July 22; filed, July 25; payments, $676, frame up and ready for lathing; $675, ready for painting; $675, completed; $676, 35 days.

ELECTRICITY supplies the means, which architects and contractors have neglected, for greatly increasing the economy of building operations.

Manufacturers of dynamos and motors make electric hoists which are reliable and much easier handled than steam hoists; and in all of the larger towns the local electric light and power concerns sell electrical energy from their wires for the purpose of running motors.

An electric hoist is one in which the electric motor replaces the usual steam engine, or hose; or, perhaps, the man at the crank. It requires the minimum of attention. Usually, the electric company furnishes such expert attention as is needed in the person of a man who makes periodical visits to oil and clean.

With the electric hoist there is saved the services of an engineer, and many risks of fire.

We know of but one case in this city where even an attempt has been made to use such a hoist in building; and that was in the erection of the Chronicle building. But the ignorance, disbelief and prejudices of some of the contractors caused its removal before even a test of its capacity.

The public sentiment in relation to the capacities of electric power has changed greatly in the past four years, by reason of the great success of electric motors in running elevators and machinery, as well as street cars and mines and mills. Therefore it would seem that if the electric companies which sell electrical energy would renew their efforts to furnish electric hoists for building purposes, the contractors would be willing to adopt them at rates which would show advantages over those steam, horse, or man hoists.

It is almost needless to speak of the advantages of electrically-operated elevators for permanent passenger and freight uses; for they have been thoroughly demonstrated by several years of success in this and other cities. In these cases the electric motor is used to directly actuate a geared hoist, or indirectly to run a pump to force water to a tank on the roof or against the pressure of an accumulator; from which tank, or accumulator, the water enters the piston, or ram, connected with the elevator cage, at the desired pressure.

Another use for electric power in building is in the various sawing and boring operations of the carpenter and iron-worker on the spot.

Mechanical mixers of mortar and concrete may thus be run; and possibly other procedures may be much expedited by this readily applied power.

THE OLD CHURCH OF MONTEREY AND THE MISSION OF SANT INEZ.

"Tis better to preserve than to destroy."

"Good morning Father Cassinada, we are from Boston, strangers in these parts and have just been examining and admiring your old Mission, and have here(carrying their arms full) a few fragments that we are to take home with us. Our friends in the East will be so interested in seeing some real pieces of stone from the old Missions of California of which we all have heard so much and have learned to appreciate so well." "Certainly ladies, but you have not there enough surely; you have only a few pieces of the mouldings around the tower and some of the carving from the doorway. If you would like to have a piece of the belfry or ornament from the gable I can find you a crow bar in my garden which perhaps will assist you." "No thank you Father we have enough, we have enough."

Easily satisfied, these twin ladies from Boston, satisfied in as much as that they could not carry more. And so whether it be a chip from the cross, a patch from the holy coat, or a few pieces of stone from the old church of Monterey, there seems to be a spirit of appreciation abroad among us that manifests itself in the destroying of the thing admired rather than in the preserving of it in its entirety so that all may enjoy in the beholding. What it is that drives us to do these things it may be hard to determine. Perhaps as in the age of Chivalry, they gave a ring to plight their honor, so in this age of stories of romance that some call lying, we break a fragment off to carry with us as tangible proof of having seen the thing described, something to help authenticate our story; but still more likely let us say, we break the thing admired to keep the piece in happy memory, and as a maiden lays her wedding cake beneath her pillow and dreams of happy love, so do we lay these fragments near us in our waking hours and dream in eastern land, of moonlit skys and mountains of soft blue, all lying tranquil by the western sea. The poet builds his story word by word, and sweet the music of his rithmal tale; but if as sower broadcast o'er the land we strew the words that tell of lonely grief or plighted love sincere; where then the beauty, where the music then. And so the builder rears his thoughts in stone, each stone expressing something of a thought and all the triumph of a human soul; so do not tear them rudely thus apart to place in curio drawer and mantel shelf, but let them still remain till summer suns and winter rains shall crumble all to dust.

This much we ask of those who would destroy by breaking down, but how to tame the vandal that destroys by building up the ruined wall or fallen roof is yet a task more difficult. 'Tis better to preserve than to restore, prevent than cure; but if at any time we are compelled to re-erect, let us do so in a spirit of self abnegation. It is one of the misfortunes that comes to all architects sometime in a life to have to add to, alter, or restore; and although all being fore-warned should be fore-armed against this probability, we find many instances in which a wrong conception seems to prevail as to an architect's duty under such circumstances. During the many years, one might almost say centuries, occupied in the building of some of the Gothic cathedrals different architects were employed from generation to generation till the whole was complete, and thus we find in many cases quite a variety of style yet all are pleasing and harmonious, but we must remember that at the time referred to, these countries had a national architecture as they had also a common religion and although one architect might work 50 years later than his predecessor and have considerable individuality the national style so well expressed the individual that his work was always sympathetic with that which had been done before.

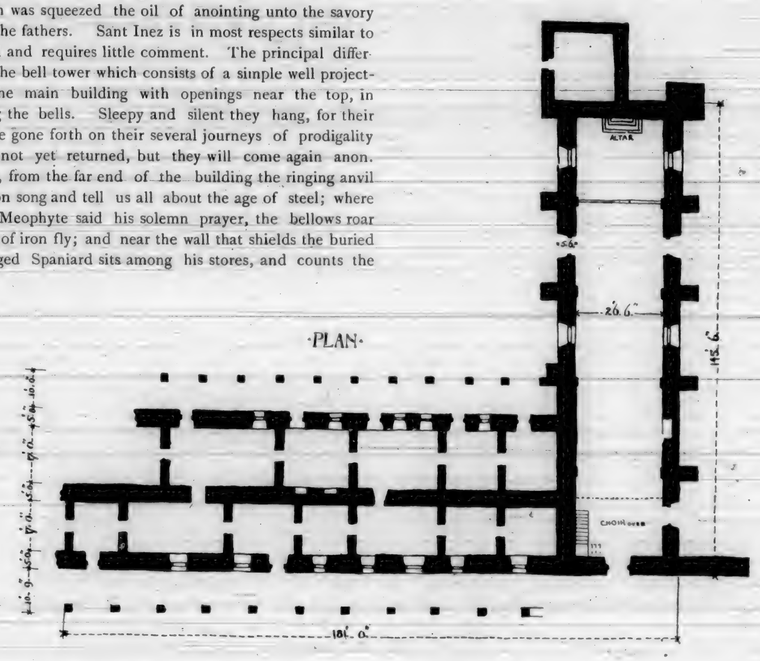
To-day we have no national style of architecture, no common code of ethics, we are in the chaotic stage and are as unstable as the wind that bloweth where it listeth; we copy everything and create nothing. It behoves us therefore in restoring, adding to,or altering, to study carefully what has been done before and to try and preserve to the building throughout the same individuality. Examples of this in harmonious building may be found in a small addition to the Palace Hotel and in the added stories to the Mercantile Library on Pine street. To sacrifice our individuality and simply aim to carry out the design as if under the guidance of the original architect, should be our aim in all such cases. Of course where the addition is large or the alteration is such as to render it independent of the original structure, this argument would not hold. But with the Missions of California both forms of Vandalism have been indulged in, and it is as a remonstrance against further destruction that we offer this protest.

·MISSION· OF ·SANTA NESS·

The church of Monterey given in our sketch, was built for the use of the soldiers stationed at the presidio to guard the missionaries in their work of prosylitizing and colonizing. The walls are of buff colored sandstone and are still in a good state of preservation. The front is probably one of the most architectural of the old Spanish buildings in California. The bell tower still remains as originally designed, despite the tempting offer of the padres crow bar, and we trust that long may the hand of time and the curio gatherers be kept from off it. So also the hand of the architect who sees no architecture but Renaissance no building but Gothic, no orthodoxy but his 'doxy and above all the worker in cement, who would apply his filthy compound to everything as if there were no other material in the wide world so good as his, simply because he is familiar with the one and unfamiliar with the others.

Sant Inez of which is given the plan and perspective view in the text, is situated in one of the most sylvan of California's valleys. Close by, the name of Los Olives proclaims it to be exceedingly fertile and as we drive to the Mission, the stumps of old olive trees with young ones coming up between, reminds us that perhaps a hundred years ago these trees produced the fruit from which was squeezed the oil of anointing unto the savory dishes of the fathers. Sant Inez is in most respects similar to San Miguel and requires little comment. The principal difference is in the bell tower which consists of a simple well projecting from the main building with openings near the top, in which hang the bells. Sleepy and silent they hang, for their spirits have gone forth on their several journeys of prodigality and have not yet returned, but they will come again anon. Meanwhile, from the far end of the building the ringing anvil sings its iron song and tell us all about the age of steel; where once the Meophyte said his solemn prayer, the bellows roar and sparks of iron fly; and near the wall that shields the buried dead, an aged Spaniard sits among his stores, and counts the profit of his daily sale, while from the field where chattering harvester like lightnings flash, quick shears the drooping heads of whitened grain, the laborer returns to eat his mid-day meal, to talk of prices, pools, and freight by rail and think the world encompassed by the hills that close him in, and heaven scarce higher than his shocks of grain, so near the earth his mind.

Tres, 1891.



COLORS AND LIGHT.

A German authority, in referring to the appearance of colors under artificial light, says that in gaslight neutral colors usually appear duller, while bright colors, especially yellow and red, increase in brilliancy. Ruby red and scarlet assume a fiery tone, cherry red is changed to ponceau and the latter into capuchin red; while capuchin red appears orange and orange gold yellow; corn yellow and straw yellow become paler, sulphur yellow has a faded, whitish look, and canary yellow loses its yellow tone and becomes brighter. Salmon rose appears almost white. Purple rose becomes dull, and of all the paler rose colors only solferino becomes brighter. Silver gray becomes brighter and assumes a slight rose cast. It is the only gray which gains in brightness. The blue gray tones, pearl gray mixed with blue or blue gray with pearl, lose both brightness and fire, without, however, becoming unsightly. This is also the case with raven black and all blue shadings.

Pale blue appears gray, sky blue remains blue but loses all lustre, dark blue turns blackish and turquoise becomes dull and watery. Pure yellowish green remains fiery but becomes darker. Apple green changes into emerald. Bluish white becomes unpleasant to the sight and loses its lustre, but yellowish white increases in fire. Pale violet, bluish violet and lilac become opaque and lose all effect. Violet red becomes more fiery, but all other violets lose their tone and appear brown or black.

Maroon, otter marine blue, coffee brown, retain much of their brightness if placed beside each other, and consequently excellent effects may be produced by placing upon paler colors darker shades as coverings, in the form of dots, borders, stripes, or other decorative forms.—*The Hub.*

A RULE AS TO COLOR.

An artist's rule as to color, says a contemporary, is: Choose carefully only those tints of which a duplicate may be found in the hair, the eyes or the complexion. A woman with blue-gray eyes and a thin, neutral-tinted complexion, is never more becomingly dressed than in the blue shades in which gray is mixed, for in these complexions there is a certain delicate blueness. A brunette is never so exquisite as in cream color, for she has reproduced the tinting of her skin in her dress. Put the same dress on a colorless blonde and she will be far from charming, while in gray she would be quite the reverse. The reason is plain—in the blonde's sallowness there are tints of gray, and in the dark woman's pallor there are always yellowish tones, the same as predominate in the cream-colored dress. Women who have rather florid complexions look well in various shades of plum and heliotrope, also certain shades of dove gray, for to a trained eye this color has a tinge of pink which harmonizes with the flesh of the face. Blondes look fairer and younger in dead black, like that of wool goods or velvet, while brunettes require the sheen of satin or gloss of silk in order to wear black to advantage.—*The Hub.*

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

The residence to be erected for Major Mc Laughlin at Santa Cruz is from the design of Mr. Thomas Walsh, architect of this city.

The building is a two story frame with cellar and attic built upon a rubble foundation. The first story contains a large reception hall, parlor, billiard room, den, reception room and dining room. The kitchen is located on line with principal floor and is one story in height, with large ventilator extending through roof in tower shape and is disconnected from dining room by a large pantry containing a fire proof vault and from the front of building by the rear hall a lavatory is placed under main stairs accessible from reception hall, billiard room and west veranda.

The main entrance is located centrally at front of building and a porte-cochere is placed on the east side entering into reception hall. The second story contains five chambers and two bath rooms. The servants' rooms, trunk room etc., are located in attic. The observatory can be entered from the attic and from the upper story of the tower. The building will be thoroughly ventilated and heated with the hot water system.

The light and elegant wire bridge to be erected in Golden Gate Park over a depressed road-way, is from the design of John A. Robling and Sons. The span proper is 60 feet. Total length, 140 feet, width 23 feet, clear between rails. Capacity of bridge, 2450 pounds per lineal foot of bridge.

Cables of galvanized steel wire 2½ inches in diameter saving a breaking strength of 200 tons each.

They are fastened at ends to concrete anchorages in such a manner as to allow for adjustment.

The top of floor will be 17 feet above the driveway and will save a grade of three feet from the center towards the end of bridge.

The floor will consist of 12 inch steel beams suspended from cables by means of iron suspenders, and braced transversely with iron rods.

An iron railing is fastened to these beams rigidly at each side.

The railing will be extraordinarily strong so as to help in distributing concentrated loads, and will be ornamental at the same time. At each end of railing will be an ornamental lamp post.

The bridge is supported by two steel towers, each consisting of eight columns. These latter are framed together in a most substantial manner and the necessary braces and brackets will be of very ornamental design.

The tops of towers will hold suitable flagpoles. The towers will rest on solid concrete piers.

F. A. Koetitze is the engineer.

The old church Monterey is from sketches by Tres, our special correspondent.

The corner in the Dining room is from Clarkson Swain, Architect of this City.

The Ben Lomond Hotel, by S. Newsom Architect, is from a drawing by C. Corrigan.

BOOKS & PERIODICALS

Academy Architecture and Annual Architectural Review for the years 1890 and 1891—7½ by 10 inches—edited by Alex. Koch, architect. Published by special permission and for sale by William Mueller, 695 Broadway, New York, or through this journal. Price, $2.50 per copy. This Review contains a large number (100 or more) reproductions by line or half tone photo-type selections of the most prominent architectural drawings hung at the Royal Academy Exhibition, or the most interesting architectural subjects carried out or designed during the last few years in the principal cities of Europe. The year 1891 is the third issue of this Review, and each issue presents in a concise, neat and applicable form a large amount of matter interesting and valuable to architects, draughtsmen, designers, etc., as well as to students and lovers of art in general. We know of no other book which contains so much useful material to assist the architect compiled in such a condensed form and so easily accessible. This is a work that every architect should have.

The Metal Worker Essays on House Heating. The book contains the principal efforts submitted in the celebrated Metal Worker competitions in house heating. A brief account of these contests is given in the introductory chapter, and the names and addresses of the prize winners are also mentioned.

We are disposed to consider this volume one of the most valuable books extant on house heating, for the reason that it presents the particular ideas of different men who are actively engaged in the work described. It is not a mere theoretical discussion of principles, but instead it contains accounts of how different men would do the same work under like conditions, and also of how the same results may be accomplished by different means. The opportunity of contrasting the several different systems of house heating now in common use which is presented, is not the least important feature of the work. The price is $2.50.

"Hello! Adolphus, what style do you call that new house of yours?"

"I don't know; the architect calls it the Eastern Craze."

"It is not at all beautiful."

"It was not intended to be."

CUPID.

Cupido, a celebrated deity among the ancients, god of love, and love itself. There are different traditions concerning his parents. Cicero mentions three Cupids; one, son of Mercury and Venus; another, son of Mercury and Diana; and the third, of Mars and Venus. Plato mentions two; Hesiod, the most ancient theogonist, speaks only of one, who as he says, was produced at the same time as Chaos and the earth. There are, according to the more received opinions, two Cupids, one of whom is a lively ingenious youth, son of Jupiter and Venus; whilst the other, son of Nox and Erebus, is distinguished by his debauchery and riotous disposition. Cupid is represented as a winged infant, naked, armed with a bow and a quiver full of arrows. On gems, and all other pieces of antiquity, he is represented as amusing himself with some childish diversion. Sometimes he appears driving a hoop, throwing a quoit, playing with a nymph, catching a butterfly, or trying to burn with a torch; at other times he plays upon a horn before his mother, or closely embraces a swan, or with one foot raised in the air, he, in a musing posture, seems to meditate some trick. Sometimes, like a conqueror, he marches triumphantly, with a helmet on his head, a spear on his shoulder, and a buckler on his arm, intimating that even Mars himself owns the superiority of love. His power was generally known by his riding on the back of a lion, or on a dolphin, or breaking to pieces the thunderbolts of Jupiter.

Among the ancients he was worshipped with the same solemnity as his mother Venus, and as his influence was extended over the heavens, the sea and the earth, and even in the empire of the dead, his divinity was universally acknowledged, and vows, prayers and sacrifices were daily offered to him. According to some accounts, the union of Cupid with Chaos gave birth to men, and all the animals that inhabit the earth, and even the gods themselves were offsprings of love, before the foundation of the world. Cupid, like the rest of the gods, assumed different shapes; and we find him in the Æneid putting on, at the request of his mother, the form of Ascanius; and going to Dido's court, where he inspired the queen with love.

NOTES & COMMENTS.

We are indebted to the Pacific Lumberman, and Electrician for the following article which is so much to the point that we reproduce it here:

The *Electrical Review* says the word "electric" is perverted to base uses. "To the uninitiated, the *hoi pollio*, this word carries a world of mysterious, subtle and powerful meaning. We see extensively advertised the merits of electric hair-curlers, electric soap, electric tooth brushes, electric knife sharpeners, and hundreds of others. This is a swindling prostitution of a noble word, to help the sale of articles not connected in any manner with anything electric. The cure for this lies in the education of the public in matters electrical, so that they may know of their own knowledge what to trust, and what to avoid, when they see or read about anything 'electric.'"

We remember a year or two ago, when the California Electric Society was being organized, a notice was put in the different dailies, asking those interested in electrical matters to meet at a certain hall. When the evening came the hall was well filled, but many present looked like cranks that had made their escape from some asylum. They turned out to be "electric doctors," "Electricians," as they called themselves, who had been attracted by the word electrical.

There is another class of men that misuse the word. They are the bell-hangers who advertise themselves as "Electricians."

And lastly we have the men who, having oiled a dynamo for a few months, come out as full fledged "Electrical Engineers" and "Experts."

It is unfortunate that such a good word should be put to such base uses, but so long as the world is filled with fools who believe what they hear, but do not understand, the evil will go on unchecked.

A CITY DWELLER'S WISH.

I love the leaf of the old oak tree,
I love the gum of the spruce,
I love the bark of the hickory,
And I love the maple's juice.

On the walnut's grain I fondly dote,
On the cherry's fruit I'd dine,
And I love to lie in a narrow boat,
And scent the odor of pine.

Ah, me! how I wish some power grand
Would invent some single tree
With all these points well developed, and
Would send that tree to me.

I'd plant it deep in the jardiniere
That stands in this flat of mine;
I'd give it the sweetest, tenderest care,
And water its roots with wine.

—*John Hendrick Bangs, in Harpers.*

The Odd Fellows of Chicago are inspired with the noble ambition to paralyze the foreign visitors to the World's Fair with the biggest and most hideous office building in the world. So they have laid their plans for the construction of what they call a "Temple," in the form of a tobacco warehouse with a sugar refinery and three State Prisons on top of it, the whole surmounted by an insane asylum and capped with a factory chimney with windows in it and a church steeple on top. The entire delirium is to be thirty-four stories high, and the peak of the steeple is to be 556 feet above the ground—just a foot higher, it will be observed, than the Washington Monument. If it were a foot lower the Chicago Odd Fellows would feel that they had lived in vain. When foreigners witness this triumph of American taste they will stop asking why we put a duty on works of art.

San Francisco News Letter.

The new Swimming Baths at Sacramento have been opened. The scheme has been brought to final completion by an association composed of public-spirited residents. The *Sacramento Union* has worked arduously to enlist public enterprise in the work, with the result that the city of Sacramento now has the most complete swimming bath on the Coast. This must be highly gratifying to the *Union*. Many of the interior towns will, in the future, profit by the articles that have heretofore appeared in the columns of that paper on the subject of swimming baths.

The woods chiefly used by the Greeks and Romans were the cedar, ash, oak, yew, lotus, citron and ebony.

There is nothing like experimental facts; they are irresistible when properly conducted, and outweigh mere theories.

Mr. Lovell has entered into a co-partnership with Mr. J. M. Wood. They are the architects for the new theatre at Stockton. Mr. Wood is well and favorably known on this Coast, he having designed the California Theatre in this city, and during the past and present season designed and superintended the extensive alterations of the Palace Hotel.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute Architects, meets second Friday of each month at Academy of Sciences Building.

Geo. H. Sanders, Pres. Oliver Everett, Vice-Pres.
Geo. A. Boardwell, Sec. John M. Curtis, Treas.

Technical Society of the Pacific Coast, meets first Friday of each month at Academy of Sciences Building.

John Richards, Pres. L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evening of each month at the Academy of Sciences Building.

W. C. Quimby, Pres. O. Brooks, Vice-Pres.
C. E. Purington, Sec. W. C. Crosett, Treas.

Builders' Association of California, meets every Monday at 330 Pine Street, Rooms 9–12, at 1.30 P. M.

S. H. Kent, Pres. E. C. Worden, Vice-Pres.
Ira Fancher, Sec'y. Wm. B. Kreger, Treas.
L. A. Larsen, Clerk and Financial Sec'y.

Master Painters' Association of the Pacific Coast.
E. M. Gallagher, Pres. H. G. Jarman, Sec.

THE regular monthly meeting of the San Francisco Chapter of the American Institute of Architects was held Friday evening, Sept. 11th. Reports for the past year were received from the officers. These reports showed a marked increase of the funds in bank and in the hands of the treasurer. The election of officers resulted in the choice of Geo. H. Sanders, President; Oliver Everett, Vice-President; Geo. A. Boardwell, Secretary, and John M. Curtis, Treasurer, (re-elected.) For Trustees, G. W. Percy, W. J. Cuthbertson, John Wright, H. T. Bestor and Seth Babson. The new officers were installed in their regular places. If the Chapter had some more accessible hall for meetings than at present, there appears no reason why the coming year should not be an active and interesting one for the association.

Lucol as a paint oil has lately come into the market as an entirely new invention calculated to supersede the old linseed oil. Professor A. W. Jackson, Vice-president of the American Lucol Company, at various meetings addressed the Chapter of Architects, the Technical Society, and the Master Painters of this city on the merits and advantages of the new oil. The principal points of advantage in the use of Lucol is summed up in the following notes from the addresses before the societies.

Mr. Jackson stated that Lucol was not introduced as an "adulterant" for linseed, neither was it "just as good," but in all respects better, and that where linseed oil should be used to reduce the Lucol, the linseed oil would occupy the position of an adulterant to the extent of the inferior oil used.

The professor mentioned some twenty or more points of superiority that Lucol possessed over linseed oil as a paint oil.

1st. Color—good and clear.

2d. Smell—not disagreeable, but has the odor of the gum and whatever solvent may be used.

3d. Permanence for the gum, which has been tested for some five years.

4th. Body—good; the gum gives the body, which is dissolved in a volatile solvent, and can be made thick or thin by grading the quantity of each.

5th. Dries quick or slow. By the use of certain light solvents, it can be made to dry quickly, when, if the heavier solvents are used, it becomes a slow dryer. As prepared at the factory, the solvent is graded to the required density to form the drying qualities about the same as linseed oil.

6th. Holding up quality. The body holds the pigment throughout the whole drying process.

7th. Bearing out qualities, viz: Not to sink into the wood, leaving the pigment without a binding material. With this material the solvent may sink into the wood, but the gum retains and holds the pigment in place.

8th. The oil can be made to dry as hard or soft as desired.

9th. The adhering quality of Lucol has proved superior to linseed oil, where painting has been done on adjacent buildings at the same time with both oils.

10th. Thinner. "Turps" or alcohol can be used, but the best thinner to use is the manufactured or prepared oil for this purpose. Petroleum properly distilled, such, for instance, as the best grades of lamp oil, do not deteriorate the Lucol oil, except so far as it thins the oil; therefore it carries less gum per square foot of surface covered. Linseed oil can be used as a thinner if desired.

11th. Effect on pigments. It does not affect the tints of the most delicate colors, and will readily mix with white lead, zinc, or any other pigment.

12th. Gloss—It holds its gloss remarkably well when used at the proper degree of thickness. When much reduced the gloss disappears proportionately within certain limits. From fifteen to twenty per cent. of thinner can be used without diminishing the gloss, but thirty-three per cent. gives an egg-shell gloss, while forty per cent. "flats" it entirely.

13th. Retains the brightness of the tints for a longer time than when linseed oil is used.

14th Quantity of pigment to the gallon of oil is less than other oils, for the reason that the gum of the Lucol being left on the surface, it holds the pigment more in mass, the density being thereby increased.

15th. Freedom in spreading. Where the pigment is mixed in the same proportion of pigment to oil as is usual for linseed oil the Lucol works a little tough, this can be remedied by the addition of the proper thinner.

16th. Blisters less than linseed oil. It has in itself no blistering qualities. Lucol dries from the bottom outward, while linseed oil dries from the outside, forming a skin subject to blisters. It withstands the weather effects of heat and cold without blistering.

17th. Does not crack on account of the elasticity of the gum.

18th. Its washing qualities are of the first order; it behaves differently from linseed oil and is not affected by the use of caustic lyes of the washing solutions.

19th. Wears longer, and does not chalk or peel off; it simply wears out by the natural wear of the elements.

20th. Can be "flatted" by the addition of the thinners before mentioned.

In our next number we shall refer to the subject again; giving something of the constitution of the oil.

TENDERS TO BE RECEIVED.

Sealed Proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C. until 2 o'clock P. M. on the 25th day of September, 1891, for all the labor and materials required for the approaches to the U. S. Court House and Post Office building at Statesville, N. C., in accordance with the drawing and specification, copies of which may be had on application at this office or the office of the Superintendent at Statesville, N. C.

Each bid must be accompanied by a certified check for a sum not less than two per cent. of the amount of the proposal.

The Department will reject all bids received after the time

F.A. Koebitz, Engineer.

herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Approaches to the U. S. Court House and Post Office Building, Statesville, N. C." and addressed,

W. J. EDBROOKE,
August 28th, 1891. Supervising Architect.

SEALED PROPOSALS will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C. until 2 o'clock P. M. on the 28th day of September, 1891, for all the labor and materials required for the iron stairs, iron works, &c., of elevator shaft, for the U. S. Court House, Post Office, &c., building at Denver, Colo., in accordance with drawings and specification, copies of which may be had on application at this office, or the office of the Superintendent at Denver, Colorado.

Each bid must be accompanied by a certified check for a sum not less than two per cent. of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposals for Iron Stairs, Iron Works, &c., for the U. S. Court House, Post Office, &c., building at Denver, Colo." and addressed to,

W. J. EDBROOKE,
August 27, 1891. Supervising Architect.

SEALED PROPOSALS will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C. until 2 o'clock P.M. on the 6th, day of October 1891, for all the labor and materials required and fixing in place to complete the Low-pressure, Return-circulation, Steam Heating, and Ventilating Apparatus, Power Boiler, Pumps, &c., in the U. S. Custom House &c., Building at Galveston, Texas, in accordance with the drawings and specifications, copies of which may be had on applications at this office or the office of the Superintendent at Galveston, Texas.

Bids will also be considered for any other system of heating and ventilating in lieu of the above and parties proposing to supply such must submit with their proposal plans and full specification for same.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements and meaning of this invitation, or for any heating and ventilating apparatus not satisfactory to this Department.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Low-pressure, Return-circulation, Steam Heating and Ventilating Apparatus, (or otherwise, as the case may be) Power Boiler, Pump, &c., for the U, S. Custom House, &c., Building at Galveston, Texas", and addressed to,

W. J. Edbrooke,
Supervising Architect.

BUSINESS MOSAICS.

J. Browell, who has been so long and favorably known as a builder of patent chimneys has an excellent display of his appliances at the Fair of the Mechanics Institute. Mr. Browell's chimneys are constructed in accordance with the most approved scientific knowledge of the day. The method of ventilating the space between the inner and outer pipes reduces the expansion and contraction from the effects of heat and cold—thus forming a chimney having the element of safety in a greater degree than a brick chimney. So far as regards earthquakes and storms, the Browell Chimney is the safest. On soft or "made" ground the liability to cause an unequal settlement is diminished on account of their lighter weight than brick chimneys. These chimneys can be enclosed with walls and plastering, or they can be made quite ornamental as can be seen on some of those on exhibition. Mr. Browell being a practical and observing man, his chimneys are kept up to all the requirements of the times as the best that can be made, not just as good, but the best.

Architects and house-keepers have an excellent opportunity to examine into the merits of gas as it relates to cooking and heating, as exhibited at the exhibition at the Mechanics Fair, by the San Francisco Gas Company. With all the economic features as heretofore used, the present exhibition shows many improvements, more especially in the forms and adaptability to the requirements. The gas is so mixed with air as to make a more perfect combustion consequently a blue, smokeless hot flame with no dirt or soot, and no smell or contamination of the atmosphere of the room. Food cooked by the gas fire is more palatable than when cooked by the coal fire. Open gas fires for heating have already taken the place of many of the old style coal fires with their accompanying dirt, smoke and soot. Almost every house at present building is arranged for gas to be applied for all heating purposes. Bath rooms, sinks, laundry tubs, etc., can now be supplied with small instantaneous water heaters thereby dispensing with the cumbersom boiler as heretofore. All interested persons should examine these stoves and heaters at the Fair or at the Company's show rooms at 16 Post street.

AS TO METALLIC LATH.

The Cincinnati Corrugating Company are to be congratulated on the very large increase in the use of their metallic lath this season. They write us that the building public are now thoroughly aroused to the fact that it is the most effective, practical and satisfactory article of the kind that had ever been placed on the market.

Among the merits of this lath might be mentioned the fact that it is very rigid, yet easily adapted to specially formed surfaces; it is very easily and rapidly applied, while the peculiar formation gives an unequalled bed and key for the mortar.

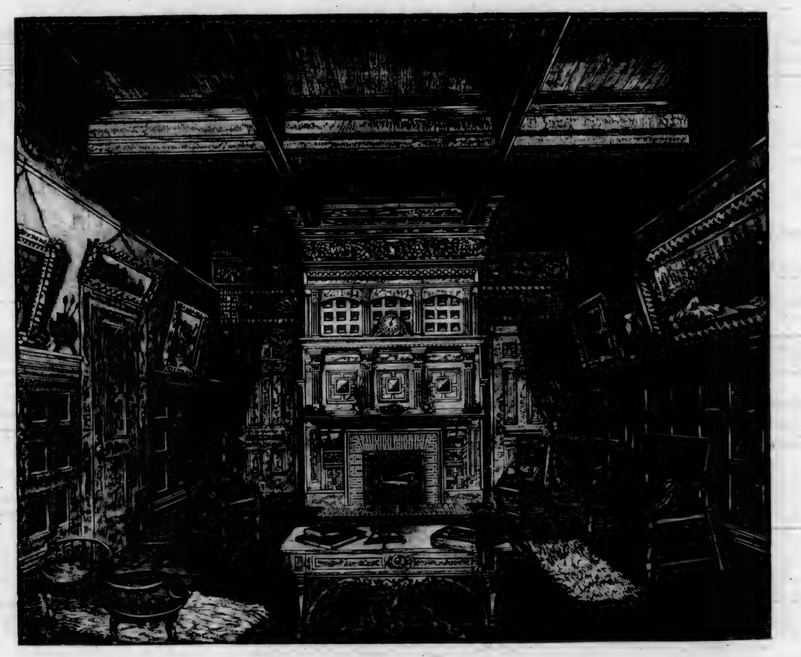
Another point the company call attention to is the great saving in insurance. Recently the underwriters of St. Louis have issued a manifesto on the subject. They say that to be ranked as first-class construction and to get the best rates, iron lath, or an equally good style of construction must be adopted and neither wooden lath nor wooden furring will be admitted. In the case of one large public building recently erected in Cincinnati, the committee decided to use wooden lath on the score of "economy," thus reducing the building to the class known among the insurance men as "ordinary construction." It is estimated that had they used the Corrugating Company's Metallic Lath, as they thought of doing, thus making it class as "superior construction," the saving in insurance in five years would have more than paid the difference.

In addition to the United States Government Building, one of the finest in the country, this lath has been adopted in the construction of the Carew Building, the City Hall, Odd-Fellows Temple and other first-class edifices of Cincinnati.

The Cincinnati Corrugating Company are at all times ready to give information as to this as well as their other products, and will promptly mail samples, estimates, etc. They should be addressed at Piqua, O.

Veneers of California Red Wood have become famous wherever known throughout the world, and the display at the Mechanics Fair of the California Veneer Works, R. P. Hurlbut, Manager, 539 to 563 Brannan street, this city, shows many handsome specimens of this ornamental wood that rival in beauty the fine woods that are imported at great expense. These red wood curls are in all shades from the most delicate pink to the dark hue of mahogany, clouded, undulating and curled, feathery, speckled, sprayed, the markings and shades merging into one another giving a rich harmonious combination of tones which in the hands of the artist and designer is susceptible of being treated in a manner pleasing to a refined taste. The accompanying cut shows the business office of the works on Brannan street, and is entirely fitted up with red wood in great variety of beautiful shades. These works also prepare veneers, lumber or logs of mahogany, primavera and Spanish cedar.

Wire lathing has been steadily growing in public favor since its introduction some years ago. The disadvantages which generally attend new things have been remedied and as at present manufactured the Roebling Standard Fire Proof Wire Lath has no superior in the market. It may be applied to studding or joists and the proper stiffness maintained by the stiffening bars. It can be supplied directly to brick or terra cotta walls and ceilings, without furring, and yet have sufficient air space to prevent dampness. It is easily applied, gives a good key to the mortar and is not subject to damage by reason of the expansion by heat or the contraction by cold. With this lath the plastering fills the space between the wall and wire lath as well as the coating over the face, therefore, the wire cloth is imbedded in the body of the plastering in which form it presents the best fire resisting material for this work to be had.



THE CALIFORNIA VENEER WORKS.

(Showroom 563 Brannan Street.) R. P. HURLBUT, Manager.

If you are inclined to be ill tempered and petulant you want a Blount Door Check. If you are inclined to be careless and inconsiderate about fastening the windows, you want a Giant Sash Lock. Weatherly, Jardine & Co., 132 Market street, are the agents for both of the useful articles mentioned as well as many other improved appliances.

The California Architect and Building News is a practical journal published by an association of architects, and in the interests of architects and others connected with the building trades.

John Mallon, the Pioneer Ornamental Glass Worker, has some beautiful art glass in the exhibition at the Mechanics Fair. The work is of a high grade, the coloring bright and clear and blended for figure work gives the appearance of life itself.

We have lately had some blue prints made by Edward Denny & Co., 418 Montgomery street, which were very fine copies. Mr. Denny also makes black prints that surpass anything yet to be had. This firm has a large stock of architects' and draughtsmens' materials including some late novelties.

A LARGE ELECTRIC GENERATOR.

Our fine illustration is of the 120 h. p. Dynamo built by the Electrical Engineering Co. of San Francisco, for electric power transmission and distribution purposes.

Such dynamos are located at the electric power central station, and are driven by belts from the engine or other course of power. The electricity so generated is conveyed by wires to the electric motors in various localities;—often miles away.

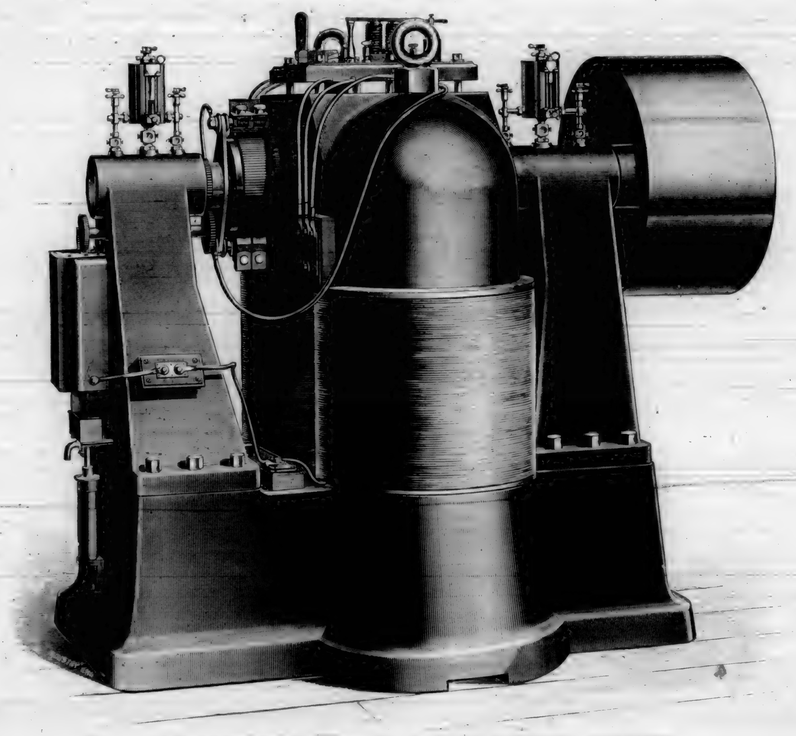
For instance:—The motors exhibited by the Electrical Engineering Co. at the present Mechanics Fair are part of twenty-three upon one electric circuit which is seven miles long.

The Electrical Engineering Co.'s dynamos and motors are made of all sizes and for all purposes which require the generation of electricity and its utilization.

These machines are especially valuable to the architect and builder, on account of the assistance they do and can give in operating their tools and elevators.

The Pullman Sash Balance is one of those especially useful articles that the manufacturers are continually adding from time to time little improvements to their balance which keeps it in advance of all other methods. This balance does not require box frames. A metal tape is used as an attachment to the sash and winds or unwinds on a drum which is moved by the aid of a spring which winds or unwinds as required to balance the sash.

The springs are of the best steel obtainable, and work in steel boxes and frames to avoid the danger of breakage which would exist by the use of cast iron. The tape is not of cotton or iron, but made according to the latest method for Aluminum metal, which promises to surpass all other forms of metal for this purpose, on account of its adaptability to the varying conditions it being strong, tough and pliable, yielding easily to the movement of the pulley. This Pullman spring and tape has been put into a form adapted to use as a door spring which is simple, light, strong and complete.



120 HORSE-POWER DYNAMO FOR ELECTRIC POWER TRANSMISSION.

The Board of Supervisors have purchased 10,000 feet of the "Eureka" Cotton Rubber Lined Fire Hose. Last month they purchased 5,000 feet, and they will probably make another purchase of 5,000 feet in a short time. This hose is of the same construction and manufacture as the well known "Paragon" Cotton Fire Hose, but is heavier and calculated for fire service in the business and manufacturing districts of large cities. W. T. Y. Schenck of this city is the agent for this Coast.

Large silvered amalgam plates 5x8 feet are on exhibition at the Mechanic's Fair. These plates are for saving the fine gold in mining operations, and were manufactured by E. G. Denniston at his plating works 653 and 655 Mission street, this city. It may not be generally known that old plated ware for household use can be replated and made to appear the same and at a price much less than new goods. Mr Denniston makes a specialty of all kinds of plating, either new or old.

CITY BUILDING NEWS.

Alabama near 20th. To build; owner, Ben Schloss; architect, A. J. Barnett; contractor, Frank Williams; surety, $770; cost, $3,240; signed, August 7; filed, Aug. 8; payments $1000, rustic and rough boards on; $760, brown mortared; $700, completed; $830, 35 days.

Pine and Taylor. Mantels; owner, John Furness; architect, J. C. Newsom; contractors, Bush & Mallett; cost, $1400; signed, Aug. 15; filed, Aug. 22; payments, $225, parlor mantels set; $825, completed; $350, 35 days.

Pixley and Buchanan. To build; owner, Henry Tegen; architect, Wm. Schrof; contractor, M. S. Yerxa; surety, $950; cost, $4750; signed, Aug. 18; filed, Aug. 20; payments, $800, first floor joists on; $750, enclosed; $950, roof on and rough plumbing done; $400 brown mortared; $500, completed; $950, 35 days.

Pleasant Place near Jones. To build; owner, Henrietta Smith; architect, Harold D. Mitchell; contractor, Leonard B. Schmid; surety, $1000; cost, $3465; signed, Aug. 11; filed, Aug. 12; payments, $960, frame up; $950, brown mortared; $688, completed; $867, 35 days.

Railroad Ave. near 12th Ave. To build; owner, Rosalie Benkelmann; architect, C. E. Dunshee; contractor, C. E. Dunshee; cost, $1550; signed, Aug. 15; filed, Aug. 18; payments, $750, plastered; $250, completed; $550, on the 1st day of Jan. 1892.

Ridley near Church. To build; owner, W. E. & J. Franks; architect, P. R. Schmidt; contractor, W. E. Cummings; cost, $3058; signed, Aug. 20; filed, Aug. 31; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Sacramento and Yerba Buena Sts. Carpenter work, etc.; owner, Louis Schmidt; architect, W. H. Armitage; contractor, Louis M. Weismann; cost, $6590; signed, Aug. 20; filed, Aug. 31; payments, $1475, frame up; $1200, brown coated; $1000, standing finish on; $1200, completed; $1625, 35 days.

San Jose Ave. near 16th. To build; owner, Geo. S. Payne; architect, M. J. Welsh, contractor, Ivory Wells; surety, $2568; cost, $11475; signed, Sept. 3; filed, Sept. 4; payments, $2151, frame up; $2151, brown coated; $2151, exterior finished; $2153.25, completed; $2868.75, 35 days.

Seventeenth bet. Guerrero and Dolores. To build; owner, Mrs. A. W. Gadsby; architect, F. M. Schweitzer; contractor, F. W. Schweizer; cost, $2820; signed, Aug. 31; filed, Aug. 31; payments, $700, frame up; $700, brown mortared; $700, completed; $750, 35 days.

Shrader, bet. Page and Haight. To build; owner, Jacob Finger; architect, Theo. Lenzen; contractor, F. Weinochl; surety, $3350; cost, $3350; signed, Aug. 10; filed, Aug. 28; payments, $840, building enclosed; $835, brown coated; $835, carpenter work completed; $840, 35 days.

Steiner near Jackson. To build; owner, H. L. Van Wyck; architect, Julius E. Kraft; contractor, R. O. Chandler; surety, $2980; cost, $11,920; signed, Aug. 25; filed, Aug. 28; payments, $1940, roof shingled and chimneys built; $2980, brown coated; $2980, floors laid; $2500, completed; $2980, 35 days.

Stockton St. No. 707. Alterations; owner, W. H. Mead; contractor, Geo. W. Adams; cost, $1700; signed, Aug. 29; filed, Aug 31st.; payments, $100, frame up; $400, brown coated; $500, completed; $400, 35 days.

Stuart near Howard. To build; owner, W. J. Lowry; architects, Kenitzer & Kollofrath; contractor, W. S. Kreger; cost, $6290; signed, Sept. 1; filed, Sept. 1; payments, 1st day of each month 75 per cent as work progresses; 25 per cent. 35 days.

Sunnyside, Block 44. Frame office, boiler house &etc.; owner, S. S. Construction Co.; architect, J. D. Lowndes; contractors, J. G. & T. N. Day; cost, $21,900; signed, Aug. 22; filed, Aug. 24; payments, 75 per cent as work progresses; 25 per cent 35 days.

Sutter & Jones. Brick work etc.; owner, John A. Ehrman; architect, Chas. J. Devlin; contractor, Carl Wolf; cost, $1785; signed, Sept. 1; filed, Sept 2; payments, 500, 1st tier of joists are on; $106, chimneys built; $425, completed; $450, 35 days.

Sutter and Jones. Carpenter work etc.; owner, A. Wolf; architect, Chas. J. Devlin; contractor, J. A. Ehrman; surety, $4000; cost, $15,000; signed, Aug. 18; filed, Aug. 29; payments, $1000, first tier joists on; $1000, third tier joists on; $1000, roof frame on; $1200, building enclosed; $2000, first coat plaster on; $1200, plastering completed; $750, standing finish on; $1350, ready to paint; $500, completed; $5000, six months after completion with interest at 6 per cent.

Sutter and Jones. Painting; owner, A. Wolf; architect, Chas. J. Devlin; contractor, Otto Schulz; surety, $1000; cost, $1575; signed, Aug 21; filed, Aug. 29; payments, $295, primed inside and out; $295, ready for graining; $295, grained; $295, completed; $395, 35 days.

Sutter and Jones. Plumbing; owner, A. Wolf; architect, Chas. J. Devlin; contractors, Thos. Clark & Son; surety, $1000; cost, $2388; signed, Aug. 20; filed, Aug. 29; payments, $800, gas, water and waste pipes in; $990, completed; $598, 35 days.

Sutter near Octavia. Carpenter work etc.; owner, Adolph Boyken; architect, H. Geilfuss; contractors, Schutt & Kreeker; cost, $11,293; signed, Aug. 11; filed, Aug. 14; payments, $2117, frame up; $2117, ready for plastering; $2117, inside standing finish on; $2119, completed; $2825, 35 days.

Sutter near Octavia. Brick work etc; owner, Adolph Boyken; architect, H. Geilfuss; contractor, Ferdinand Wagner; cost, $2279; signed, Aug. 14; filed, Aug. 14; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Sutter near Octavia. Lathing; owner, Adolph Boyken; architect, H. Geilfuss; contractor, Arthur O'Brien; cost, $1040; signed, Aug. 14; filed, Aug. 14; payments, $390, brown mortared; $390, completed; $270, 35 days.

Sutter near Octavia. Painting; owner, Adolph Boyken; architect, H. Geilfuss; contractor, Henry Wagner; cost, $1100; signed, Aug. 14; filed, Aug. 14; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Turk, near Hyde. To build; owner, R. P. Kellogg; contractor, Evan Watts; cost, $18,500; signed, Aug. 18; filed, Aug. 18; payments, 25 per cent., frame up; 25 per cent., brown mortared; 25 per cent., completed; 25 per cent., 35 days.

Turk near Taylor. Additions and alterations; owner, Jas. G. Fair; architect, H. A. Schulze; contractor, A. Jackson; cost, $12 846.91; signed, Aug. 26; filed, Aug. 28; payments, first day of each month 75 per cent. as work progresses; 25 per cent., 35 days.

Twenty-first near Harrison. To build; owner, John Peasly; architect, M. J. Welsh; contractor, John Mann; surety, $2800; cost, $2800; signed, Sept. 1; filed, Sept. 1; payments 8, $700, frame up; $700, brown mortared; $700, completed; $700, 35 days.

Twenty-first and Sanchez. To build; owner, Emma J. Lowell; architects, R. H. and R. White; contractor, John Furness c st, $3950; signed, Aug. 17; filed, Aug. 19; paymcnts, $725, building enclosed; $725, completed; $500, 35 days.

Twenty third near Castro. To build; owner, S. Axlrod; architects, Salfield and Kohlberg; contractor, Henry Rohling; cost, $3650; signed, Aug 20; filed, Aug. 21; payments, $1000, frame up; $750, white coated; $1000, completed; $900, 35 days.

Union near Buchanan. To build; owner, P. A. Johnson; architect, Mooser, & Cuthbertson; contractor, A. J. Mc Elwain; surety, $1100; cost; $4070; signed, Aug. 11; filed, Aug. 12; payments, $1010, frame up; $1020, plastering completed; $1020, completed; $1020, 35 days.

Valencia near 16th. Carpenter work etc.; owner, J. K. Warren; architect, Julius E. Krafft; contract r, John Blake; surety, $2000; cost, $3450; signed, Aug. 24; filed, Aug. 25. payments, $900, frame up and rustic on; $800. ready for lathing; $885, completed: $865, 35 days.

Vallejo near Sansome. To build; owner, Mrs. E. Price; architect, J. T. Kidd; contractor, G. o. Connon; c st, $2190; signed, Aug. 20; filed, Aug. 20; payments, $810, brick walls up and rafters on; $83 26 completed; $948, 35 days.

Washington and Walnut. Carpenter work, etc.; owner, J. F. Plumel; architect, T. J. Welsh; contractors, Currie & Loomer; surety, $423; cost, $1690; signed, Aug. 10; filed, Aug. 13; payments, $633.50, plastered; $633.50; completed; $423, 35 days.

Alameda County.

Addison St. near West street, Berkeley. To build; owner, Nels. P. Jensen; architect, Robert Seidel; contractor, John Person; cost, $1450; signed, Aug. 13; filed, Aug. 13; payments, $500, frame up; $500, plastered; $450, 35 days.

Alameda, Block 92 Stratton's map. School house; owner, City of Alameda; architects, Mooser & Cuthbertson; contractors, Smilie Bros.; cost, $19,487, signed, Aug. 12; filed, Aug. 17; payments, $3650, frame up; $3652, first coat plaster on; $3652, plastering done, windows hung and glazed; $3652, completed; $4872, 35 days.

Bay St. near R. R. Ave., Alameda. To build; owner, W. N. Noy; architect, Howard Burns; contractor, D. Straub; cost, $3590; signed, Aug. —; filed, Aug. 11; payments, $897, frame up and brick work completed; $897, enclosed and plastering on; $897, completed; $899, 35 days.

Bella Vista Park, Lot 8. Two-story frame; owner, E. E. Potter; contractor, J. A. Eastman; cost, $3450; signed, Aug. 18; filed, Aug. 19; payments, $750; frame up, roof on and chimneys built; $800, enclosed and first coat plaster on; $987, completed; $863, 35 days.

Buena Vista Ave. near Oak St. Two-story frame; owner, Capt. J. Jensen; architect, Chas. S. Shaner; contractor, P. Christensen; cost, $2270; signed, Aug. 12; filed, Aug. 14; payments, $567.50, frame up, rafters and sheathing on; $567.50, brown mortared; $567.50, work done and ready for painting; $567.50, 35 days.

Clement Ave near Oak St. Ala. To build; owner, Christian Radsville; architects, J. J. & T. D. Newsom; contractor, Geo. A. Benseman; cost, $2600; signed, Aug. 17; filed, Aug. 18; payments, $800, frame up and roof boarded; $800, brown mortared; $650, completed; $650, 35 days.

Eagle Ave. near Everett St. Ala. Two-story frame; owners, Clement et al; architect, Geo. A. Bordwell; contractor, John J. Boyle; cost, $2290; signed, Aug. 12 filed, Aug. 17; payments, $665, frame up; $595, plastering done; $665, completed $665, 35 days.

Falon St. near 8th. One-story frame; owner, Eugene L. Courtain; architect, Chas Mau contractor, Bandin & Eber; cost, $2000; signed, Aug. 8; filed, Aug. 11; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Fruitvale Ave near Lynde. Two-story frame; owner, F. K. & Mrs. Bechtel; architects, G. H. W. Deike; contractor, G. H. W. Deike; cost, $1765; signed, Aug. 12; filed, Aug. 13; payments, $657.50, enclosed; $657.50, 1st coat plaster on; $450, 35 days.

Grant cor. Central Ave. To build; owner, H. J. Weiss; arch tect, Chas. Mau; contractors, Wo d & Chandler; cost, $1568; signed, Aug. 12; filed, Aug. 12; payments, 75 per cent. as work progresses; 25 per cent., 35 days.

Jahn Tract, Lot 20. Two-story frame dwelling; owner, E. J. Bickell; architect, S. Edgar Fisher; contractor, J. B. Sprague; cost, $3475; signed, Aug. 1; filed, Aug. 10; payments, $868.75, frame up; $868.75, enclosed and shingled; $868.75, brown mortared; $868.75, 35 days.

Nevis Tract, Pleasanton. Alterations; owner, T. Caraher; architect, J. L. Weilbye; contractor, J. F. Walton; cost, $1338; signed, Aug. 6; filed, Aug. 17; payments, $334, stagings erected and gallery frame erected; $334, first coat paint on; $334, completed; $336, 35 days.

Oak Park Tract, Alameda. Two-story frame dwelling; owner, Mrs. A. Sohlac; architect, A. R. Denke; contractor, A. R. Denke; cost, $3840; signed, Aug. 10; filed, Aug. 11; payments, $900, frame up and enclosed; $900, plastered; $900, completed; $1140, 35 days.

San Jose ave. near Willow St. To build; owner, George Brown; architect, C. S. Shaner; contractors, Brehaut & Diamond; cost, $4660; signed, Aug. 19; filed, Aug. 20; payments, $873, frame up and roof sheathing on; $873, enclosed, cornice on and window frame in; $873, brown mortared, veraudas and porches up; $876, plastering finished; $1165, completed.

Shattuck ave. near Russell St. Cottage; owner, Robt. F. Ellison, architect, Josiah J. Rose; contractor, Josiah J. Rose; cost, $1960; signed, Aug. 14; filed, Aug. 15; payments, $490, roof on and house enclosed; $490, brown coated; $490, completed; $490, 35 days.

Simpson ave. near Telegraph ave. To build; owner, William H. Johnston; architect, Howard Burns; contractor, H. E. Jones; cost, $2550; signed, Aug. 15; filed, Aug. 15; payments, $637.50; frame up; $637.50, enclosed and plastering on; $637.50, completed; $637.50, 35 days.

Thirty-first St. near Grove, Oakland. Two-story house; owner, R. P. M. Greeley; architect, C. H. Wedgewood; contractor, C. H. Wedgewood; cost, $2170; signed, Aug. 17; filed, Aug. 17; payments, $542.50, frame up & rustic on; $542.50, brown mortared; $542.50, inside finish on & ready for painter; $542.50, 35 days.

Twelfth bet. Clay and Jefferson. Four bake ovens; owner, Hugh Hamilton; contractor, Jacob Bender; cost, $1550 signed, Aug. 8. filed, Aug. 8; payments, 25 per cent, walls up; 25 per cent, floors laid and castings in position; 25 per cent crowns in and chimneys in position; 25 per cent, 30 days.

Union St. near Encinal, Alameda. Two story frame; owner, Mrs. A. O. M. Ruther; architect, A. R. Denke; contractor, A. R. Denke; cost, $4200; signed, Aug. 10; filed, Aug. 11; payments, $700, frame up; $1000, 1st. coat plaster on; $800, 2nd; $800, completed; $900, 35 days.

Washington St. near 10th. To build; owner, Arthur Brown; architect, W. J. Matthews; contractor, W. Winnie; cost, $8290; signed Aug. 4; filed Aug 10; payments, one-fifth of work done $1243; two-fifths $1243; three-fifths, $1243; four-fifths $1243; $1243, completed; $2075, 35 days.

Washington near 16th. To build; owner, Arthur Brown; architect, W. J. Matthews; contractors, Danziel & Moller; cost, $1560; signed, Aug. 17; filed, Aug. 19; payments, $389, one-third work completed; $389, two-thirds completed; $389, completed; $393, 35 days.

Willow and Encinal, Ala. Two-story frame, etc.; owner, John C. Siegfried; architect. Chas. S. Shaner; contractor, C. A. Parker; cost, $3922; signed, Aug. 3; filed, Aug. 7; payments, $980.50, rustic and shingles on stable, etc.; $980.50, new chicken house ready for painter; $980.50, tank frame up and inside work on stable done; $980.50, 35 days.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

THE work of restoration of the old Sutter Fort was practically begun at 4 o'clock Tuesday afternoon, Sept. 22nd, 1891, at which hour Geo. Murray, Jr., laid the first adobe brick in the building. Until that time all forces have been concentrated in the laying of a new cement foundation underneath the entire edifice, and in the preparation of adobe brick.

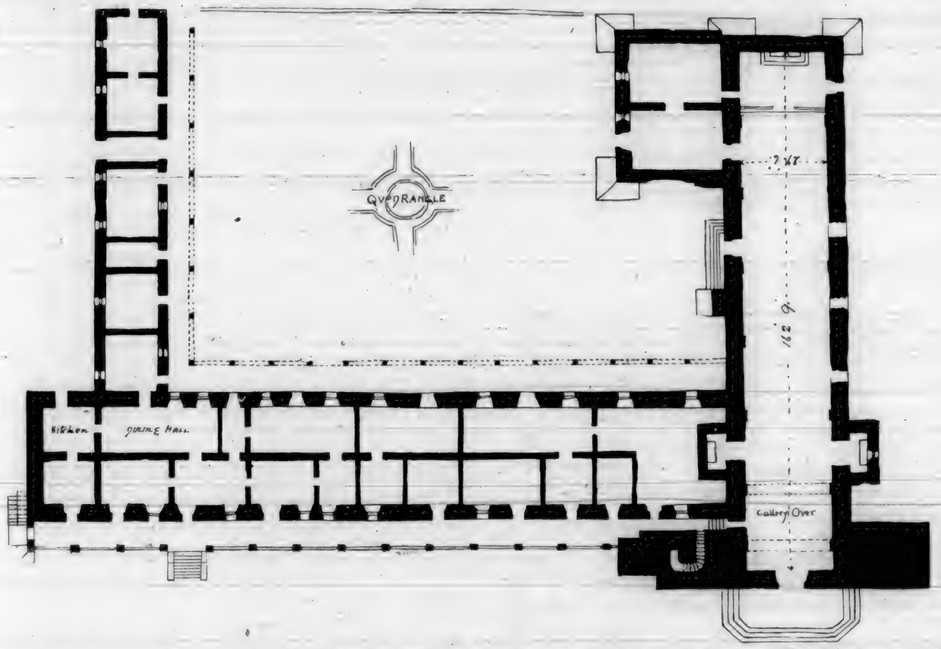
The latter have been made in strict accordance with the best known methods employed by the adobe makers of early times—the mud being well mixed with straw and ground to such consistency as to produce hard and enduring building material.

Governor Markham has evinced much interest in the work, and has given the trustees many valuable suggestions.

THE fuel of the future is a subject that is receiving a marked degree of attention and it cannot be long before gas will entirely supercede solid fuel for household use in all situations where gas can be had.

THE MISSION OF SANTA BARBARA.

Second or third in importance of the twenty-one Missions of California (San Luis Rey being admitted as the first) is Santa Barbara. Situated in the southern part of the State, in the land of the orange blossom and its golden fruit, the town of Santa Barbara stands near the center of a broad rich valley and against the sea. From the place of arrival, be it by water, the iron horse or the more refractory bronco. Ones eye by the general configuration of lines, both as regards the mountains, the direction of the main artery of the town and the parallel projection of the wharf, is naturally lead either directly out to sea, over the blue expanse of ocean to the dim shadows of mysterious island that float as it were in mid air and stand as senteries between the mainland and the far off birth place of winds and waves in the ocean's bosom, or directly inland across the town and its long street, gradually arising as it receeds, till in that border land between the seen and unseen, the eye is arrested by the last recognizable object, it is the Mission Church and its long, low roof of dwellings.

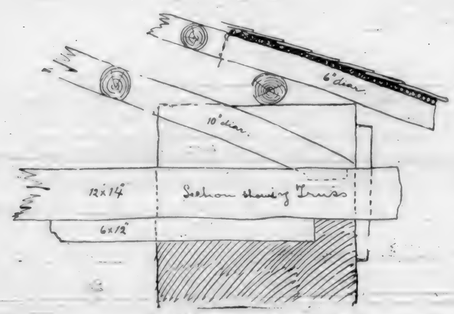


Situated about two miles inland, the Mission commands a magnificent view of the whole country in front of it, and the sea with its many islands beyond; and compels in return the attention of all eyes cast around, whether it be as we stand by the white torrents of ocean as they ceaselessly pour themselves upon the golden sands or where the noiseless breakers of the clouds dash themselves to pieces against the peaks and promontory of the mountain's summit. Santa Barbara was built in 1786 according to the plan of the first floor indicated in the text and has a second floor, used as sleeping apartments over. Originally there was only a veranda over the cloister of the first story, with the roof supported by brick piers carrying the line of those below, but at a later date after the time of the earthquake, repairs being required, the spaces between the piers of the second story veranda were built up save the window openings and the sleeping accommodation of the monks thus increased.

The general plan explains itself, and shows this mission to be as complete in its arrangements as any and more so than most. In front a long cloister of piers and arches of stone affords ample protection from the sun and allows of a comfortable seat in the open air from which to view one of the finest scenes of earth, air and ocean under heaven. Surrounded by the dwellings, store houses and offices, churches, etc., is the quadrangle, laid out as a garden with many paths winding in and out among beautifully arranged shrubs and gay flowers that lift their bright faces to the southern sky and drink continually of its never failing stream of sunshine.

In the center is the old well with a circular wall around to guard it. On two sides of the quadrangle a cloister consisting of brick pier with wooden lintels from pier to pier carrying the rafters on the roof, serves the double purpose of shade for the sun and also allows of the monks passing from cell to cell or to their office in the church under cover. The living apartments as usual are devoid of all that we call beauty and beyond serving as a protection against the heat of day and the cold of night and as a place of silence and secrecy suited to quiet meditation and devout prayer they serve no purpose. But as these were then all the purposes of life, they satisfied well the wants of the builder.

The prominent features of the front elevation of the church as seen in our sketch are a classic pediment or gable carrying the lines of the roof of the nave or church proper. This is supported by six half columns, which rest on pedestals with moulded base and plinth course and are surmounted by Ionic Capitals of rude design. The cornice of the pediment is enriched by a dentil course and below at the frieze a Greek pattern all of somewhat poor proportions. Flanking the central feature on either side, are the bell towers with their three stories and doomed roof so common to the Missions. To reach the tower on the right of our sketch there is an elliptical staircase leading from the cloister and in order to pass from one tower to the other an ingenious arrangement of steps is contrived in the thickness of the wall, immediately behind the pediment. The interior is very similar to those already described. On entering the church you pass beneath the choir, which is supported by two semi-circular Masonry arches spanning the whole width of the nave. The church then from the choir forward is divided into six Bays, by pilasters projecting about six inches from the wall and having a moulded base, a cap rail at the height of the dado and above an Ionic capital; the whole surmounted by a rude dentil cornice, on which rests the ceiling which is perfectly flat, no construction being shown. At either side of the nave near the choir gallery are two side chapels with altars. The reredos as usual has its patron saint perched high up in the center and on each side an embodiment in wood of some fellow martyr, besides two such benefactors painted in their respective niches. Outside the nosing of the stone steps leading to the main entrance attracts our attention on account of its heroic proportions, viz: four inches, the whole rise being twelve inches. It is peculiar to note that the hewn planks forming the ceiling in a number of the Missions are indented at spaces of about half an inch apart with small holes as if struck with the point of a sharp pick. This was done apparently to form a key for the thin coat of white plaster applied as a finish. We give a sketch showing the construction at the foot of the main trusses used in several of the Missions.



SKETCH OF ROOF TRUSS.

The principal rafter, which is round, is morticed into the tie beam, and at the top halved together, with king-post tenoned into both, the whole rest on a corbel, and apparently in order to anchor the walls together, a strong key is driven through the the projecting end of the tie beam, thus securing the wall. No iron nails were used in the construction, even the mouldings of the doors were attached with wooden pins. Referring to things unique in regard to the old Missions, it is interesting to note, that in front of the Mission Church at Monterey, a pavement in the form of a star is composed of round pieces about 12 inches in diameter, of what, at first sight, one might readily mistake for Portland cement, but which, on inquiry, are discovered to be the vertebra of whales. These, so far as is generally known, may be said to be prehistoric, but as history in this case is dependent largely on the oldest retentive memory of the neighborhood, it does not necessarily take us back to the cave dwellers, nor even to that period in the history of California when the cave dwellings of our prehistoric ancestry would have been considered quite comfortable, but somewhere in the vicinity of that region of time past.

TRES. '91.

TRANSITIONAL OR ELIZABETHAN ARCHITECTURE.

From the London "Building News" 1878, we take the following extract from Prof. Barry's lecture at the Royal Academy.

In the Academy lecture Prof, Barry concluded his examination of the principles which underlaid the English architecture of the sixteenth and seventeenth centuries, a type of work which he styles Transitional, for while it clung to Mediævalism in affection for mullions, gables, and general picturesqueness, it aimed at the regularity, measured symmetry, and details of Italian practice. As illustrations he took an early and a late example of Elizabethan—Longleat Hall, Wilts, and Crewe Hall, Cheshire.

Longleat was built, it is believed, betweer. 1567 and 1569, and presumably by one John of Padua, who had been installed by Henry VIII in 1544, into the newly-created office of "Devisor" of his Majesty's buildings. There is much in the design and arrangement of Longleat which shows Italian influences on the design. Thus it is quadrangular on plan, with buildings arranged round inner courts of moderate dimensions. In making the quadrangles but secondary features, Italian precedents were followed, but this mansion differs from them in that the aspect is outward, and the windows are so placed as to command views of the country around. We find in the exterior unmistakable evidence of Italian taste. We have the three orders superimposed: first the Doric, then the Ionic, and, lastly, the Corinthian. The pilasters are well executed, with diameters diminishing from the lower story to the higher. Each order has its appropriate entablature of architrave, frieze and cornice, designed with due subordination of parts; and the whole is crowned by a regular balustrade. The pervading principle of design is horizontalism. There is a central entrance in a symmetrical front, and a very few additions and suppressions would give a complete Italian character to the whole composition. On the other hand, we have the mullioned windows, dear to Mediævalists, and the projections common in Elizabethan work, serving to redeem the front from flatness and insipidity. Taken as a whole, Longleat is one of the most remarkable and beautiful buildings of the period, and the details indicate a purity of taste rarely found. The design is obviously by an architect of taste and refinement, well accustomed to Italian work, and probably acquainted with Italian artists. Crewe Hall is a much later example, but shows some coincidences of principle, mixed with considerable individuality. It was built for Sir Randolph Crewe between 1615 and 1636, and two oil paintings, executed immediately after the completion of the works, enable us to form a clear idea of its original appearance. The out-buildings containing the servants' offices have long since been removed, and a new wing was added a century since to contain these rooms. In 1866 almost every part of the mansion was destroyed by fire, except portions of the dining hall and this comparatively modern wing.

The Hall has been rebuilt with the greatest care, and it is believed all the rooms built by Sir Randolph, and which still exist, present the original appearance, although with less roughness of execution and uncouthness of detail. Looking at the house, as shown in the interesting oil paintings, we find it a square block of 100 feet each way. The minor offices are occupied in small gabled buildings, and there is a walled-in fore court, enclosing a walled terrace in front of the house. Crewe Hall is much smaller and less imposing than Longleat, but there is the same grouping together in one large block, the same projections of bays and oriels, the same wealth of mullioned and transomed windows, and the same horizontal spirit of design. On the other hand, there is a more English feeling pervading this hall. Here, at Crewe, the use of orders and pilasters is confined to the principal entrance, and the gable is retained in a subordinate form in the main building, but freely used in the out buildings, while the red moulded brick chimneys and the mixture of brick and stone in the elevations give a home-like character to the building. Internal lighting is obtained by means of a small central court. The chief feature is the hall, a room of great dignity and importance, marked by the oriel and dais at the upper end, and having an elaborately carved oak screen at the lower end, with the mediæval arrangement of passage and buttery hatch. Close to the hall is the withdrawing room for the family, here traditionally known

as the "carved parlour." The chapel is of small dimensions, and constructed in accordance with precedent, although it stands north and south. Another peculiarity in the internal distribution at Crewe is the introduction of a mezzanine floor. The hall and chapel are lofty apartments, but the rest of the ground story is horizontally bisected by a floor, and on it are the bedrooms and private sitting-rooms, communicating with the end of the chapel furthest from the altar, where this floor forms a gallery, containing the family pew. The part beneath this gallery is screened off as an entrance and ante-chapel, and the servants and others occupied the lower part of the chapel, entering from the open court. The windows of the chapel have arched and trefoiled heads, with Late Tudor cusping, all the other openings into the building being rectangular. The existence of mezzanine floor is masked on the two principal fronts, but on the northern and western fronts it is recognized, and the two stories have separate windows, with distinct sills and heads. Crewe Hall is rich in the possession of one of the finest existing specimens of Transitional staircase. It is a newel staircase, built round a central well-hole, and is of oak, elaborately worked and carved. Excellent in design, and sound in construction, it is very easy and convenient, and occupies but little space, being not more than 24 feet square from wall to wall, while the story itself is 20 feet high. The shortness of the flights and the frequency of landings secure great ease in ascending, and from the compactness of plan no unnecessary distance is traversed. With its handsome newels, carved and panelled, surmounted by quaint animals with heraldic cognisances, its richly wrought balustrade and picturesque arrangement, this staircase is one of the most interesting examples of the 17th century.

Prof. Barry urged young architects to carefully study the planning and design of staircases, for nothing more clearly marked the difference between an architectural composition and a builder's box. This staircase at Crewe led to the great reception-rooms and principal guest chambers. These were all on the first floor and looked outwards, in the English manner. The whole of the northern side was occupied by the usual long gallery. The other apartments were principally sitting-rooms, and were approached through each other. There were a few attics and small bedrooms for servants, but most of the latter must have been accommodated out of the house. The ceilings generally are of elaboration, and in some cases of much beauty; and large curious chimney-pieces reach up to the ceiling. We find in the whole arrangement a highly characteristic amount of domestic comfort. The execution of the ornamental details was good, particularly the carpenter's work; although the sculpture of the human figure was strained and uncouth. Notwithstanding all drawbacks, Crewe Hall was a splendid specimen of the taste of the Transitional epoch—a noble example of the mansion of the old English gentleman. The taste for more formal design which was becoming fashionable not only pervaded the house of the period, but extended to the adjoining grounds, which were laid out in plantations and terraces, gardens of stiff forms and patterns, bowling-greens, and labyrinths and mazes, hedges becoming walls and streams canals, and Nature herself being put to fetters. At Crewe and in most other places the Elizabethan gardens have been replanned, but a very interesting example remains at Levens, in Westmoreland, where the aspect of things has been maintained by the owners without alteration from the time of original foundation of the place.

At the Transitional period in all parts of the country there was displayed a development of a taste for symmetry coupled with lingering attempts to retain the beauty of the past, to combine old and new. A taste for profuse internal decoration prevailed—a decoration not of the true artistic character, which calls for the co-operation of the sister arts of painting and sculpture, but a decoration of masons, plasterers and carpenters, with much striving in the dark, and half realization of good intentions. The walls of rooms were handed over to the carpenter, and he covered them with oak panelling, generally extending from floor to ceiling. In many cases he shared his task with the plasterer, and allowed his comrade space for a deep and elaborate frieze above the panelling. There was frequently much grace and skill in the whole design, both in general composition and disposition of parts, and where scroll-work was employed it had a curious intricacy and a characteristic elaboration.

But the object was to cover the whole surface of the walls with constructed decoration. Nothing was left to the taste of the future occupants; the builders had everything their own way. This taste for profusion of ornament, characteristic of the Elizabethan style, passed away, and was succeeded by the baldness of the Georgian era. Now, indeed, the lecturer remarked, amongst ourselves, the wheel has again turned round, and we hear of "decorative artists," "art manufacturers," and "art workmen" in all directions. Everything must now be reversed. Our ceilings must be black, and our floors white; balusters must be turned upside down; fires placed on the floor; our mahogany sideboards banished, and dressers, borrowed from the kitchen, put in their place.

Plate-glass, we are further told, is not "æsthetic." If it cannot be avoided altogether it must, at least, be degraded into small divisions, separated by clumsy and heavy bars. Better still, if it can be altogether obscured by colored patterns and devices. Cheerfulness and light are beneath the notice of the "artist-decorator," but as a compensation, he will cover every space with daisies and pomegranates, and will perhaps even persuade a whirling flight of birds of paradise to settle in impossible positions on walls, ceilings, shutters and doors. Every space must be decorated and nothing left for repose.

While the Professor would not defend the cold dreariness against which all this was a protest, he could not regard such over-elaboration as a healthy movement. It is, he said, an anachronism inconsistent with the claims of pure art and the simple and refined manners of the best modern life. High class paintings, engravings and sculpture are the true decoration of our dwellings, and no style of architecture can be permanently accepted which does not provide a place for them, and receive them with a hearty welcome.

Electricity and its recent applications by Edward Trevert, and published by the Bubier Publishing Company of Lynn, Mass., and for sale by Osborn & Alexander, 401 Market street, San Francisco, Cal. Price $2.00. The size of the book is 5 x 7 inches and 1¼ inches thick. This work forms one of the latest and most practical contributions to electrical science. The subject is treated on the higher progressive plan, yet the illustrations, both cuts and text, are easily understood by any ordinarily intelligent person, and is especially valuable to students and amateurs. The book is divided into twenty chapters—in which are treated electricity and magnetism, voltaic batteries, dynamos, and how to build one, the electric arc, and the arc lamps, electric motors, and how to build one, field magnets, armatures, the telegraph and telephone, electric bells and how made and used, induction coils and how made, the incandescent lamp, mining apparatus, electric railway, welding, plating, gas lighting apparatus, measurement and resistance, and all followed by an illustrated dictionary of electrical terms and phrases, which is of great value at the present time.

John Wiley & Sons, Publishers, have in press, to be issued shortly, a new work on stones for building and decorating, by Geo. P. Merrill, U. S. Museum.

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways

The old church of the Mission of Santa Barbara is from sketches by "Tres," our special correspondent.

The Residence is from designs by Mr. Samuel Newsom, architect.

NEW JERUSALEM CHURCH.

The New Jerusalem Church, on O'Farrell St., illustrated in our present number is drawing near completion and proves to be a handsome and substantial structure. It in fact consists of a group of buildings, including church, school, and parsonage—the latter detached except in the extreme rear, and the two former closely combined. The church will be comparatively small, accommodating about six hundred people, and with school-house, etc., in proportion thereto.

The buildings occupy a site on the north side of the street, in the middle of the block, 87½ x 137½, and raised about nine feet above the line of the sidewalk. The church is approached by a broad flight of stone steps, and entered by a wide semi-circular doorway, which opens into a roomy vestibule, on one side of which is the pastors' study, and on the other, the principal ascent to the gallery and a door communicating with a public reading-room for the use of the neighborhood. Opposite the entrance are glass doors, leading into the auditorium proper. The auditorium is semi-circular, or rather polygonal, in plan, the seats forming an amphitheater, with the pulpit, platform and recess on one side, and a semi-circular gallery on the other. On each side of the platform are recesses for the vestry and organ chamber, respectively.

Including the latter, the auditoium is sixty-six feet by forty-eight feet, and thirty-eight feet high. It is lighted by means of five double windows below the gallery, and seven windows midway of the roof. Also by a circular domelight in the center of the ceilings and by large windows over the gallery on the south or entrance side, which will be ultimately all filled with cathedral and art glass. The whole of the interior is lined with wood, and the seats and such portions of the interior as are likely to be soiled by contract, are waxed. The materials of interior finish will be redwood and selected Oregon pine. The school-rooms in the rear of the church are entered by a glass door similar to the front entrance, and a vestibule communicating with the outside and containing the Sunday School library, and an additional or escape stairs from the gallery. The school-rooms are arranged with a large room in the center and class and society rooms on each side. When all thrown together by means of folding doors, a hall 60 x 32 is the result, amply sufficient for all purposes of the society, religious as well as social. The parsonage is placed at the south-west corner of the site; the space between the house and church is to be nicely cultivated, and will form a very attractive feature of the arrangement. The parsonage contains about twelve rooms and a garret, and is connected with the church by means of a covered cloister and conservatory, which is later intended to contain potted plants, palms, etc., for the decoration of the church on special occssions. The grounds are open or parked with grassy lawn and margins to the cement sidewalks, but divided from the garden by a light iron railing on top of the bank on which the buildings are placed. The lower part of the church, including the porch, reading-room and the first story of the tower is of freestone in narrow courses, and the upper parts of all the buildings is to be cement stucco—a material not largely used as yet in this country, but extensively employed in the East, and with satisfactory results. The total cost of church organ and furnishing will be about $25,000.

The New Jerusalem Church is from designs by Messrs. Wright and Sanders, Architects.

The vaulted ceiling of the tripple vestibule which forms the entrance to "Somerset House" is a fine example of eighteenth century work. Somerset House was commenced in 1776 and finished in 1790, and was therefore fourteen years building, and during the reign of King George III. The architect was Sir William Chambers, one of the leading architects of that period.

The archway or vestibule shows a refined treatment of Doric. There is no excess of ornamentation to crush the Doric columns. The ceiling arches being divided by flat bands, and not by heavy cross arches. The soffits have large open panels with small mouldings and the ornamentation elegant and devoid of ostentation. In this example it was not a question of quantity, but of quality, and the discrimination shown in the selection of the constructive and ornamental features is evidence of carefu study by the designer. We are indebted to the *Building News*, London, for the illustration.

Rosewood takes it name on account of its fragrance when cut, as well as from its color when finished.

The State of Washington last year produced over 1,200,000,000 feet of lumber at a value of $12,000,000.

In the State of Washington there was lately cut a fir log 32 feet long and 90 inches in diameter.

In Russia laborers receive from $1 to $1.75 per week; average mechanics $2.50 per week, and the highest price paid to carvers, machinists, etc., $3.50 per week.

Coating for Black Board—1 pint of alcohol, 90 per cent.; 2 ounces shel-lac, dissolve and add; 1 ounce best ivory black; ¾ ounce emery flour; 1 ounce ultramarine blue. Put in well stoppered bottle, and shake before using. On account of its volatility alcohol may be added to the mixture as it thickens from evaporation. This preparation contains all the requisite qualities for chalk drawings on a black ground. Apply one coat for old and two or more coats for new work.

The first sun-dial was erected at Rome by Papirius Cudsor in 293 B. C., and the time first divided into hours.

134 years after the introduction of the sun-dial, a water-machine was invented by Scipio Nasica, for the purpose of measuring time.

NORDENSKJOLD RAIDS CLIFF DWELLINGS.—Baron Nordenskjold, of Sweden, who secured permission to visit the cliff dwellings on the reservation near Durange, Colorado, with the understanding that he would neither destroy nor carry away any of the relics went upon the work of general devastation upon arriving there. He has shipped several boxes of relics to New York.

When the baron reached Durange upon his way East he was arrested by a United States marshal, charged with robbery and will be prosecuted to the fullest extent.—*Exchange.*

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at Academy of Sciences Building.

GEO. H. SANDERS, Pres. OLIVER EVERETT, Vice-Pres.
GEO. A. BOARDWELL, Sec. JOHN M. CURTIS, Treas.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

W. C. QUIMBY, Pres. O. BROOKS, Vice-Pres.
C. E. PURINGTON, Sec. W. C. CROSETT, Treas.

BUILDERS' ASSOCIATION OF CALIFORNIA, meets every Monday at 330 Pine Street, Rooms 9–12, at 1.30 P. M.

S. H. KENT, Pres. E. C. WORDEN, Vice-Pres.
IRA FANCHER, Sec'y. WM. B. KREGER, Treas.
L. A. LARSEN, Clerk and Financial Sec'y.

MASTER PAINTERS' ASSOCIATION OF THE PACIFIC COAST.
E. M. GALLAGHER, PRES. H. G. JARMAN, SEC.

THE members of the San Francisco Chapter of the American Institute of Architects, and the members of the Technichal Society of the Pacific Coast, paid a visit on September 26th to the new buildings, comprising the Girls Dormitory and the Museum at the Leland Stanford, Jr., University at Palo Alto. The visit was made upon the invitation of Messrs. Ransome and Cushing, the contractors for the erection of the buildings.

Concrete formed of broken stone and Portland cement is the material used for the walls, and concrete beams supporting concrete arches being used for floors and roofs. In fact the whole structure is of concrete and glass, with marble floors and stairways. The buildings are receiving the finishing touches and have been erected in an incredibly short time—only a few months—in which to erect and complete these large monolithic stone buildings; had cut stone been used two or three years, at least, would have been required for the same work. After the inspection of the work, the visitors partook of a bounteous colation, followed by speeches from practical men, highly complimentary to the contractors, and especially so to the architects, Messrs. Percy and Hamilton of this city, on account of the courage displayed in breaking away from the older methods and the adoption of a new mode of construction, with such satisfactory results as exhibited in this instance.

In the November number of this Journal, we shall endeavor to give some illustrations of these buildings.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

UNIFORM SPECIFICATION FOR COMPETITIVE BIDDING.—Where the law requires all contracts for public work to be let to the lowest responsible bidder, the same specifications must be submitted to all bidders, as there can be no real competition unless the competing bids are based upon the same data, and a law which requires that plans and specifications and bids for the work shall all be advertised for at the same time, is therefore unconstitutional.

Fones Bros. Hardware Co. v. Erb, Supreme Court of Arkansas, 15 S. W. Rep., 7, (83E).

CONSTRUCTION OF BUILDING CONTRACT.—In an action for breach of building contract which, after specifying by numbers various materials to be used, recited "the above numbers refer to P. Bros.' catalogue," evidence that a certain portion used by the builder, for which the contract called for "No. 47," was substantially like "P No. 47," is admissible, as the contract meant simply that P. Bros.' materials of the specified numbers should be used as models. Where the contract fixed the size of sills on which certain columns were to rest, and did not expressly state the diameter of the base of the columns, evidence by an expert as to the proper diameter of the base of such columns to rest on such sills is admissible. A charge, "in deciding whether or not plaintiff was proceeding with said building in compliance with the contract, * * * there must have been a substantial compliance in every material particular, * * * as called for by a fair, reasonable, and practical construction of the contracts, plans, and specifications taken together, and where there is a conflict in any of these, this should be reconciled in a practical, workmanlike manner, so as to arrive at the fair and reasonable intention of the same," is correct, and does not leave the construction of the written contract to the jury.

Linch vs. Paris Lumber and Grain Elevator Co., Supreme Court of Texas, 15 S. W. Rep., 208.

A BUILDER'S LIEN.—The judgment of the Supreme Court in the Hinckley case will be of interest to those who are engaged in building.

The decision will add to the confusion which prevails in the law concerning building.

In most of the States the rule regarding liens is vigorous. A lien which is not recorded is no lien at all. It is like an unrecorded mortgage, and is of no avail as against an innocent bona-fide purchaser. But in this State, under the decision of the Supreme Court in the Hinckley case, it seems that a sub-contractor can hold a lien on a building without recording it. It is hardly necessary to observe that this ruling will expose house-builders to serious annoyance and, perhaps, loss.

A man may build a house and pay the contractor to the uttermost farthing, yet he has no guarantee that when he tries to sell the house, some purveyor of materials, or some mechanic who has worked on the house will not turn up with a lien, of which he has had no notice and no knowledge. That there should be some devise by which a party seeking to buy a house should be able to ascertain whether or no there is any incumbrance on it.

We present the decision in full from the record.

HINCKLEY, ET AL, Appellants, vs. FIELD'S BISCUIT AND CRACKER CO., ET AL, Respondents. 13,230.

In the Court below a demurrer to the complaint was sustained and judgment thereupon entered in favor of the defendants. The plaintiffs appealed.

The question to be considered here is whether the ruling of the Court in sustaining the demurrer was correct. The demurrer was upon the general ground that the complaint did not state facts sufficient to constitute a cause of action and also for ambiguity.

The allegations of the complaint so far as necessary to be stated, are: That on February 28, 1887, the defendant Field was the owner of record of land upon which stands the building against which it is sought to enforce the lien, but that he held the same in trust for the Field's Biscuit and Cracker Co., a defendant herein; that upon that day said Field entered into

ENTRANGE VESTIBULE TO SOMERSET HOUSE.

a contract with said Company, whereby in consideration of the issuance to him of eight hundred shares of its capital stock, he agreed to complete and deliver to the Company, equipped and furnished with the latest improvements, a factory to be under his directions, constructed on said land, and as soon as completed, the same, with its appurtenances to be conveyed to it. That immediately after the execution of this contract the Company issued and delivered to Field, eight hundred shares of its capital stock in full payment for said land and for the building and machinery to be constructed thereon by him, and on November 5, 1887, the said Field conveyed to the Company the land and improvements thereon. The complaint further avers that upon April 11, 1887, the said Field "as such contractor of and for the said defendant Field's Biscuit and Cracker Company, employed plaintiffs herein to build, manufacture and construct at their own works, and deliver and put in place upon foundations prepared by said Arthur Field, in said structure, building and factory," a steam plant, consisting of boiler, engine, heater, feed pipes, etc., for the agreed price of $5,600; and that said contract was duly performed by plaintiff. It is not alleged that this contract was recorded, but it is averred that the agreement between Field and the Field's Biscuit and Cracker Company was never recorded.

Plaintiffs' claim of lien was filed for record within the time given by law.

The respondents insist that Field was the owner of the property upon which a lien is claimed, at the time he contracted with the plaintiffs to furnish said factory the steam plant referred to in the complaint, and as the price agreed upon to be paid therefor, exceeded $1,000, and the contract was not recorded; that contract was wholly void under Section 1183 of the Code of Civil Procedure, and no recovery can be had by plaintiffs thereunder.

I. Section 1183 of the Code of Civil Procedure provides that "mechanics, material-men, contractors, sub-contractors, artisans, architects, machinists, etc.," shall have a lien upon the property upon which they have bestowed labor or furnished materials, and "in case of a contract for the work between the reputed owner and his contractor, the lien shall extend to the entire entract price, and such contract shall operate as a lien in favor of all persons except the contractor, to the extent of the whole contract price, and after all such liens are satisfied, then as a lien for any balance of the contract price in favor of the contractor." The Section then provides that all such contracts (that is, those between the owner and his contractor) shall be in writing when the amount agreed to be paid thereunder exceeds $1,000 and before work is commenced thereunder, be filed in the office of the Recorder of the proper county, "otherwise they shall be wholly void and no recovery shall be had thereon by either party thereto."

The position, assumed by respondents, in support of their demurrer, rests upon these two propositions.

1st. That Field was the owner of the building he was constructing, and

2nd. That plaintiffs were contractors in the meaning of Sec. 1183, of the Code of Civil Procedure, and the failure to sustain either is fatal to the judgment appealed from.

We agree with respondents upon the first point that Field was the owner and not a contractor, as that word is used in the section of the code just referred to. His relation to the Fields Biscuit and Cracker Co. was that vendor and that the factory was constructed for himself that he might convey it and the land upon which it stood, in accordance with his agreement to do so. It is very true that the Fields Biscuit and Cracker Co. was the equitable owner, having paid the agreed price therefore, but as the building was erected by its consent, then under agreement that its vendor should retain the legal title until its completion, he was for all practical purposes pertaining to its construction, the owner within the meaning of the law relating to mechanic's liens, and the equitable estate was equally bound with the legal title to satisfy the lien of mechanics, or material-men, growing out of contracts made with him in the construction of the building.

2nd. But assuming this to be so, the question still remains, were the plaintiffs contractors, as that word is used in Sec. 1183 of the Code of Civil Procedure, where it speaks of a "contract for the work between the owner and his contractor." If so, their contract not having been recorded was wholly void, and the demurrer was properly sustained. We are of the opinion, that upon the facts alleged, plaintiffs were not such contractors, but were material men. Although one may furnish materials to be used in the construction of a building under an expressed contract, he does not become a contractor, as that term is used in the law relating to mechanics' liens. That law recognizes a a clear distinction between contractors and sub-contractors, material men and mechanics, and thus different words are used to designate distinct classes of persons. All are referred to being entitled to liens, and the priority of their several liens is declared, and it is quite clear to us that the word contractor in Secs. 1183 and 1184 of the Code of Civil Procedure does not refer to a material-man. The section in requiring the contract "between the owner and his contractor" to be in writing and recorded, has for its object the giving of notice of the terms of the contract to those who may be employed, or furnish materials to the contractor, in the course of its performance, so as to enable them to judge whether the contract price to which they have a right to look for their security, is sufficient for that purpose. But the reason for giving this notice does not apply to the case of one who contracts only to furnish material, as his employees have no lien upon the price which he is to receive therefore, and for that reason the statute does not require that contracts under which materials are furnished shall be in writing and recorded.

And this view of the law is sustained by the reasoning of Mr. Justice Sharpstein, in the case of Sparks vs. Butte County Gravel and Mining Co., 55 Cala., 392, in defining the words "original contracts" as found in Sec. 1187 of the Code of Civil Procedure.

In this case there can be no doubt that the plaintiffs were simply material-men. Under their contract they were to manufacture at their own shop the boiler, engine, heater, feed pipes and necessary attachments, and deliver them finished and complete, and properly set them in the building; but the work done by them on the premises of defendant in placing them in position, was only the completion of their contract to deliver such finished machinery, and did not convert them into contractors for the erection of the factory or any part of it, within the true intent of the statute. The contract was essentially one to furnish material for the factory, and not a building contract.

3rd. What has been said disposes of the second ground of demurrer, to the effect that the contract was void because not complying with Sec. 1184 of the Code of Civil Procedure, as that section only refers to the contract of the contractor.

4th. We do not think the complaint is ambiguous in the respects pointed out by the demurrer.

We are satisfied that the complaint states a cause of action, and if the defendant have any defense to the action it is not disclosed by the complaint. In reaching this conclusion we have not overlooked the fact that the plaintiffs allege in general terms that Field was a contractor and as such contracted with plaintiffs. But the complaint avers specifically all the facts in regard to the ownership of the property and the relations to it of defendant Field and the Field Biscuit and Cracker Co., and the allegations that Field was contractor may be disregarded.

Judgment reversed with direction to overrule the demurrers interposed by defendant.

DE HAVEN, J.

Filed Sept. 10th, 1891.

We concur:

MCFARLAND, J.

SHARPSTEIN, J.

PRIORITY OF LIENS IN CALIFORNIA.—Under the section of the California Code providing that mechanics' liens shall be preferred to any lien that may have attached subsequent to the time when the mater ialswere furnished, materials furnished to a person in possession under a contract of a sale constituting a prior lien to a mortgage subsequently given the seller for the price. Where materials are furnished under a contract, and part of them are procured from another, who refuses to deliver them unless paid for by the contractor, the latter having paid for them, can include their cost in his claim of lien.

Avery v. Clark, Supreme Court of California, 25 Pac. Rep., 919, (112C).

NEGLIGENT EXCAVATION.—Excavation by an owner on his own land adjoining another's building, causing damage, without his knowledge, or previous notice to him, is evidence of want of care in doing the work.

Schultz v. Byers, Court of Errors and Appeals of New Jersey, 22 At. Rep., 514, (45C).

BUSINESS MOSAICS.

The Gardner Sash Balance and Steel Ribbon running on their new pullies attracted marked attention at the late Mechanics' Fair. The four hundred pound elevator door hung with this balance could be easily manipulated by a child. This device is rapidly gaining on the old cord style.

Insulated Electric Wires of all kinds are made by the John A. Roebling's Sons Company of Trenton, N. J., with office and sales room at No. 8 California street, in this City.

The Underwriter's wire is covered with two coatings of insulating material and can be relied upon as proof against accidental fires from unprotected wires. A weather-proof protected wire is furnished that will withstand hard usage where exposed. The compound wire is covered with a superior insulation which allows the wires to be run into buildings without interference with telephone wires. A safety insulated wire is made for inside wiring. Lamp cords, flexible cables, annunciator cables, weather-proof ærial cables, German-silver resistance wire, lead encased wires and cables, are all prepared by these well known manufacturers.

A new iron paint of superior quality and extra heavy body is now being manufactured in this City by the San Francisco Mineral Paint Co., Muecke & Co. Agents, 319 California street. Those who have used it recommend it highly, and prefer it to any other iron paint in the market. It has all the chemical qualities requisite, is ground to an extra fine grade, mixes readily and forms a heavy body when dry.

The Vulcan Iron Works had on exhibition at the late Mechanics' Fair their improved rope tram-way for the conveyance of materials over wide depressions. They also had one of their compact ice machines and cold storage rooms in operation. As these machines can be operated by anyone with such little expense that it would be well for persons interested in such matters to communicate with the above firm at 135 to 145 Fremont street, San Francisco.

The Instantaneous Water Heating Company have lately made an improved water heater of small size only nine inches in diameter and twenty-eight in height, which is set on a neat shelf with gas pipes attached for heating. This heater has been especially designed for the use of dentists and doctors, wash basins, sinks and where a small amount of cooking is done. They are made in various styles from plain to ornamental, plated and finished to make a neat piece of furniture. See advertisement on page iii.

It seems rather queer that an advertisement that runs a long time should be called a *standing* advertisement.

In this issue The J. L. Mott Iron Works show an illustration of one of their double open Lavatories, which is unique in design and appearance and worthy the attention of architects and parties desiring of using first-class material. They are made in various styles and sizes and adapted for either private or public buildings. Mr. M. S. James, their representative for this section, will be pleased to give any information that may be desired in reference to goods made by this well known house.

Patent Earthquake-proof Chimneys as made by Schuster Bros., 306 Sutter street, have long been known as a superior device for forming a fire flue without the use of bricks.

They are also importers and dealers in Metals, Stones and Ranges.

AMERICAN PIG TIN.

The Philadelphia firm of N. & G. Taylor & Co., who have for some time furnished American tin, announces that a shipment of thirty-five tons of American pig tin from mines in San Bernardino County, California, known in this State as the Temescal tin mines, was made on the 12th of August. The Philadelphia firm says that on the receipt of this pig tin it will be able to supply American tin plate made from American materials and by American workmen from start to finish. This is the first shipment from the Temescal mines out of the State, other shipments having gone to San Francisco and been used for making tin pipe and solder. There seems to be a general movement among sheet mill proprietors to transform their works into plants for the production of tin plates. Pig tin of the quality produced at the Temescal mines is all that is now needed to make tin plates a thoroughly American product.

We have received from C. Sidney Norris & Co., of Baltimore, the manufacturers of the well known Norris Patent Sash pulley, a sample of their new aluminum bronze tape for which it is claimed the excellent qualities of strength, pliability, lightness and durability.

The Rischmuller door opener and closer is an improved appliance that presents many desirable features. By the handle of the opener when placed at a distance or on an upper floor, the door can be opened or closed as readily as when worked by the knob on the door; therefore the door is under complete control from any position desired.

It presents a neat appearance, the wires being obscure and so arranged that the door cannot be opened from any other point than the one arranged for.

A full sized working model can be seen at the Plaster and Decorating store of Kellett and McMurray, 28 Ellis street. The price is $15.00. Leave orders with G. Rischmuller, 934 B Capp street, S. F.

On page XII of this paper will be found the advertisement of A. L. Fish, 59 and 61 First street, the agent for the Worthington Pump. These pumps have successfully withstood the test of time and usage. On account of their excellent qualities, many premiums and diplomas from various exhibitions have been awarded to the manufacturers.

The specimen of arch work in Terra-Cotta, from the new "Mills' Building," which was placed on exhibition by Messrs. Gladding, McBean & Co., 1358 & 1360 Market street, this City, shows the delicate modeling and artistic effect of the work from this well known firm.

The Cincinnati Corrugating Co., make the first purely American Terne Plates. The Cincinati Corrugating Co., of Piqua, Ohio, have been considering the manufacture of Terne Plates, or Tinned Roofing Plates, as an adjunct their present large line of Painted Roofing Sheets. In order to satisfy themselves of the adaptability of the steel sheets supplied them by their allied Company, the Piqua Rolling Mill Co., they have recently made a quantity of 14 x 20 terne roofing plates with great success.

This experience demonstrates fully that the quality of the steel plates used for coating meets the highest requirements.

The terne coating, composed of tin and lead, resulted beautifully, equaling in the opinion of experts, in appearance and all other respects, the "Old Style," hand made, ternes hitherto imported from Wales.

Major McKinley will address the citizens of Piqua, Sept. 17th, and the success of The Cincinnati Corrugating Co., has added so much to the enthusiasm of the occasion, that the Executive Committee have ordered 5,000 souvenirs made of Piqua Terne Plate mounted on ribbon badges for distribution.

The souvenirs will be circular in form and have thereon the words, "Ohio Sheet Steel, California Tin, Missouri Lead, Piqua 1891— McKinley and Protection." At the meeting full sized sheets will be conspicuously displayed.

These are the first terne plates in Ohio, and so far as we are advised, the *first purely American terne plates* have been made at Piqua, Ohio. For in their composition not an ounce of foreign material enters—California furnished the pig tin, Missouri the pig lead, and the Bessemer steel used was made at Middleport, Ohio, and rolled by the Piqua Rolling Mill Co.

The Cincinnati Corrugating Co., claim no other merit in this, than that they give to all, the results of their experience—that all that is necessary to test the practicability of making American Tin or Terne Plate, is to make them. Having satisfied themselves on the point of practicability, the next steps will be pursued, as in any other branch of manufacture—to obtain the best facilities for economic manufacture for the regular production of American Terne, or Tinned, Roofing Plates.

The Cooking Range at the new Stanford University was from the firm of John G. Ils & Co., 814 Kearny street. It is of unusual size and especially made for that purpose.

We acknowledge the receipt of a transparent half circle scale of degrees from Merchant & Co., Importers and Dealers in tin plate, metals, etc., Philadelphia.

Creosote Shingle Stains have become a standard preparation throughout all sections of the country as is shown by the following letter from Mr. Samuel Cabot, the inventor and manufacturer.

During the six weeks previous to the 1st of July, our Creosote Shingle Stains received 107 recommendations, and it is curious to note the different sections of the country from which these came. The result shows conclusively that they are actually used in all parts of the country.

The recommendations were received as follows: From the New England States; 13, New York; 21, New Jersey; 8, Pennsylvania; 14, the South; 9, The West, including nearly all the states from Ohio to California; 42.

TENDERS TO BE RECEIVED.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 30th day of October, 1891, for all the labor and materials required for the cut stone and brick masonry works of the superstructure of the U. S. Court House, Post Office, etc., building at Detroit, Michigan, in accordance with the drawings and specifications, copies of which may be had at this office or the office of the Superintendent at Detroit, Michigan.

Each bid must be accompanied by a certified check for two per cent. of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same, also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposals for the cut Stone and Brick Masonry Work of the Superstructure of the U. S. Court House, Post Office, &c., Building at Detroit, Mich." and addressed to

W. J. Edbrooke,
October 1, 1891. Supervising Architect.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

THE Post Office site for San Francisco has been selected by the Washington authorities. It has a frontage of 350 feet on Seventh street, by a depth of 325 feet on Mission street, and 325 feet on Stevenson street. The price paid was $1,040,000. Objections have been urged against the location as being too far from the business portion of the City, while the probable majority of the future will think it a tax on their time to pass over a non-business block while in active duty. The strongest protestations are made by persons who have the least business with the Post Office Department. Objection has been made on account of the difficulty to be encountered to obtain a secure foundation, but this is no serious objection, as the public buildings in many of the cities have been built upon ground that presented greater difficulties than our own.

Whatever may be said in reference to the design for the future buildings, we feel assured that Mr. W. J. Edbrook, the present Supervising Architect for the Treasury Department, will design a structure which in architectural importance will accord with commercial importance of the great city that San Francisco is destined to become, as well as the main westerly point in the postal service.

VENTURA MISSION.

Our sketch this month gives two views of the Mission Church of San Buena Ventura, the one as seen from the front, and the other, which is equally interesting, as seen from the rear. In those days when the church was fresh from the hands of the builder it stood no doubt in the fields or rather in the midst of a but slightly cultivated country, but now Ventura is a busy agricultural center, small but active. The view as seen from the front is taken from the main street, on which stands the church near the center of commerce. From behind, the view is very picturesque, combining in one the church with its crowd of lowly dwellings nestling around, beyond the sea and its gliding sails that move to and fro like sea birds, as they skim from wave to wave in search of food, and still further on in the hazy distance, that required to provide the genuine thing, the spaces have been filled with wooden imitations. This does not seem altogether to run in line with the sentiment of truth, which above all a church building should express, but as the average superficial beholder will never connect the untruth of the building with the falsity of the builder, the world at large will not be shocked by such an inconsistency.

To the left of our sketch, as seen from the front, was originally the graveyard. Some years ago in digging the foundations for a proposed addition to the church, many bones were unearthed. It was the custom among the Indians to bury their dead without enclosing them in a coffin, whether from an intuitive wisdom, native to their thoughts, or from pecuniary reasons,

VIEW OF THE MISSION CHURCH OF SAN BUENA VENTURA.

the Santa Barbara Islands, blue and dreamy in their place of silence among the waves. All the air seems laden with sunshine, blue sky above and blue sea beneath, while across the old bell-tower the yellow light of the sun in its southern glory glows as a flame of fire against the deep shadow and dark background of climbing vines and drooping peppers. Nothing now remains of this Mission save the church, but this is in a good state of preservation.

The walls for half their height are built of stone, while the balance is of a dobe. The small bells in the tower are hung so as to swing on iron pivots fixed in the wooden crossbeam, while the large bells are rigid, only their tongs swinging. To add to the apparent wealth of bells in this tower, at a less cost than I know not. To the right, the dwellings and storehouses common to the Missions have entirely disappearred, and in their place stand the comfortable modern dwellings of the parish priest, and around it a trim garden with pleasant shade trees and sweet smelling flowers and all breathing of peace and happiness, but whether it be the crowning feature of the tower that cast its shadow across the light, or only that of the imagination, it stands there still as emblem of that reallty which is ever present with us, even in these most sunlit places of the earth, and no doubt it is much the same to day in this Eden of the south as it was 100 years ago in the days of the Mission's founding, or even in that place of many flowers where the river Euphrates divided its waters.

TRES.

BRICK AND MARBLE IN THE MIDDLE AGES.

From the *London Builder* we take the following article on "Brick and Marble in the Middle Ages," which is as applicable to design at this day as twenty years ago:

The stimulated interest among English architects in that combination of brick with marble in veneered or particoloured designs, which has so largely characterized the architecture of Mediæval Italy, and the avowed interest in which gave rise in great measure to the fancy for chequered and "stripy" brickwork in England, which critics have stigmatized by various contemptuous epithets. We cannot say that the influence of this form of Italian architecture on our own modern practice has been in the main for good. We have imitated mostly the less refined, certainly the less costly forms of it; we have got the brick *without* the marble, for the most part. That the process of marble veneer has not been employed here, at least not in that extensive and wholesale manner in which it is found in Italy, is a matter for congratulation. It is not in the highest sense an architectural form of treatment; it has more of the essence of cabinet work than architecture, and at best is only suited in expression to a climate of mild weather and bright suns. But the adoption of brick and marble in combination might have been very well used here, but has been almost neglected, except in so far as the employment of marble shafts goes. We have, instead of this, in our modern brick architecture, either very raw and crude combinations of strangely colored brick, or we have "stone dressings," in which a dead sandstone surface offers no contrast to the texture of the brick, but rather adds dullness to the whole. Part of the charm of brick and marble combinations consists in the contrast of texture—the smooth, hard marble with the rough brick—and in the delicate tints obtained from the marble. We have a good deal of the material within reach, but itr has not been made the most of, even where expense was no obstacle to any wish or fancy of an architect.

PLAN OF MISSION SAN BUENA VENTURA.

Independently of these more practical considerations, the interest of a comparative study of Italian with Northern Mediæval architecture, is very great, even to those who feel less of positive interest in the style *per se*. The peculiar distinction between the conditions under which the architect worked, and the results he produced in the North and South. The Northern Mediæval architect developed his style away from the reach of the remains of classic architecture, and with no precedents to divert his aim from the one style which he was engaged in almost unconsciously perfecting, without, practically, the knowledge of any other. The Italian was otherwise situated. He worked in a country with a great past, the architectural monuments of which were everywhere around him. And these architectural monuments belonged to a school of constructive design, totally opposed to that which was dominant in Europe in the Middle Ages. They were the monuments and representatives of the great lintel system, which had died out with the decline and fall of the Roman Empire. The new structural form was that of the arch in its entirety, which had only been half accepted by the Roman, in a one-sided and architecturally apologetic manner, but was now to be carried to its utmost development by the Goth, whose influence was to become predominant throughout Europe. But in the midst of this permeation of the arcuated style, there lingered in Italy a constant tendency to a revival of, or return to, the antique forms, the remains of which were so plentiful, and the consequence was not only the existence here and there of groups of artists influenced by some one building of antiquity, which they admired, and were desirous of re-producing in its best features, in their new work; but a general obstacle everywhere tothe frank acceptance of the arcuated style as a system of balanced and buttressed construction. The old classic principle of repose still asserted itself in the Mediæval art of Italy. The buttress was never made a feature in the design, except in the old classic pilaster-like form; the arch was largely used, its pointed form was more or less adopted, though with hesitation, but its external constructive expression was shirked, and the obvious aim was to combine the Gothic arcuated construction with the classic immobility of design and expression; or if this were not the conscious aim, it was the unconscious result of conflicting tastes and associations.

"They ignored, as much as possible, the clear exhibition of the pointed arch, and even when they did use it, not untrequently introduced it in such a way as to show their contempt for it as a feature of construction; employing it often for ornament, and never hesitating to construct it in so faulty a manner, that it required to be held together with iron rods from the very first day of its erection. This fault they often found it absolutely necessary to commit, because they scarcely ever brought themselves to allow the use of buttress; and this reluctance was a remarkable proof of their classic sympathies. Italian architects, then, in never resorting to the buttress, avowed their feeling that a state of perfect rest was the only allowable state for a perfect building, and they preferred almost always to use the arch for its beauty alone, and avowedly not for its constructional value."

From this use of the arch without the buttress grew, thinks Mr. Street, one beauty, the use of the frequent trefoiled arches so common in Italy, and which he regards as having their origin in an attempt to balance the arch by weighing it inwards. As so much depended on these trefoiled arches, "no pains were spared in bringing their outline into the very purest form. To this we owe the absolute perfection which characterizes some of the trefoiled arches in early Italian work." Whether or no this may be attaching a little too much constructive importance to the trefoiled arch, there can be no doubt that to the half-hearted use of the arch referred to, as well as to the lingering of certain reminiscences of classic art, is mainly due to want of unity of design and of entirely satisfactory character in the buildings of Mediæval Italy as compared with the best of Northern Gothic. "You may go to a great English cathedral and find that, from every point of view, inside and outside, every feature is well proportioned to its place, and beautiful in itself, whilst the *tout ensemble* is also perfect in proportion and mass. This can never be said of Italian work. It never produced anything perfect both in detail and in mass, and one always finds it nec-

essary to make excuses for even the best works, such as one never finds necessary, or allows oneself to think of making, for English works. There is something really absurd in comparing even the best of the Italian churches with such cathedrals as Canterbury and Lincoln, so superior are the latter from almost every point of view." Among other reminiscences of classic design with which the Italian architect was haunted was the cornice, which was developed to an extent and with a richness never found in true Gothic work, and the heavy lines of which not only cap the walls horizontally, but are carried up gables and returned round buttresses. Many of these cornices (often brick) are very fine, and not without great effect architecturally; but it is obvious that they clash with the verticality of design which is predominant in true Gothic. The mouldings of the Italian architect are what we should call poor and slight in effect, partly the result of a bright climate where deep cutting is not required to emphasise the shadows; and partly that frequent dealing with marble leads to a love for plain surfaces and sharp angles rather than for deep hollows and rounded angles. The traces of classic influence on the plan, through the basilica form, are everywhere in Italian churches, which thus lack the multiplied outline and internal intricacy of the Northern cathedral; the latter quality being again interfered with by the wide spacing of the points of support by the Italian architect, who thus removed all appearance of mystery, and even destroyed completely the apparent scale of many of the largest structures in this manner. Among peculiarities due to classic influence, the constant use of the detached shaft, and especially its use in couples placed one behind another, so as to ensure lightness in the front view and yet give a full and varied perspective, with ample apparent strength. We quote the following very just remarks in regard to the respective merits of shafts and continuous mouldings :—

"So long as the influence of Lombard and Romanesque art is visible in French, German, and English Gothic, so long the detached shaft was used, and just in proportion as in course of time that influence decreased, so did the frequency of its use decrease. Our 14th and 15th century buildings present nothing in its place but combinations of mouldings, in themselves very beautiful, but by no means so beautiful as to reconcile us to the loss of that which they so entirely supplemented. One consequence of their introduction, to the exclusion of the detached shaft, was, that the art of sculpture deteriorated just in proportion as the art of moulding was developed. There is no place in which architectural sculpture can be more fittingly displayed than in the capital of a column. It is the most convenient, and at the same time the most conspicuous position for it. It is, too, the most important feature in every design in which the detached column is used. The gatherings together of all the arch mouldings into one above the capital, in order that their forces may be collected before being transmitted to the ground, leads naturally to the laying of a special emphasis on this point above all others; and it is one of the strongest among many reasons in favor of the earliest Gothic, and against the latter varieties of the style, that in the former the use of shafts involved the use of forcible and elaborately cut capitals, so that this point might be distinctly marked, whilst in the latter, by the disuse of the shaft and the constant practice of carrying the mouldings of the arch down to the ground without any interruption, it was made as little as possible."

The partiality of the Italian architects for detached shafts is further illustrated, we may observe by the peculiar form of porch, consisting of a canopy supported by shafts generally resting on the backs of animals, which is found so frequently in Italian work. One of these, that of S. Maria Maggiore, Bergamo, forms the frontispiece to the present volume, and is a very good specimen of this elegant type of design, with which however, great fault may doubtless be found if we take it from the standpoint of exact criticism. But there are many such features in architecture, which it would be ill judged to imitate, yet which in their original form and locality are full of an interest partly artistic, partly archeological; we sketch them with a kindly feeling towards the workmen who invented such pretty fancies, and feel satisfied on the whole, that there should be "incorrect" as well as "correct" architectural design in the world, and that artistic invention should never have moved for long in one fixed path, however satisfying it might be to the judgment.

Among other uses of the shaft in Italy, Mr. Street alludes to the cloister of S. Gregorio, Venice, where the shafts support the woodwork in a very picturesque fashion without any arches; in fact, a reminiscence on a small scale of classic construction, only that the lintel is of wood instead of stone. There is among the drawings of French châteaux in the International Exhibition, a similar construction, with admirable effect, in the formation of a recessed gallery under the eaves of the roof, which are carried by shafts in pairs at some distance from one another, supporting what we should now call a "trimmer" at the extremity of the rafters. Constructively, no doubt, wood upon stone shafts is not altogether workmanlike; and we may note this as another instance of that want of homogeneous character in construction and design from which arises much both of the interest and the defect of the Mediæval Italian architecture.

OPTICAL CORRECTION IN DESIGN.

Some striking instances of the importance attached to this kind of refinement by all the leading architects of antiquity are given by Viollet-le-Duc and Barnouf, besides a few English authorities, as J. Pennethorne. Of course Mr. Penrose was the first in this country who published anything definite on the subject, and that gentleman's learned work on "The Entasis, and Other Curved Lines of the Parthenon" (1845), and his "Geometric Lines and Optical Corrections of the Greek Architects" must be acknowledged as clearing up any doubts upon the Greek application of correctional or compensatory curves. Our own journal has also referred to certain effects more or less illusive in respect both of architectural lines and perspective representation; and the "Architectural Dictionary," in its recent part, enters rather fully into the subject, referring to our own pages and other writers. It is well known that St. Peter's at Rome disappoints the spectator who enters it; it looks smaller than he had imagined. This effect has been regarded by some writers as indicating justness of proportion, but by many others as a defect.

The Cathedral of Florence also looks smaller than it really is on account of the largeness of scale of the arches, and as a rule Classic buildings of one order look small when compared with a Gothic cathedral, with its numerous narrow arches and multiplicity of detail. The effect of distance was studied by the Egyptians, as their colossi had sometimes smaller figures near them, in order to increase the effect. Three distinct refinements have been noticed by investigators of the Greek Parthenon,—namely: the entasis; the inclination of the axes of the columns; and the convexity of the stylobate and entablature. Again, Vitruvius mentions that the angle columns were placed closer, and made about a 50th larger than the rest—the inner rows of columns were generally smaller. The flutes were modified in form to give distance; the triglyphs were made to slope to the architrave; the guttæ made conical to appear uniform; and the faces of dentils were made to incline. Chambers, in his "Decorative Part of Civil Architecture," mentions also that, where the parts are far removed from the eye, the due proportions of members have been sacrificed, recourse being had to artifice to produce the desired effect. At St. Peter's this practice is frequent in the cornices and other lofty parts, the vertical faces of which have been modified or omitted. Extraordinary distance has been sometimes obtained by diminishing the width and height of the columns of a colonnade as in the Plazzo Spada. This false kind of perspective was practiced by Serlio and Bernini, the latter of whom, in the Scala Regia at the Vatican, made the side walls approach each other as they rose, the width at the bottom and top being as 5 and 3. The columns, vault, and details all diminish in like proportion. Viollet-le-Duc mentions various peculiarities in the form of mouldings and angle features by which light and shade were made to play an important optical effect. The angle pinnacles of the spire of St. Denis are set to an angle to each face to give apparent rigidity.

M. Daly has also referred in his "Revue d'Architecture" to the accentuation of shadows in mouldings, and it is now understood by all who have studied minutely the best works of the Greeks and artists of the Middle Ages that the deep quirks and throatings found in Greek cornices, capitals, and mouldings had not only a useful but an æsthetic purpose and meaning. They gave dark lines of shadow to relieve and throw into prominence other shadowed parts, while the prominent members caught luminous rays with the like object of intensifying light and shadow and making contrasts more telling. In the design of arches, Alberti and others have given directions to still them when necessary, to clear the imposts. Brewster and J. Carpenter have likewise referred to optical illusions and perspective inversions but, perhaps the most interesting class of illusions to which the architect may profitably direct his attention is caused by the juxtaposition of curved lines in buildings.

The sag of straight tie-rods is well known by architects and can be readily attested; but the junctions of an arch with, its vertical jambs frequently calls for considerable correction to prevent the appearance of spreading. The juxtaposition of vertical and horizontal, with oblique lines, produces an unpleasant effect to the eye, and so also the widths of horizontal and vertical surfaces, though equal, do not appear so. These appearances in the contrastive power of lines are somewhat analogous to the effects produced by placing together certain colors, and as in color decoration it is necessary to produce a balance of primaries or as nearly so as possible, so in designing the architect must seek the causes of illusive appearances and endeavor to remedy the disagreeable effect by corrective means—*London Building News.*

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways

COURT HOUSE, FRESNO, CAL.

The building, as shown in accompanying design, is shortly to be erected and was recently chosen in competition by the Board of Supervisors.

The central portion of the building, comprising the existing Court House and offices, has been remodeled internally to adapt it to its altered requirements, and to connect it to the new wings on either side; while the front has been entirely changed to harmonize with the general design.

It was desired that the two new wings should each be placed at a distance of twenty feet from the present building and connected by bridges or covered corridors near the center for communication between each part, and this has been done very effectively, both for convenience and appearance; but, to avoid the scattered and isolated appearance that three separate buildings would present, the wings were placed in such a position as to be connected with each other and with the central block by means of the bold front portico, and this, with the alterations to the old building, affected a unison and completeness which could not otherwise have been satisfactorily obtained; while the bridge corridors in the rear form very effective connections, so that from front or rear the buildings have the appearance of one complete and harmonious structure.

The left wing is occupied by two story Hall of Records, Law Library and offices of the County Clerk, etc., and the right wing by the Board of Supervisors' offices, Court and Jury rooms, Judges' chambers, Collector's offices, etc.

Each of the new wings are to be of fire-proof construction and to be erected in the most substantial manner, while the central tower and dome will be of strong timber framing covered with copper and will replace the existing dome, which, with the greatly extended building, would have presented an incongruous and very diminutive appearance.

The building, as a whole, will undoubtedly be of great utility and ornament to the City of Fresno, and one that possibly for very many years will fulfill all the requirements of the authorities and officials, while the Supervisors and the public generally will possess an administrative building of which they may be justly proud, and which will be indubitable evidence of their public spirit and of the progressive and sound growth of their City.

The architect is Mr. William Curlett, of San Francisco, in conjunction with Mr. T. A. Eisen, of Los Angeles, Cal.

The country residence herein illustrated was built for Mr. R. C. Johnson, and is situated at Buena Vista near Sonoma, Cal.

It is a frame structure, consisting of two stories with basement and attic.

The exterior with its broken outline, bay windows, spacious verandas and high tower gives a very pleasing effect and an imposing appearance. From the tower one can obtain a magnificent view of the surrounding country, which abounds in beautiful scenery.

The interior was arranged to meet all the requirements of both convenience and effect. It is finished throughout in red wood, with the exception of the main staircase, the newell, rail and ballusters, which are executed in black walnut. The rooms are all large, light and airy, and are liberally supplied with closets and other necessary accommodations, including an ample number of speaking tubes aud electric bells.

The building was designed and built under the superintendence of B. McDougall & Son, Architects, 330 Pine st., S. F.

NOTES & COMMENTS.

N. S. Keith and the Electrical Engineering company have begun suit in the United States Circuit Court against the Harding Electrical Manufacturing Company for damages at the discretion of the Court, and also costs of suit for an alleged infringement of a patent on a dynamo machine.

Santa Rosa is in need of houses to rent. Desirable places are taken as soon as vacated.

We have received a bound volume of "Painting and Decorating," published by the House Painting and Decorating Publishing Co., of Philadelphia.

Painting and Decorating is an illustrated monthly journal treating on the subjects indicated in the title. Each issue contains articles of value to architects, while to students of architecture or art it is especially useful.

"Stones for Building and Decoration," by George P. Merrill, Curator of Geology in the United States National Museum, illustrated and published by John Wiley & Sons, New York, and for sale by Osborn & Alexander, 401 Market street, San Francisco, Cal., price $5.00. The size of the obok is 6x9 inches and 1½ inches thick.

This work, as the name indicates, treats of matters of especial interest to the Architect and Engineer. The subject is, however, so handled as to make it of equal value to the Student and Stone-dealer, as well as to all who are interested in the subject either from an economic or a purely scientific standpoint. Though written primarily from an American point of view, it is made to include descriptions of all stones of importance that are to be found in the American market, from whatever source.

The work opens with a brief chapter on the Early History of stone-working in the United States. This is followed in Part I by chapters on the Geographical Distribution of the Minerals, and the Physical and Chemical Properties of such stones as are utilized for general constructive and decorative purposes.

Part II is given up to a systematic description of the rocks, quarries and quarry regions. Each variety of stone is taken up in turn, its composition, origin, structure and general adaptability for any form of work discussed, and the resources of each State and Territory described in alphabetical order. It is believed that there is not a single stone in the United States of more than merely local interest that is not described, or at least referred to, here. The subjects treated are as follows: (1) the Steatites or Soapstones; (2) the Serpentines or Verd-antique Marbles; (3) Gypsum and Alabaster; (4) Limestones and Dolomites, both marbles and the common varieties; (5) the Minor Ornamental Stones; (6) the Granites; (7) the Porphyries or Porphyritic Felsites; (8) the Liparites; (9) the Syenites; (10) the Diabases, Gabbros, Melaphyrs and Basalts; (11) the Diorites and Andesites; (12) the Gneisses and Schists; and (13) the Sandstones, Volcanic Tuffs, and Slates.

Part III treats of the methods of Quarrying and Working; the Machines and Implements used in stone-working; the Weathering of building stones; the Selection of stone for building purposes, and the methods employed for the Protection and Preservation of stone from the ravages of time.

Part IV is made up of Appendices, including extensive Tables showing the qualities of stone as indicated by their crushing strength, weight, ratio of absorption and chemical composition; a short table on the prices of stone and the relative cost of dressing; a list of some of the more important stone buildings in the United States and the dates of their erection; a bibliography of works on building stone and concludes with a glossary of terms.

The work is illustrated with eleven full-page plates, drawn in most cases from photographs taken by the writer and the accuracy of which is therefore beyond question, and eighteen figures in the text.

In putting forward the work the publishers would call attention to the fact that not merely is this the most exhaustive and comprehensive treatise on the subject that has yet appeared in the English language, but it is really the only available treatise on the subject. Until a systematic attempt at ascertaining the resources of the country was inaugurated at Washington, the information necessary for a work of this kind was beyond the reach of any single individual. Mr. Merrill, from his position as Curator of the Geological Department in the National Museum, has had better facilities for gaining an accurate and wide-spread knowledge of the subject than falls to the lot of most men. How well he has improved his opportunities must be learned from an inspection of the work itself.

WORLD'S FAIR NOTES.

From the Department of Fine Arts, World's Columbian Exposition, we have received the following communication, which will be of interest to architects:

Every effort will be made by the Department of fine Arts to give the best possible expression of American Architecture as a Fine Art; but this can only be accomplished in a dignified and comprehensive way by the hearty co-operation of American architects.

It is expected that adequate exhibits of recent architectural progress will be made by foreign countries, and correspondence to that end with foreign societies has already been begun. A special effort is being made to secure from abroad as large collections as possible of reproductions from monumental decorations which, from the character of the materials used, will, in all probability, remain in this country. A rare opportunity for intelligent comparison will thus be afforded, and it is hoped that in this field, where so much has been accomplished on new lines in the last few years, the United States will not fail to take the high rank which she deserves.

It is to be observed that, according to the classification adopted for the Department of Fine Arts, building and construction are not included. These subjects are classed under the heading "Civil Engineering," (in Group 148, Department L—Liberal Arts) as "Constructive Architecture" which (Class 839) includes:

Plans of public buildings for special purposes; large and small dwelling-houses.

Drawings and specifications for foundations, walls, partitions, floors, roofs and stairways.

Estimates of amount and cost of material.

Designs and models of special contrivances for safety, comfort and convenience in the manipulation of elevators, doors, windows, etc.

Working plans for the mason, carpenter and painter--Designs and models of bonds, arches, coping, vaulting, etc.; plastering and construction of partitions; painting and glazing.

Plans of appliances for hoisting, handling and delivering.

Building materials to artisans—Scaffolding and ladders; special scaffolding for handling great weights; portable cranes and power elevators.

Illustrations of the strength of materials.

Plans and sections of special architectural forms—Metallic floor-beams and girders; hollow bricks and other architectural pottery for heating and ventilation; metallic cornice and conduits; shingles and sheathing; glass-roofs, floors and accessories; architectural hardware.

Methods of combining materials.

Protection of foundations, areas, and walls against water.

Working plans for paving and draining.

Any further information desired will be gladly furnished on application to

HALSEY C. IVES,
Chief of the Dep't of Fine Arts,
World's Columbian Exposition.

It is not thought probable, now, that there will be any tower at the World's Fair. The projectors of the most promising tower scheme abandoned it when they found that they would have to take down their tower when the Exposition closed, because the Park Commissioners refused to grant any subsequent use of a site.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

FAILURE TO COMPLY WITH SPECIFICATION.—Where the requirement of a building contract, that the cellar be made water-tight, (its situation making it subject to the flowing of water,) is not performed, and the omission is not shown to have been unintentional, there is not a substantial performance of the contract; and the refusal of an architect to give the certificate required by the contract as a condition precedent to the last payment thereon is not unreasonable, and the builder cannot recover such payment.

Weeks v. O'Brien, Superior Court of New York, 12 N. Y. Supp. 720, (69 M).

CREDIT ON RESERVED PAYMENTS FOR CONTRACTOR'S FAILURE.—Where the owner of a building, against which mechanics' liens are filed, fails to retain after the completion of the work, and pay over to those entitled thereto, one fourth of the contract price, as provided in his contract, he is responsible to that extent, but may have deducted any lawful credits to which he is entitled under the Code of Civil Procedure, Cal., Sec. 1200 which provides that, if the contractor fails to perform his work in full or abandons it, the proportion of the contract price applicable to mechanics' liens shall be deemed the difference between the value of the work and materials already done and furnished and the payments then due and actually made.

Reed v. Norton, Supreme Court of California, 27. Pac. Rep. 426, (130C).

CLAIM AGAINST PUBLIC BUILDING.—Where the statute provides that a mechanic or material-man may give the owner of the building for which he has furnished material or labor written notice of his claim, and that it thereupon becomes the duty of the owner to retain sufficient funds to pay it, a mechanic employed by a sub-contractor, who serves the required notice, acquires a prior right to the funds in the hands of the owner due the contractor, and though the latter may not be entitled to a lien, the building being a public one.

Bates v. County of Santa Barbara, Supreme Court of California, 27 Pac. Rep. 438, (109C).

SUFFICIENCY OF RECORD OF CONTRACT AND NOTICE OF LIEN.—Where a statute provides that material-men may have liens, and that all building contracts shall be in writing when the price exceeds $1,000, and shall be filed in the office of the County Recorder before work is commenced, otherwise the contract to be void, and in such case all material furnished at the instance of the owner, a failure to give a description of the property affected by the contract does not invalidate it, as no description is required by statute. Where a contract was recorded, a notice of lien which states that the lien claimant agreed with the contractor to furnish the lumber and building material to be used in the construction of a building, and delivered the same, for which the contractor agreed to pay $833.86, as he received payment under his building contract, is sufficient, as the terms of payment could be ascertained from the building contract.

San Diego Lumber Co. v. Wooldredge, Supreme Court of California, 27 Pac. Rep. 431, (171C).

SUFFICIENCY OF AFFIDAVIT FOR LIEN—EFFECT OF AMENDMENTS TO STATUTE.—Where the affidavit for a mechanics' lien is entitled at the head as of the county in which it was sworn to, it is a sufficient description of the property to say it is "located in said county" though the name of the county does not appear in the body of the affidavit. Where an amendment to the lien statue is passed, lessening the time within which a lien may be filed, the old provision remains in form as to contracts performed prior to the enactment of the amendment.

Nyston v. London & N. W. Am. Mortgage Co., Supreme Court of Minnesota, 49 N. W. Rep., 394, (120M).

MECHANICS' LIEN FOR PAPER DECORATING—A mechanics' lien may be established for papering a house. It is not necessary, in order to sustain a lien that the price of the work should have been agreed upon, but it is enough if it appears, that the work was ordered, as that implies a promise to pay the reasonable worth and value of the work.

La Grille v. Mallard, Supreme Court of California, 27 Pac. Rep., 294, (70 M).

CONDITIONAL ACCEPTANCE OF BUILDERS' ORDER.—When an order is drawn by the surviving member of a firm of contractors for a specific sum, with direction "to charge the same to firm on account of work done and work to be done on your building now in process of erection," and the same is accepted on these terms, "I agree to pay within order when the building is completed and received by Messrs. Bruce & Morgan," the acceptance is conditional upon the completion of the building by the drawer; and if, without fault of the acceptor, he fails to complete it, and the acceptor has it completed by others at his own expense, there can be no recovery in an action on the acceptance.

Baker v. Dobbins, Supreme Court of Georgia, 13 S. E. Rep., 524, (130M).

DISTRIBUTION OF ASSETS AMONG LIENS AND MORTGAGES.—When there are several liens upon the same property, and a mortgage as well, and some of the liens are prior to the mortgage and some subsequent, the proper method of distributing the assets, is to first set aside the amount of those liens which are prior to the mortgage, then satisfy the mortgage, and then add the residue to the amount first set apart, and divide it *pro rata* among all the liens, as there is no priority among them, as between each other.

Tinlayson v. Crooks, Supreme Court of Minnesota, 47 N. W. Rep., 398, (98M).

MECHANICS' LIEN LAW IN THE STATE OF WASHINGTON.—The mechanics' lien law of the State of Washington, provides that the notice for a lien shall contain a statement of the demand after deducting all just credits, and also a statement of the terms and conditions of the contract, if any. Such a notice is defective where it states that the material and labor for which the lien is claimed were furnished under a sub-contract, but omits to set out the terms of the original contract. The notary must use his seal in certifying the verification of such lien notice, as the notice is not intended primarily for use in court or in judicial proceedings, and hence is not within the exception of a statute providing that such documents need not bear the seal.

Gates v. Brown, Supreme Court of Washington, 25 Pac. Rep., 914, (142C).

BUSINESS MOSAICS.

Among all the stair builders of the city Geo. R. Jesse stands at the head. He has been in the business for many years and his work has given general satisfaction.

Persons who wish a good job of painting done should call on J. L. Cahill, 932 Mission St. Mr. Cahill also imports paints, oils, glass and wall paper of the finest grade.

The *Moniteur Industrielle* recommends the use of a mixture of oil and graphite on all screws in machinery. It says it will effectually prevent them from becoming fixed, and protects them for years from rust, at the same time the mixture facilitates tightening up.

The Joseph Dixon Crucible Co., Jersey City, N. J., have for a number of years prepared graphite mixtures which have found great favor with machinists and steamfitters of this country.

Dixon's Graphite Pipe Joint Mixture not only takes the place of red lead but is infinitely better, while Dixon's Graphited Oil is used where a thinner mixture is desired and also for lubricating bearings. Graphite is the best natural lubricant known.

The Union Pressed Brick and Terra Cotta Company manufacture only first-class material, among which are moulded, ornamental and plain pressed brick, also terra cotta worked in very artistic designs.

They are always making new and valuable improvements in their work and any advance in the requirements of the trade is immediately met by this company. They have facilities for turning out new designs and patterns with the utmost dispatch. The quality of materials furnished by this company has been thoroughly tested by use and proves itself a standard article. The office of the company is at the southeast corner of Bush and Sansome streets, S. F.

Parquet floors and wainscoting is used in many places where ornamental hard wood is desired.

The firm of Reynolds & Adams, 1237 Market St., appear to have distanced all their rivals, on account of their work being so much more artistic.

This firm has put up some beautifully worked fret-work in many of our new banks and counting rooms.

Ornamental metal work becomes of more importance each year. One of our best and most reliable metal workers is William Cronan of the "Eagle Sheet Iron Works," 1213 & 1215 Market St.

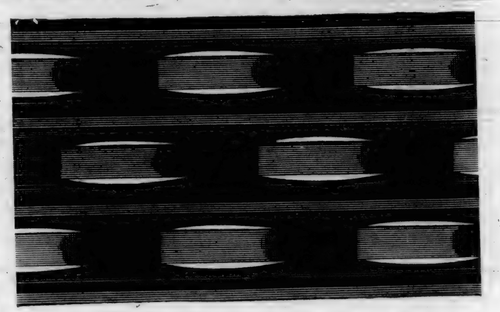
Mr. Cronan has moulded and put up the ornamental sheet metal work on many of our most prominent buildings.

THE BOSTWICK STEEL LATH.

We have many times referred to the multiplicity of new uses to which steel was being applied, and our purpose at the present time is to call the attention of our readers to one of the latest applications of the metal—the manufacture of steel lath.

A year ago the Bostwick Metal Lath Company was organized in the city of New York with a capital of $250,000. The demand for the product became so urgent that a second company was organized for its manufacture at Niles, Ohio, with a capital of $100,000. We have before described this lath in our columns, but it may not be out of place to briefly reproduce it. The lath is a sheet of metal corrugated longitudinally, and having between the corrugations certain slits cut in the metal, the metal between the slits being stretched or expanded, forming loops, projecting on one side of the sheets. The plaster, when applied, passes under the loop and through the opening, thus forming a double key to the mortar.

The fact that it is so extensively used by builders and recommended by architects throughout the country, speaks volumes for its excellence and practical utility. The manufacturers claim for it several points of superiority over all other laths, among which may be mentioned: First, the fact that the lath itself is fire-proof; second, the facility with which it can be put on, it having been demonstrated that a workman can put on about three times as many steel lath as he can wood lath in a day; third, a man can plaster a much larger number of square yards of this lath than any other in the same period of time; fourth, this lath can be used on either surface, the smooth side being especially adapted to the use of adamant, or any patent hard plaster in the market.



The keying secured by the loop is superior, and the plaster is not liable to crack or fall off. A saving of plaster follows, because, in the first place, the surface to be covered is even and unyielding. Secondly, the openings being uniform, are sufficient to guarantee a strong key and do not admit of waste mortar falling from the back of the lath. Again, it is claimed to be far superior to any other form of lath, as it can be adapted to any kind of shape or surface. It possesses rigidity, requires no stretching, and can be bent to a semi-circle when used on the cove of a ceiling, iron pillars or other curved surfaces. It will not corrode or rust, as the alkali of the lime in the mortar is a preservative.

It is also claimed to be a non-conductor of lightning; is rat and vermin proof, and a great saving of labor and material is obtained by its use, and is now being specified by all the leading architects, and extensively used in government and other large public and private buildings.

Another point the company call attention to is the great saving in insurance. Recently the underwriters of St. Louis have issued a manifesto on the subject. They say that to be ranked as first-class construction and get the best rates, iron lath, or an equally good style of construction must be adopted and neither wooden lath nor wooden furring will be admitted.

For further information see advertisement on page XIV.

The Byrkit-Hall sheathing lath has, upon trial, been found superior in many respects to the system of narrow laths. It is especially valuable on walls of school-rooms where a solid backing is required for blackboards, and store walls where shelving is liable to be put up, on account of its firmness and strength. This lath can be put on horizontally or diagonally. In the latter case it acts as a brace for the whole building, being made of one-inch boards. It forms a good key for the plastering and retains the heat of a room. The agent of this article is John F. Byxbee, 42 Market St., S. F.

As the season of cold weather comes on a great many people are looking around for the best system for heating apartments. In all new buildings of any pretensions whatever, gas pipes are run in such a manner so that they can be used for all the fires, whether open grate, close heating or cooking purposes. Movable heating stoves can be obtained with the latest and most approved gas burners which utilize all the heat available in the gas. Thesd heaters can be readily attached to any gas fixture, and give out an agreeable heat without smoke. Gas heating and cooking appliances for any purpose whatever can be had of the S. F. Gas Light Co., No. 16 Post St.

Plumbing according to the latest sanitary principles is done by G. & E. Snook, 630 Sacramento St.

This is an old firm, long known for the excellence of its work.

Plaster of Paris from the Golden Gate Plaster Mills, Lucas & Co., 215 & 217 Main St. of this city, holds its place against all competition. This plaster has proved itself a reliable article—it quality being uniform—and can always be depended upon.

With the introduction of high buildings the system whereby access is had to the upper floors becomes an important feature for consideration. As time in business is money, speed is required with the utmost safety that can be had. To fill all these requirements, we know of no manufacturers superior to W. H. Birch & Co., 119 Beale St.

They have been machinists for many years, and have the necessary experience in such matters. They use the celebrated Ellithorpe air brake and air cushion, which has withstood successfully many practical trial tests.

Gas fixtures and plumbers' supplies can be obtained of Thos. Day & Co., 222 Sutter St. This firm is one of the oldest and most reliable in the city.

TENDERS TO BE RECEIVED.

Sealed Proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 1st day of December, 1891, for all the labor and materials required for the wharf, gangway, warehouse, etc., at the U. S. Quarantine Station, San Diego, California, in accordance with the drawings and specification, copies of which may be had at this office or the office of the surgeon in charge.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for wharf, gangway, warehouse, etc. at the U. S. Quarantine Station, San Diego, California," and addressed to

W. J. Edbrooke,
October 21, 1891. Supervising Architect.

Sealed Proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 30th day of November, 1891, for all the labor and materials required for the cut stone work and brick work, iron and wood floor and roof construction, roof covering, approaches, etc., for the superstructure ready for the interior finish of the United States Court House and Post Office Building at Springfield, Missouri, in accordance with the drawings and specification, copies of which may be had at this office; or the office of the Superintendent at Springfield, Missouri.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the proposal.

The department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in an envelope, sealed and marked, "Proposal for the cut stone work and brick work, iron and wood floor and roof construction, roof covering, approaches, etc., for the superstructure, etc., ready for the interior finish, for the U. S. Court House and Post Office, at Springfield, Missouri," and addressed to

W. J. Edbrooke,
October 29, 1891. Supervising Architect.

CITY BUILDING NEWS.

Ash Ave. near Van Ness. To build; owner, Jas. A. Ryan; architect, Fred B. Wood; Contractors, Currie & Loomer; bond, $1411; cost, $5644; signed, Oct. 12; filed, Oct. 12; payments, $1400, frame up and roof ready for tin; $1400, brown-coated, $1433, completed; $1411, 35 days.

Block bounded by Union, Green, Steiner, and Fillmore. Brickwork; owner, F. M. Pixley; architect, J. Gash; contractor, D. J. O'Brien; cost, $2050; signed, Sept. 30; filed, Oct. 3; payments, 75 per cent as work progresses; balance, 35 days.

Broadway near Gough. Cement and concrete; owner, R. M. Murray; architect; W. H. Lillie; contractor, W. R. Patterson; bond, $850; cost, $1275; signed, Oct. 24; filed, Oct. 29; payments, 75 per cent as work progresses; balance, 35 days.

Broadway near Gough. To build; owner, D. F. Walker; architect, W. H. Lillie; contractor, R. M. Murray; bond, $4000; cost, $17,200; signed, Oct. 24; filed, Oct. 29; payments, $4000, foundations in; $2280, frame up; $2280, building enclosed; $2280, brown coated; $2280, standing finish on; $2280, completed; $4300, 35 days.

Broadway near Gough. Plumbing and gas fitting; owner, D. F. Walker, architect, W. H. Lillie; contractor, W. F. Wilson; bond, $1000; cost, $2000; signed, Oct. 24; filed, Oct. 29; payments, $750, rough work in; $787, completed; $513, 35 days.

Buchanan and Washington. To build; owner, Julia Strassburger; architects, Salfield & Kohlberg; contractor, Alex. L. Campbell; bond, $3000; cost, $11,887; signed, Oct. 1; filed, Oct. 8; payments, $1500, 1st floor joists on; $1887, roof ready for slating; $3000, ready for plastering; $2500, completed; $3000, 35 days.

California near Central ave. To build; owners, Cal. St. Cable RR. Co.; architect; H. C. Macy; contractor; P. G. Martin; cost, $3800; signed, Oct. 27; filed, Oct. 28; payments, on 20th, 40th and 60th days from date hereof, 75 per cent of value of work done, balance, 35 days.

California near Jones. To build; owner, Geo. S. Fife; architect, Clinton Day; contractors, Ingerson & Gore; cost, $3450; signed, Oct. 26; filed, Oct. 28; payments, $800, frame up and roof boards set; $800, exterior ready for painter; $919 and 75 per cent of extras, completed; $821 and 25 per cent of extras, 35 days.

California and Leavenworth. To build; owner, Fred Deininger; architect, P. A. Stoll; contractor, Henry Rohling; cost, $7200; signed, Sept. 29; filed, Oct. 7; payments, $1200, frame up; $1050, roof on; $1050, brown coated; $1050, white coated; $1050, completed; $1500, 35 days.

California near Montgomery. Brick and iron work; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractor, Jacob Haaf; bond, $10,000; cost, $19,700; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance 35 days.

California near Montgomery. Carpenter work and glazing; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractors, Mahoney Bros.; bond, $2000; cost, $7900; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance, 35 days.

California near Montgomery. Concrete work; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractor, George Goodman; bond, $1150; cost, $2107; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance, 35 days.

California near Montgomery. Elevator; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractor, John Hammond; bond, $1800; cost, $3668; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance, 35 days.

California near Montgomery. Iron work; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractors, Winslow Bros. Co.; bond, $2200; cost, $4583; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance, 35 days.

California near Montgomery. Lathing and plastering; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractor, H. Fisher; bond, $1500, cost, $2000; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses balance, 35 days.

California near Montgomery. Plumbing and gas fitting; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractors, Shepard Bros.; bond, $1100; cost, $2268; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance, 35 days.

California near Montgomery. Roofing, copper and galvanized iron; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath; contractors, Forderer Cornice Co.; bond, $800; cost, $1820; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses, balance, 35 days.

California near Montgomery. Vaults; owners, German S. & L. Soc'y; architects, Kenitzer & Kollofrath. contractors, W. W. Montagie & Co.; bond, $1600; cost, $2275; signed, Oct. 27; filed, Nov. 2; payments, 75 per cent as work progresses; balance, 35 days.

California and Octavia. Plumbing, drainage and tiling; owner, Edgar Mills; architect, A. Page Brown; contractors, Duffey Bros.; cost, $3900; signed, Oct. 14; filed, Oct. 14; payments, 75 per cent as work progresses on 1st day of each month; balance, 35 days.

California near Sansome. Brick and concrete; owner, Mutual Life Ins. Co.; architect, Clinton Day; contractor, Jno. McCarthy; cost, $84,000; signed, Sept. 29, filed, Oct. 21; payments, $8000, concrete foundations complete; $13,387, stone and brickwork are built and basement limed; $8225, stone and brickwork are built side of 2d course above bases of main pilasters; $1588, to level of 1st story lintels; $8000 to ornamental sill course of 2d story; $4000 to bottom bed of brackets of 2d story piers; $5500, to top of 2d story; $5200, completed; $21,000, 35 days.

California near Steiner. Alterations and additions; owner, D. F. Walker; architects, Smith & Freeman; contractor, S. H. Kent; bond, guaranteed; cost, $2600; signed, Oct. 13; filed, Oct. 13; payments, $1500, ready for painter; $450, completed; $650, 35 days.

Clay near Baker. Carpenter, plumbing, painting; owner, Annie Hendry; architect, Louis S. Stone; contractors, Knox & Cook; cost, $4255; signed, Nov. 3; filed, Nov. 3; payments, $1063.75, building enclosed and roof on; $1063.75, plastering completed; $1063.75, completed; $1063.75, 35 days.

Clay near Laurel. To build; owner, A. H. Martin; architect, W. H. Lillie; contractor, A. C. Soule; bond, $2000; cost, $3700; signed, Oct. 20; filed, Oct. 22; payments, $555, frame up; $555, enclosed; $555, brown coated; $555, standing finish; $555, completed; $925, 35 days.

Clipper near Diamond. To build; owner, R. F. Johnson; architects, Townsend & Wyneken; contractors, Currie & Loomer; bond, $368; cost, $1475; signed, Nov. 3; filed, Nov. 5; payments, $450, frame up and chimneys built; $350, brown coated; $307, completed; $368, 35 days.

Collingwood near 20th. To build; owner, Arthur Josue; architect, C. K. Kirby, Jr.; contractor, Geo. R. Scott; cost, $2552.95; signed, Oct. 21; filed, Oct. 22; payments, $400; frame up to 1st floor joints, and 1st floor joists on; $600, frame up and roof rafters on; $400, outside finish on; $800, inside on; $212.45, completed; $640.50, 35 days.

Dolores and 20th. To build; owner, Thos. Roy; architect, C. M. Rousseau; contractor, Andrew Christensen; cost, $1600; signed, Oct. 2; filed, Oct. 2; payments, $1000, roof on; $200, completed; $400, 35 days.

Douglass near 17th. To build; owners, Chas. Baltz & Peters Bros.; architect, H. Geilfuss; contractors, Rechenbach & Hoelle; cost, $3500; signed, Oct. 19; filed, Oct. 21; payments, $875, frame up; $875, building enclosed and stable set up; $875, completed; $875, 35 days.

Eleventh near Market. Exterior and interior mill work; owner, Church of the Advent; architects, Coxhead & Coxhead; contractor, W. J. Thornton; cost, $2200; signed, Oct. 27; filed, Oct. 31; payments, 75 per cent as work progresses; balance, 35 days; $1350, exterior work; $850, interior work.

Eleventh near Market. Iron work; owner, Church of the Advent; architects, Coxhead and Coxhead; contractor, Wm. Cronan; bond, $800; cost, $1895; signed, Oct. 10; filed, Oct. 23; payments, 75 per cent. as work progresses; balance, 35 days.

Elizabeth near Castro. To build; owner, Henry Soetje; contractor, A. Petry; cost, $1500; signed, Oct. 17; filed, Oct. 19; payments, $375, frame up; $375, brown coated; $375, completed; $375, 35 days.

Erie near Mission. To build; owner, Chas. S. Laumeister; architect, A. J. Barnett; contractors, Rhoades & McDonald; bond, $2500; cost, $4075; signed, Oct. 15; contracted October 24; payments, $1925, 2nd floor joists on; $1400, roof on, flooring laid; $1500, brown coated and outside finish on front above 1st floor; $1500, white coated and outside finish on; $1000, completed; $2550, 35 days.

Eureka and 22nd. To build; owner, Anna Devriese; architect, Geo. E. Voelkel; contractor, Louis Cereghino; bond, $2000; cost, $3990; signed, Oct. 6; filed, Oct. 16; payments, $400, frame up and building roofed; $1000, plastering completed; $1490, completed; $1000, 35 days.

Fifteenth near Noe. To build; owner, T. J. Bass; architect, A. J. Barnett; contractors, Rhoades & McDonald; bond, guaranteed; cost, $3080; signed, Oct. 15; filed, Oct. 16; payments, $770, rustic and roof boards on; $770, brown coated; $770, completed; $770, 35 days.

First and Harrison. Alterations and additions; owner, J. Newman; architects, Mooser and Cuthbertson; contractors, Welsh & McCann; bond, $1500; cost, $6000; signed, Oct. 20; filed, Oct. 21; payments, $1000, house raised, frame up, $1250, brown coated; $1250, plastering completed; $1000, completed; $1500, 35 days.

Franklin and Grove. Plumbing and gas-fitting; owner, Catherine Oliver; architect, T. J. Welsh; contractors, Ford Bros.; bond, $385; cost, $1538; signed, Oct. 28; filed, Oct. 29; payments, 75 per cent. as work progresses; balance, 35 days.

Francisco bet. Mason and Taylor. To build; owner, Jno. C. Fredericks; contractor, August Guilbert; cost, $6455; signed, Oct. 14; filed, Oct. 14; payments, $1600, frame up and rustic on; $1600, brown coated; $1600, white coated; $1655, completed.

Fulton near Lyon. To build; owner, Jas. W. McClure; architect, M. G. Bugbee; contractor, W. S. Wilson; cost, $5555; signed, Oct. 26; filed, Oct. 30; payments $1388.75, frame up and enclosed; $1388.75, brown coated; $1388.75, completed; $1388.75, 35 days.

Geary near Dupont. Plumbing and gas-fitting; owner, S. L. Sachs; architects, Salfield and Kohlberg; contractor, R. A. Vance; cost, $1263; signed, Sept. 26; filed, Oct. 7; payments, $450, rough work in; $500, completed; $313, 35 days.

Geary near Dupont. Wrought and cast iron; owner, S. L. Sachs; architects, Salfield & Kohlberg; contractors, Bigelow & Little; cost, $872; signed, Sept. 25; filed, Oct. 7; payments, 75 per cent. as work progresses; balance, 35 days.

Geary near Laguna. To build; owners, P. D. & Mary Burke; architect, A. Klahn; contractor, A. Klahn; cost, $3190; signed, Oct. 1; filed, Oct. 5; payments, $800, frame up; $800, brown coated; $790, completed; $800, 35 days.

Green near Kearny. To build; owner, Chas. Lagrave; architect, Chas. M. Rousseau; contractors, Miron & Robertson; cost, $2200; signed, Oct. 28; filed, Oct 29; payments, all when work is completed and accepted.

Green near Laguna. To build; owners, Woods & Moore; architect, W. H. Lillie' contractor, C. W. Mitchell; bond, $4000; cost, $6970; signed, Oct. 21; filed, Oct. 22; payments, $1045, frame up; $1045, enclosed; $1045, brown coated; $1045, standing finish on; $1047, completed; $1743, 35 days.

Green near Pierce. To build; owner, J. F. McGauley; architects, Coxhead & Coxhead; contractor, Joseph Norris; cost, $3125; signed, Sept. 28; filed, Oct. 2; payments, $800, frame up; $1000, building covered in; $300 plastering completed; $425, completed; $600, 35 days after completion.

Green near Scott. To build; owner, Miriam F. Bancroft; architect, Louis S. Stone; contractor, A. C. Bryan; cost, $4000; signed, Oct. 20; filed, Oct. 20; payments, 75 per cent as work progresses; balance, 35 days.

Green near Scott. To build; owner, Ida Middleton; architect, Louis S. Stone; contractor, A. C. Bryan; bond; $1000; cost, $4556; signed, Oct. 15; filed, Oct. 15; payments, 75 per cent as work progresses, balance, 35 days.

Green near Scott. Carpenter, plastering, cement work; owner, Ida Middleton; architect, Louis S. Stone; contractor, A. C. Bryan; cost, $4556; signed, Oct. 15; filed, Oct. 17; payments, 75 per cent as work progresses; balance, 35 days.

Hampshire near Twenty-fourth. To build; owner, Annie A. Morton; architect, W. C. Dickerson; contractor, F. C. Kleebauer; bond, $1000; cost, $2600; signed, Oct. 6; filed, Oct. 6; payments, $650, frame up; $650, brown coated; $650, completed; $650, 35 days.

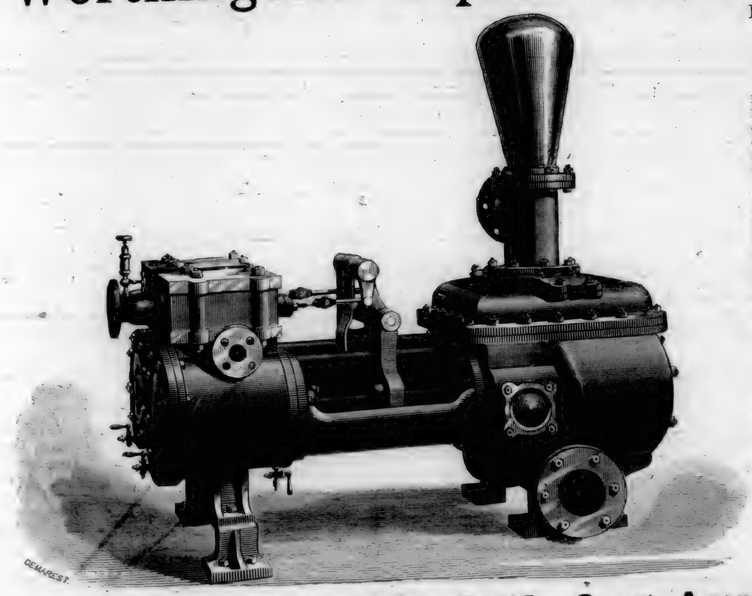
Worthington Duplex Steam Pumps.



High Pressure, Low Pressure, Compound and Compound Condensing.

Water Works Pumps, Elevator Pumps, Fire Pumps, Tank Pumps, Boiler Feed Pumps, and Pumps for every other known service, of any desired capacity and of proper proportions for the service to be performed.

Worthington Pumps are used almost exclusively in all the large hotels, apartment houses, club houses, theatres, office buildings, business houses, and public institutions in New York City, Brooklyn, Philadelphia, Boston, Chicago, and other Eastern cities. The great Auditorium building in Chicago has Worthington Pumps, aggregating in capacity 20,000,000 gallons per day.

Among the buildings in San Francisco using Worthington Pumps may be mentioned the Occidental Hotel, Lick House, Palace Hotel, Pleasanton Hotel, New Chronicle Building, Wells, Fargo & Co's New Building, Murphy Building, (Market Street), Crocker Building (Bush Street) New California Hotel and Theatre Building, Union Foundry Block, First National Bank Building, Donohoe Building, and others. Contracts have also been awarded for a full complement of Worthington Pumps for the New Crocker Building and Mills Building.

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

WITH this issue ends the Twelfth Volume of this JOURNAL. During the whole twelve years of its existence we know of no month when the JOURNAL has failed in its regular issue. At the present time it is the only one printed this side of the Rocky Mountains in the interest of Architects and Builders.

THE year about to close shows us that many of our past achievements, which we reckoned so wonderful, are not perfect and that the future must be relied on before our expectations can be realized. We have learned that many unforseen influences have forced themselves upon us in a way to change our plans and resolutions. Some have found their best laid schemes go wrong, and enterprises which were supposed to have been carefully erected upon a solid foundation, have come tumbling down bringing disaster and ruin to others as well as themselves. Others have commenced from small beginnings and worked their way cautiously to a stable and prosperous business. Others yet have in a moment caught the inspiration and advanced rapidly into wealth and prosperity.

Yet upon the whole, those connected with the building interests have no reason to feel despondent. The amount expended for buildings in San Francisco does not fully reach that of last year, but the increase in the number of buildings erected shows that building has been more general.

Throughout other sections of California, Oregon and Washington the building business has been more than usually active.

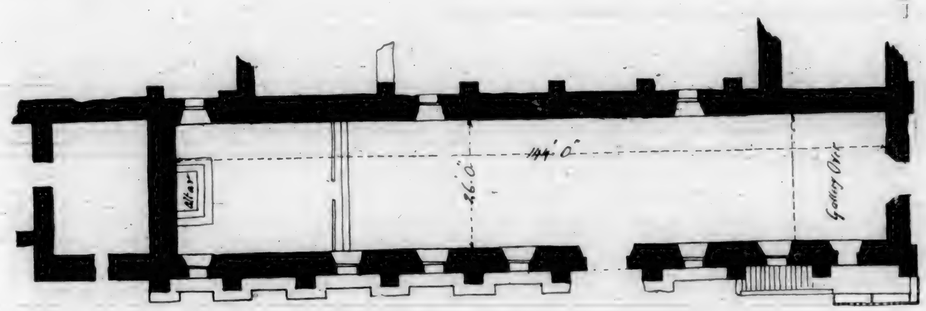
The crops have been abundant and the prices high. Many of the larger holdings of land have been cut up into farms of moderate size. This increase in the number of farms means more families, and more families signifies more homes and citizens.

Let this year with its disappointments and vexations be passed to the rear. Let us learn wisdom from the past, and let no past failure dishearten us in our future efforts.

Let us learn from the past to be steadfast, patient and true to the interests we represent, and let us plan to carry forward our best endeavors and trust to an all-wise providence to guide us to a realizing materialization of our highest aspirations.

WITH the January number of the *California Architect and Building News*, we shall commence a department to be devoted to suburban and rural districts, wherein we shall give hints, sketches and studies of the various architectural problems that may present themselves for country and farm buildings.

The subject is one of great importance, and will consequently take a wide range—to even touch upon the various details that are required, from the drainage of the premises to the final completion and decoration for the great variety of structures at this time deemed requisite for such purposes. The demand for farm buildings is always growing. It is a mistake to suppose that anything which will protect the inmates from the elements, is good enough for the farm. In a country like ours, families living in rural districts have the same desire for suitable modern buildings planned with as much regard for economy, convenience, healthfulness and beauty, as those living in the more central localities.



PLAN OF SAN GABRIEL.

MISSION FRAGMENTS.

In concluding our sketches of the Missions (for the present at all events) we give a perspective on a large scale showing the cloister of San Antonio, Monterey County. The piers and arches as before described, are of 12″ x 12″ x 2″ titles and the haunches are filled in with dobe bricks. The roof is constructed of round timber for rafters, and boughs as a sheathing on which to carry the tiles. In the text is the plan of San Gabriel Mission, Los Angeles County. Taking the road east from the Angel city, we pass through the Arroyo Seco and its tree embowered road, stopping of course to quench our thirst at the little Mexican tavern, and to drink also of that sweet refreshment that comes from sparkling eyes and heaving bosoms, to dream of ideal beauties from fair Castellia, and while we dream, to quaff the red wine that vies in rosy tints with the warm blood that flushes the cheeks of those queens of the Sun.

And then to the dusty road again and onward to the romantically named "Crown of the Valley," Pasadena. Pasadena an American's ideal of what a town should be, neat, busy, orderly, wealthy, smart, buggies and well dressed owners, ladies in silk hats cantering along to make some purchase, perchance to mail a letter to some far distanct friend. And then a few miles further on and we are in the little village of San Gabriel, so different from the Pasadena we have just left, with its ice cream soda ten cents, and civilization. Here we are received by an assemblage of dogs that represent all the life of the place, for while the natives hear the clatter of our horses hoofs and the canine yelp that tells of an approaching stranger, they are but half awake to the fact, and at all events it does not much concern them. There is the sunshine without that looks warm and cheerful, the shadow of the porch to temper its vehemence, the gentle movement of the wind, and within a bottle of wine and a cigar, what more to be desired than this; war and floods, earthquakes or princes crowned, and palaces uplifted to the sky concern them naught.

Enough; the vesper chimes, and low the head doth bow, to what I know not, all is mystery, and so if far beyond the ken of mortal eye all things appear as dimly seen, so even without the circle of a long day's ride the world is just as far away as heaven or hell. Beneath the pepper trees we tie our steeds and view the buttressed walls and grim old bells that ever and anon go cling clang, clank clank, in the belfry. Cracked indeed are the sounds their brazen hollows emit, but perhaps it is this very uniqueness of sound that is half the charm and mystery to which all bow the head as slowly they move along reverently to their devotions. It will be noticed that this building has at regular intervals buttresses along its sides, a peculiarity not found in any of the other Missions, for in all the other cases the buttresses are scattered about in wonderful disorder. The walls are all of stone and the stair to the gallery, which in this case is outside, is also of stone, with an iron balustrade around the landing. I was going to say that the confessional box speaks for itself, but that cannot be, otherwise many is the secret that its wooden walls would have retold, and long e'er now it would have been thrown by the common hangman without the city walls, bearing with it the anathema of the Pope, priest, people and even the very dogs would call out upon such treachery. But it has done its work well for many long years and having a strong heart, oak no doubt, it has not succumbed, in sorrow at the tales of wickedness related within.

We have thus scantily scanned the ancient architecture of California and found that in its twenty-one Mission buildings, things long past. And so we love them, and as the years roll by and time with hands of snowy whiteness lets fall the frost of age upon our brow, bleaching our raven locks as through the century past, it has these Mission walls; our sympathies will grow close and closer to them and we will love them all the more.

December, 1891. TRES.

there is little that in truth can be called truly architectural. Some have only the simplest and most fundamental necessaries of a building; a rectangular enclosure and a roof, others have the outlines of that which might be treated architecturally, but in either case we find that if it be a tower or a gable, it is the mere fundamental idea in its rudest form. No prodigality of design, no beauty of detail, but only the merest shadow of those towers and domes that lift the golden cross to kiss the summer sun in far off Spain. But if it be true that as has been said before they are nothing because of that beauty that comes from fine proportion and delicate workmanship, they have each a native picturesqueness of their own; although in many ways similar in general idea. One is in the heart of a great city almost forgotten, another a ruin far away in a quiet hollow of the mountains, a third the busy haunts of men and the shrine at which reverential hearts pour forth the love they bear for

GOVERNMENT BUILDINGS.

We have received from Mr. Adler, the Secretary of the A. I. A., the following communication. The subject being one of importance to Architects we publish it in full with the hope that they will take such action thereon as may be best calculated to secure the ends suggested in the paper.

"The accompanying copy of a paper read at the last Convention of the American Institute of Architects by Mr. Windrim, late supervising architect of the Treasury Department, sets forth clearly the reasons why there should be a change in the methods adopted by the United States Government for securing designs of its buildings.

A committee of the Institute, of which Mr. Windrim is a member, has been appointed to prepare the draft of a proposed Act of Congress intended to reform the practice of the Government in this particular, to secure a better class of designs, and more judicious expenditure of Government funds upon Government buildings. For it is a notorious fact that the buildings erected for the Government cost more per cubit foot, and are not as well adapted to the purposes which they are intended to serve, as the buildings erected by private individuals and the great corporations of this country.

Congress will not, however, act unless individual Congressmen are first assured, by utterances of the public press and the expressed wishes of their constituents, that a reform demanded by the public."

"ARCHITECTURE AND THE UNITED STATES GOVERNMENT."

"The Federal buildings erected by the Government should characterize the best types of art in architecture. The public mind to-day is becoming educated. It is not satisfied with the mediocrity in art; the æsthetic taste of our people is becoming more cultivated, the beautiful is more appreciated, and the demand is made for it. Good art is educational, refining, and should be enduring. It is proper that the Federal buildings should be of a high standard of artistic excellence, have the elements of proportion and study in design that will illustrate the strength and development of a successful people, and leave the impress of our advancement in art and culture as a nation.

The United States Government erects buildings for the use of the Executive Departments of the Government; it also erects buildings in which it transacts the public business with the people—the custom-houses, post-offices and court-houses, located in every section of the country as the increase in population and development of business necessitates the Government to provide for itself a building to accommodate the public offices, and in which the records of public business may be preserved.

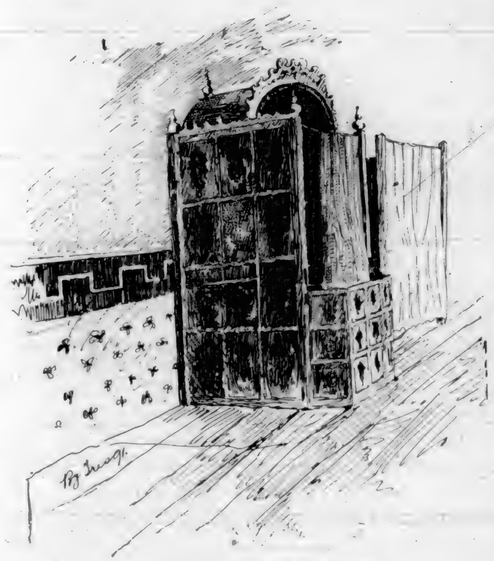
These latter structures are erected when Congress, by legislation, directs the Secretary of the Treasury to procure a site and erect upon it a suitable building to accommodate

the Government offices for the transaction of public business then expressed, limiting the cost of the site and the building, complete in all its appointments, with approaches, to a fixed sum.

The officer under the Secretary of the Treasury to whom the duty of preparing the plans and specifications necessary to construct such buildings, is assigned, is the supervising architect.

This officer is supposed to be the author of the plans and designs for the work thus placed under his care. Twenty-five years ago it was practical for an individual to comply with the duties of the office, but with each succeeding year the rapid increase in public business, with the development of the country, has added consecutively to the labor and responsibility of this officer.

At this time there are probably forty odd buildings under construction and completion, and a number in excess of sixty new structures are awaiting to be designed by the supervis-



CONFESSIONAL, SAN GABRIEL.

ing architect or his assistants. It is patent that the amount of labor thus involved cannot receive from one head careful consideration in the matters of arrangement of buildings and the details of construction, or receive the study and painstaking in design which should be given to the permanent buildings of the Government.

While the routine business of the Government is managed with exacting uniformity, and consequently there is uniformity in the requirements for the building, so that there appears to be a limit in the scope of the architect, there is choice in the adaptation of building to site which invites variety in the form and exterior design of the structure.

The supervising architect's office has some most capable assistants, as much good work in the buildings of the Government shows; but there are not enough capable employees for the amount of work devolving upon the office, and, under existing regulations, they are not obtainable.

The supervising architect experienced this fact and considered it his duty, in the annual report of 1889, to recommend to the Secretary of the Treasury the advisability of securing the plans for the most important buildings for the Government through the architects of the country by competition, and suggested a method that appeared practicable for consideration; also in his report of 1890, again requested attention to this important subject.

The Honorable Secretary of the Treasury, the late William Windom, became so far convinced of the possible benefit to the public service, if the method proposed was tried, that in his report to Congress, he indorses the recommendation on this subject, as follows: "The following recommendations of the Supervising Architect of this Department are concurred in: That the system of competitive designs for public buildings be tried."

The Supervising Architect of the Treasury Department can only be what the designation of the office implies,—a Supervisor whose time is almost continuously occupied with the business management of the office and the solution of its business problems; he cannot be the architect of the many structures that are assigned to his care, and they are successful structures, as best adapted for the purposes for which they are erected, and have merit as artistic designs, largely dependent upon the skill and talent of his assistants.

The Supervising Architect, on Feb. 7, 1891, suggested, in a bill authorizing the erection of a proposed post-office and sub-treasury building in the city of Chicago, a section providing, that at the discretion of the Secretary of the Treasury, the plans for the same be obtained by competition of architects; also on Feb. 20, 1891, the Supervising Architect forwarded a memorandum containing a proposed amendment to the "Legislative, Executive and Judicial Appropriation Bill," to the Committee, as follows:—

"And the Secretary of the Treasury is hereby further authorized, in his discretion, to obtain plans, drawings and specifications for the erection of public buildings, through competitions by architects, under such conditions as he may prescribe, and to make payment of the expenses of said architects' services out of the appropriations for the respective buildings."

Action, however, was not taken in either case by the Committee of Congress.

Such legislation passed would permit the Honorable Secretary of the Treasury to invite competition among architects for the plans and designs for Federal buildings, and by the adoption of the method the Government would be assured of the personal supervision of the architect who would have an individual responsibility for the fitness of the building and for its artistic excellence.

How is the public service to be benefited by the United States Government engaging an architect for each important Federal building? This practical side of the question is that which the business man in Congress will ask in answer.

First. By the dispatch of business the Practising Architect complets his work, as a whole, in the earliest time practicable, and to do this can give undivided attention to the preparation of design and the study of detail. There is a fixed time when his work is finished. Against this is the lamentable fact that public business is conducted with much formality, but not with the directness of private business.

If the buildings erected by the Government were conducted on business methods, the same as the erection of like structures by individuals, it would be economy to the public service.

Second. The careful and continuous thought of an architect directed to one building must produce better results than the same thought disjointed in the effort to care for many buildings. By the selection of architects for merit in design the buildings erected by the Government should represent the best examples of architectural art and the entire counrty would be benefited.

There is a limit to the amount of work one man can do, be he ever so capable. When the limit of capability is reached all business thereafter is not so well done and should be deferred to another. The number of buildings, which the Government is continually erecting suggests the propriety of securing, by division of labor, new thought, energy and ability among the profession of architects. Such action would tend to secure the first, economy to the public service by dispatch of business, and the second, the undivided attention of an architect engaged for a specific duty which would also result in economy."

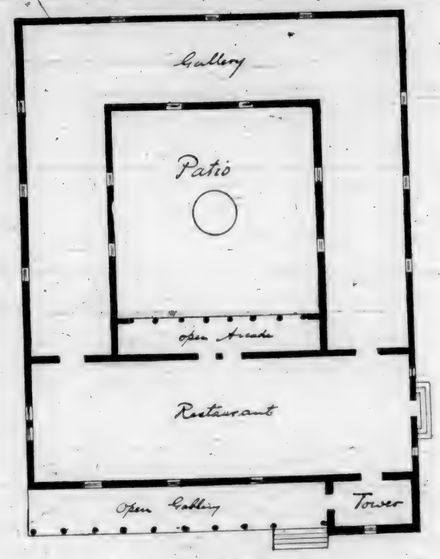
JAS. H. WINDRIM,
Architect.

Philadelphia, Penn., Oct. 26, 1891.

CALIFORNIA WORLD'S FAIR BUILDING.

Synopsis of a paper read before the members of the San Francisco Chapter of the American Institute of Architects, Dec. 11, 1891, by W. J. Cuthbertson.

As none of the plans presented to the California Commission seem quite to fill the bill, here is a suggestion for a building and arrangement which might perhaps be a typical plan, striking enough to attract the attention of all visitors to the World's Fair. It would be an almost exact reproduction of one of the Missions of California—the tower forming



PLAN OF BUILDING.

the entrance, the church the reception hall, cafe and wine sampling room and offices, while around the Patio would be grouped the one story exhibition galleries corresponding

to the buildings around the garden of one of the California Missions. Of course the objection to doing this would be the inappropriateness of these buildings for exhibition purposes which require plenty of light and air, while Mission buildings were very inadequate in this regard.

This however, would be overcome in practice by roofing the buildings with glass; in this manner the roof showing on the outside being roofed with Mexican tiles, while the glazing is hidden in the interior valley. By having these skylights, very little light would be required on the sides, so that the distinctive blank surfaces of Mission buildings would be preserved, while the utility of the building for exhibition purposes would not be damaged. In the Patio, which is protected somewhat by the encircling buildings, plants, trees and scrubs, indigenous to California, would be planted intermixed with fountains, etc., and slices of big trees or other relics from California.

The front building patterned after the church, might be two stories high, the top story used for the cafe devoted to California cooking, and lighted by arcaded galleries opening on to the Patio and to the outside. The lower story in the same way is devoted to the sampling of California wines and brandies, etc., these galleries forming outdoor refreshment places during the hot weather.

Thus an interesting ethological example would be presented to the world's visitors, at the same time that a useful building is had for the purposes of the California Commission.

The outside would be plastered with "L'Unique," a distinctly California production, and the columns of the arcade I would suggest, would be presented one by each of the marble and stone quarries of the Pacific States.

This is a very slight suggestive sketch which I have the temerity to believe is worthy of consideration by California World's Fair Commission.

RULES AND REGULATIONS GOVERNING THE ADMINISTRATION OF THE DEPARTMENT OF FINE ARTS AT THE WORLD'S FAIR.

Section 1. (Duration.) The Department of Fine Arts of the World's Columbian Exposition, will open in Chicago, May 1, 1893, and will close October 30, 1893.

Sec. 2. Classification: It will be open to such works of American (United States) and foreign artists, whether previously exhibited or not, as may be classed under the head of Fine Arts, under the following schedule:

FINE ARTS: PAINTING, SCULPTURE, ARCHITECTURE, AND DECORATION.

GROUP 135. Sculpture.

Class 770. Figures and groups in marble; casts from original works by modern artists; models, and monumental decorations.
Class 771. Bas-reliefs in marble or bronze.
Class 772. Figures and groups in bronze.
Class 773. Bronzes from *cire-perdue*.

GROUP 136. Paintings in Oil.

GROUP 137. Paintings in Water Color.

GROUP 138. Paintings on Ivory, on Enamel, on Metal; on Porcelain or other wares; Fresco Painting on Walls.

GROUP 139. Engravings and Etchings; Prints.

GROUP 140. Chalk, Charcoal, Pastel and Other Drawings.

GROUP 141. Antique and Modern Carvings; Engravings in Medallions or in Gems; Cameos; Intaglios.

GROUP 142. Exhibits of Private Collections.

Sec. 3. The following will not be admitted:
1. Copies, even though they be reproduced in a class different from that of the original. For example, engravings obtained by industrial processes.
2. Pictures, Drawings or Engravings not framed.
3. Works of Sculpture in unbaked clay.

SEC. 4. The Department of Fine Arts shall consist of:

1. An American (United States) section.

2. A section for each foreign country which is represented by a general commission, or by a national committee.

3. A section comprising exhibits of private collections, and the works of artists of non-represented foreign countries, whose works may be admitted under the provisions of section IX.

SEC. 5. (AMERICAN.) American (United States) artists must deposit, or cause to be deposited with the Chief of the Department of Fine Arts, before November 1, 1892, a list signed by them of such works as they desire to exhibit. A separate list should be made for each group and class, strictly following the schedule in Section II.

Artists will be duly notified when their works must be sent in for examination by a jury to be appointed in future.

SEC. 6. Works of American (United States) artists produced since 1876 which have passed the examination of juries of exhibitions of acknowledged standing, will be admitted on list, should the jury so determine. An examination of lists will be made at an early day after November 1, 1892. Artists whose works may be admitted under these conditions will be at once informed by the Chief of the Department of Fine Arts. Works accepted must be delivered at the receiving gate of the Building for the Fine Arts on or before March 1, 1893.

SEC. 7. (FOREIGN.) The Department of Fine Arts, or its representatives, will be responsible for simple interior decoration of the galleries of the Art building. Special decoration or arrangements in lighting, etc., differing from those provided, will be executed at the expense of the National Committee of the country asking for it, and under the joint direction of the foreign representative and the architect of the Art building.

SEC. 8. The Chief of the Department of Fine Arts will not correspond with the artists of countries represented by general commission or national committees. The works of these artists will be admitted only through general commissions or national committees having in charge their reception and return.

SEC. 9. Foreign artists, natives of countries not represented by a general commission or national committee, should address their request to the Chief of the Department of Fine Arts before July 15, 1892. They should notify him of the number of works they wish to exhibit, the subjects and dimensions, including frames; they will then be informed where to send their works for examination by a special jury who will pass upon the admittance of all such works. In the case of works that have already passed the juries of exhibitions of acknowledged standing and have been exhibited, action will be taken by the jury at an early day after July 15, 1892. A notice of the action of the jury will be sent to the artist at once. Works accepted must be delivered at the receiving gate of the Building for the Fine Arts, on or before March 1, 1893.

SEC. 10. (GENERAL.) Packing and transportation of all works will be at the expense of the exhibitors unless special arrangements are made through private enterprise or public effort. A special rule for the guidance of those sending works, giving information in regard to packing, marking and shipping, will be furnished on application.

SEC. 11. When a sufficient number of works (pictures) are contributed by one artist to warrant such arrangement, an effort will be made to hang them in one group.

SEC. 12. A card of admission will be issued to each exhibiting artist, entitling the holder to the privilege of the grounds, when open to the public. This card must be signed by the holder, and must be shown to the attendant when asked for.

SEC. 13. The custodian of the Art building will have the care and protection of works of art. Guardians of the gallery will be subject to his direction. He will use all due vigilance to insure the safety and protection of works of art against theft or damage.

Information as to special insurance, etc., will be given on application.

SEC. 14. Works of art will not be sketched, photographed or reproduced except with the written permission of the exhibitor, countersigned by the Chief of the Department of Fine Arts.

SEC. 15. The number and character of the honors conferred will be announced later; also, the appointment of the Jury of Awards.

SEC. 16. Works of art must remain in the Exposition until its close, unless removed by a special permit, signed by both the Chief of the Department of Fine Arts and the Director General.

SEC. 17. All works exhibited must be removed within a reasonable time after the close of the Exhibition. They will be delivered only on the presentation of the original receipt.

SEC. 18. The Building for the Fine Arts is a bonded warehouse, and all works of art will be received within its walls subject to the inspection of the customs officials, but without the payment of duty. They will be received and sent out in bond.

In cases where pictures or other works of art are sold, to remain in the United States in the possession of private individuals, duty will be paid in accordance with the customs laws governing such cases.

SEC. 19. It is understood that artists, either native or foreign, becoming exhibitors, thereby accept the conditions stated above and agree to comply in every respect with the above requirements.

HALSEY C. IVES,
Chief of the Department of Fine Arts.

APPROVED:
GEO. R. DAVIS,
Director General.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

The double page containing several designs for residences as built in the Hawaiian Islands—C. B. Ripley of Honolulu is the architect.

The Old Mission Church is by "Tres," our special correspondent.

The two cottages are from designs by M. G. Bugbee.

BUILT BY STUDENTS.

Comparatively few people are aware that Chicago has a building almost wholly built by the students of an industrial school. The new building of the Institute of Technology, 147 Throop street, is the first building west of New York City ever put up wholly or in part by students. No better evidence of the practical character of the instruction of a school could be desired.

The teaching of trades is in accordance with the broad plan of this Institute which proposes to teach "Any person, any study, day and evening." It now announces the organization of evening classes in Electricity, Plumbing and Bricklaying, as well as Architecture, Engineering and Telegraphy, beginning December 1st next. Draughting of all kinds is made a specialty, four instructors being employed.

A desirable opportunity is thus offered young men who want to "earn better wages."

EVERY MAN HIS OWN BRICK-LAYER.

If all the claims that are made for a new brick invented by a German mechanic are shown to be founded in fact, the bricklayer and his affiliated craftsmen may well view with alarm so startling an innovation. This brick is made of cast iron and is hollow, with a shell so thin that its weight is less than that of an ordinary clay brick. Its size and shape are about the same as those of the common brick, but its most interesting peculiarity is the manner in which it is laid up. Each brick has grooves and ribs on its upper and lower sides which engage with corresponding grooves and ribs on the fellow bricks, making a close fit; and there are also circular openings on the upper side of each brick, adapted to receive projections—one of which is hooked or claw-shaped—on the under side of the brick immediately above it. The result of these ingenious devices is to form not only a wall of great solidity and strength, practically fire-proof, and susceptible of being made highly ornamental by the use of paint, but a wall which a man may build for himself, and tear down and build over again—no mortar being used in the construction—very much after the manner of juvenile architects with their building-blocks. The large air spaces in these bricks, moreover, conduce to the coolness of the house in summer and its warmth in winter.—*Mechanical News, N. Y.*

A FAMOUS TOMB.

When the wife of the Emperor Shah Jehan was on her death bed, her husband, known throughout India as one who had loved his wife with affection akin to idolatry, promised to rear to her memory a tomb which for magnificence would out-do anything known in the history of the world. No sooner had the remains of his loved partner been deposited in a temporary sarcophagus of white marble than Jehan set about carrying out his purpose. He gathered the architects and builders of all known countries, and conferred with them as to what would be the most costly and extravagant design. The result of their deliberations is the famous Taj Mahal, a mausoleum which caused a whole empire to pay tribute and employ 20,000 workmen for 17 years. Its beauty is such as to discourage an attempt at description.

It stands on the bank of the Jumma river, one of the largest feeders of the Ganges, in India. It is about a mile below the fort of Agra, and is approached through an avenue of lofty cypress trees, the tomb being at the end, nearly the third of a mile from the gateway of the green avenue.

The tomb itself is of dazzling whitness, standing on a double terrace, the first being of sandstone, about 20 feet high, and 1,000 feet broad. At each end of this sandstone terrace there is a miniature mosque built of dark red stones, the doorways facing each other.

The second terrace is only 15 feet in height and 300 feet square. On each corner of this 300-foot terrace pure white marble minarets, each 140 feet in height, have been erected, the "Taj" or tomb, being in the center, every stone of the exterior being of marble, fine in texture and without a flaw.

The Taj is what one could hardly call an octagonal structure, neither is it square, the corners being truncated so as to give it the appearance of being eight-sided, the whole surmounted by a dome 200 feet high. It is not the massiveness of this structure which made it famous in the annals of India, but its graceful airiness, which combines both solidity and beauty.

In speaking of it Bishop Heber has truly said: "They built like Titans and finish like jewelers." The dome and the sides of the tomb are inlade with agate, sapphire, jasper and other precious stones, all wrought into flowers, wreaths and vines of exquisite loveliness.

In the center of the edifice, directly under that magnificent dome, are two sarcophagi containing the remains of the emperor and his loved wife, and above them the inscription: "To the Memory of an Undying Love." STONE.

ANNUAL BUILDING SUMMARY.

In the following table we present the number and value of buildings erected in San Francisco during the year about to close:

FOR FIRST SIX MONTHS.

	No. of Brick Buildings	No. of Contracts	Brick Building Value.	No. of Buildings	No. of Contracts	Frame Building Value.	No. of Buildings	No. of Contracts	Alterations & Additions Value.	No. of Buildings	No. of Contracts	Total Value.

It will be noticed that while the total number of buildings has been increased by twenty-four, and the number of contracts increased by one hundred and thirty, the total cost of the buildings erected has been decreased by $148,957, from last year.

This statement has been made up from the files of the ARCHITECTS and we should bear in mind that in addition to this, there must have been many improvements not noted through the records. We should estimate such improvements at not less than $700,000 in the whole city, making a grand total of say, $6,946,056 for the year.

We give the total values and numbers from 1880 so that our readers may make a comparison:

1880—	397	engagements, value.....	$1,754,435
1881—	533	" "	3,790,732

There is a woman in Wisconsin who has been married fifty-eight years, and who has never missed building the kitchen fire. Her husband is probably the oldest fire escape on record.—*Ex.*

From the *Reno Gazette* we learn that Mr. Wm. Thompson is about to organize a joint Stock Company for the purpose of constructing a one hundred thousand dollar hotel for the accommodation of the traveling public seeking rest and recuperation. Reno, we believe, is destined in the near future to become a popular health resort. Its dry, invigorating and health-restoring atmosphere gives it a natural climatic advantage over many of the present famous places.

The utility of chemical engines as an aid to the efficiency of the fire department is beyond question. During the last year many of the fires in this city were put out by means of this apparatus alone, without the use of water. The damage to stock by water was saved.

From the *Timberman*, we learn that the hemlock region in Pennsylania where the trees were infected with worms during the summer, many of the trees are dead, and in order to save the logs they will have to be cut down within a period of a year.

The use of iron and steel in place of wood has been felt in the lumber sections, and while the demand for timber for building and railroad purposes has proportionally decreased, the deficit has been fully met by the increased demand for wood for the manufacture of paper stock. The demand on our forests for paper stock bids fair to increase to immense proportions in the future.

More light is wanted for the City Hall. After several decades have passed, the City Hall Commissioners have passed a resolution asking the Board of Supervisors to order lighted at night the lamps around the City Hall grounds.

The use of Vitrified brick as a paving material for street roadways is growing in popularity. Localities where experiments have been tried with the proper quality of paving brick has so far satisfied the authorities, that preparations have been made for an increase the coming season. It seems to us that it is full time for San Francisco to move in this direction.

The San Francisco Gaslight Company is about to erect the largest gas holder in America. The new works of the company at North Beach, will embrace all the latest improvements in that line, and when finished will be the most complete plant in the country.

San Jose proposes to build a Ship Canal, to tide-water, thus becoming a port of entry for the shipping of the world.

There can be no better advertisement of a city than a reputation for good streets; even one may suffice to make a place well-known. For years the city of Cleveland was not mentioned that Euclid Avenue was not spoken of. San Jose was known far and wide by its "Alameda," a shaded and well-kept driveway, extending to its neighbor, Santa Clara, now unhappily destroyed by a wrong-headed and foolish municipal authority.

Oakland could and should have dozens of equally fine and well-known drives; it has every requirement therefor but the enterprise to create. Look at Eight street as it stands to-day, lined its entire length with beautiful residences and fine improvements, bordered from Broadway to the Point with magnificent poplar trees, stately and regular as the grenadiers of the Imperial guard, possessing an air of aristocratic refinement, unvexed with the omnipresent and exasperating car tract, it is yet avoided by every driver of a vehicle, from the daring butcher cart to the luxurious laudeau, by reason of the hills and vales, ruts and irregularities, stones and earth of its wagon-wrecking, bone-cracking driveway.

More than this, no city can afford to have obstructed streets. It is the manifest duty of the city authorities to cause to be opened all the streets within its limits, no matter what the cost, that, whatever it may be, far more than comes back in increased values, and additional conveniences, in the bettered appearance of the city, and in the increased estimation in which it will be held both at home and abroad. —*Alameda County Real Estate Review.*

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at Academy of Sciences Building.

GEO. H. SANDERS, Pres. OLIVER EVERETT, Vice-Pres.
GEO. A. BOARDWELL, Sec. JOHN M. CURTIS, Tres.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

W. C. QUIMBY, Pres. O. BROOKS, Vice-Pres.
C. E. PURINGTON, Sec. W. C. CROSETT, Treas.

MASTERS PAINTERS' ASSOCIATION OF THE PACIFIC COAST.

E. M. GASLAGHER, Pres. H. G. JARMAN, Sec.

AN adjourned meeting of the SAN FRANCISCO CHAPTER OF THE AMERICAN INSTITUTE OF ARCHITECTS, was held at 408 California street, on the 18th inst., the President, Geo. H. Sanders, presiding.

A communication was received from Geo. H. Sanders, containing a report of the Chapters Students Class for the year; stating that although no work had been recently submitted to the Chapter, yet the members had been diligent in their work and would at an early period, probably at the January meeting, make an exhibition of drawings and models for criticism. Mr. Sanders suggested that prizes or awards of some kind should be made to those showing the best work, and that the Chapter should formulate new rules and regulations in matters relating to competition for the guidance of the students, and that several prizes should be set apart for the more energetic ones to strive for. These suggestions were approved by the members and the subject laid over for especial discussion at the January meeting when it is hoped that all the members who can conveniently do so, will be present to take part in the proceedings.

THE regular meeting of the California Electrical Society was held in their rooms, Academy of Science Building, on Monday evening, December 7th.

Mr. Geo. P. Low, electrical expert of the Pacific Insurance Union, read a paper upon the hazards of Arc Circuits and the methods of restricting the same.

This paper is one of a series which Mr. Low is now delivering before the society. Many instances were mentioned where fires had started from defective insulation; and methods of construction for buildings suggested in a manner to reduce the danger from fire.

The paper was full of information valuable to Architects and Builders.

AT the expiration of each subscription the bill for the succeeding year is mailed, and we shall be pleased to renew the name on our subscription books. The price is three dollars per year, in advance.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

ONE LIEN ON TWO BUILDINGS.—Where work is done on a building and barn under one contract, and they are situated on the same tract of land, a joint lien on both buildings may be filed instead of a separate one on each.

Crawford v. Anderson, (Appellant), Court of Indiana, 28 N. E. Rep., (52C).

INTEREST IN LAND NECESSARY TO SUSTAIN MECHANIC'S LIEN.—A contract for the sale of land, which obligated the buyer to erect six houses thereon within a specified time, and in which the seller agreed to advance a designated sum to partly pay the cost of their construction, is sufficient to show the seller's consent that the buildings be erected, and renders his interest in the land subject to such liens as might be filed for labor and material furnished for the construction of the houses. A stipulation in the contract of sale that any mechanic's lien should be subject to the seller's consent to the erection of the houses, and was not sufficient to subordinate to the seller's rights the lien of a person furnishing materials for the work, who was not connected with either of the parties to the contract, and who had no notice of the stipulation.

Miller v. Mead, Court of Appeals of New York, 28 N. E. Rep. 387, (83C).

SUBCONTRACTORS ASSIGNMENT OF MONEY DUE.—The agreement between a contractor and a subcontractor, provides that fifteen per cent. of the monthly estimates should be reserved until the completion of the work and the payment of all claims by the subcontractor. The subcontractor borrowed money, giving the lender, as security, a first charge on the fifteen per cent. drawback, of which the lender notified the contractor. Thereafter the contractor and subcontractor made an agreement reciting that work, amounting to a certain sum, had been done, and a certain amount paid, and that the subcontractor had on hand material of a certain value, and providing that the contractor should pay him the sum to which the work done amounted, and he should credit the contractor with the amount already paid, and who should purchase the material on hand at a certain price, to be delivered free of all claims, or to pay the claims, and deduct the amount paid. Under this agreement the contractor might pay the labor and material bills necessary to avail himself of the work which had been done with reference to the contract, though nothing was left for the assignee or the subcontractor as he occupied no better position than his assignor, except that the contractor could not after the notice, make voluntary payments to the subcontractor.

Fisken v. Milwaukee B. & I. Wis., Supreme Court of Michigan, 49 N. W. Rep. 873, (232).

APPLICATION OF PAYMENTS.—Where a contractor who was building a house for defendants, delivered a check to plaintiffs' agent, taking a receipt therefore, and requested the agent to apply the proceeds to materials furnished by plaintiffs on a building then being erected for a third person; that the agent refused to so apply the proceeds of the check, but stated that part would be so applied, and that the residue would be applied to certain other contracts, not including that with defendants; that afterwards the contractor went to plaintiffs' office, showed plaintiffs' book-keeper the receipt for the check given by the agent, and the book-keeper, in ignorance of the facts, and relying on the contractor's statments, gave him a receipt for the amount of the check on the materials furnished for defendants' house; that plaintiffs, on discovery of the facts, promptly repudiated the application of the check so made by the contractor, and the contractor afterwards approved plaintiffs' bill for the whole amount of materials furnished on defendants' house, without claiming any credit on account of the check; that the contractor by producing the receipt, afterwards induced defendants to advance "further money" on his contract; and that plaintiffs did not know of the use to which the contractor put the receipt. The defendants were not entitled to have the amount of the check deducted from plaintiffs' claim for material furnished.

Schallert-Ganahl Lumber Co. v. Neal, Supreme Court of California, 27 Pac. Rep. 734, (235C).

RIGHT OF CONTRACTORS BONDSMAN TO RESERVATION OF PAYMENTS.—Where a contractor gives a bond to secure the owner of a building against claims for liens under his contract, and the contract provides that one-fourth of the price should be retained until a final settlement, if the owner pays the contractor the full amount of the contract price immediately upon completion of the building, and without notice to the bondsman, he thereby relieves the latter from liability to the extent of the one-fourth agreed to be reserved, as that was charged with a trust in favor of the bondsmen to make him good, in case of loss.

Kirssig v. Allspaugh, Supreme Court of California, 27 Pac. 655, (96C).

BUSINESS MOSAICS.

The large shipments (recently made) of California tin to Messrs N. & G. Taylor, the pioneer manufacturers of tin-plate in the United States, has stimulated the business at the Temescal Tin Mines, the output being increased as rapidly as possible to fill the orders on hand. Many eastern firms that have recently commenced the business of manufacturing tin plate have ordered tin from these celebrated mines.

Double Acting Lift and Force Pump. All brass. Anti-freezing. Double Acting Force Pumps of this description are often made without guides, the pistons being frequenty bent out of line in the act of pumping by the side strain that accompanies the rocking of the handle from a half to a full stroke.

By recent patented improvements, this company has entirely overcome this defect. By reference to the cut it will be seen that the Guides AA are attached to the sides of the Air Chamber, and are removable therefrom when it becomes necessary to examine or repair the operating parts of the pump. The operating lever is also made *reversible*, so that the pump may be used either *right* or *left*, as desired. The handle, links and cross head are of malleable iron and very strong.

Manufactured at The Union Brass Works, The Wm. Powell Co., Proprietors. 50, 52 and 54 Plum street, Cincinnati, Ohio.

An addition to the Piqua Tin Plate Plant. Ground broken this morning for the additional building. As we stated in the CALL of Sept. 16th, the Cincinnati Corrugating Company proposed to extend their Tin Plant in due time, and we are now advised that in pursuance of this determination they have ordered the following additions to their present outfit: One pair Cold Rolls from A. Garrison & Co., Pittsburg; six Annealing Boxes from McKeesport, (Pa.) Machine Co.; four Morewood Tinning Pots; one Five Roll Morewood Tinning Machine; one Pump for Liquid Tin; Complete Kits of Tinman's and Washman's Tools; Necessary Shaftings and Pullies; also Fire and Red Brick, Cement, Lime, Castings, Bolts, etc., to erect a complete Tinning "Stack."

The first two items are already shipped. The next three are ordered of C. A. Britton, Cleveland, and will be shipped within three or four weeks. Mr. Britton's machines are made at Cleveland, Ohio, after Welsh machinery imported directly by him for that purpose. An extension is necessary to contain part of the new machinery, etc., for the tin plant, as there is not room for all in their present factory buildings. This extension was commenced this morning in charge of Mr. David Speelman, and will be completed within two weeks.

All the additions to the Tin Plant will be completed in four to six weeks, and the Corrugating Company will then have increased facilities for making either Bright or Terne Tin Plates of highest grades. The Steel Sheets will be rolled as heretofore, by the Piqua Rolling Mill Company, that rolled several tons of No. 30 gauge Steel Sheets for this purpose last week.

If the Corrugating Company, finds the operation of the plant, above referred to, as profitable as they have reason to expect, they propose to double or treble it as fast as good business policy dictates. The course of the Corrugating Company, has been entirely consistent from the beginning, and casts shame upon those who by their senseless partisanship, have cried down the beginning of an American industry in our city, because forsooth, it was on a scale too humble to suit its would-be critics.—*Pique Daily Call.*

One of the most prominent lumber firms of the city is that of Preston & McKinnon, Pier 5, Steuart street. Their lumber yards are among the largest on this coast, and contain the best of pine, cedar, spruce and redwood. Their mills are located in the regions where the best grades of timber are to be found, and the machinery cuts straight and true to gauge.

The Columbia Daily Calendar. An old friend in a new dress, and an article that has come to be one of the indispensables of an editor's desk, comes to hand in the Columbia Daily Calendar for 1892. The Calendar is in the form of a pad containing 367 leaves, each 5⅛x2⅝ inches; and each slip bears a short paragraph pertaining to cycling or some kindred subject, and at the bottom of each leaf is a blank for memoranda. The stand is an entirely new departure, being made of sheet metal finished in ivory black, and is very compact. This is the seventh issue of this now well-known Calendar, yet all the matter is fresh and new.

Damp-Proof and Water-Tight Cellar. Peter H. Jackson, San Francisco, No. 462,953. Dated Nov. 10, 1891. This invention relates to building, basement, cellar and vault constructions. The object is to increase the stiffness and strength of walls or floors of buildings without increasing their thickness, so that a structure will remain integral or as originally constructed even after great lapse of time, will resist tensile strain, remain erect under the weakening effects of fire, and may even be able to withstand earthquake shocks and oscillations; to construct basements, cellars, vaults or the like in such manner that the inside will be entirely free from dampness; to construct foundation walls or the walls of basements or cellars on soft bottoms in such manner that they will be capable of sustaining the buildings above them without the employment of piles or other ordinary means for upholding foundations on soft bottoms, and finally, to prevent the tops and bottoms of stiffened walls from being pushed inward when subjected to pressure from without. With these objects in view, the invention consists in a wall, floor or the like, having upon its top surface supporting

walls, and comprising in its structure, along with surface masses of concrete or the like to resist compression, metallic ties or beams embedded slightly beneath the interior or upper surface for the purpose of resisting tensile strain from transverse pressure inward or upward; furthermore, in a wall, floor or the like, composed of two portions—an outer and an inner—the outer portion capable of resisting compressive force and the inner portion capable of withstanding tensile strain, the two portions united by a stratum of asphaltum, or any equivalent water-resisting substance, extending along the neutral axis of the wall or floor, whereby the cellar is rendered damp-proof, and by exclusion of moisture, the metallic parts near the interior surfact of the wall are preserved in a constantly dry condition, and any relaxation of the adhesion of the cement thereto is prevented; furthermore, in a wall or floor consisting of an outer and an inner portion united along its neutral axis by a stratum of damp-proof material, the outer portion constructed of cement, artificial stone, or the like, and the inner portion composed of similar material and provided with metallic ties or small beams embedded in it, whereby tensile strain may be successfully withstood and the floor or wall be prevented from bursting inward; furthermore, in a wall or floor composed of two portions united along the neutral axis by a stratum of damp-proof material, the outer portion made of cement, artificial stone, or similar material capable of resisting compressive force, and the inner portion constructed of like substance and consisting of inverted arches having metallic ties or small metallic beams embedded in the foot of the arches for the purpose of withstanding the tensile strain; furthermore, in the combination with the walls having metallic beams, of beams and blocking pieces to resist pressure above or below, or both above and below, and finally in various novel details of construction whereby the objects of the invention are attained.

Hall's Safe and Lock Co., 609–611 Market street, is putting in the safe and vault work in the Crocker Estate Building, besides other prominent buildings in course of erection. This firm is well known for its excellent work.

TENDERS TO BE RECEIVED.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M. on the 30th day of December, 1891, for all the labor and material required for the Approaches, etc., to the U. S. Court House, Post Office, etc., at Los Angeles, California, in accordance with drawing and specification, copies of which may be had at this office or the office of the Superintendent at Los Angeles, California.

Each bid must be accompanied by a certified check for a sum not less than two per cent. of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Approaches to the U. S. Court House, Post Office, etc., Building at Los Angeles, Cal.," and addressed to

W. J. EDBROOKE,
Supervising Architect.

December 3, 1891.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 8th day of January 1892, for all the labor and materials required for the plumbing, gas-piping, etc., for the U. S. Custom House, Post Office, etc., building at Port Townsend, Washington, in accordance with the drawings and specification, copies of which may be had on application at this office, or the office of the Superintendent at Port Townsend, Washington.

Each bid must be accompanied by a certified check for a sum not less than two per cent of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Plumbing, Gas-Piping, etc., for the U. S. Custom House, Post Office, etc., Building at Port Townsend, Washington, with the name and address of the bider on the outside of envelope for identification, and addressed to

W. J. EDBROOKE,
Supervising Architect.

December 3, 1891.

CITY BUILDING NEWS.

Angelica near 19th St. To build; owner, Peter Unrath; architect, A. R. Pfarrer; contractor, Frank Williams; bond, $600; cost, $1755; signed, Nov. 16; filed, Nov. 17; payments, $435, frame up; $440 brown coated; $440, completed; $440, 35 days.

Baker near Grove. To build; owner, Wm. Lindop; architect, C. H. Mullen; contractor, M. J. Feely; cost, $1910; signed, Nov. 17; filed, Nov. 19; payments, $477.50, enclosed and roof boards on; $477.50, brown coated; $477.50; completed; $477.50, 35 days.

Boulevard in Golden Gate Park. To build; owners, Golden Gate Park Co., architect, W. O. Banks; contractor, Willis Norton; cost, $7789; signed, Nov. 17; filed, Nov. 19; payments, 75 per cent as work progresses on 1st day of each month; balance, 35 days.

Bryant, Nos. 528 and 530. Alterations and additions; owner, Cornelius Pringle; architect, J. C. Newson; contractors, Humeston & Page; cost, $4550; signed, Nov. 16; filed, Nov. 24; payments, 75 per cent as work progresses; balance, 35 days.

Buchanan and Washington. Plumbing and gasfitting; owner, Julia Strassburger; architects, Salfield & Kohlberg; contractor, R. A. Vance; cost, $1800; signed, Nov. 20; filed, Nov. 25; payments, $500, rough work in; $850, completed; $450, 35 days.

California near Walnut. To build, owner, R. C. Miller; contractor, W. W. Redmall; bond, $800; cost, $2855; signed, Nov. 16; filed Nov. 16; payments, $735, roof on and building enclosed; $700, brown coated; $700 completed; $700 35 days.

Carl, near Willard. To build; owners, Metropolitan Railway Co.; architects, Shea & Shea; contractors, Anderson Bros.; cost, $9125; signed, Nov. 19; filed, Nov. 27; payments, $2250, frame up; $2250, outside finish on; $2250, completed; $2275, 35 days.

Castro, near 23d. To build, owner, Jos. Harris; architect, M. J. Welsh; contractor, R. J. Dowling; bond, guaranteed; cost, $3375; signed, Nov. 30; filed, Dec. 1; payments, $843.75, frame up; $843.75, brown coated; $843.75, completed; $843.75, 35 days.

Clipper near Diamond. To build; owner Katherine de Blaumford; architects, Copeland & Pierce; contractors, McPhee & Bailey; cost, $1733; signed, Nov. 16; filed, Nov. 19; payments, $350, frame up; $350, brown coated; $626, inside finish on; $300, completed; $400, 35 days.

Elizabeth near Castro. To build; owners Wm. Curley; architect, C. M. Rousseau; contractor, Wm. Peters; bond, $800; cost, $1600; signed, Nov. 13; filed, Nov. 14; payments, $400, frame up; $400, brown coat; completeded, $400. $400, 35 days.

Ellis near Buchannan. Moving and alterations; owner, Chas. Levis; architect, S. Hatfield; contractor, Allan MacDonald; cost, $1485; signed, Oct. 22; filed, Nov. 6; payments, $800, old building moved and lower frame up; $850, rustic on; $850, white coated; $857.75, completed; $1121.25, 35 days.

Grove near Lyon. To build; owners, D. & V. Badaracco; architects, B. McDougall & Son; contractor, A. Jackson; cost, $2000; signed, Nov. 27; filed; Nov. 28; payments, $500, frame up and roof on; $500, brown coated; $500; completed; $500, 35 days.

Harrison and Langton. To build; owner, J. MacNamara; architects, B. McDougall & Son; contractors, Brennan Bros.; cost, $3675; signed, Dec. 1; filed, Dec. 2; payments, $500, frame up; $800, frame set and rough plumbing in; $700, brown coated; $918.75, completed; $906.25, 35 days.

Hickory near Gough. To build; owner, M. A. de Laveaga; architect, P. R. Schmidt; contractor, J. J. O'Brien; cost, $4890; signed, Nov. 6; filed, Nov. 9, payments, 75 per cent as work progresses on 1st and 15th day of each month; balance 35 days.

Howard and Washington Ave. Alterations and additions; owner, The Gesellschaft Teutonia; architect, Henry Geilfuss; contractor, F. L. Hansen; cost, $2570; signed, Nov. 18; filed, Nov. 19; payments, 75 per cent as work progresses on 1st day of each month; balance 35 days.

Jackson near Scott. Stone and brickwork; owner, Albert Gallatin; architect, Clinton Day; contractor, John McCarthy; cost, $7084; signed, Oct. 23; filed, Nov. 19; payments, 75 per cent of work done at end of 30 days; 75 per cent of work done 30 days after first payment; 75 per cent completed; balance, 35 days.

Building News..... 11

NOTICE.

Correspondents should address their communications to the *California Architect and Building News*, 408 California Street, San Francisco, Cal.

WITH this issue begins the Thirteenth Volume of this JOURNAL. During the whole twelve years of its existence we know of no month when the JOURNAL has failed in its regular issue. At the present time it is the only one printed this side of the Rocky Mountains in the interest of Architects and Builders.

LOOKING ahead, we see many signs of progressive activity throughout the land. New inventions and improvements in everything connected with building, are seeking the light and making their utility known. Commerce is spreading her influence more and more over the Pacific Slope, and in her train construction, architecture and art will surely follow.

Villages and cities must of necessity arise where commerce goes, and architecture through proper channels will display itself in many winning ways; and that which is now but simply utilitarian, must assume the decorative character of the older and more fashion loving cities. Supply follows demand, and capitalists and others seem to be alive to the wants of the hour, consequently, new quarries of ornamental and building stone are being opened and developed, new manufacturing establishments are being erected and put in operation, new systems of irrigation and water power are being developed, and the new mystic power of electricity already contests the ground so long held by older methods.

The advance already commenced is imbued with new life and vigor, and it becomes the duty of the profession to keep it going in the right direction. While keeping in view the past, we have abundant reason to congratulate our friends on the cheering prospect before us, and the brightness on the horizon of the dawning future.

RURAL population illustrates the domestic and wholesome side of life. The home and fireside, as the abode of wife and children, should receive the most conscientious thought in the preparation of the plans, so as to produce convenient and beautiful structures for the home, that life may be brightened, and the disadvantages and unnecessary burdens lessened.

MEMORIAL ARCH, SANTA CRUZ.

DESCRIPTION of the Memorial Arch erected by the citizens at Santa Cruz, California, in commemoration of the early settlement of Santa Cruz by the Mission Fathers, one hundred years ago.

Said arch is located in front of the R. C. Church and forms the entrance into the church grounds, the whole width of the structure being subdivided into three entrances or gate-ways, of which the central and large opening will admit of processions passing through, and the openings on both sides of same are intended for every day use.

MEMORIAL ARCH, SANTA CRUZ.

The frontage of the monument is 34 feet 6 inches, and the height to the top of cross about 24 feet 6 inches. The material is finely cut granite.

The style of Architecture is the Gothic and corresponds to the Architecture of the church.

The design is by Mr. T. J. Welsh, Architect of this city.

THE CALIFORNIA STATE BUILDING FOR THE WORLD'S FAIR.

Instructions by the Committee to Architects.

THE style is to be of the Mission and Moorish type, covering a ground area of from 60,000 to 65,000 feet, with a gallery floor space of two-thirds the same area, and the interior must be so provided as to be easily arranged in departments, with offices, committee and assembly rooms, cafe, kitchen and lavatories. An interior court is to be provided for semi-tropical plants around which arcades will be constructed.

WE have received from D. D. Davisson a piece of an old lintel, recently taken from the Mission Church of Sonoma, California. This piece of lintel is 18 inches wide, 7 inches thick, and about a foot long, and shows the marks of the ax. It is perfectly sound except a little on the two outer edges. This lintel is of redwood, and was 16 feet long and spanned an opening 11 feet wide, and was originally placed in the wall about 100 years ago. This goes to prove that California Redwood is almost inpervious to decay.

POST OFFICE SITE.

The following paper was read before the San Francisco Chapter of the American Institute of Architects, at the last meeting, by Geo. H. Sanders, President.

GENTLEMEN:—Though there is every probability of the Post Office site being finally settled at Seventh and Mission streets, it may not be wholly out of place to discuss the principles on which the site of a great public building should be selected; the controversies in the public press which have prevailed for months past on the subject, having utterly failed in the opinion of the writer, to evolve any definite idea on the subject.

From an Architect's stand-point it would seem that the real points at issue, involving all those higher considerations of architectural fitness and artistic qualities which give value to the setting and reflect beauty upon a great architectural work, have been left wholly out of sight.

In regard to convenience of position some sort of statement on the subject should certainly have been made by the Department, and the fact that such has not been done would seem to argue that it is of no great consequence so far as it is concerned, and such is probably the case. In fact the real parties to consult on the subject are the great wholesale and retail book firms, some of whom are said to handle several tons of mail matter every week. To these the question of hauling becomes a matter of considerable importance and for their convenience a warehouse and branch station on the water front which would save double moving, would be by far the best arrangement.

This would leave the matter of centrality to the transient public, the most important question to decide. The branch stations throughout the city solving the subject for the general public.

The matter would then resolve itself into those questions of prominence and accessibility by the public—proximity to the great hotels, and last, but not least, beauty and dignity of position.

Ready accessibility from the principal streets and by leading car lines, would enter largely into the above considerations—together with that of aspect, as regards exposure to light, and *prospect* in the matter of spaciousness of surrounding areas, and altitude—affording good views of the building on every side, especially of the principal fronts.

The lack of all these considerations is conspicuously absent in many public buildings, especially our City Hall. From no single point can this building be seen as a whole, were it ever possible to view this structure to advantage (when finished), it would be found to be one of the most picturesque and "architecturesque" buildings in America, if not in the world.

The Larkin street facade is one of the finest in existence, and the McAllister street front, were it visible as a whole, would be found to be a very noble composition. But from no place can it be so seen and the architectural qualities of the building are almost wholly lost—and one of the noblest sites in America has been sacrificed to a miserable parsimony which realized something less than the cost of the foundation of the building—by the sale of the best part of it.

The City Hall of Philadelphia is another lamentable example in which millions have been spent on the architectural embellishments and materials of a building which can never be seen to advantage from any one point. Surrounded, as it will doubtless be, some day by tall ten-story structures or higher, it will be out of sight, except for its pipe stem of a tower, from the top of which old Ben Franklin will view with astonishment the improvident folly of his townsmen.

The Capitol at Washington, the Hartford Capitol, and our own at Sacramento, are notable examples of stately good taste and wise magnanimity in the selection of sites. These buildings can be seen to advantage from every side, and it can be readily noted how immensely their architectural values are enhanced by their surroundings and the possibility of viewing them from a proper distance.

As a site for a great public building such as our Post Office undoubtedly will be, it seems to the writer that there is one supremely fitted for the purpose—one not excelled by any in America—both as regards convenience of accessibility, position on important streets, and at an altitude equally attainable from the higher as well as lower levels of the city and which would render the building conspicuously visible throughout the principal part of the town.

I allude to the block on the north side of Union Square, bounded by Post on the south, Sutter on the north, and Stockton and Powell to the east and west. It contains only one building of much importance, and though it might be very costly, it would be well worth all the money that would have to be paid for it, even if the city had to bear half the expense.

Placed in the middle of this block with the open square rising gently from Geary street, with the three principal fronts exposed to the east, south and west, the sunlight and shadows would play about it from dawn till twilight and all night long the moon would follow in her phases, bringing out the architectural features of the pile and giving to every detail its true value and expression. The northern front too, with its bold central entrance and massive architecture would by mere contrast and strength of simple forms, aid the other three by proving a foil to their delicacy and beauty.

It would be the commercial front "par excellence."

With ample space all round the building the effect would be to double the apparent size of Union Square, and would thus prove of double value to the city. Were the whole of the block in question to be devoted to the Post Office site, there would be ample room to double the width of Sutter, Stockton and Powell streets, or rather lay the added space out in park.

On each face of the building should be a grand entrance leading to corridors and offices surrounding a central court or hall which could be covered over with glass at the first story, serving all the purposes of the general office on the ground floor—a very fine effect could be attained by forming a terrace at Sutter street, the terrace to return to the central portico on the north side, and level with the second story of the building; by this means the basement or lower story would be made equal to any in the building—the mail carts could obtain access to the building by passing through archways under this terrace on the north front. Over this point and above the grand staircase and in connection with the elevators would rise the tower or dome or whatever form may be determined on as the central feature—and this on account of the breadth of Union Square on the south would be easily visible from Geary street.

Unless care is observed in the selection of sites for public buildings on other than mere questions of expense and private interest, what possible use is subserved in spending one-fourth or one-third of the whole cost of site and building, in architectural adornments which can never be seen to advantage and are therefore thrown away?

Neither the present site, that of the Mechanics' Pavilion nor that of Seventh and Mission possess the requisites of

good sites on account of the absence of the conditions above noted.

To have to pass through a number of mean and narrow streets to an out of the way corner of the city as at present, or to approach it from the rear from market street as in the case of Seventh and Mission, would be in both cases inconsistent with proper architectural dignity and consistency.

The Mechanics' Institute site is too much hemmed in, and presents features identical with those noticed above in speaking of the City Hall.

The west side of Union Square, another site which has been proposed, is unsuitable on account of the rapid fall of the ground along its principal front, and would be at a disadvantage on account of area, as it would occupy the short side of the block.

Until the true economy of selecting sites for our public buildings, possessed of the necessary qualities of aspect, prospect, and spaciousness is acknowledged, we shall possess no buildings of any architectural value, because whatever they have will be invisible and therefore lost on account of the absence of the conditions necessary to enable the beholder to view them to advantage.

In view of the above considerations it would seem to be the duty of every architect, artist or man of sense and taste, to protest against the shocking waste of money as well as of opportunity and professional ability which is going on continually, not only, alas, in San Francisco, but elsewhere throughout the country on account of popular ignorance and indifference in matters connected with the architectural adornment of the cities and towns we inhabit; and this is lamentably true not only in regard to the State and Municipal buildings and public areas and squares, but in every street and highway it is the same. Every where there is diversity instead of community of interest and the private gets the public gudgeon at an advantage at every turn.

What has made "unter den Linden," "The Place d'la Concord" and the "Ring Strasse" the admiration of and the resort of the world, but the spacious grandeur, architectural magnificence and stately beauty of these noted places and the structures which surround them? It will be something other than private interest and political greed which will accomplish the architectural regeneration of San Francisco.

IN view of the influenza epidemic prevailing at the present time, we give Dr. Harrison's description of infusoria found in air, water and in secretions thrown off by persons suffering from influenza then prevailing in Boston, and which was published in the *Youth's Companion* of January 16, 1879, under the heading of "Colds, or Epidemic Influenza." "Its symptoms are a dry, violent cough, sneezing, copious discharge from the nose, and in severe cases prostration and fever. It is supposed contagious and produced by a small cell, with cilia or feet, which has been named by Dr. E. Cutter, "Arhizopoda" (root footed parasite)." The cuts a and b show the parasites magnified 900 diameters.

Some were found in the air, some in water, and a large number in discharges from the nose, all identical.

They have the power of moving their cilia in any direction, even withdrawing them into their bodies.

Dr. Harrison believes they have the power of producing this parasitic catarrh.

Dr. Cutter recommends inhaling fumes of burning sulphur, it gives relief and destroys the parasite.

MYTHOLOGY.

TERMINUS, a divinity at Rome who was supposed to preside over bounds and limits, and to punish all unlawful usurpation of land. His worship was first introduced at Rome by Numa, who persuaded his subjects that the limits of their lands and estates were under the immediate inspection of heaven. His temple was on the Tarpejan rock, and he was represented with a human head without feet or arms, to intimate that he never moved, wherever he was placed. The people of the country assembled once a year with their families, and crowned with garlands and flowers the stones which separated their different possessions, and offered victims to the god who presided over their boundaries. It is said that when Tarquin the Proud wished to build a temple on the Tarpeian rock to Jupiter, the god Terminus refused to give way, though the other gods resigned their seats with cheerfulness; whence Ovid has said,

Restitit, et magno cum Jove templa tenet.

TERMINALIA, annual festivals at Rome, observed in honor of the god Terminus, in the month of February. It was then usual for peasants to assemble near the principal land-marks which separated their fields, and after they had crowned them with garlands and flowers, to make libations of milk and wine, and to sacrifice a lamb or a young pig. They were originally established by Numa, and though at first it was forbidden to shed the blood of victims, yet in process of time land-marks were plentifully sprinkled with it.

TERMINALIS, a surname of Jupiter, because he presided over the boundaries and lands of individuals, before the worship of the god Terminus was introduced.

ACADEMIA, a place near Athens surrounded with high trees, and adorned with spacious covered walks, belonging to Academus, from whom the name is derived. Some derive the word from "*exaz dnuos*," *removed from the people.* Here Plato opened his school of philosophy, and from this, every place sacred to learning has ever since been called *Academia*. To exclude from it profaneness and dissipation, it was even forbidden to laugh there. It was called *Academia vetus*, to distinguish it from the *second Academy*, founded by Arcesilaus, who made some few alterations in the Platonic philosophy, and from the *third* which was established by Carneades.

ACHELOUS, the son of Oceanus or Sol by Terra or Tethys, god of the river of the same name in Epirus. As one of the numerous suitors of Dejanira, daughter of Œneus, he entered the lists against Hercules, and being inferior, changed himself into a serpent, and afterwards into an ox. Hercules broke off one of his horns, and Achelous being defeated, retired in disgrace into his bed of waters. The broken horn was taken up by the nymphs, and filled with fruits and flowers; and after it had for some time adorned the hand of the conqueror, it was presented to the goddess of plenty. Some say tha the was changed into a river after the victory of Hercules. This river is in Epirus, and rises in mount Pindus, and after dividing Acarnania from Ætolia, falls into the Ionian sea. The sand and mud which it carries down, have formed some islands at its mouth. This river is said by some to have sprung from the earth after the deluge.

RURAL NOTES.

THE orthodox picket is made the same width at bottom as at top, leaving the space at a, the same as at b—Fig 1. We have seen pickets made with the lower end wider than the upper end, being tapering as at Fig. 2. Thus the space at b, is less than at a. The advantage is at once apparent, small animals are prevented from passing through at points near the ground. The pickets may be sharpened at top as in Fig. 3. This tapering form requires no more timber than the old style by sawing the boards reversed as at Fig. 4. We believe there would be a ready sale for this form of picket if the saw mills would place them on the market.

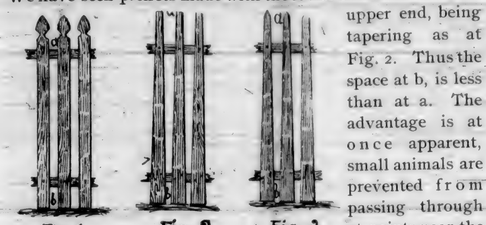

Fig. 1. Fig. 2. Fig. 3.

Fig. 4.

The pickets may be from 3 feet 6 inches, to 4 feet 6 inches in length, and the width, 3 or 4 inches at the lower end and from 1½ to 2 inches at top, sawed from boards 1 inch thick. The pickets may be set at any distance apart as may be desired, we would suggest, however, that the space at b Fig. 2 should not exceed 1 to 2 inches.

THE ladder shown in Fig. 5, is a very convenient arrangement. It is formed of a plank 2 inches thick and 12 or 14 inches wide. Steps a and b are sewed in and cut out to form a 4 inch step. The cut is made vertical to c, in order to give a good foot-hold, and run out at d, to give strength to the step. The steps may be strengthened with large nails as at e. The steps a—b are cut with a bevel or pitch on the top to shed the water where same is placed in an exposed situation. The steps a—b are placed at each side alternately, giving each rise from 12 to 15 inches as desired. In 1869 the writer had a well dug to a depth of 54 feet, having about 6 feet depth of water. A suction and force pump was set at a depth of 12 feet from the bottom of the well, the pump therfore required to be operated from the top of the well, the rods being supported by a guide-plank, which was cut out as above described to facilitate inspection. A scantling should be nailed at the back and made to break joints where the length requires it. The device can be used as a fire escape or as a ladder to the roof. It is also convenient in barns, sheds, granaries and the many places where the regular ladder would be cumbersome.

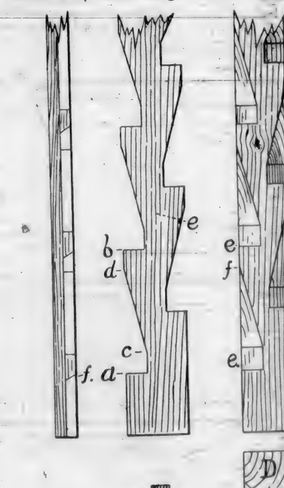

Fig. 5.

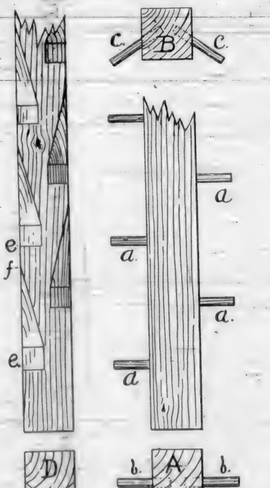

Fig. 6.

Fig. 7.

In Fig. 6, is an arrangement that the writer asw in use some forty years ago, where the corners of the large timbers of a barn were cut out in the manner shown.

Fig. 7 shows a frame post of barn or factory with the usual pin ladder, A the post, and b-b pins or rungs. An improvement is shown at B, where c-c are the rungs set at a slight angle to prevent the foot slipping outward. The rungs are placed alternately with regard to the height, the usual way being to place them opposite.

WORLD'S FAIR NOTES.

The Exposition attractions in the vicinity of the main lagoon entrance, just south of the great Manufactures Building, are to be quite different from those originally planned. No Casino will stand at the end of the pier 1,000 feet from shore, and there will not be a curved mole bearing columns emblematical of the thirteen States. In place of the latter there will be a peristyle 60 feet wide and 500 feet long, extending north and south and spanning the lagoon entrance by a grand arch. Ranged along this peristyle will be emblematic columns representing all of the states and territories. At the north end of the peristyle will be placed the Music Hall, which for a time it was thought would have to be put on the wooded island. It will measure 140 by 200 feet, and will have an auditorium large enough to seat 2,000 people with an orchestra of 75 pieces and a chorus of 300 persons.

Medusaline, a new composition designed as a substitute for brick and building stone, has been adopted for the sidewalks and driveways in the Exposition grounds. The committee on grounds and buildings granted the contract to the Medusaline Manufacturing Company of Chicago for the construction of 450,000 square feet of such sidewalks and driveways. The price is 6½ cents per square foot. The concrete composition to be used by the contractors is said to be as hard as perfect stone, and it is now thought probable that it will be used instead of staff for the exterior ornamentation of the Fine Arts Palace, and several other buildings.

"He is a Brick." The oldest bit of slang which can be traced to a historical origin is said to be, "He is a Brick." Plutarch in his "life" of Lycurgus, gives an account of the visit of an embassador from Epirus to the city of Sparta, who saw much to admire and praise. But he wondered greatly that Sparta was not a walled town and asked the explanation of its lack of defensive works. No answer was returned that day. Early the next morning, however—for the Spartans rose at dawn—the Epirote was awakened and conducted to the field of exercise outside the city, where the army of Sparta was drawn up in battle array. "There," said Lycurgus, "are the walls of Sparta, and every man is a brick."—*The Brickmaker.*

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

OAKLAND THEATRE.

The Theatre at Oakland is being erected on the corner of Fourteenth street and Broadway for Mr. Joseph Macdonough, from designs by Messrs. Mooser & Cuthbertson, Architects of this city.

The view and sketch plans show the general arrangement.

OLYMPIC CLUB BUILDING.

The Olympic Club Building is in course of erection on the northerly side of Post street between Mason and Taylor streets. The first story will be of stone, and above this pressed brick with Terra Cotta trimmings. The Corner-stone was lately laid by Mayor Sanderson.

The President is Mr. William Greer Harrison.

The Architect is Mr. H. A. Schulze.

HIGH SCHOOL, SAN BERNARDINO.

This building, which is now in course of erection consists of four stories, the lower one is to be occupied by workshop, boys and girls gymnasiums, bath-rooms, toilets, and heating and ventilating apparatus of the most effective description.

On the first floor is the main entrance hall, 34x64, with a spacious stairway in the centre giving access to each floor, and embraces also large hat and cloak rooms, hallway from rear entrance, assembly room 33x51, superintendents offices and store room and three recitation rooms 26x35. This floor is approached on the principal front by a bold flight of granite steps 14 feet wide which give access to a spacious vestibule having encaustic tile floor and paneled wainscoting to the walls. The teachers private rooms are placed on each side of the vestibule.

The second floor contains a stair hall of the same size as that below, together with assembly room 33x51, library 23x35, four recitation rooms 26x33, and boys and girls hat rooms and toilets.

The third floor contains in addition to the stair hall, an auditorium 44x79 with ante-rooms, also laboratory with supplies, and dark room and recitation room.

The basement story is 10 feet 8 inches clear height and each of the other stories are 15 feet 6 inches clear.

The interior is filled up and arranged in the most complete and perfect manner for carrying on the work of the school, drinking fountains are placed in each of the stair halls and the heating and thorough ventilation of every portion of the building is of the most perfect description.

The exterior walling will be built of brickwork on concrete foundations, the basement story faced with coursed rock faced ashlar, and the sills, lintels, belt courses and cornices, etc., will be of rock faced Ventura or Arizona stone.

The roofs will be strongly constructed and trussed, and will be covered with metallic shingles, the ventilators and roof of tower will be covered with tin, with the rolls and bosses formed of lead.

The building is being erected by contract, 51,195 dollars being about 1,000 dollars less than the estimate of the architect.

The architect is Mr. T. H. Goff of San Bernardino, who is also supervising the erection of the Insane Asylum for the city and county of San Bernardino, Cal.

ANCHORING BOLTS.

From a letter to the Troy Polytechnic some interesting particulars are quoted about the usefulness of various substances for anchoring bolts into stone. It was necessary, in the construction of an elevated railway, in a place where a line led over rock, to anchor the foundation by bolts to the ledge; and in view of the expense and other objectional qualities of sulphur and lead for this purpose, it was resolved to try whether cement could be made available. To test the question, fourteen holes were drilled in a ledge of limestone rock, all forty-two inches deep, and bolts, some three-quarters and some one inch, were set in the holes. Around four of the bolts sulphur was then poured, lead was put round four more, and Portland cement mixed neat around the remaining ones. Two weeks later the bolts were pulled by a powerful lever. Out of those run with sulphur, one was drawn out under a strain of 12,000 pounds. With the others the iron yielded before thesulphur gave way. Three of the bolts calked with lead also broke in place, one pulling out; but of those set in cement, one yielded slightly and then broke, while all the others broke in place, showing that Portland cement is not only cheaper for setting iron into stone, as well as less likely to corrode the iron, but is stronger and much more easily applied. This account reminds us, the journal referred to adds, of a little experience of our own, which has a certain interest. In the construction of a building where external anchors are used, some of the bolts, which were built through the walls, were set by a mistake of the maker, with the ends cut for wood screws, instead of being threaded for a nut. As the work was being hurried, and there was not time to wait for others, they were used, on the assurance of the maker that he could fit nuts to them. After the walls were ready for the anchors it was found that no machine was made that would tap an iron nut to fit a wood screw, and the manufacturer made nuts of babbitt metal, which were forced on the screws. They were rejected by the architect on account of the softness of the metal, and a bolt, with the nut, was tested at the Watertown arsenal, on the Emery testing machine, to determine the resistence of the nut. The bolt was pulled in one direction and the nut in the opposite one, and neither yielded until a force of 5,600 pounds had been applied, when the nut burst, the threads stripped and the bolt pulled out. The bolt was three-quarters of an inch, somewhat deeply cut, so that the resistance of the nut was about three-quarters of the strength of the bolt, and if it had been made thicker the iron would probably have yielded before the soft babbitt metal.—*The World's Progress.*

THE DIFFERENT KINDS OF ASH.

The following inquiry is from the lumber buyer of a large manufacturing concern:

I have a limited knowledge of ash lumber, and in buying it am often unable to classify it with certainty.

1. Is there any way to distinguish absolutely between white, gray, brown and black ash plank? Newhall and Gray have different names, viz., white ash, red ash, green ash, blue ash and black, water or hoop ash.

2. Which of these are synonymous with gray and brown?

3. To which variety does calico ash belong?

4. Does eastern and western black ash differ in appearance or quality of lumber?

There seem to be so many slightly differing shades of color, and degrees of strength and elasticity, as to cause much diversity of opinion among those with whom I meet, and as I have little opportunity to become familiar with standing trees or with logs, I desire definite knowledge to guide in selection of plank.

5. Does selected gray, brown or black equal in strength and suitability for mechanical uses the average of first or forest growth white ash?

6. In what portions of the principal ash producing states can the toughest lumber of the different varieties be obtained?

If these questions can be suitably answered in your columns, kindly print the information at an early date, and greatly oblige

A NEW SUBSCRIBER.

When reduced to lumber there is no method known by which to "distinguish absolutely" between white, gray, brown and black ash. Botanists distinguish by the leaf, bark and fruit, but with these data for determination absent, the judgment is at fault. The white ash, however, is most easily determined from its light color, medium density and elasticity, and some experts even claim to judge almost the locality from which the tree came, by breaking a sliver between the fingers. The ash is a tree which, as a rule, prefers a low, rich, moist, but not wet, soil, with a rather heavy clay loam subsoil. It is quite tolerant of change of conditions, but suffers greatly in quality when growing on dry or limestone soil.

The white ash, as is well known, is the most valuable of the ash family, reaching a height sometimes of 120 feet, and a diameter of five feet. It is found from Canada to Florida, and as far west as the first tier of states west of the Mississippi river, but reaches its greatest and richest development in the Ohio river bottoms, including, in a general way, the southern parts of Ohio, Indiana and Illinois, and the bottom lands of western Tennessee and eastern Missouri and Arkansas. The terms white, red, green, blue, etc., are common designations, rarely accurate, frequently local, given to the different species, but which are often misleading, as the same term is applied to different species in different places. The white ash is so called from the fact that the bulk of the wood is a light yellow or cream color when fresh cut, turning to a pale brown on exposure, and the core or heart is small, often only three or four inches wide in a tree 30 inches in diameter.

The blue ash gets its name from the fact that the inner bark when soaked in water yields a dark blue dye. The wood is darker in color, generally a rich brown, heavier, more solid, and, as a rule, more brittle. It will stand nearly the same transverse strain, but breaks with a less splintered fracture than white. The blue ash is chiefly confined to the territory east of the Alleghanies, and though not as common nor as valuable as white ash, is much used for the same purposes. It is indistinguishable in lumber except by the darker color and greater weight and hardness. The blue ash, a medium sized tree growing on the upland and especially limestone soil, comes next to the white in quality and in extent of territory over which it is found. It is chiefly confined to the states west of New York and north of the Ohio river, but including Iowa and Missouri. It is the heaviest of the ashes, and from the character of the soil it prefers, is naturally quite brittle, but it has a good light yellow color and works well with a high polish in manufacture. The green ash is also a widely spread species, of equal value with the blue, and more elastic. It is supposed to take its name from the pale green color of the leaves, as it prefers a low, almost swampy, soil. It shrinks badly in drying, and is not a very durable wood, except when kept dry as in interior work.

The only other botanical species which has a well recognized name is the black or hoop ash, so called from the dark color of the heart wood. This term, however, is not distinguishing, as the blue and green species when exceptionally dark receive the same name. The wood of the black ash is readily split into thin layers, which are used for barrel hoops, and it is softer and lighter than the white. The color of the sap wood is so light that it is quite undistinguishable from the white ash. The tree is a small one, preferring low wet bottom lands and swamps.

Other kinds of wood called ash are the wafer ash, or hop tree, a small tree of little economic value, and the yellow ash, or yellow wood, gopher wood or shittim wood, a beautiful tree, but very scarce, found in Tennessee and the mountains of North Carolina and Kentucky. Its firm, strong-grained, yellow wood takes a beautiful polish and is very durable, but unfortunately it is so rare as to be almost impossible to procure. In fact, it is said that there are not a thousand trees in all the Alleghany and Blue Ridge ranges. The bark is smooth and light gray, and the leaves in shape resemble the beech, but are arranged on a leaf stalk like the ash. It grows as far north as Massachusetts, and a number of handsome specimens can be seen in and around Boston and Cambridge.

As has been said before, any grading based on color is misleading, is not based on any necessary differences in quality, and varies with different localities. The term gray or brown may be applied to a dark colored white ash growing on the upland, or to a specimen of the blue, green or black ash. Calico ash is a similar name used to designate those specimens of the white ash whose heart wood is variegated and of unusual size. Such specimens are often seen in the delta of the Mississippi or the bottom lands between Cairo and Vicksburg.

As a general rule when elasticity is the prime requisite, the selected white ash of medium weight and rather coarse quality is demanded, such as for light wagons or where the material must be reduced to the smallest size consisent with safety. For purposes where strength is required or initial resistance to flexion or indentation, the brown or black varieties are to be preferred, and where there is a generous margin of safety allowed between size of the finished article and the strain that will be put on it. The brown lumber also will, as a rule, resist weather the best, though the real cause is not to be found in the color but in the character of the wood depending almost entirely on the soil in which it grew. The "toughest" lumber, using that term to denote the most elastic, is found where the white ash reaches its most favorable development.

The relative value of northern and southern ash for various purposes has not yet been carefully investigated, and much remains to be done. In fact, little has yet been accomplished in this line in the investigation of any of the woods of this country, though it is a question of great importance to the manufacturing interests. Each kind of wood has its own special value, and both producer and consumer can work together to better advantage, when the qualities of the various species are known and recognized. The government is doing something from year to year under the able direction of Mr. Fernow, chief of the division of forestry. Many firms, however, and a number of the larger corporations, especially railroads, have been compelled to take up this work in their departments of tests, and consignments of lumber are sometimes rejected for causes which appear to the lumbermen quite insufficient. A year or two ago a large quantity of heavy timbers to be used in the Auditorium were rejected because they were short leaf yellow pine. Of course if the specifications called for long leaf and nothing else, the rejection was right, but scientific investigation shows that the practical difference between the two kinds is often very small, and in the instance under consideration the one would have been precisely as good as the other. The prejudice against the short leaf, however, was such that it had to go. In structures of wood, investigations will soon be possible as a result of the numerous experiments now being made, and the effect will be to make manufacturers more careful, and to give greater security to human life.—*Henry L. Tolman in the Northwestern Lumberman, December 26, 1891.*

The Illinois Board of World's Fair Commissioners has ordered specifications for the architectural reproduction in drawings of all the Illinois state institutions and public buildings, sixteen in number.

ARCHITECTURE—A WOMAN'S STUDY.

We take the following article from the "Architectural Review" published in 1870—by Samuel Sloan of Philadelphia.

We have ever been of opinion that the refined taste inherent in woman's very nature, most especially fits her for the æsthetic requirements of architectic study, and we will confess to some surprise that while the gentle sex is in quest of mental occupation, the charms which surround this art of ours should fail to attract them to inquire into its claims to attention, as a something worthy their application.

With such an impression we awaited the, to our mind, certain development of woman's evident destiny, and were not a little pleased to meet in the *Woman's Journal* with the following:

"Why do not some of our bright girls who graduate from High, and Norman Schools, and who are looking for a vocation, study Architecture? It is a profession that pays well, after it is thoroughly learned, and one in which women of a certain kind of talent might excel." * * *

There are many professional men who would no doubt give females an opportunity of making themselves proficient in drafting, and that they would answer their expectations, we feel that we can judge from what we have seen some accomplish. There is, in fact, no good reason why the delicate nicety of woman's hand, and the preceptive taste so peculiarly her own, should not be productive of admirable drawings and acceptable designs. In literature she has acquired a position which rivals that of man himself. In painting and in sculpture, she commands respect. In music she stands pre-eminent. In all the sciences which are said to complete a polite education, she is ever forward and not infrequently first. Then why should she not add Architecture, with all its lore of history, and its elegant accuracy of science, to her accomplishments? The day is already dawning which shall see woman greatly elevated above her too long existent inequality of mental position; and now that the other professions are gallantly opening ranks to receive her, it is not too soon for architects also to acknowledge her claims, and invite her to a trial of her ability in culling the choicest flowers of beauty to adorn the classic elegancies of design.

We do not propose, or even suppose that the gentler sex will ever assume the ruder and more masculine (so to speak) out-o'-door operations, connected with the practical department of our profession—not at all; but, we do think that in the arrangement of plans, in Domestic Architecture for instance, that woman is the best judge of the convenience and economy of dwellings, for she it is who is the most interested party, and even in the external appearance of our homes who so anxious for the picturesque and the pleasing as she who presides there.

A literary woman is never so intently particular in her work, as when with heartfelt affection she depicts the detailed beauties of the humblest cottage home. Does not this characteristic show that taste, the most natural and refined reigns in her bosom and sways her very imagination. What more is asked than the cultivation of this genuine art-love to make woman devoted to Architecture, with all its graces and attractions so winning, because so kindred to her mind?

By all means, then, let us offer her a liberal welcome, and we shall reap the grateful benefit in the expansion of that patronage we look for so ardently for our profession, and without which, with all its claims to the widest recognition, it will but live on slowly, patronized by the comparatively few, but scarcely recognized by the great majority.

Bellamy—"If the theories of socialism were adopted, sir, men would live as happily as children do now." Smith—"Yes; each one watching greedily to see that nobody else got a bigger apple."

"How's this, Dauber? You've painted Father Time with a mowing machine instead of a scythe." "That's all right. We artists of the modern school keep up with inventive progress."

Electricity Simplified—The Practice and Theory of Electricity, by T. O'Conor Sloane, E.M., Ph. D. Illustrated—Published by Norman W. Henley & Co., New York.

The work on Electricity is the plainest of any that has come under our knowledge. Every student of electricity should have one.

The book is to be had from Messrs. Osborn & Alexander, 401 Market street, San Francisco. We may present some chapters from this work in future numbers of our paper.

Practical Centring by Owen B. Maginnis, with illustrations—published by W. T. Comstock, New York, and for sale by Messrs. Osborn & Alexander, 401 Market street, San Francisco.

This is a book that should be in the hands of every builder and every workman in the trade.

The book treats of centring for all classes of stone, brick or wood work, and for scaffolding, and the cutting of rough or finished lumber for work of this description.

The work is so fully illustrated that we cannot well make extracts from its pages.

The Cosmopolitan with its usual complement of good things comes to us for January, 1892. Price $3.00 per year.

The Fortnightly Review, monthly, by the Leonard Scott Publication Co., 231 Broadway, New York. Price $4.50 per year.

This review is one of the essential periodicals of the present day. Twice every month the reader is supplied with the freshest thoughts of the world's great writers and thinkers.

Lippincott's Magazine comes to us for January, 1892. This popular magazine has been before the public for twenty-five years and has advanced with the requirements of the cultivated taste in literature to a first position. The stories represent the actual conditions of life, the authors being prominent in their special lines. The stories are complete in each number. J. B. Lippincott Co., Philadelphia. Price $3.00 per year.

The Timber Trades Journal, an English periodical devoted to the timber interests of the world, has opened a branch office at 136 Liberty street, New York. Our dealers in Pacific Coast woods may find it to their interest to communicate with said journal.

The Phrenological Journal for January, 1892, comes to us full of useful knowledge about the science of health and human nature. Price $1.50 per year. Fowler & Wells Co. publishers, 775 Broadway, New York.

We have received the first number of the *Pacific Builder*, a new monthly periodical devoted to the building interests of the Pacific Coast. It is published by May S. Purtelle, at Portland, Oregon. Price $1.00 per year. It starts out with a good healthy look, and we wish it success.

The Mexican Financier, published in New York, and simultaneously in the City of Mexico, by the Seeger & Guernsey Company, is a very useful paper to the trading public who may have business with the people of Mexico.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at Academy of Sciences Building.

GEO. H. SANDERS, Pres. OLIVER EVERETT, Vice-Pres.
H. T. BESTOR, Sec. JOHN M. CURTIS, Tres.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

W. C. QUIMBY, Pres. O. BROOKS, Vice-Pres.
W. C. CROSETT, Sec. W. C. CROSETT, Treas.

MASTERS PAINTERS' ASSOCIATION OF THE PACIFIC COAST
E. M. GALLAGHER, Pres. H. G. JARMAN, Sec.

THE annual meeting of the Technical Society of the Pacific Coast, was held at the rooms in the Academy of Sciences Building, 819 Market street, on Friday, January 15th, for the purpose of electing the officers and directors for the ensuing year.

Reports of the officers were submitted, showing the transactions of the past year, and the President in his annual address reviewed the work of the Society.

The following officers were elected for the year 1892:—President—John Richards, Mech. Eng.; Vice-President—Luther Wagoner, Min. Eng.; Treasurer—Geo. F. Schild, Naval Arch.; Secretary—Otto Von Geldern, Civil Eng. Directors—H. C. Behr, Geo. W. Dickie, W. R. Eckart, C. E. Grunsky, and A. Schierholz.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects, was held the 15th inst. at 408 California street. The President, Geo. H. Sanders presiding.

The vacant position of Secretary was filled by the election of H. T. Bestor.

A report on the Chapter Classes was received from Mr. Sanders, and free hand crayon drawings, in "black and white," were received and placed on the wall.

For the January competition, three "pen and ink" drawings were received.

A committee, consisting of Messrs. Sanders, Pissis, Everett, Gash and Cuthbertson, was appointed on Competitions of the Students Classes.

The drawings of these competitions will remain on exhibition at the head-quarters of the Chapter, 408 California street, and all Architects or persons interested in this work, are invited to inspect the same.

President Sanders read a paper on the Post Office Site as an Architectural problem, which was ordered printed in the California Architect, and copies forwarded to the daily press of San Francisco. This paper will be found in full in another column.

AT the expiration of each subscription the bill for the succeeding year is mailed, and we shall be pleased to renew the name on our subscription books. The price is three dollars per year, in advance.

From various sources for a long while past have come demands for a revision of the building laws of New York city, and an organized movement has now been begun to secure the passage of an amended law by the next legislature. In order to accomplish this a Board of Revision has been formed, composed of gentlemen named by the American Institute of Architects, the Architectural Iron Works Association, a carpenter and mason from the Mechanics' and Traders' Exchange, a representative of the Real Estate Owners' Association and of the Board of Fire Underwriters, the Superintendent of the Bureau of Buildings and the Counsel of the Fire Department. This board will meet twice a week, to hear the views of architects, builders, real estate owners and others interested in the subject, and will then endeavor to frame a law which shall meet all objections against the present one.—*Fire and Water.*

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in thi column, such as appear applicable to this section of the country.

ATTORNEY'S FEES OF OWNER IN LIEN CASE.—Where the owner of a building has been compelled to enforce liens, to which both he and the contractor were parties, he is entitled to set off against the contract price, not only the amount of the judgments recovered, but all that he had been compelled to pay to relieve his property from the liens, including his attorney's fees and costs.

Cavell v. Washburn, Supreme Court of California, 27 Pac. Rep. 859, (68C).

LIABILITY OF WIFE FOR CONTRACT OF HUSBAND.—Where a husband contracts for the erection of a house on his wife's separate property, the fact that the wife examined the plans for the building, watched the progress of the work, and personally and by letters urged the material-men to push on the work, are sufficient to sustain the verdict that the wife is liable to the mechanic's lien of the material-men. In such case it was proper to charge "that a husband cannot, by making a contract like this, charge his wife's property, unless it appears that the materials were furnished with her knowledge and consent." If she assented to the contract made by her husband in this respect, * * * if she knowingly received the goods, assented to the application of the goods to her property, she is bound by the contract.

Boney v. Thackara, Supreme Court of Pennsylvania, 22 At. Rep. 754, (123C).

PENALTY CLAUSE IN BUILDING CONTRACT.—A person named Kemper and one named Candon entered into a written contract whereby Candon agreed to build a wall, etc., or else at his election, to remove a certain house three feet, and put it in as good condition as it was before; and in such contracts the parties further stipulated as follows: "It is mutually agreed between said parties that a failure on the part of said Candon to perform these obligations shall entitle said Kemper to recover from him the sum of five hundred dollars as liquidated and ascertained damages for the breach of this contract." Candon elected not to build the wall, etc., and afterwards failed to remove the house. The cost of removing the house, and putting it in as good condition as it was before, would not have exceeded $100. When the parties made the contract, and stipulated for damages in case of breach, fixing the amount at $500, they could not have had in contemplation actual compensatory damages; and therefore the sum of $500 mentioned in such contract as liquidated and ascertained damages must be treated as a penalty, and not as liquidated damages, and therefore it cannot be enforced, and only actual damages can be recovered.

Candon v. Kemper, Supreme Court of Kansas, 27 Pac. Rep. 829, (200C).

SERVICE OF LIEN NOTICE ON WIFE.—A wife, who, in addition to her dower and homestead rights, has been awarded exclusive possession of a homestead pending a suit for divorce and alimony instituted by her, is a proper party to an action to enforce a mechanic's lien thereon, and where judgment by default has been obtained in such action against the husband alone by collusion between him and plaintiff, she may become a party, and contest the alleged lien.

Weston v. Weston, Supreme Court of Wisconsin, 49 N. 834, (867C).

LIEN FOR LUMBER FURNISHED TO RAILROAD CONTRACTOR.—Lumber sold to a subcontractor of a railway, for the erection of shanties for its employees and suitable stables for his teams, is not within the statute granting a lien for labor performed on material furnished in the construction, repair, and equipment of the railroad, and gives no right of action against the railway company.

Stewart Chute Lumber Co. v. Missouri Pac. Ry. Co., Supreme Court of Nebraska, 49 N. W. Rep. 769, (75).

BUSINESS MOSAICS.

The San Francisco Mineral Paint Co., the manufacturers of Royal Metallic Paint, an artificial stone coloring and mortar stain, have resumed operations with new machinery and are grinding their material to the finest possible limit that the latest improved machinery will permit. From people who have used it, and are judges of such material, it is pronounced to be the best in the market.

The following letter was received from N. & G. Taylor Co., importers and dealers in Tin Plate, Metals, Sheet Iron, Wire, etc.:

Philadelphia, January 6, 1892.

Editor of "CALIFORNIA ARCHITECT AND BUILDING NEWS."—We are very glad indeed to say that the Block Tin received by us from the Temescal mines we found equal to any tin we ever used. We used some of it in the manufacture of Solder, but the major portion was used in the manufacture of Bright Tin-plate.

It affords us great pleasure to say that we made Bright Tin-plate from Steel sheets made in Pennsylvania, Block Tin from the Temescal mines in California, and the work was done by men born, bred and raised in Philadelphia. If this is not American Tin-plate from a to z and will not satisfy those doubters who are endeavoring to create such an impression against the industry, we really don't believe they would be satisfied if they did all the work themselves.

To us the manufacture of Tin-plate is nothing new nor mysterious; we feel that we have understood the business for many years and that our position is quite different from most importers, in place of being bound to the sale of certain makers' brands and subject to their whims and wishes, we have had brands that we own, which we sold under the most positive guarantees offering absolute protection to the buyer, and we consider it good sound business judgment to prefer to make such plates here under our own supervision in place of having them made three thousand miles away according to our instructions.

In addition to making Bright Tin-plate we are making Taylor's Guaranteed Roofing Plates, which are known the country over, they are:—Taylor "Old Style", "The Taylor Roofing Tin," "Taylor's Columbia." All of the finest quality, the value regulated by the quantity and quality of the coating.

"He who would bring back the wealth of the Indies, must take with him the wealth of the Indies." Which means that you can't have the value without the cost. You get just what you pay for. The only question is what grade you will buy. Of somethings the cheapest is the best; but of important things, the best is the cheapest.

Removal—John A. Roebling's Sons Co., manufacturers of Wire, Wire Rope, Sash Cord, Fire Proof Wire Lathing, Bare and Insulated Electric Wires for all purposes, have removed from their old quarters, No. 8 California and No. 14 Drumm streets, to their new and commodious building No. 25 and 27 Fremont street, in the middle of the block between Market and Mission streets.

This firm has lately furnished for the new Crocker building, corner of Market and Post streets, quite a quantity of the celebrated Roebling Fire Proof Stiffened Wire Lathing.

The Jos. Dixon Crucible Co., Jersey City, N. J., makes a specialty of Graphite Compositions. In looking over the list of preparations where graphite can be used with success, one can see many uses where this material is superior to anything heretofore brought forward. Being of itself practically indestructible it forms the resisting qualities of a paint where heat is present, also as a resistant to friction in lubricants for heavy machinery.

For Crucibles it has long been known. The lead pencils made by this company have won by their superior excellence, the first position for business or artists use.

We call special attention to Suplement and advertisement of the Colton Marble Co., showing the grand staircase in the Academy of Sciences Building in this city. Mr. John C. Pelton, Jr., Manager, Office, Flood Building, Room 42.

Young Husband—"Well, my dear, did you succeed in finding a stove to suit you?" Young wife—"Indeed, I did. Such good luck! I got a stove that will never cost us a cent for coal. The dealer said it was a self-feeder."

The well known firm of Smith and Trowbridge, "West Coast Wire Works," have dissolved partnership, Mr. James Trowbridge purchasing the interest of Mr. Smith.

The souvenir from Messrs. Merchant & Co., for the year 1892, is received. The illustrations are unique as is usual with this firm. The first illustration shows the earth with Chicago as the central point; long lines of passenger steamships from all parts of the world are centering towards Chicago to inspect the manufactures of Merchant & Co. Plate No. 2 shows the World's Fair grounds with the metal tower of this firm. This tower is to be 4,000 feet high and topped out as a "Star Ventilator", and is proposed to be used to ventilate the building at the World's Fair. The different nations are seen concentrating in all manner of conveyances towards this grand exhibit.

Plate No. 4 shows the method of inspecting the roofing plates.

Plate No. 7 shows the top of the "Star Ventilator" over the 4,000 foot tower, where people of all nations are viewing the wonderful city, and country around.

Plate No. 8 shows a grotto cooled to an agreeable temperature by the celebrated "Star Ventilator".

Plate No. 9 shows a close room where most of the inmates have fainted, and where a Brownie is about to place in the ceiling a "Star Ventilator".

Plate No. 10 shows the same room with the contented and pleased look of the inmates after the ventilator is placed in position.

Plate No. 12 shows a large sheet metal retort which is being viewed with consternation by the Russian, it being so superior to anything heretofore manufactured, that the Russian sheet metal is likely to be superseded in the market.

Plate No. 20 shows Miss Columbia placing the crown of honor upon the head of Messrs. Merchant & Co's. Brownie.

Write your advertisements clearly and truthfully, using sufficient space to show what you are prepared to furnish, have them printed continuously, then if you have anything that anybody wants, your returns will be satisfactory.

The Marshall Improved Window Furniture Company last week completed their contract for three hundred windows and sixty wash-stand doors on the Fair building, cor. Pacific and Front streets.

F. Sims, one of the firm of Sims & Morris, Western Iron Works of this city, dipped 40,000 shingles in 77 gallons of Carbolineum Avenarius. These shingles were dipped for two minutes without breaking bundles and when taken out were found to have been thoroughly penetrated and fully saturated with the preparation of Carbolineum.

The J. L. Mott Iron Works are continually adding to their already large number of articles for plumbers use. This firm has always been the manufacturer of the most perfect appliances characterized by beauty and strength, and the sanitary needs of the day in such articles are present in a marked degree. The arrangements for attachment are so perfect and gas tight, that no sewer emanations find their way into the house by this means.

Bath rooms, lavatory sinks and toilet rooms, when fitted with their appliances can be thoroughly cleansed all around the same, leaving no place where refuse or dirt can find a lodgement, as all such places are by their method unmasked.

The Mott Company has for years followed the plan of making all their articles in such a manner as to bear out their superiority over others in the market. By this means they have a standard value that at once recommends them to the favor of any person who has a knowledge of their quality. The latest productions from this firm are fully up to all the advanced sanitary questions of the times.

TENDERS TO BE RECEIVED.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M. on the 29th day of January, 1892, for furnishing and delivering at Freight Depot in city where required, Safes for the U. S. Government Building at the following cities:

Burlington, Vt.; Evansville, Ind.; Grand Rapids, Mich.; Macon, Ga.; New Orleans, La.; New York, N. Y.; Oswego, N. Y.; Philadelphia, Pa.; Sandusky, Ohio; Wheeling, W. Va. and Winona, Minn., in accordance with the specification, copies of which may be had at this office.

Bids for one or more of the safes must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the bid.

The Department will reject all bids received after the time fixed for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposals for safes for U. S. Government Buildings" and addressed to

W. J. EDBROOKE,
December 31, 1891. Supervising Architect.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 5th day of February 1892, for all the labor and materials required for the trench excavation, concrete and stone foundations, stone masonry, cut stone brick work of the basement and area walls, first floor and basement beams and girders, basement columns, etc., for the U. S. Court House, Custom House and Post Office at Omaha, Nebraska, in accordance with the drawings and specification, copies of which may be had on application at this office or the office of the Superintendent.

Each bid must be accompanied by a certified check for a sum not less than two per cent of the amount of the proposal.

The Department will reject all bids received after the time herein stated for opening the same; also bids which do not comply strictly with all the requirements of this invitation.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for Trench Excavations, Basement and Area Walls, Iron Beams, Columns, etc., for the U. S. Court House, Custom House and Post Office at Omaha, Nebraska," and addressed to,

W. J. EDBROOKE,
January 8, 1892. Supervising Architect.

CITY BUILDING NEWS.

Battery near Pacific. All cast iron work; owner, Jas. G. Fair; architect, H. A. Schulze; contractors, O'Connell & Lewis; cost, $2,563; signed, Nov. 17; filed, Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Battery near Pacific. Carpenter and stair work; owner, Jas. G. Fair; architect, H. A. Schulze; contractors, Smilie Bros.; cost, $20,837; signed, Nov. 17; filed, Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Battery near Pacific. Excavating, brickwork, etc.; owner, Jas. G. Fair; architect, H. A. Schulze; contractor, John McCarthy; cost, $22,150; signed, Nov. 17; filed, Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Battery near Pacific. Painting, graining, etc.; owner, Jas. G. Fair; architect, H. A. Schulze; contractor, J. M. Sindlinger; cost, $1,595; signed, Nov. 21; filed, Dec. 9; payments, 1st day of each month 75 per cent of work done; balance 35 days.

Battery near Pacific. Sandstone, pier, caps, etc.; owner, Jas. G. Fair; architect, H. A. Schulze; contractor, J. P. M. Phillips; cost, $2,205; signed, Nov. 21; filed, Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Battery near Pacific. Tinsmith work, etc.; owner, Jas. G. Fair; architect, H. A. Schulze; contractor, J. C. Roberts; cost, $2,686; signed, Nov. 17; filed, Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days;

Battery near Pacific. Wood and iron, lathing; owner, Jas. G. Fair; architect, H. A. Schulze; contractor, Thos. Mannix; cost, $2,345; signed, Nov. 21; filed, Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Battery near Pacific. Wrought iron work; owner, Jas. G. Fair; architect, H. A. Schulze; contractors, Biglow & Little; cost, $5,432; signed, Nov. 17; filed Dec. 9; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Broderick near Ridley. To build; owner, J. Caley; architect, W. H. Lillie; contractors, Harrington & Johnson; bond, $2,500; cost, $4,670; signed, Dec. 17; filed, Dec. 18; payments, $700, frame up; $700, enclosed; $700, brown coated; $700, standing finish on; $702.50, completed; $1,167.50; 35 days.

Castro near 23rd. To build; owner, Joseph Harris; architect, M. J. Welsh; contractor, F. C. Kleebauer; bond, $883.75; cost, $3,335; signed, Dec. 11; filed, Dec. 11; payments, $883,75, frame up; $883.75, brown coated; $883.75, completed, $883.75, 35 days.

De Long near Frederick. To build; owner, C. Lehnhardt; architects, John & Balczynski; contractor, E. L. Hansen; cost, $2,940; signed, Dec. 28; filed, Dec. 31; payments, $700, frame up; $800, brown coated; $700, completed; $740, 35 days.

Dolores near Cumberland. To build; owner, Geo. Walcom; architect, R. H. White; contractor, Rob't Currie; bond, $965; cost, $3,485; signed, Dec. 22; filed, Dec. 28; payments, $720, frame up; $720, ready for brown coat; $720, standing finish on; $720, completed; $965, 35 days.

Elgin Park near Ridley. Alterations and additions; owner, Carlo Oliva; architect, A. J. Barnett; contractor, B. Antonelli; bond, $900; cost, $1,495; signed, Dec. 5; filed, Dec. 5; payments, $500, when house mayers appliances are all removed; $620, completed; $375, 35 days.

Elizabeth near Castro. To build; owner, C. B. Van De Mark; architect, Edward Burns; contractor, Jas. Campbell; cost, $2,850; signed, Dec. 1; filed, Dec. 5; payments, $712.50; frame up; $712.50, brown coated; $712.50, completed; $712.50, 35 days.

Ellis near Buchanan. To build; owner, Winnie Lafferty; contractor, S. T. Crawford; cost, $6,000; signed, Dec. 23; filed, Dec. 28; payments, $1,200, frame up and roof boards on; $1,800, brown coated and enclosed; $1,950, completed; $1,050, 35 days.

Filbert and Dupont. Plastering and lathing; owner, Rev. R. De Carolis; architect; Chas. J. Devlin; contractor, Martin Carrick; cost, $1,100; signed, Dec. 3; filed, Dec. 5; payments, $400, brown coated; $425, completed; $275, 35 days.

Filbert bet. Fillmore and Steiner. To build; owner, J. E. Habergarten; contractor, L. B. Schmid; cost, $2,000; signed, Dec. 22; filed, Dec. 26; payments, $1,000, brown coated; $500, completed; $500, 35 days.

Franklin near Clay. To build; owner, A. P. Hotaling, Jr.; architects, Kenitzer & Kollofrath; contractor, Adam Miller; cost, $15,105; signed, Dec. 14; filed, Dec. 24; payments, $2,000, frame up; $2,500, enclosed and roof completed; $2,000, brown coated; $3,350, woodwork completed and ready to paint; $1,500, completed; $3,750, 35 days.

Geary Street; No. 623. Plumbing and gas-fitting; owner, R. N. Vance; contractor, Jas. Broad; cost, $1,500; signed, Dec. 28; filed, Dec. 28; payments, 75 per cent. of the value of work done on 1st day of each month; balance 35 days.

Geary near Buchanan. To build; owner, C. C. Butter; architects, Shea & Shea; contractors, E. C. Worden & Son; cost, $12,365; signed, Dec. 9; filed, Dec. 16; payments, $1,545, rough frame up; $1,545, rustic on; $1,545, partitions set and outside finish on; $1,546, brown coated; $1,546, white coated; $1,546, completed; $3,092, 35 days.

Geary and Leavenworth. To build; owners, Michalitschke Bros.; architects, John & Balczynski; contractors, Richardson & Gale; cost, $12,000; signed, Dec. 12; filed, Dec. 12; payments, 75 per cent. as work progresses; balance 35 days.

Geary and Polk. Painting, graining and natural woodwork; owner, David T. Pierce; architects, R. H. & R. White; contractors, Smith & Duryea; cost, $1,900; signed, Dec. 10; filed, Dec. 11; payments, 1st day of each month 75 per cent. of value of work done; balance 35 days.

Gough and Broadway. Carpenter work; owner, D. F. Walker, Agent of Althea Walker; architects, Smith & Freeman; contractor, A. Jackson; cost, $27,146; signed, Dec. 2; filed, Dec. 7; payments, $2,000, foundations in; $3,000, frame up; $4,000, ready for plaster; $4,000, plastered; $4,000, ready for painter; $3,358, completed; $6,787, 35 days.

Gough and Broadway. Painting; owner, D. F. Walker, Agent of Althea Walker; architects, Smith & Freeman; contractor, Gus. V. Daniels; cost, $1,794; signed, Dec. 1; filed, Dec. 7; payments, $300, house primed; $500, inside and outside has two coats; $515, completed; $449, 35 days.

Gough and Broadway. Plumbing; owner, D. F. Walker, Agent of Althea Walker; architects, Smith and Freeman; contractors, Dudley Bros.; cost, $1,297; signed, Dec. 2; filed, Dec. 7; payments, $1,000, rough work done; $850, completed; $847, 35 days.

Grove and Baker. To build; owners, J. Arguello and wife; architects, Martens & Coffey; contractor, W. W. Ackerson; bond, $2,500; cost, $13,865; signed, Dec. 22; filed, Dec. 28; payments, $2,000, frame up; $2,000, enclosed and roofed; $2,000, brown coated; $2,000, white coated; $2,395, completed; $3,470, 35 days.

Haight Street, Nos. 436 and 438. Alterations and additions; owner, A. Sandell; contractors, Mullins and McGowan; bond, $775; cost, $3,100; signed, Dec. 14; filed, Dec. 22; payments, $388, house raised and brickwork done; $387, framed; $775, rough plastered; $775, completed; $775, 35 days.

Jackson near Baker. Carpenter work; owner, E. T. Howes; architects, Smith & Freeman; contractor, John G. Adams; cost, $5,600; signed, Dec. 23; filed, Dec. 28; payments, $1,050, frame up; $1,050, ready for plastering; $1,050, brown coated; $1,050, completed; $1,400, 35 days.

Jackson and Laguna. Cabinet work; owner, A. Schwabacher; architects, Percy and Hamilton; contractor, F. W. Kreling; cost, $8,890; signed, Dec. 15; filed, Dec. 21; payments, 1st Saturday of each month, 75 per cent. of work done; balance 35 days.

Jackson and Laguna. Carpenter and mill work; owner, A. Schwabacher; architects, Percy and Hamilton; contractors, Farrell & Bell; cost, $14,588; signed, Dec. 15; filed, Dec. 21; payments, 1st Saturday of each month, 75 per cent. of value of work done; balance 35 days.

Jackson and Laguna. Concrete work; owner, A. Schwabacher; architects, Percy & Hamilton; contractors, Ransome & Cushing; cost, $8,200; signed, Dec. 15; filed, Dec. 21; payments, 1st Saturday of each month, 75 per cent. of work done; balance 35 days.

Jackson and Laguna. Plumbing and gas-fitting; owner, A. Schwabacher; architects, Percy & Hamilton; contractors, Duffey Bros.; cost, $3,925; signed, Dec. 15; filed, Dec. 21; payments, 1st Saturday of each month, 75 per cent. of work done; balance 35 days.

Jackson and Laguna. Ornamental and plain plastering; owner, A. Schwabacher; architects, Percy and Hamilton; contractor, Henry Fisher; cost, $2,235; signed, Dec. 15; filed, Dec. 21; payments, 1st Saturday of each month, 75 per cent. of work done; balance 35 days.

Jackson and Laguna. Painting, varnishing, etc.; owner, A. Schwabacher; architects, Percy & Hamilton; contractors, M. J. & J. J. Donovan; cost, $1,425; signed, Dec. 15; filed, Dec. 21; payments, 1st Saturday of each month, 75 per cent. of work done; balance 35 days.

Langton Street, No. 125. To build; owner, Rob't J. Young; contractor, A. G. Martin; bond, $500; cost, $2,400; signed, Dec. 3; filed, Dec. 8; payments, 75 per cent. at end of every two weeks as work progresses; balance 35 days.

Leavenworth near Sacramento. To build; owner, G. D. Mayle; architects, John & Balczynski; contractor, Wm. Plum; cost, $6,490; signed, Dec. 9; filed, Dec. 10; payments, $1,200, frame up; $1,200, partitions set; $1,300, white coated; $1,300, completed; $1,390, 35 days.

Market St.—Palace Hotel. Furniture for writing and reading room; owners, Sharon Estate; architect, A. P. Brown; contractors, West Coast Furniture Co.; cost, $1,552; signed, Dec. 3; filed, Dec. 12; payments, $1,552, completed and accepted.

Market St.—Palace Hotel. Ventilating shafts in courts; owners, Sharon Estate; architect, A. Page Brown; contractors, W. W. Montague & Co.; cost, $1,725; signed, Dec. 23; filed, Dec. 24; payments, 75 per cent. completed; 25 per cent. 35 days.

Market, Post and Montgomery. Show and counter cases; owners, Geo. C. Shreve & Co.; architect, A. P. Brown; contractors, W. B. & B. Smith; cost, $18,500; signed, Dec. 4; filed, Dec. 12; payments, 40 per cent. upon shipment of goods from N. Y., 60 per cent. upon acceptance.

Market, Post and Montgomery. Cartan, pierre and plaster ornaments, owners, Geo. C. Shreve & Co.; architect, A. P. Brown; contractor, Henri L. Bouche; cost, $3,250; signed, Nov. 20; filed, Dec. 12; payments, 60 per cent. when shipments are delivered from N. Y., 40 per cent. upon acceptance.

McAllister and Jones. Decorative painting; owners; Hibernia S. & L. Society; architects, Pissis & Moore; contractors, Moretti & Trezzini; cost, $3,920; signed, Dec. 1; filed, Dec. 17; payments, 1st and 15th day of each month 75 per cent. of value of work done; balance 35 days.

McAllister and Jones. Mosaic marble floors; owners, Hibernia S. & L. Society; architects, Pissis & Moore; contractors, Chatain & Ghetti; cost, $1,455; signed, Dec. 1; filed, Dec. 17; payments, 1st and 15th day of each month 75 per cent. of value of work done; balance 35 days.

McAllister and Jones. Mantels and panelled ceilings; owners, Hibernia S. & L. Society; architects, Pissis and Moore; contractors, Fink & Schindler; cost, $6,388; signed, Dec. 1; filed, Dec. 5; payments, 75 per cent. as work progresses on 1st and 15th day of each month; balance 35 days.

Sacramento and Montgomery. Painting, Glazing, etc.; Pacific Life Ins. Co.; architects, Wright & Sanders; contractors, Geo. J. Smith & Sons; cost, $5,546; signed, Dec. 8; filed Dec. 11; payments, 75 per cent. as work progresses; balance 35 days.

Steiner and Ellis. To build; owners, T. F. Misgill and wife; contractors, Petterson & Person; bond, $400; cost, $5,236; signed, Dec. 8; filed, Dec. 10; payments, $1,000, frame up; $1,400, brown coated; $1,300, completed; $1,336, 35 days.

Tehama Street, Nos. 353 to 357. Carpenter work; owner, J. Spaulding; architects, Shea & Shea; contractor, A. C. Hussey; cost, $1,500; signed, Dec. 16; filed, Dec. 18; payments, 75 per cent. as work progresses; balance 35 days.

Twelfth Ave. near "M". To build; owner, Chas. H. Knus; contractors, Parker & Bane; cost $1,400; signed, Nov. 30; filed, Dec. 7; payments, $300, enclosed; $450, brown coated; $400, completed; $250, 35 days.

Twenty-fifth and Capp. To build; owner, Michael Curran; architect, W. H. Bayless; contractors, Doyle & Son; bond, $6,000; cost, $12,000; signed, Dec. 4; filed, Dec. 5; payments, 75 per cent. as work progresses on 5th day of each month; balance 35 days.

Vallejo near Buchanan. To build; owner, Bertha Cellarius; architects, Townsend & Wynken; contractor, J. W. Wissinger; cost, $7,875; signed, Dec. 18; filed, Dec. 22; payments, $905, 1st floor beams are on; $1,000, rough floors laid; $1,500, brown coated; $1,000, white coated; $1,500, completed; $1,970, 35 days.

Waller near Masonic Ave. To build; owner, Mary J. Nachtigall; architect, N. A. Comstock; contractor, Chas. Kinsman; bond, $2,500; cost, $5,500; signed, Dec. 2; filed, Dec. 10; payments, $1,375, frame up; $1,375, brown coated; $1,375, completed; $1,375, 35 days.

Washington near Walnut. To build; owner, W. O. Ludovici; architect, Wm. Curlett; contractor, Wm. Linden; cost, $7,400; signed, Dec. 7; filed, Dec. 8; payments, $3,000, roof on; $1,512.50, brown coated; $1,000, inside finish on and doors hung; $1,887.50, 35 days.

ALAMEDA COUNTY.

Bella Vista near 11th Ave., Oakland. To build; owner, E. S. Chapman; contractors, A. W. Pattiani & Co.; cost, $5,000; signed, Dec. 16; filed, Dec. 17; payments, $1,350, rustic and roof shingles on and chimneys built; $1,250, window frames set, brown mortar on and exterior primed; $1,150, completed; $1,250, 35 days.

Blake Street near Shattuck Ave. Berkeley; To build; owner, C. A. Briggs; contractors, Cheney & Baum; cost, $1,750; signed, Dec. 12; filed, Dec. 12; payments, ¼, enclosed; ¼, brown mortar on; ¼, completed; ¼, 30 days.

Broadway and 14th Streets, Oakland. Concrete arches; owner, Jos. Macdonough; architects, Mooser & Cuthbertson; contractors, Gray Bros.; cost, $3,700; signed, Dec. 14; filed, Dec. 23; payments, 75 per cent. of the value of work done; balance, 25 per cent., 35 days.

Broadway and 14th Streets, Oakland. Gas work; owner, Jos. Macdonough; architects, Mooser & Cuthbertson; contractor, T. H. Andrews; cost, $8,000; signed, Dec. 5; filed, Dec. 23; payments, 75 per cent. of the value of work done; balance, 25 per cent., 35 days.

Broadway and 14th Streets, Oakland. Sandstone; owner, Jos. Macdonough; architects, Mooser & Cuthbertson; contractor, David O'Neil; cost, $1,500; signed, Nov. 30; filed, Dec. 23; payments, 75 per cent. of the value of work done; balance 35 days.

Carrison Tract. To build; owner, A. H. Yeazell; contractor, H. J. Goetzman; cost, $2,050; signed, Oct. 30; filed, Dec. 14; payments, one sorrel horse on date of said contract at agreed price of $300; balance of said $2,050, to be paid as follows: $25, completed, and $25, 30 days, and so on, $20 in each 30 days, until entire sum of $2,050, has been paid.

Central Ave. near Lafayette, Alameda. To build; owner, E. A. Fischer; architect, Chas. S. Shaner; contractors, J. E. Henderlong Bros.; cost, $4,430; signed, Dec. 24; filed, Dec. 29; payments, $832.50, rough frame up and rafters on; $830, enclosed, rustic on and window frames in; $830, brown mortar on; $830 plastering and all woodwork done; $1,107, 36 days.

Channing Way Dana, Berkeley. To build; owners, D. W. & M. Parkhurst; contractors, A. W. Pattiani & Co.; cost, $7,750; signed, Nov. 30; filed, Dec. 5; payments, $2,500, rustic and roof shingles on and chimney built; $1,750, window frames set, brown mortar on and exterior primed; $1,500, completed; $2,000, 35 days.

Delaware Street near Shattuck. To build; owner, Mary Holden; contractor, Chas. H. Thrane; cost, $1,630; signed, Dec. 12; filed, Dec. 14; payments, $543.33, frame up, enclosed and roof on; $543.33, brown mortar on; $543.33, 35 days.

Felton and Herzog Streets, Gd. Gt. To build; owners, John A. Carson and wife; contractor, H. F. H. Brown; cost, $1,630; signed, Dec. 23; filed, Dec. 24; payments, $543.25, roof on and outside completed; $543.25, completed; $543.25, 35 days.

Grand Street near San Jose Ave., Alameda. To build; owners, Nettie R. & E. B. De Golia; contractors, A. W. Pattiani & Co.; cost, $4,356; signed, Dec. 4; filed, Dec. 7; payments, $1,158, rustic and roof shingles on and chimney built; $1,158, window frames set, brown mortar on, etc.; $840, completed; $1,100, 35 days.

Linda Vista Terrace, Oakland. To build; owner, E. D. Ormsby; architect, J. Conati; contractor, Jacob Steinborgh; cost, $8,460; signed, Dec. 17; filed, Dec. 19; payments, ¼, frame up and rustic on; ¼, first coat of plaster is on; ¼, ready for last coat of paint; ¼, 35 days.

Lot 19, block 726. To build; owner, Colombo Raffo; contractor, Frank C. Bignami, cost, $2,906; signed, Nov. 5; filed, Dec. 8; payments, $960, frame up; $975, one coat plaster on; $971, 35 days.

Myrtle near 12th St., Oakland. To build; owner, F. H. Reuning; architects, Percy & Hamilton; contractors, Cornelius & Reed; cost, $2,800; signed, Dec. 26; filed, Dec. 27; payments, ¼, frame up and rustic on; ¼, first coat plaster on; ¼, ready for first coat paint; ¼, 35 days.

Park Ave. near San Jose. Alameda. Alterations; owner, O. E. Derby; architect, A. R. Denke, contractor, Geo. Kueppler; cost, $925; signed, Dec. 15; filed, Dec. 15; payment, $300, building is covered in; $300, completed; $325, 30 days.

San Pablo Ave. near 16th St., Oakland. Brickwood in extension building; owner, W. Hall; architects, J. J. & T. D. Newsom; contractors, Remillard Brick Co.; cost, $1,555; signed, Dec. 17; filed, Dec. 18; payments, 75 per cent. of the value of work done and materials furnished to be paid on 2nd and 16th of each month, and the remaining 25 per cent., 35 days.

San Pablo Ave. near 16th St., Oakland. All plate and glass work in store fronts; owner, Winslow Hall; architects, J. J. & T. D. Newson; contractors, L. & H. Cobbledick; cost, $2,300; signed, Dec. 10; filed, Dec. 11; payments, 75 per cent. of work done and materials furnished on 1st and 15th of each month; balance 25 per cent., 35 days.

San Pablo Ave. near 16th St., Oakland. Plumbing, etc., owners; J. C. & E. Coleman; architects, J. J. & T. D. Newson; contractors, Wm. S. Snook & Son; cost, $1,450; signed, Dec. 9; filed, Dec. 10; payments, 1st and 15th day of each month 75 per cent. as work progresses; balance 25 per cent., 35 days.

San Pablo Ave. near 16th St., Oakland. Painting; owners, J. C. & E. Coleman; architects, J. J. & T. D. Newsom; contractors, Doody & Hooley; cost, $1,967; signed, Dec. 9; filed, Dec. 10; payments, 1st and 15th day of each month 75 per cent. as work progresses; balance, 25 per cent., 35 days.

San Pablo Ave. near 16th St., Oakland. Brick, carpenter, plastering, etc.; owners, J. C. & E. Coleman; architects, J. J. & T. D. Newsom; contractor, Winslow Hall; cost, $12,175; signed, Dec. 9; filed, Dec. 10; payments, 1st and 15th day of each month 75 per cent. as work progresses; balance, 25 per cent., 35 days.

Suburban Tract —— lot 14, block A. To build; owner, Rob't. A. Barker; contractor, J. J. Rose; cost, $1,650; signed, Dec. 5; filed Dec. 7; payments, first payment, house up and enclosed; second, house completed; third, 35 days.

The California Architect and Building News.

Copyrighted 1891, by the California Architectural Publishing Company.

OFFICE, 408 CALIFORNIA STREET, SAN FRANCISCO, CAL., U. S. A.

VOLUME XIII. FEBRUARY 20th, 1892. NUMBER 2.

A MONTHLY JOURNAL DEVOTED TO THE ARCHITECTURAL INTERESTS OF THE PACIFIC COAST.

Published on or about the 20th of each month by The California Architectural Publishing Company. The Stockholders being Architects and others interested in the profession.

SUBSCRIPTION TO THE JOURNAL, - $3.00 PER YEAR IN ADVANCE.

ESTABLISHED 1879. INCORPORATED 1889.
NOW IN THE THIRTEENTH YEAR.
W. J. CUTHBERTSON, President. OLIVER EVERETT, Secretary.

THE Competative designs for the California State Building at the World's Fair, have been submitted and placed on exhibition

What struck us most in viewing the wealth of creative ability, brains and time exhibited at the rooms of the California World's Fair Commission was the prodigal waste of time, money and vital force therein shown.

Twenty-nine different designs are here shown for a $75,000 building, at least half of which show a creditable amount of ability and worth.

Nearly all have elaborately wrought and colored perspectives and some of very large size, involving an incommensurate expenditure of time and money leaving out the before mentioned vital force.

An unwritten law of the profession should be that members going into competition would not take advantage of their superior wealth in money or even of their superior wealth of time to get an unfair advantage over those who are lacking in these, but leave the decision to a companion under uniform conditions—which conditions would be a sketch only sufficient to elucidate the points of the plan but no meretricious accessories to mistake the facts and lead the judges to be carried away beyond the actual facts or to be influenced by sympathy that one of the competitors, poor fellow, has gone to a tremendous expense and therefore we ought to do something for him.

By the evidences of fierce competition exemplified in this contest, we are surely on a no higher plane than the lawyer whose business it is to bias a judge or jury by anything no matter how dishonest or improper.

We would like to see in the future, owners of honesty, who desire competition, set their face against this unnecessary waste which really instead of helping them to a decision, confuses them with a multitudinous and elaborate exposition of detail and prettiness.

The moral method seems to be to present only a slight sketch—with as little expenditure of life as possible, sufficient to give an idea to the owner of the possibilities of the design.

WORLD'S FAIR NOTES.

A Proposed Palace of Pure Silver.

The *San Francisco Chronicle* says:—A resident of West Fourteenth street, New York, has made the most novel and original suggestion on record for an interesting exhibit at the World's Fair. In a letter to Secretary Foster to-day he says: "I wish to point out to you that you have in your power, with the consent of Congress, to construct the most beautiful and magnificent, as well as the most valuable, exhibit the world ever saw. I allude to building a palace of silver, constructed of the silver now in bullion and coin in the Government's vaults at the various depositories. If the Government could get permission from Congress to recast 15,000 tons of it into slabs of say 600 pounds and one inch thick. This would give 600,000 superficial feet, out of which could be built the most beautiful structure the world has ever seen. It would build a structure 400 feet by 300, with a tower 300 feet high, on which could be placed an American eagle with wings of 100 feet spread. A silver palace worth $100,000,000 would be an attraction that would draw millions of people who always want to see something new and grand. Not over $1,000,000 need be expended in the construction of such a palace, which could be guarded by the army."

SAWING HICKORY AND ASH FOR CARRIAGE WORK.

By Fitz.

THE scarcity of good timber and the well-know fact that for carriage work the situation of the grain layers has a marked influence upon the durability of the finished vehicle, makes it of the utmost importance that the plank be cut in a manner that will prove the most profitable. Until within a comparatively few years, the expense of sawing, except in the old method of cutting through and through, cutting plank as shown by the quarter section, Fig. 1, was so great as to make it unprofitable to cut up in any other way. By

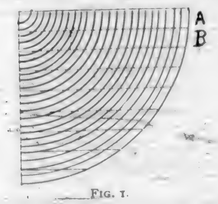

FIG. 1.

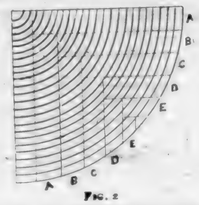

FIG. 2.

this method the center planks, *A* and *B*, were the only ones in which the grains run in the general direction desired, but even these were defective, particularly plank *B*, the center, the toughest part of the wood, was unfit for side or spring bars, unless the thickness was such that they could be cut edgewise instead of on the flat of the plank. Each succeeding plank after *B* grew less and less valuable, compelling the use of bars with the grain in the wrong direction, or causing great waste in timber and in time in cutting the various pieces; then, too, there is much greater loss from warping and springing than there would be if the grains run in a different direction. The various faults combined caused, in the aggregate, a loss of at least 50 per cent. in the quantity of suitable plank for first-class carriage work.

The improvement in saw mill machinery has made it possible to perform work which could not have been done with the old-style gate saw, not only as to the sawing itself, but also in the handling.

Logs are now quarter-sawed as cheaply as they were planked before the day of improved machinery. This quarter-sawing first came into demand to meet the requirements of architects and furniture manufacturers, for oak to be worked in a manner that would place the grain in a most desirable position for showing its beauty. Since then other timbers have been quarter-sawed for other purposes where increased strength was required. The machinery, therefore, for quarter-sawing is very complete, and there is nothing to prevent carriage makers having quarter-sawed timber. This is important, particularly for ash and hickory, not only for the best results as to the location of grain, but also as a check to the waste.

There are various methods of quarter-sawing, and it matters little which is adopted so far as cost is concerned; it

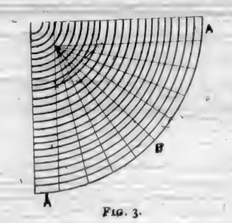

FIG. 3.

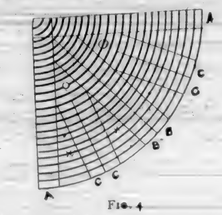

FIG. 4.

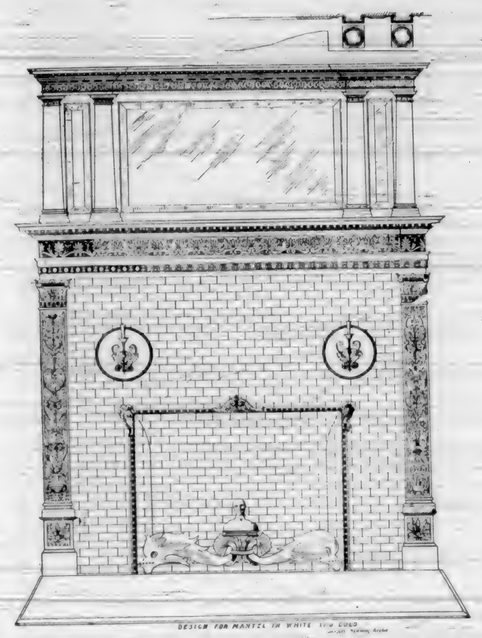
follows, therefore, that the method which will give the best result as to position of grains, and reduce the loss to the lowest figure, is one that should be adopted. Fig. 2 shows a very common method. One which is something of an improvement on the old plan as shown by Fig. 1, but it does not give as good a result, as too great a part of log is improperly cut. The planks *A A* are the only ones that are perfect. *B B* answers fairly well, while in *C C* the angle of the grain impairs the stiffness of the cut strips, making them of doubtful value. The trouble increases with *D D*, while *E E* and the triangle between them are unsuited to carriage work. In fact, about one-fifth of the entire log is wasted, or rather is unsuited to the principal uses for carriages, such as shafts, side bars, and spring bars. It can be used for axle beds, perches, head-blocks, etc., but is no better for these uses than if cut in proper form.

Fig. 3 illustrates another method. The first cut planks, *A A*, are in all respects the same as the first cuts of Fig. 2. The balance is cut into triangular pieces, the saw kerf radiating from a common center. By this method planks are secured with the grains in proper position to work to the best advantage. The waste at the center may be avoided by cutting off the point on the line *X X*, or by first splitting on line and then removing the triangles. The uneven thickness may be urged as an objection to this method of sawing, but it is much less than it appears, as bars of all kinds are required of different thicknesses. If care is taken in marking out, the loss will be very light. The main objection is the loss that results of a portion of the finest timber in the log, at the triangle, after the first planks are cut.

The plan of sawing as shown by Fig. 4 is without doubt the most desirable, giving as it does so many planks of uniform thickness, and having the grain in the proper position. In this the first cut planks, *A A*, are similar to those of Figs. 1 and 2. These being removed, the triangles between *A* and *B* are cut away and planks *B B* sawed. These have the grain precisely in the same position of that in *A A*, the planks, however, being narrower. A little waste occurs in cutting these at the beveled edges, but a careful workman can reduce it to the merest trifle. These being cut, the triangles *O O* are cut away and the balance is cut to give planks *C C*. These, though narrow, have the grain in the correct position. The only pieces that are wasteful are the four marked *X* and the two marked *O*, but none of these are all waste. The two marked *O* are large enough to get a good full bar out of each, with the grain in proper position. Those marked *X* will give one, if not two each, leaving very little waste. If the log cut this way is small there will be but one plank instead of the two indicated by *C*, but even in this case the loss is slight, and every plank is in shape to cut to the best advantage and give the best results.

In some sections, the old saw mill, fed by the little stream in the spring of the year, with its gate and mulay saw, is the most accessible, and because of that very much valuable timber is cut to waste. It would be far more profitable to sell the timber in the log than to saw it into unmarketable plank. Care in this respect and in sawing would go far towards removing the apprehension of a scarcity of hickory and ash timber, beside making that in the market far more valuable to the users.—"*We take the foregoing from the "Wood Worker" and which originally appeared in the "Blacksmith and Wheelwright".*



DESIGN FOR MANTEL IN WHITE ENAMELED BRICK AND GOLD

The Mantel here shown is built of white enameled brick—and the ornaments worked up in gold. Designed by Samnel Newsom, architect.

ELECTRICITY SIMPLIFIED.

THE ETHER—ELECTRICITY.

A recent work from which we reprint the first Chapter.

"There are in nature certain mysteries, if such a name does not appear too poetical, which have never been solved and may remain so for all future generations. The conservative scientist is apt to include among such things gravitation, electricity, and perhaps light. To explain the phenomena of light, an almost inconceivable entity termed the luminiferous ether has had to be invented. By assuming such a thing to exist and to be endowed with almost inconceivable properties, light is explained and its phenomena are brought into the domain of mathematics. But no direct proof of the existence of the ether has yet been found, and we hardly can venture to hope for one.

The modern treatment of electricity deals with it as representing and including special phenomena of this ether. Some go so far as provisionally to define it as being the ether itself, and to treat static excitement, magnetism, current electricity, etc., as due entirely to different states of the ether.

The luminiferous ether is by calculation deduced as being of the following general properties. It is supposed to be a medium most resembling a gas in constitution, yet possessing rigidity like a solid, as well as elasticity like that of a gas. Its density is equal to 936 one-thousand-millionths (936-1,000,000,000) that of water, or equal to that of air at 210 miles above the earth. Its rigidity is one one-thousand millionth (1-1,000,000,000) that of steel. It is sometimes compared to an all-pervading jelly, through which waves of light and other radiant energy and of electromagnetism are constantly throbbing. Particles of ordinary matter move through it without resistance. It interpenetrates the molecules of matter, and hence an air pump is entirely without effect upon it. There is no such thing as an ether vacuum (Daniel). It cannot be excluded from empty space.

Such is the hypothetical luminiferous ether, an ultra-gaseous body possessing the properties of both a solid and of a gas. It should be looked upon as an expedient for the present, as something most useful in formulating theories, but unproved. A theory is often little more than a symmetrical skeleton to sustain our laboriously acquired collection of facts. The test of the utility or perfection of a theory is its ability to foretell what will happen under given conditions. It may be able to do this and yet be wholly fictitious.

Light is radiated from one body to another across enormous intervals of space. The mind cannot conceive of one body acting upon another without some connecting medium. The same applies to gravitation and electricity. The ether originally invented to account for the transmission of light through distances, of unknown degrees of immensity in the case of the heavenly bodies, has been found a useful factor in formulating a theory of electricity.

If any object is excited electrically, every object within its range of action, that is to say, which is not screened from its effects, is also affected. This involves the same kind of action across a space as obtains in the case of light. It is termed radiant action and is a manifestation of radiant energy. Again, an electric current or the poles of a magnet produce magnetic effects in their vicinity upon objects not in contact with them. This involves action at a distance also.

These are among the reasons which have induced scientists to invoke the luminiferous ether to aid in explaining and accounting for electrical phenomena. As employed in the present work it will be found useful in enabling the mind to better formulate a theory of the science. Extraordinary as the idea of the ether may appear, it is evident that the modern achievements of electricity are just as strange. They are of such nature as to be entitled to an extraordinary line of explanation.

The sun is at such a distance from the earth that it takes light over eight minutes to travel from its surface hither. The nearest of the fixed stars are so remote that in many cases days and years are consumed in the passage of light from them to us. If one of these bodies were suddenly annihilated we should see its light after it ceased to exist. The sun would seem to continue to shine for eight minutes and twenty seconds after its extinction. We may even now seem to see stars which long ago ceased to be luminous, and distant suns may now be radiating light into space, which light will not reach us to show us a new star, for years to come.

All this is so strange and deals with such infinite relations of quantities as regards distances and time that the luminiferous ether, viewed from such a standpoint, seems not too extravagant a conception to account for the high velocity and intensity of radiant energy.

Pulses or waves of electric energy are found to act like light, to be capable of transmission through some bodies, of reflection from others, and of refraction and interference. The relations between electrostatic and electromagnetic units indicates a ratio corresponding to the velocity of light. These considerations give direct ground for utilizing the theoretical ether as a medium for the propagation of electrical disturbances.

The term radiant energy is continually acquiring new scope in physics. Many phases of electrical disturbance fall under this heading. Others may be attributed to radiant force.

The passion for unification at one time tended to obliterate the old distinction between static and dynamic electricity. Now a true basis for such division must be recognized and may to a certain extent be determined by the consideration of force and energy. True static phenomena are phenomena

INSTITUTE OF BRITISH ARCHITECTS MDCCCXXXIV

of ether stress or of force; electromagnetic wave and current phenomena are related to ether waves or energy.

FORCE, ENERGY, MASS AND WEIGHT.

Physical concepts, such as force, mass, energy and other elementary things, have received within recent years much accuracy and definition of description and attributes. Only a few years ago great confusion existed, notably in the distinction between force and energy. The enunciation of the absurd doctrine of the conservation of force, and its support in many essays and papers by those who were assumed to be the leading thinkers of the day, is an illustration, now but a few years old, of this fact.

This accuracy has led, and is leading, to more and more subdivisions, which brings about a multiplication of units, and increase in nomenclature especially in electricity, which has already been felt to be a misfortune, although it is not easy to see how it is to be avoided.

For the purposes of this work it is quite unnecessary to enter into all of these subdivisions. There are a few elementary mechanical ideas which may be enunciated before the electrical part is entered on. These involve subjects which are often sources of error and misunderstanding.

As physics and mechanics are based upon measurement, units of different kinds have been established. They are based upon length, time and weight. The relations of these factors to the compound units are termed the dimensions of the unit. The centimetre, gram, and second are the bases of measurement, and the fundamental units constructed or built up upon them are termed the centimetre-gram-second or C. G. S. units.

FORCE is that which, acting on a quantity of matter or mass, can change its rate of motion or can impart motion to it. It can be called into existence or annihilated under adequate conditions; in other words, there is no conservation of force. Its unit is that force which can in one second impart to one gram of matter a velocity of one centimetre per second. This unit is termed the *dyne*. The weight of one gram is equal to about 981 dynes. A dyne is equal to about 63½ grains.

The exertion of force along a path in space, which condition necessarily implies motion against resistance, is termed WORK. Its unit is a dyne exerted through a path one centimetre long. The most convenient way to express force is to refer it to gravitation. Hence the unit of work is generally defined as the raising of 1-981 gram to a height of one centimeter against gravitation. The name of the unit is the *erg*.

The power of doing work is termed ENERGY. A weight of 1-981 gram by frictionless machinery could, in descending one centimeter, raise another body of the same weight the same distance. Hence it would be said to possess energy of position, a form of potential energy, equal to one erg. The sum of energy in the universe is invariable; energy can be neither created nor annihilated by natural causes. This is the doctrine of the conservation of energy, which has replaced the discarded one of the conservation of force.

If a bullet is fired from a gun, the energy of the combustion of the powder is in part expended in driving the bullet forward; in part in driving the gun backward, producing recoil; in part in heating the gun and bullet, and in various other ways. None of its energy is destroyed. The bullet strikes a target and is brought to rest. Its energy is not destroyed, it is only transformed. Some appears as heat energy—indeed most of it directly or indirectly takes this form; none disappears.

If this doctrine is true, perpetual motion against resistance, as generally understood, is impossible. There is very little doubt of this doctrine's truth.

It follows from the above that energy cannot, properly speaking, be expended, and that work is not done at the expense of energy. Work simply denotes the reciprocal of a given form of energy, and is produced by the disappearance of that particular form of energy, and is the result of its conversion into some other form. A weight raised by the combustion of coal is the reciprocal of the heat energy, and no more represents work than it does the product or the result of the conversion of heat energy into mechanical potential energy. In other words, work and energy may be treated as identical. To do work, energy is required, and is absorbed in the process by being converted into some other form or forms. The other forms, either one or more of them, are in many cases some irreclaimable form or forms, which can never again be utilized. This is so often the case that the available energy of the universe is undoubtedly tending to zero. This zero will be attained when all objects have the same temperature.

A body placed at a height above a plane possesses what is termed potential energy, referred to the plane. Its advantageous position indicates a power of doing work. Another example of potential energy would be a strained spring, possessing the energy of stress.

A body in motion, by virtue of its inertia or resistance to reduction of velocity, can do work, and is said to possess kinetic energy. A body at rest in a certain sense may be said to possess the same with reference to moving bodies, because all rest and motion are relative.

An example of the transformation of energy can be taken from the above. A one-pound weight raised one hundred feet has expended upon it one hundred foot-pounds of energy, and possesses that amount of potential energy. If now it is allowed to fall through the same distance, it parts with its potential and assumes kinetic energy. When it has fallen one hundred feet, if in a vacuum, it will at the one-hundred foot mark possess none of its original potential energy, but in its place will have one hundred foot-pounds of kinetic energy. As it strikes the ground and comes to rest, this energy will change into heat energy and other forms, but it will remain the same in amount—one hundred foot-pounds.

MASS is the quantity of any portion of matter. Owing to centrifugal force a body weighs less at the equator than at the North Pole; upon the surface of the moon it would weigh far less. Yet its mass would be the same although its weight might vary. Were transportation cheap enough, and were the other conditions favorable, a merchant could make money by selling by weight, in northern or southern latitudes, goods which he had purchased by weight in equatorial latitudes, provided he weighed with a spring-balance. He would buy and sell the same weight, but would buy a greater mass than he sold.

WEIGHT is mass acted on by gravity. As gravity varies, weight will vary, even though the mass remains the same: all which has been just illustrated.

In electricity we have force and energy. Heat energy in driving an engine that drives a dynamo becomes ultimately converted into electric energy. An electric machine or a battery on open circuit maintains its terminals at a varying potential, or in such state as to exercise electromotive force. This force, producing a current through a resistance, does work. As for electric mass and weight, as yet they are not recognizable, and probably do not exist.

MYTHOLOGY.

LUNA, (*the moon*) was the daughter of Hyperion and Terra, and was the same, according to some mythologists, as Diana. She was worshipped by the ancient inhabitants of the earth with many superstitious forms and ceremonies. It was supposed that magicians and enchanters, particularly those of Thessaly, had an uncontrolable power over the moon, and that they could draw her down from heaven at pleasure by the mere force of their incantations. Her eclipses, according to their opinion, proceeded from thence; and on that account it was usual to beat drums and cymbals to ease her labors, and to render the power of magic less effectual. The Arcadians believed that they were older than the moon.——A maritime town of Etruria, famous for the white marble which it produced, and called also *Lunensis portus*. It contained a fine capacious harbour, and abounded in wine, cheese, etc. The inhabitants were naturally given to augury, and the observation of uncommon phænomena.

RURAL NOTES.

WHEREVER fences are used to inclose fields, some practical method must be devised for the passage of persons from one field to another.

Where gates either hung on hinges or sliding, are used, there is a liability that they may be left open by some forgetful or careless person. Turn stiles are objectionable for several reasons. Any opening for passage through the fence is liable to attract the attention of animals to such an extent that when a breakage is made in the line it will in most cases be near such passages.

The methods here shown may be used for fences formed of either boarding, rails, pickets or barbed wire.

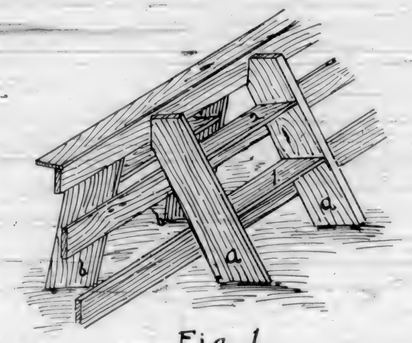


Fig. 1.

Fig. **1,** shows the common step-ladder, having side pieces a–a and b–b, and steps 1–2—or more on one side—with corresponding steps on the opposite side. For permanency the steps should be let into the sides before nailing together.

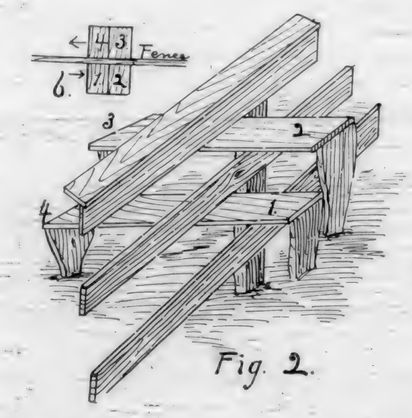

Fig. 2.

Fig. **2,** shows an arrangement that is quite common in some sections. The steps extend to equal distance on each side of the fence, 1–2 or more steps up at one side and the same down at the other side—at b, is shown the line of fence and steps. The ends of the steps are supported in various ways, the cheapest being a board sharpened at the lower end and driven into the ground.

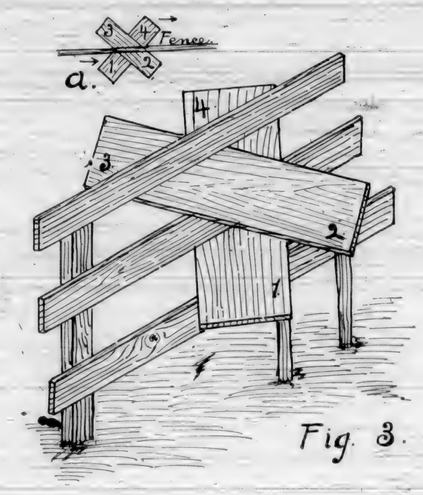

Fig. 3.

Fig. **3,** shows another arrangement where the steps are set at an angle as shown at—a. The ends of steps being supported by stakes same as in Fig 2. In this case as in the others the number of steps can be regulated according to the height.

In Fig **1,** the person passes up on one side at right angles to the line of fence and then down at the other side. In Fig. 2, the person passes up in the direction of the arrow, shown at b—turning about at top and decending as shown by the arrow at the opposite side of the fence. In Fig. 3, the person passes up in the direction of the arrow at a, stepping over and decending at the other side in the same direction.

There is an objection to all these methods as described, for the reason that animals confined within an inclosure usually pass along the fence lines and any projecting parts, such as steps, etc., may be wrecked or the animals injured by these projections.

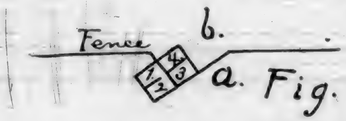

Fig. 4.

This defect may be reduced to a minimum by the arrangement shown in Fig. 4, where the fence is formed with a recessed angle at b, so that the steps shall not project beyond the general line of fence. The protected portion being placed at the side most liable to injury

BRICK AS A BUILDING MATERIAL AND THE TRUE ART OF LAYING THEM.

By J. W. Crary, Sr.

BRICKLAYING is a peculiar art. The *trowel*, is one of the very oldest of mechanical tools, and is by all odds, the most difficult to handle with perfect expertness. Not one bricklayer in six can use a trowel with perfect skill. In order to be a first-class bricklayer, the use of the trowel must be commenced in boyhood. The boy must have a natural mechanical talent, and a particular liking for the trowel, so that to handle and play in mortar with a trowel, as a matter of diversion, as well as art, is a choice pleasure.

There is a peculiar dexterity in taking mortar up from the mortar-board, and then spreading it skillfully on the wall, so as to make a perfect, regular "bed" for the brick. To do this cleanly and nice, without wasting mortar, is a rare art. The mortar should be so spread that the brick, when down to the "*line*," will have a perfect, even bearing, without "*flushing*" much mortar out, back, or front. Mortar should not be spread for more than six to seven brick at a time, then the brick should be wet and laid with a peculiar *shake* and pressure of the left hand, so that they will come down very near the *line*, and only a tap of the trowel is needed to adjust them right to the line after they are laid. I need not say, that brick should be laid plumb and level, though some good front workmen will "*hack*" the joints a little above the first story front, that is, to incline the front of the brick a little over, so that presents more "*face*" when seen from it below. Some contend that a front brick should be laid a little out at the bottom where the wall is seen below the eye, and a little out at top, when viewed above the eye. The old technical name for these differences is "*liping*" and "*hacking*": the top of the brick is cut over, and the bottom under, which give the joint a lip-like appearance. The object is to prevent the show of defects in perpendicular lines, under different views of light and shade. It is a matter of no great importance; it is simply a small draft and principle in favor of beauty, for no scientific builder will say that a brick is laid wrong when its front is plumb, and its bed joint level. The objection to a "lip" joint is that it catches rain, dirt and dust. The smoother the front of a wall, the longer it will retain its freshness and beauty.

There are five other tools than the trowel, that belong to the brick layer, viz., the "Scutch," the "Hammer," the "Chisel," the "Plumb" and the "Level." These, with the trowel, constitute the bricklayer's "kit" of tools, and, although few and simple, the man that has mastered a perfect knowledge and use of them is a first class mechanic.

TO GET AND START A GOOD FOUNDATION FOR A WALL.

If it were not for the fact, that brick, when properly laid form the strongest wall known to builders, the careless, and generally ignorant attention given to foundations, would cause most all walls to crack vertically. Foundations are the main essential in building, and if the principle art is not well understood and strictly applied in all cases, the whole superstructure is impeffect and unreliable. I have seen large and costly buildings made comparatively worthless by negligence or ignorance in preparing the foundation. When walls crack or settle, it is necessary for the architect or engineer to invent an excuse, and the fault will often be laid on the brick, or bricklayer. I could name some prominent public buildings in different places of the country, where this was the case.

There are four general kinds of surfaces to build on, viz., sand or gravel, clay, stone and mud or alluvial soil, such as found in New Orleans. In building on sandy land, if it be level, the trenches for foundation should be deep enough to be below the frost, and all loose, unpacked earth or vegetable matter; then, before brick are laid, the foundation should be thoroughly rammed, so that all inequalities in the looseness of the sand will be equalized; then, the surface being leveled, the best hard brick should be laid and first course well settled. It should never be forgotten by the bricklayer that it is the first bottom course of brick that he must depend on for a good foundation, and that one good heavy stroke in setting the brick as he lays them in the first course, is of more importance than all the nice care he can take in his wall above the bottom course. If the surface of the ground is unlevel or a hillside then the trenches for foundations should be dug out the same depth from the inclined surface. This leaves *steps* or offsets at the bottom at proper intervals, according to the incline plane of the surface. It is not infrequently the case where buildings are put up on a hillside to see one part of the foundation started near the surface and other parts at considerable depth below. This shows a want of ability or honesty in the builder or architect. Still a great deal of this kind of botchery is done everywhere, by common builders.

What I have said of sandy foundations will apply to clay, and to rock, where the entire surface is rock, but if one part be rock and other parts be of other kinds of material, then, after proper excavation, a heavy body of concrete well rammed, or else piling, if in a wet place, is necessary in order to equalize resistance to pressure. It does not follow that the foundation anywhere shall be solid as the rocky part of it, but it must be known that the weakest part of the foundation will much more than resist any pressure that the superstructure or needed weight would amount to. Any skillful builder can make this test. It is simply to find what a given surface of the foundation will resist and how much would ever be put on it.

HOW TO BUILD A FOUNDATION OF ALLUVIAL SOIL OR MUD.

New Orleans is the principal place in the United States where buildings must be on soft alluvial soil, and as it is not generally known how foundations are laid there, and as I have had much personal experience in doing brick work there, I will give a short description of such work. A trench is made of suitable width and deep enough to find water, then plank is put down lengthwise, with foundation, then crosswise, making two courses of plank, the water will cover the plank. Brick work, with cement mortar, is then started on the plank and the work proceeds to completion. As the building progresses, and for two or three years after it is done, it settles until it comes to a bearing equal to the resistance of the mud and soil surrounding the plank foundation. The City Hall of New Orleans had settled, up to 1856, about sixteen inches. I saw that the use of plank as a foundation was a mistake, and instead I used concrete made of brick-bats, stone and coarse sand and cement, which was rammed down thoroughly, then starting the brick work with a broad base, at least three times the thickness of the wall proper, all settling of the walls was permanently prevented. The object in ramming a foundation is to adjust all inequalities. Some places will be soft, loose and spongy. All should be rammed until it ceases to settle.

In my preceding article on this subject I have treated mainly on the importance of good brick, good mortar, good foundations and good skill in building walls. I will now try to give some good hints about the best way to build brick walls strong, serviceable and economical.

There is seldom an account of a great fire, that does not show fatal accidents from the falling of brick walls, and the injury and displacement of such as do not fall, so as to leave them useless. In most cases, this is the result of faulty planning by the architect, and bad workmanship, though the bricklayer is not in fact responsible, as he is, at least, supposed to be, under the orders of the architect.

PARTY WALLS OR DIVISION WALLS THE MOST IMPORTANT.

If a wall dividing a pair of buildings, or dividing buildings in a row, or dividing two distinct properties be built on true principles, and with proper care and skill, in nine cases out of ten it will stand firm, and in good condition to be used as at first. In all cities the law requires that party walls shall be built a certain thickness, according to the height of the building the length of the wall or its fire-proof character, is not considered, and the consequence is, when a hot fire burns out—on one side of such wall, that side must expand and curve and crack, and if there be nothing to support it on the opposite side, the vertical curve will cause the wall to over-hang, so that it will lose its balance and fall.

Now if a party wall be built on a good foundation, and on true principles, the outside four inches of the wall on both sides, will be set off from the inside, three-quarters of an

inch, so as to leave an air space from bottom to top of the wall, which will act as a non-conductor of heat, and thus prevent to a great, and sufficient extent, the expansion of the wall, so as to seriously injure it. All party walls should be *braced* by *pilasters*, or projections, of at least four inches, not over fifteen feet apart. The face of the pilaster should be equal to the thickness of the wall, and then it should be solid and unbroken from bottom to top of the wall.

STRENGTH IS MAINTAINED AND TWENTY PER CENT. ECONOMY.

By pilasters in a party wall the thickness may safely be reduced. If we are required to build a party wall, say 18 inches thick, we can reduce it to 13 inches, by carrying up on each side a 4-inch pilaster, 12 inches on the face. These pilasters give the wall more lateral strength, than if it were 18 inches thick, and saves at least twenty per cent. of material.

If it be said that pilasters are in the way, I answer that the space gained between them more than compensates for the room they take, and, further, that they are both ornamental and useful in many ways.

BUILDING WOODEN STRIPS IN WALLS FATAL.

It has long been the habit of architects and builders to lay wooden strips in walls, so that "*furring*" for lath could be fastened. At best, "*furring*" and lathing a brick wall is a violation of true art in building, and is entirely unnecessary, as I will show, but, if it has to be done, the plan of cutting out mortar joints and *wedging* is best. A wooden strip laid in place of a joint of mortar is *botchery*. 1st. It is liable to decay and shrink, or swell and get loose, and, of course, weakens the lateral strength of the wall. 2d. If a fire burns out the building, the lath or strip in the joints of the wall, will burn out, and the wall is weakened so that it will easily sway and fall. This is one of the main causes of the falling of walls, during and after a fire.

HOLLOW WALLS ARE DRY AND NEED NO "FURRING."

Any brick wall can be built with an aperture of three-quarters of an inch between courses of brick, without impairing the strength of it. If a thirteen inch thich wall be built with the inside course of brick set three-quarters of an inch from the outer part of the wall, the "bond headers" will have all necessary bearing on the inside of the "front header." If only one brick, or, what is termed a nine-inch wall is to be built, the inside stretches can be set three-quarters of an inch from outside "stretchers," or, what is better, for dwelling houses, the inside course of brick can be set on edge, and three courses high will be equal to five courses on the "*flat*," which makes every sixth course a "header" or "bond course." This plan gives ample air space to prevent heat, cold, or dampness, coming in from the outside and the wall is just as strong as if it were solid. In building nine-inch walls for houses, the "jambs" of the doors and windows should be a brick and a half or 13 inches thich, and if doors and windows are placed so as to admit of it, the "jambs" should be started as "pilasters" and carried up from bottom to top of the walls; this gives great additional lateral strength to the walls, takes but a trifle more work, and material, and gives ornateness to the finish of the rooms. A three-story dwelling can be safely built in this way, with a saving of 16 per cent. of brick and mortar.

OBJECTIONS TO "FURRING" AND "LATHING."

First, the cost; *second*, liability to decay; *third*, it makes a harbor for rats, mice and bugs; *fourth*, it takes up room; *fifth*, it impairs the strength of the wall, for the reason that it is not plastered, which when done, on the brick, gives strength and permanency to the building.

CONSTRUCTION OF SMOKE FLUES.

One of the greatest evils in brick work, is the careless, imperfect building of smoke flues. There should be no sharp angles or turns in a smoke flue. It should be uniformly and smoothly "*pargeted*," and no offsets should be left where mortar can lodge and *choke* the flue, and all smoke flues should be at least six inches from any wood work.

Now that terra cotta is cheap and easy to get, it should be used for smoke flues, whenever and wherever practicable.

SETTING JOISTS AND SIMILAR BEARINGS ON A WALL.

It is a common error to "set and anchor" joists in a wall, so that when a building happens to burn, the hoists fall, and pull a part or all of the walls down. Joists should be so set and fastened to the wall that if they burn out and fall, no damage is done to the brick work. There are so many simple ways of doing this that will suggest themselves to the builder. In fact, there is very little added to the strength of brick work, by fastening wood work to it. If brick work be well done, on true principles, it needs no bracing up with anything, and nothing should be fastened to a brick wall that would endanger it in case of fire, or overloading the floors.

I have finished this series of articles, and trust that I have given some hints and facts that will benefit those interested. My sole object in writing these articles, was to help and encourage economical, good brick building. I do not claim to know all that can be known about brick, though I have been *in brick* over sixty years, the field for thought widens, and I am yet a student. A perfect brickmaker would be a sight indeed.—*Clay Worker.*

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

BUSINESS BLOCK.

The business block illustrated is in course of erection on Sansome near Pine street, in this city. Messrs. Smith & Freeman, architects.

RESIDENCE AT ROSS STATION.

The design for the residence at Ross Station and in course of erection, is by Mr. M. G. Bugbee, Architect.

RESIDENCE AT BAKERSFIELD.

The residence with plans was designed for Mr. H. C. Pacts to be built at Bakersfield, California. The building is of brick with the exception of the verandas and cornices which are of wood. The location has been carefully considered in the arrangement of the plan and method of construction. Bakersfield being within the warm section of the southern part of the state, the brick walls are built hollow so as to allow a free passage of air. The projecting cornices, and wide verandas with thorough ventilation contribute to the comfort of the inmates. The general arrangement is shown on the plans. B. McDougall & Son are the architects.

THE DINNER.

The "Dinner" is designed to be executed in stained glass, and speaks fully its own story—We are indebted to the London *Building News* for this illustration.

Electricity Simplified.

By T. O'CONOR SLOANE, E. M., Ph. D. Published by NORMAN W. HENLEY & Co., New York, and for sale by OSBORN & ALEXANDER, 401 Market St., San Francisco. Price $1.00. In another column we reprint the first chapter. The work is very practical, and is so fully illustrated that any person wishing to become informed on the subject should obtain a copy of the book.

The Clay Worker

Is a monthly journal devoted to BRICK, TILE, and TERRA-COTTA interests. T. A. RANDALL & Co., publishers, Indianapolis, Ind.

On another page will be found an article from the *Clay Worker* on "Brick as a Building Material," etc., by J. W. CRARY, SR. Mr. Crary is the author of a valuable work on Brick and Tile Making, called "Sixty Years of Brick Making and Burning," and published by the same publishers.

Theory and Practice in the Designing of Modern Framed Structures

The title of a new work on timber and metallic structures, written by PROF. J. B. JOHNSON, MR. C. W. BRYAN and F. E. TURNEAURE, is now in press, and will soon be issued by JOHN WILEY & SONS, Publishers, New York.

Practical Centring.

By OWEN B. MAGINNIS. Illustrated—Published by W. T. COMSTOCK, New York. This is a new work treating of the PRACTICE OF CENTRING ARCHES in building construction as carried on in the United States at the present time, also giving other useful information of value to the trade.

The work embraces each subject in detail and in language that practical men can understand, and is especially commended to students attending trade, technical and architectural schools.

The Architect's and Builder's Pocket Book.

By FRANK EUGENE KIDDER, C.E. Pp. 900. 500 illustrations. New York, 1892, published by JOHN WILEY & SONS. Full leather, gilt Price $4.

The original aim of the author was to produce a reference pocket book which should be to the architect and builder what Trautwine is to the engineer or Haswell to the mechanic. The author has succeeded admirably, and it would be a difficult matter to find as much useful information in the same compass. The work has been rearranged and many of the chapters rewritten and one hundred pages of new matter has been added. The work treats of mensuration, geometry, trigonometry, the strength and stability of foundations, walls, buttresses, arches, beams, floors, roofs, etc... The present or ninth edition will doubtless be well received by the profession, owing to the great development of the use of steel and concrete in building construction. Great attention is given to the strength of steel and the methods of using it. A glossary of technical terms, ancient and modern, adds greatly to the usefulness of the work. The arrangement of the book is admirable and the great number of illustrations serve to make the book an indispensable companion for the architect. The book is to be had from MESSRS. OSBORN & ALEXANDER, 401 Market St., San Francisco.

Lippincott's

For February, comes with its usual variety of finished stories. The principal one is *Roy the Royalist*, by William Westall.

COMMERCIAL LAW.

I—The Law and the People.

Blackstone, in his commentaries on law, which comprise to-day, as they did a century ago, the basic principles of all law, says that every man should be versed to a greater or less degree in the law of the land in which he lives. The reason for this is obvious. No man can transact business without constantly engaging himself in operations which are governed and controlled by law. It is neither necessary nor expedient that every man, or any man, should be "his own lawyer," for there is a great deal of truth in the old "saw" that he who acts as his own lawyer is very apt to have a fool for a client. It is not a wise man who acts as his own physician when illness overtakes him, but it is an extremely foolish man who does not possess himself of sufficient information regarding physiology and hygine to protect himself from such ailments and diseases as may be prevented and avoided by a proper degree of care. When prevention has failed and disease comes, a wise man relies upon the physician.

And so it is with the law. A wise man who is constantly engaged in the buying and selling of goods should have a fund of general information concerning those principles which underlie all contracts of purchase and sale. A man who is to a considerable extent engaged in the giving and taking of notes, should understand at least the fundamental principles of the law of bills and notes. The employer of labor should know what his rights and responsibilities are. And so through the various relations of life, there are fundamental legal principles applicable alike to all of their class, which should be known of all men who are interested in them. His knowledge of these things should be for his own protection. When litigation does come, the lawyer should always be called in.

That this is becoming more and more recognized is evidenced by the fact that the technical press, which is always alert to the needs of its constituents, has within the past year or two, to a very considerable extent, incorporated among its departments the reports of legal decisions of interest to its readers. This had been followed from time to time, by the publication of articles elaborating special points of interest, until the business man, if he be a subscriber of a progressive paper of his trade or profession, has an opportunity of gathering together a fund of practical information concerning the law of his business.

It is probable that a more general understanding of the history of law itself, and the methods by which it is arrived at and applied, would not only render this information of more value but would enable a much more intelligent use of it by a law reader. It is therefore proposed in a series of two or three articles to give a brief *resume* of the growth of law and the methods employed by the courts in applying it.

There is probably no nation in which the mass of the people are as interested in law and its administration as are the people of the United States. This is due, in a measure, to the fact that we are closer to the government than any other people—for here the people are the government. The people also participate to a larger degree than in any other country in the administration of the law—from the mass of the people is drawn the jury whose determination of the facts, if properly made, is final and subject to no appeal. The courts are opened with more freedom to spectators and every facility is offered for familiarity of the people with the law and its administration. Why then should not the people possess themselves of a wider information of the law which governs them, which controls their acts and their commercial transactions, which they are expected to follow and obey; which they judicially determine to have contracted with reference to, whether they are informed upon it or not, and which they are called upon from time to time to aid in administering. The purpose of this article and similar matter which is published from time to time is not to inform its readers upon those technical lines along which the lawyer must work, but rather to place within reach of the people information upon those branches of the law which they and not lawyers have to deal.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at 408 California street.

GEO. H. SANDERS, Pres. — OLIVER EVERETT, Vice-Pres.
H. T. BESTOR, Sec. — JOHN M. CURTIS, Tres.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. — L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. — GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

GEO. P. LOW, Pres. — C. O. POOLE, Vice-Pres.
W. I. CROSETT, Sec. — O. BROOKS, Treas.

MASTERS PAINTERS' ASSOCIATION OF THE PACIFIC COAST.

E. M. GALLAGHER, Pres. — H. G. JARMAN, Sec.

THE annual meeting of the California Electrical Society was held at the rooms of the society, at the Academy of Sciences Building, 819 Market St., for the purpose of electing the officers for the year 1892.

The following officers were elected:—

President, Geo. P. Low; Vice-President, C. O. Poole; Secretary, W. I. Crossett; Treasurer, Orion Brooks. Executive Committee—E. A. Roe, C. T. Ryland, Jr., and R. B. Elder.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

CONTRACT AGAINST LIENS.—A building contract in Pennsylvania provided that the owner should not "in any manner" be answerable for any of the materials used in finishing and completing the building, and that there should not be any lawful claims against the contractor in any manner, from any source whatever, for work or materials furnished on said building. The contract provided against the filing of mechanics' liens, and was binding on subcontractors.

Dersheimer v. Maloney, Supreme Court of Pennsylvania, 22 At. Rep. 813, (64C).

MECHANIC'S LIEN ON PARTNERSHIP PROPERTY.—A partnership composed of three persons, erected a building upon a lot owned by two of the partners. The partners, holding the legal title of the lot, contracted in the name of the firm for material used in the construction of the building. In an action by the material-man to foreclose his lien, it was held that the lien attached to the lot and building thereon. A mechanic's lien under the Nebraska law, is not lost or waived by the taking of the note of the debtor for the balance due on their account, not in such case by giving to the latter a receipt as in full for the demand. The acceptance by a material-man of a note and chattel mortgage as collateral security for materials previously furnished for the erection of a building under a contract with the owner is not a waiver of the lien, unless such was the intention of the parties.

Hooglund v. Lusk, Supreme Court of Nebraska, 50 N. W. Rep. 162, (147).

BREACH OF PARTY-WALL CONTRACT.—The owner of a lot erected a building, under a verbal agreement with the owner of a lot adjoining that the wall on that side should be built partly upon both lots, and that when he should use it he should pay his proportionate share of the cost. Afterwards he sold to one who knew that the wall was partly over on his lot, but who refused to assume the obligation of the contract. Having made compliance with the contract impossible, the seller was liable for the damage thereby sustained by the other owner.

Nalle v. Pagi, Supreme Court of Texas, 17 S. W. Rep. 371, (94C).

ACCEPTANCE OF CONTRACTOR'S ORDER BY OWNER.—Where the owner of a building has accepted an order drawn by the contractor on him in favor of one to whom the contractor was indebted, he cannot thereafter refuse to pay it upon the ground that a defect has developed in the roof for which the contractor is liable, unless he can show that the unpaid balance remaining in the hands is not sufficient to repair the defect, as the payee of the order is, at all events, entitled to the remaining balance after the repair is made.

Layton v. Davidson, Supreme Court of Pennsylvania, 22 At. Rep. 909, (82C).

RULE OF ASSUMPTION BY RISK BY EMPLOYE.—The rule of law with reference to the assumption by an employe of the risks incident to his occupation is, that he assumes such risks arising out of an unsafe place in which to work, or unsafe appliances with which to perform his labor, as are manifest to the senses, or may be ascertained by the prudent use of them.

Quick v. Minnesota Iron Co., Supreme Court of Minnesota, 50 N. W. Rep. 244, (55C).

LEGAL STATUS OF PARTY WALL CONTRACT.—An agreement between adjoining owners in relation to a party-wall erected on the division lines of their lots is binding on the parties, and those who purchase subject to such agreement, and creates an equitable charge upon the lots.

Stehr v. Roben, Supreme Court of Nebraska, 50 N. W. Rep. 327, (48C).

INFRINGEMENT OF PATENT BY CONTRACTOR.—Where one has contracted to erect a building, lets a portion of the work to a subcontractor, and in the prosecution of their respective parts each infringes patent-rights of another, both are liable as joint infringers. Letters patent No. 263,412, granted August 29, 1882, to Peter H. Jackson, for "improvements in the method of illuminating basements;" No. 269,863, granted January 2, 1883, to the same, for "iron and illuminating stairs;" No. 302,338, granted July 22, 1884, to the same, for "improvements in the construction of buildings."

Jackson v. Nagle, United States Circuit Court, California, 47 Fed. Rep. 703, (87C).

Some men are always trying to begin at the top, unmindful of the fact that it is all folly to shingle the house till after the cellar is dug and the foundation laid.—*Ex.*

BUSINESS MOSAICS.

Line Drawings made in pen and ink suitable for reproduction by any of the processes in use, can be ordered through this Journal. Architects and Engineers are oftentimes too busy or too isolated to obtain the time or talent for the ornamental drawings. These drawings can be made from the plain drawings, and we will cheerfully furnish information regarding such work.

The Folding Iron Gate is far superior to the old style of iron gate. When closed they are similar in appearance, but when open they occupy about one-eighth of the space that the ordinary iron gates do. The gate is riveted together in such a way that when opened the main perpendicular bars close side by side, while the joinings or bands between the bars fold up.

Architects, builders or owners about to erect new buildings, when anything in the shape of a Guard for windows, doors, etc., is required, would be wise to call on the company at 129 New Montgomery street, and inspect models.

Public Buildings are not complete unless some system of heating is provided for. Geo. H. Tay & Co., 614 to 618 Battery street, San Francisco, furnish a heating apparatus which has always given perfect satisfaction to the parties who purchased them. He guarantees perfect heating, as well as unequaled economy of fuel.

The Hill Sliding Blind is one of those articles which every architect and owner should inspect. It has many advantages over the folding blind. It is entirely inside of the window casing, thus avoiding the tearing of curtains, etc. The sunlight can be excluded from any part of the window, and at the same time all the light necessary can be admitted into the room. If desired they can be easily removed from the window and put back without any trouble. Mr. Edw. B. Hindes & Co., will be pleased to have you call and examine the blinds at the office, 411 Mission cor. Fremont St., San Francisco.

Persons requiring a fire-proof and smoke-proof lath will find that the "Telescope Sheet Iron Lath" will give perfect satisfaction. It is for sale by M. J. Donovan. See advertisement on page xvii.

A Complete porcelain kitchen sink, which for practical convenience and artistic design is shown on page viii. It is at once apparent that apparatus of this class is from the J. L. Mott Iron Works.

Patent Chimneys are a necessity where buildings are of wood frame-work, and more especially when built on yielding ground. In former years some of these chimneys have been found wanting in important particulars, and one of the chimneys that has withstood the test of time and use is that of Wm. E. Stevens, cor. Larkin and Market streets.

The Ives Co. patented hardware specialties are well known to be of a practical kind, and artistic. The Ives Sash Locks and Door Bolts give great security and are made to last.

P. H. Jackson & Co., 228 and 230 First street, have lately made some improvements in vault lights and artificial stone frames, sidewalks, etc.

For Architects' materials such as instruments, papers, etc., call upon or write to the old and well known firm of Edward Denny & Co., 418 Montgomery street.

The Byrkit-Hall Sheathing Lath is formed of narrow boards one inch thick, and from three to five inches wide, tongued and grooved together. Each board has on its face side dovetailed grooves to firmly hold and key the plastering. To prevent warping or other displacement, the back of the board is cut out behind each projection. The sheathing lath is put on the walls and portions to be plastered, and securely nailed to the studding or frame work, the plastering is spread over the surface the same as for other lath. This lath presents some especial advantages, the wall being made stronger than by common laths, and where great stiffness is desired the laths may be put on diagonally. Where nails are likely to be driven into the walls, or for a backing for blackboards the advantage of this form of lath is at once apparent.

To obtain the anticipated satisfaction by the use of gas stoves for heating and cooking, the persons having them in charge should make themselves familiar with the exactness in the regulation of the quantity of fuel and heat, together with their wide range and effectiveness when used intelligently, which will at once place them at the head of the list of articles that cannot be dispensed with.

No climate however balmy, no skies however bright, no circumstances however adventitious, can avail for man's benefit, unless he himself be sufficiently vigorous and intelligent to take advantage of them for his own purposes. This necessary vigor and intelligence can be gained only through continued effort and energetic action.—*Ex.*

When you are in need of a good house-smith call on A. J. Dunbar & Co., 220 Fremont St., San Francisco, and he will attend to your work promptly. He makes a specialty of fire-escapes and artistic iron-work.

The building season is approaching and people will be on the look-out for the best and most economical mantels to be had. They should call on the well known firm of W. W. Montague & Co., and inspect their goods.

They carry in stock all classes of mantels from the plain and substantial to the more artistic ones. They also have on hand ranges of all descriptions; plain, ornamental and art tiles; heating apparatus for warming dwellings, churches, halls, etc., and numerous other articles of use in that line.

Schenck's fire hose reel should be examined by architects and others interested in building, its efficiency being beyond question. Every building of any importance should be so planned and constructed with reference to placing the apparatus in the proper place for simple and practical use.

Weatherly, Jardine & Co., 132 Market street, are the agents for a number of building specialties. A BLOUNT door check and spring, for which this firm is agent, placed on our office door some two years ago is still in perfect order, and from present appearances is likely to remain so for some time to come.

TENDERS TO BE RECEIVED.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 8th day of March, 1892, and opened immediately thereafter, for all the labor and materials required for the Interior Finish of the U. S. Court House and Post Office Building at Birmingham, Ala., including furring, lathing, plastering, iron stairs, marble work, joinery work, tower clock, etc., in accordance with the drawings and specification, copies of which may be had on application at this office, or the office of the Superintendent at Birmingham, Ala.

Each bid must be accompanied by a certified check for a sum not less than two per cent of the amount of the proposal.

The right is reserved to reject any or all bids and to waive any defect or informality in any bid. All proposals received after the time stated, will be returned to the bidder.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Interior Finish of the U. S. Court House and Post Office at Birmingham, Ala.," and addressed to,

W. J. EDBROOKE,
Supervising Architect.

February 5, 1892.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M. on the 9th day of March, 1892, and opened immediately thereafter, for furnishing and erecting complete the hydraulic passenger elevator, including pump, tanks, piping, car, etc., required for the U. S. Post Office, Court House, etc., at Wichita, Kansas, in accordance with drawings and specification, copies of which may be had on application at this office, or the office of the Custodian at Wichita, Kansas.

Each proposal must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the proposal.

The right is reserved to reject any or all bids and to waive any defect or informality in any bid. All proposals received after the time stated, will be returned to the bidder.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for a Hydraulic Passenger Elevator for the U. S. Post Office, Court House, etc., Building at Wichita, Kansas," and addressed to,

W. J. EDBROOKE,
Supervising Architect.

February 8, 1892.

CITY BUILDING NEWS.

Alabama near 25th. To build; owner, Mary Sullivan; architect, W. C. Dickerson; contractors, McLeod & McLean; cost, $3,057; signed, Feb. 2; filed, Feb. 3; payments, $750, frame up; $750, brown coated; $750, completed; $807, 35 days.

Block 28, Sunnyside. To build; owners, Installment Home Association; contractors, Home Building Co.; cost, $1,563; signed, Jan. 6; filed Jan. 9; payments, $400, frame up; $400, brown coat of motar on; $362, completed; $400, 35 days.

Block 44, Sunnyside. Brickwork of a smoke-stack; owners, S. S. Construction Co.; architect, Fred Wiler; contractor, D. J. Brennan; cost, $3,140; signed, Dec. 30; filed, Dec. 31; payments, 75 per cent. as work progresses; balance, 35 days.

Broadway near Taylor. To build; owner, Frank Nash; contractors, Doss & Morgan; cost, $1,750; signed, Jan. 22; filed, Jan. 23; payments, $500, frame up; $625, brown coated; $625, 30 days.

Butte and Mississippi. To build; owner, Thos. H. Roberts; contractor, R. O. Davis; cost, $2,709; signed, Jan. 28; filed, Jan. 29; payments, $900, frame up; $900, ready for brown mortar; $900, brown coated; $525, completed; $675, 35 days.

California near Sansome. Steel and iron work; owners, Mutual Life Ins. Co.; architect, Clinton Day; contractors, J. K. Firth & Co.; cost, $55,835; signed, Jan. 14; filed, Jan. 14; payments, $5,280, 1st floor beams, sidewalk beams and basement columns set; $5,040, 1st and 2d story tiers of beams and columns set; $4,128, 2d and 3rd story tiers of beams and columns set; $4,128, 3rd and 4th story tier of beams are set; $4,128, 4th story column and 5th story tier set; $4,128, 5th story columns and 6th tiers; $4,128, 6th story column and 7th tier; $4,704, 7th column and 8th tier; $6,212.25, completed; $15,958.75, 35 days.

Castro and 24th. Additions; owner Fannie S. Downing; contractor, A. Klahn; cost, $1,210; signed, Jan. 9; filed, Jan. 11; payments, full amount 35 days after completion.

Clara Ave. near 18th. Carpenter and mill work; owner, Fred Wagner; contractor, Geo. Reichley; cost, $2,050; signed, Jan. 2; filed, Jan. 6; payments, $500, frame up; $825, brown coat and porches up; $825, completed; $500, 35 days.

Clementina near 6th. To build; owner, A. Rothschild; architect, A. J. Barnett; contractor, W. H. Mead; bond, $2,000; cost, $6,800; signed, Jan. 5; filed, Jan. 15; payments, $1,275, frame up; $1,275, brown coated; $1,275, white coated; $1,275, completed; $1,700, 35 days.

Dupont near Lombard. To build; owner, Chas. Sahrbacher; contractor, A. Christensen; cost, $4,000; signed, Jan. 26; filed, Jan. 26; payments, $1,000, frame up; $1,000, brown coated; $1,000, completed; $1,000, 35 days.

Folsom near 15th. To build; owner, Henry R. Baldwin; contractor, James McConahey; cost, $2,000; signed, Feb. 1; filed, Feb. 1; payments, $500, framed; $500, brown mortar on; $500, completed; $500, 35 days.

Franklin near O'Farrell. To build; owner, S. Foorman; architect, M. J. Lyon; contractor, A. Jackson; bond, $3,000; cost, $12,850; signed, Jan. 20; filed, Jan. 25; payments, $2,000, frames up; $2,000, rough plumbing and sewers in; $3,000, white coated and window frames set; $2,677.50, completed; $3,212.50, 35 days.

Front and Union. Brickwork and plastering; owner, Henry Cowell; architects, Mooser & Cuthbertson; contractor, Ed. Fladung; bond, $1,700; cost, $6,400; signed, Nov. 16; filed, Jan. 9; payments, 75 per cent. as work progresses; balance, 35 days.

Geary and Leavenworth. Carpenter work, mill, etc., owner, J. A. Michalitschke; architects, John & Balczynski; contractor, S. H. Kent; cost, $30,904; signed, Jan. 22; filed, Jan. 23; payments, $3,000, third tier of joists are laid; $3,000, frame up; $5,000, ready for inside plaster; $6,000, white coated; $6,178, completed; $7,726, 35 days.

Geary and Leavenworth. Iron work; owners, J. and A. Michalitschke; architects, John & Balczynski; contractors, Bigelow & Little; cost, $8,094; signed, Jan. 22; filed, Jan. 23; payments, 75 per cent. as work progresses; balance 35 days.

Geary and Leavenworth. Lathing and plastering; owners, J. & A. Michalitschke; architects, John & Balczynski; contractor, A. O'Brien; cost, $5,674; signed, Jan. 22; filed, Jan. 23; payments, $1,700, brown coated; $2,000, white; $555.50, accepted, $1,418.50, 35 days.

Geary and Leavenworth. Painting and polishing; owners, J. & A. Michalitschke; architects, John & Balczynski; contractor, Fred Schaefer; cost, $1,970; signed, Jan. 22; filed, Jan. 23; payments, $400, first coat on outside and inside; $400, ready for graining; $677.50, completed; $492.50, 35 days.

Geary and Leavenworth. Plumbing; owners, J. & A. Michalitschke; architects, John & Balczynski; contractors, Duffey Bros.; cost, $6,250; signed, Feb. 2; filed, Feb. 4; payments, $2,250, rough plumbing done; $2,437.50, completed; $1,562.50, 35 days.

Geary and Polk. Concrete work; owner, Cora A. Wallace; architects, R. H. & R. White; contractors, Gray Bros., A. S. P. Co.; cost, $1,000; signed, Jan. 25; filed, Feb. 1; payments, $750, completed; $250, 35 days.

Gold near Sansome; To build; owner, L. H. Butcher; architect, T. J. Welsh; contractor, J. J. Dunn; bond, $1,700; cost, $6,906; signed, Jan. 6; filed, Jan. 7; payments, 1st and 15th day of each month 75 per cent. of value of work done; balance 35 days.

Green near Powell. Grading, brick and carpenter work; owner, Jos. Calegaris; architect, T. J. Welsh; contractor, J. W. Smith; bond, $1,487; cost, $3,945; signed, Jan. 29; filed Jan. 30; payments, $1,114.50; frame up; $1,114.50, brown coated; $1,114.50, white coated; $1,114.50, completed; $1,487. 35 days.

Grove and Baker. Mill work; owner, W. W. Ackerson; architects, Martens & Coffey; contractor, A. Kendall; cost, $3,050; signed, Jan. 15; filed, Jan. 21; payments, $570, contractors 2d payment is due; $570, when 3rd is due; $570, when 4th; $577, when 5th; $763, when 6th is due.

Grove and Baker. Painting; owners, Julius Arguello and wife; architects, Martens & Coffey; contractor, L. J. Dwyer; cost, $985; signed, Jan. 14; filed, Jan. 21; payments, $300, outside 2d coated and inside ready to grain; $324, completed; $345, 35 days.

Grove and Baker. Plumbing, gasfitting, sewers; owner, Julius Arguello; architects, Martens & Coffey; contractors, W. S. Snook & Son; bond, guaranteed; cost, $1,300; signed, Jan. 11; filed, Jan. 13; payments, $400, rough gas and water pipes are in, also sewers; $575, completed and accepted; $825, 35 days.

Harrison bet. 23d and 24th. To build; owner, E. H. Hardy; architect, Oliver Everett; contractor, R. B. Hicks; cost, $2,600; signed, Jan. 28; filed, Feb. 3; payments, $700, frame up and rustic on; $750, ready for plaster; $850, completed; $500, 35 days.

Hayes near Steiner. To build; owner, Mrs. A. C. Joice; architect, A. C. Lutgens; contractor, John Sath; bond, $2,000; cost, $3,838; signed, Feb. 3; filed, Feb. 4; payments, $700, frame up and roof shingled; $700, 1st coat of plaster on; $700, 2d coat of plaster on; $778.50, completed; $959.50, 35 days.

Locust near Washington. To build; owner, L. S. Boruck; contractor, W. W. Redmall; bond, $700; cost, $3,100; signed, Jan. 2; filed, Jan. 5; payments, $3,100, on completion of building.

Market, Post and Montgomery. Interior finish and window sashes; owners, Crocker Estate Co.; architect, A. Page Brown; contractors, L. & E. Emmanuel; cost, $94,490; signed, Oct. 17; filed, Jan. 20; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

Market Street No. 928. Store fixtures and alterations; owners, Summerfield & Roman; architect, M. J. Lyon, contractor, J. S. W. Saunders; cost, $2,050; signed, Jan. 9; filed, Jan. 25; payments, 75 per cent. completed; $512.50, 35 days.

McAllister near Broderick. Plumbing and gasfitting; owners, Board of Education; architect, C. I. Havens; contractor, H. Williamson; cost, $1,784; signed, Jan. 12; filed, Jan. 16; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

McAllister near Broderick. To build; owners, Board of Education; architect, C. I. Havens; contractor, H. Jacks; cost, $19,650; signed, Jan. 13; filed, Jan. 16; payments, 75 per cent. on 1st day of each month as work progresses; balance 35 days.

McAllister and Jones. Painting and polishing; owners, Hibernia S. & L. Society; architects, Pissis & Moore; contractor, M. J. Donovan; cost, $2,675; signed, Jan. 7; filed, Jan. 19; payments, 1st and 15th day of each month 75 per cent. of work done; balance 35 days.

McAllister and Jones. Marble floor of Rotunda; owners, Hibernia S. & L. Society; architects, Pissis & Moore; contractors, Chatain & Giletti; cost, $1,950; signed, Jan. 8; filed, Jan. 19; payments, 1st and 15th day of each month 75 per cent. of work done; 25 per cent. 35 days.

Mission Pier; No. 2. To build; owners, Jno. Rosenfeld's Sons; architect, Harbor Engineer; contractors, S. F. Bridge Co.; cost, $8,500; signed, Jan. 16; filed, Jan. 25; payments, 75 per cent. as work progresses; $26 per 1000 ft. b. m. for such additions and alterations as may be ordered.

Morton and Kearny. Alterations and repairs; owners, Geo. and Julius Raphael; architects, C. R. and J. M. Wilson; contractors, Field & Lack; cost, $2,683; signed, Jan. 20; filed, Jan. 23; payments, $1,000, columns are placed in position in 3rd story; $1,000, 2d story floors down, 2d and 1st story ceiling lathed and plastered; $683, 35 days.

Morton and Kearny. Store fixtures; owners, Raphael Bros.; architects, C. R. & J. M. Wilson; contractors, Field & Lack; cost, $1,350; signed, Jan. 30; filed, Jan. 30; payments, $900, completed and accepted; $350, 35 days.

Natoma and 7th. To build; owner, M. B. Levy; architect, Jno. Gash; contractor; W. R. Dunning; cost, $2,185; signed, Jan. 28; filed, Jan. 30; payments, $200, tinned; $100, brown coated; $100, white coated; $200, doors and windows hung; $1,050, completed; $335, 35 days.

Page near Webster. Carpenter work; owner, Hannah Kerns; architect, J. H. Littlefield; contractor, Adam Miller; bond, guaranteed; cost, $7,963.; signed, Jan. 15; filed, Jan. 21; payments, 75 per cent. of work done on 1st, 10th and 20th of each month; balance 35 days.

Page near Webster. Excavating and brickwork; owner, Hannah Kern; architect, J. H. Littlefield; contractor, D. T. Pierce; bond, guaranteed; cost, $975; signed, Jan. 15; filed, Jan. 22; payments, 1st and 15th day of each month 75 per cent. of work done; balance 35 days.

Page near Webster. Painting; owner, Hannah Kern; architect, J. H. Littlefield; contractor, J. M. Sindlinger; bond, guaranteed; cost, $840; signed, Jan. 15; filed, Jan. 21; payments, 1st, 10th and 20th of each month 75 per cent. of work done; balance 35 days.

Page near Webster. Plumbing and gas-fitting; owner, Hannah Kern; architect, J. H. Littlefield; contractors, Samuel Ickelheimer & Bro.; bond, guaranteed; cost, $1,040; signed, Jan. 15; filed, Jan. 21; payments, 1st and 15th day of each month 75 per cent. of work done; balance 35 days.

Pine near Sansome. Elevator; owner, Daniel Meyer; architects, Salfield & Kohlberg; contractors, Cahill & Hall; cost, $3,700; signed, Jan. 2; filed, Jan. 5; payments, $1,000, elevator set and well ready to receive cage; $1,700, completed; $1,000, 35 days.

Pine near Sansome. Hot water heating; owner, Daniel Meyer; architects Salfield & Kohlberg; contractor, Wm. Cronan; cost, $3,900; signed, Jan. 16; filed, Jan. 22; payments, 50 per cent, as work progresses; balance after acceptance.

Post near Octavio. To build; owner, Eugene Moffat; architect, Julius E. Krafft; contractor, W. W. Ackerson; cost, $9,200; signed, Feb. 1; filed, Feb. 2; payments, $1,700, roof shingled and chimneys built; $2,300, brown coated; $3,000, completed; $2,300, 35 days.

Potrero Gas Works. To bore wells; owners, S. F. Gas Light Co. and Union Iron Works; architect, Engineer of Gas Co.; contractors, Smith & Cook; bond, guaranteed; cost, $7 per foot; signed, Dec. 23; filed, Jan. 4; payments, $350, as every 100 feet of well is completed; $1.75, per foot on completion; $1.75, per foot, 35 days.

Powell St. Theater. Repairs; owner, E. A. Denicke; architects, Wood & Lovell; contractor, W. W. Ackerson; cost, $6,800; signed, Jan. 20; filed, Jan. 20; payments, 1st and 15th day of each month 75 per cent of work done; balance 35 days.

Sacramento near Powell. To build; owner, E. A. Denicke; architects, Kenitzer & Kollofrath; contractor, J. F. Logan; bond, $14,000; cost, $43,397; signed, Jan. 18; filed, Jan. 19; payments, $5,000, rear frames are up; $5,000, front up; $5,000, buildings enclosed and window frames set; $5,000, brown coated; $5,000, plastering completed; $5,000, ready to paint; $2,397, completed; $11,000, 35 days.

Sacramento near Powell. Painting and graining; owner, E. A. Denicke; architects, Kenitzer & Kollofrath; contractor, J. S. Thomson; bond, guaranteed; cost, $1,880; signed, Jan. 20; filed, Jan. 22; payments, $1,100, buildings second coated outside; $1,000, ready for graining; $1,200, completed; $1,180, 35 days.

Sacramento near Powell. Plumbing and gas-fitting; owner, E. A. Denicke; architects, Kenitzer & Kollofrath; contractor, Wm. F. Wilson; bond guaranteed; cost, $5,350; signed, Jan. 20; filed, Jan. 22; payments, $1,000, gas, water and waste pipes in rear building; $1,000, gas, water and waste pipes in front; $2,500, completed; $1,450, 35 days.

San Jose Ave. and Sagamore. To build; owners, H. Vandre and wife; contractors, Buck Bros.; cost, $1063; signed, Jan. 12; filed, Jan. 22; payments, $300, building enclosed; $300, ready for plaster and outside finished; $241.50, accepted; $241.50, 35 days.

Scott near Pine. Alterations and additions; owner, Hettie Morse; architect, J. H. Littlefield; contractors, Fulton and Ogle; bond guaranteed; cost, $1,025; signed, Jan. 11; filed, Jan. 12; payments, 75 per cent. of work done on 1st, 10th and 20th of each month as work progresses; 25 per cent., 35 days.

Seventeenth near Douglass. To build; owner, C. Ruhland; contractor, C. Zwierlein cost, $5,580; signed, Jan. 27; filed, Jan. 27; payments, $1,046, frame up; $1,046, brown coated; $1,046, white coated; $1,047, completed; $1,395, 35 days.

Sunnyside Ave. near Baden street. To build; owner, John Kaiser; contractors; Peterson & Peterson; bond. $500; cost, $1,085, signed, Jan. 14; filed, Jan. 21; payments, $277, frame up; $276, brown mortar on; $266, completed; $266, 35 days.

Sutter near Hyde. Brick, cement, carpenter work, etc.; owner, Chas. A. Zinkand; architect, R. Zimmerman; contractor, F. W. Kern; bond, $2,572; cost, $10,200; signed, Jan. 18; filed, Jan. 18; payments, $1,925, frame up; $1,925, partitions set and building enclosed; $1,925, white coated; $1,940, accepted; $2,575, 35 days.

Sutter near Hyde. Plastering; owner, Chas. A. Zinkand; architect, R. Zimmerman; contractor, Arthur O'Brien; cost, $1,124; signed, Jan. 18; filed, Jan. 18; payments, $450, brown coated; $450, white coated; $224, 35 days.

Sutter near Hyde. Plumbing, etc.; owner, Chas. A. Zinkand; architect, R. Zimmerman; contractor, H. Williamson; cost, $1,094; signed, Jan. 18; filed, Jan. 18; payments, $350, rough work done; $500, completed; $244 accepted.

Sutter near Hyde. Alterations and additions; owner; H. Zacharias; architect, Chas. I. Havens; contractor, F. Klatt; cost, $7,500; signed, Jan. 30; filed, Jan. 30; payments, $1,000, frame up and building enclosed; $1,000, brown coated and principal part of outside finish on; $1,000, hard finished; $1,000, completed; $3,500, 30 days.

Sutter near Hyde. Plumbing and gas-fitting; owner, H. Zacharias; architect, Chas. I. Hivens; contractor, H. Williamson; cost, $1,100; signed, Jan. 30; filed, Jan. 30; payments, $400, rough gas, water pipes and sewers in; $425, completed; $275, 35 days.

Sutter near Taylor. Brickwork; owner, M. L. Smith; architects, C. R. & J. M. Wilson; contractors, Hock & Hock; cost, $4,000; signed, Jan. 2; filed, Jan. 5; payments, $2,000, when original contractor receives 1st payment from owner; $1,000, when he receives 2d payment; $1,000, 35 days

Sutter near Taylor. Mill work; owners, California Mills; architects, C. R. and J. M. Wilson; original contractor, Wm. Knowles; sub-contractor, California Mills, N. Parrish & Co.; cost, $5,000; signed, Jan. 25; filed, Jan. 25; payments, $1,250, brown coated; $1,250; inside finish on; $1,250, completed; $1,250, 35 days.

Taylor near Bush. Concrete walls, plumbing, etc.; owners, Board of Education; architect, C. I. Havens; contractor, F. A. Williams; cost, $1,315; signed, Jan. 12; filed, Jan. 16; payments, 1st day of each month 75 per cent. as work progresses; balance 35 days.

Turk near Larkin. Brick, plumbing, plastering, etc.; owner, Jno. G. Clark; architect, Jno. G. Clark; contractor, Jno. G. Adams; bond, guaranteed; cost, $3,400; signed, Jan. 25; filed, Jan. 30; payments, $850, frame up; $850, brown coated; $850, inside finish completed; $850, 35 days.

Twenty-fourth and Castro. To build; owner, Fannie S. Downing; contractor, A. Klahn; cost, $4,973; signed, Feb. 3; filed, Feb. 3; payments, $973, frame up; balance, $4,000, 35 days.

Twelfth near Howard. Brickwork and smoke-stack; owners, E. P. White & Co.; architect, J. E. Krafft; contractor, J. O'Sullivan; cost, $7,300; signed, Jan. 20; filed, Jan; 21; payments, 1st and 15th day of each month 75 per cent of work done; balance 35 days.

Union near Scott. Moving and alterating old buildings; owner, Henry Wadsworth; architects, Mooser & Cuthbertson; contractor, J. R. Whalen; bond, $550; cost, $2,200; signed, Jan. 19; filed, Jan. 26; payments, 75 per cent. as work progresses; balance 35 days.

Western Addition, block 548. Grading; owner, Mathias Meyer; contractor, C. A. Warren; cost, $15,500; signed, Jan. 7; filed, Jan. 8; payments, 75 per cent. of work done each month on said contract shall be payable on the 5th of the following month at 20 cents per cub. yd.

Willow Ave. near Buchanan; To build; owner, John Torre; contractor, S. T. Crawford; cost, $1,450; signed, Jan 22; filed, Jan. 22; payments, $500, house enclosed; $588, completed; $362, 35 days.

ALAMEDA COUNTY.

Adeline St. near 12th, Oakland. To build; owner, W. H. Morrison; contractors, A. W. Pattiani & Co.; cost, $3,300; signed, Dec. 7; filed, Jan. 12; payments, $1,275, window frames set and lathed, ready for plastering and exterior primed; $1,200, completed; $825, 35 day.

Bay St. near R. R. Ave. Alameda. To build; owner, A. Sinnett; architect, Howard Burns; contractors, Pierce & Ruch; cost, $2,858; signed, Jan. 16; filed, Jan. 18; payments, $714, frame up and completed; $714, plastering in all on; $714, completed; $716, 35 days.

Bella Vista Park, Oakland. To build; owner, J. H. Kirk; architect, Bert L. Smith; contractor, F. A. Brown; cost, $8,076; signed, Jan. 16; filed, Jan. 16; payments, $769, frame up and sheathing on; $769, plumbing done and first coat plaster on; $769, completed; $769, 35 days.

Block B, Eureka Hd., Berkeley. To build; owner, Mrs. E. Stevens; contractors, Esty & Jewett; cost, $2,333; signed, Jan. 9; filed, Jan. 12; payments, $366.62½, ⅓ of entire amount when first house is enclosed; $366.62½, ⅓ of amount when brown mortar is on 1st house; $366.62½, ⅓ when first house is completed; $366.62½, ⅓, 35 days after completion of first house; $366.62½, ⅓ when 2d house is enclosed; $366.62½, ⅓ when brown mortar is on; $366.62½, ⅓ when completed; $366.62½, 35 days.

Block 536, Oakland. To build; owner, Chas. Helmke; architect, Chas. Mau; contractors, Leiter & Prugh; cost, $2,767; signed, Feb. 2; filed, Feb. 4; payments, $520, ½ materials furnished and ¼ completed; $520, ½ furnished, ⅓ completed; $520, ¾ furnished, ¾ completed; $515.25, completed; $691.75, 35 days.

Broadway bet. 17th and Durant, Oakland. Excavations, brick, granite and iron work; owner, Mrs. Catherine Collins; architect, Chas. Mau; contractors, Remillard Brick Co.; cost, $2,300; signed, Jan. 18; filed, Jan. 28; payments, $800, ½ materials furnished and one-half work completed; $825, completed; $575, 35 days.

Broadway bet. 17th and Durant, To build; owner, Mrs. Catherine Collins; architect, Chas. Mau; contractor, H. E. Jones; cost, $4,800; signed, Jan. 28; filed, Jan. 28; payments, $1,215, one-third materials furnished and one-third work completed; $1,215, two-thirds furnished and two-thirds completed; $1,215, completed; $1,215, 35 days.

Broadway and 14th Sts. Oakland. Carpenter work, etc.; owner, J. Macdonough; architects, Mooser & Cuthbertson; contractors, Smilie Bros.; cost, $68,900; signed, Jan. 13; filed, Jan. 15; payments, payments to be made on 1st of each month and at rate of 75 per cent. of value of the work done, 25 per cent., 35 days after completion and acceptance of said work.

Dana Street near Bancroft Way, Berkeley; Stone, brick and frame building; owners, Stiles Hall Association; architect, Clinton Day; contractor, Rob't McKillican; cost, $21,842; signed, Jan. 25; filed, Jan. 28; payments, $1,500, first floor beams set on wall plates, etc.; $4,000, walls finished to line of second floor and beams set; $4393, slate roofing completed, brown coat mortar on etc.; $4,489, completed; $5,460, 35 days.

THE situation at the beginning of the year was one of encouragement, while at the present time, with the grateful warmth of spring, confidence seems to expand with the growth of the vine and leaf; even the thermometer shows a growing tendency. Almost everywhere the polished armor of the plows is evidence of their activity. A greater area has been turned and seeded than ever before, which, aided by the warm rains, present indications that this will be the greatest productive year known on this Coast. The products are becoming more diversified, the marketing has assumed a more business aspect, and the manufacturing and storing of wine has become systemitized. The freight rates are being looked after by the mercantile community, and it is to be hoped that some fair agreement between the parties concerned, will be arrived at, thereby increasing the trade of this Coast.

With good crops comes a general prosperity and real comfort which is a powerful incentive to work. From our exchanges we learn that the country is going forward and developing its resources in all lines of industries. Improvements of various kinds are being undertaken and prosecuted in an energetic manner wrought of courage and confidence.

There is now much life in the manufacturing enterprises, and vigorous efforts are being made to push their wares into notice.

THIS season bids fair to be an era in church building. More church edifices have been planned to be built this year than for any previous year; not alone in San Francisco, but in nearly all the cities and towns of the interior. In no other way can the citizens of a village make so favorable and lasting an impression on the visitor who may be seeking for a location in which to settle, as that produced by a neat, commodious house of worship.

According to appearances, it will be only a few years hence when our section of the country will be noted for its beautiful churches, and the steady respectability of its inhabitants.

THE ART OF PLANNING.

An Address to the Students, Delivered by MR. J. MACVICAR ANDERSON, President of the Royal Institute of British Architects, and published in the Journal of the Proceedings of the R. I. B. A. The question is treated fully and yet so concisely that we are unable to make any reduction, therefore, we re-print the entire article.

IF it be true that one of the chief difficulties that attend the study of architecture is to be found in the number and variety of subjects with which it is essential to be more or less familiar, it is no less true that the comprehensive nature of the pursuit constitutes one of its greatest attractions, for it opens up a field of inquiry over which the mind may roam with ever-increasing vigor and interest. Absorption in one particular subject of study may produce lassitude, but no amount of devotion to a study so varied as that of architecture should ever conduce to such a result, for mental refreshment is to be found—not in cessation—but in variety of thought; and the student of architecture need never experience difficulty in finding mental repose by turning from one to another of the many fields of research that lie before him. For example, in History he will find the phases depicted through which the art has passed in by-gone ages; in Literature he will become familiar with the opinions of great masters which imparted individuality to the art of different epochs; in Nature he will gather from the development of the mineral and vegetable creations, the properties of the materials in which his designs will have to find expression; in Science he will learn what is the strength and formation of such materials, and how to adapt them to his requirements without doing violence to their material characteristics; in Observation of the executed works of others, whether ancient or modern, he will, from sketching and measurement, discern how successful results have been attained, or artistic effects produced. In Design he will apply the varied knowledge he has thus acquired from History, Literature, Nature, Science, and Observation; and, by the artistic and scientific treatment of the materials at his command, he will impress his ideas and personality on the architecture of his day.

For the successful pursuit of a study so varied and so fascinating many qualifications are desirable, but three are essential: Natural Aptitude, Application, Imagination. Without the first, the student will do well to abandon the career, even though he may have spent time in discovering his want of affinity with it. Many illustrations from real life might be quoted of men who had devoted years to the preliminary study of a profession only to find that they had no aptitude for it, and have with good sense left it for a more congenial career, in which they have earned reputation and renown. If the heart, as well as the intellect, be not engaged in the work of life, you may possibly, in favoring circumstances, attain to respectable mediocrity, but you will never achieve real success. Be sure, therefore, at the outset, that you possess that earnestness of purpose and heart-love for your work which spring from natural affinity and cannot exist without it. It is needless to insist on the importance of Application. Original genius or natural endowments cannot be acquired or imparted, but it is marvellous to what an extent Application compensates for the lack of such gifts. Was it genius that led George Stephenson to perfect the invention of the locomotive steam-engine—probably the greatest promoter of civilization that the world has ever seen—or was it simply indefatigable application? Read his life, if you have not done so, full of lessons for all, and judge for yourselves. Or again, look at a life but recently terminated: admittedly unendowed with genius, but possessed of good sense, honesty of purpose, and earnest application, how startling the success, how remarkable the position, which was achieved by the late First Lord of the Treasury. If you have application, you possess one of the most powerful levers with which to remove and triumph over difficulties. But it is obvious that Natural Aptitude and Application, invaluable as they are, are not sufficient to qualify you for the career on which you are entering. Far away the most important work of your lives as architects will be that of Design, and if you are devoid of the mental endowment of Imagination—by means of which alone can there be Design—you will be like a ship without compass or rudder, your lives will be aimless, and you will miss the prize of your calling. Possessed of all knowledge your works, without imagination, will be but imitations and reproductions, not designs. Equipped with learning, but devoid of creative power, you would not be artists; and, therefore, could not be architects.

I have glanced at the varied nature of your engagements as students of architecture; it would be manifestly impossible within the brief compass of this Address to discourse on all, or even a few, of these with any prospect of a beneficial result. I propose, therefore, to confine my remarks to one branch of them only, and to ask your attention to a few suggestions respecting it. The subject which I have selected is what I do not hesitate to refer to as "The Art of Planning." No doubt there are those who will regard such a designation as a contradiction in terms, for it is to be feared that there are not a few who consider planning as, at the best, a very prosaic part of an architect's work—to whose poetic fancies the idea of elevating it to the dignity of an art may appear to be a sort of architectural blasphemy. There are others who, without going so far as this, do not hesitate to relegate planning to an inferior and subordinate place, not worthy of the exercise of the higher and artistic faculties of the designer—a constructive skeleton, as it were, admirable it may be in its mechanism, but which the architect must clothe with grace before it can be admitted to the sacred courts of art. Now I do not hesitate to declare that such views of planning are thoroughly fallacious, and injurious to the best interests of architecture, because derogating to a commonplace utilitarianism what is really an integral and inseparable part of the art, the root from which grow the loftiest conceptions,—the suggestive source from which springs all that follows.

Thus viewed, you will see at once that it is impossible to exaggerate or over-estimate the importance of the study of planning. It may indeed be safely asserted that there is no study in which the human mind can engage on the results of which the comfort, convenience, and happiness of society so much depend. This, I admit, is claiming a good deal, but no more than the study properly demands. It is not my purpose at present to emphasise utilitarianism, but do not forget that every building is designed for use; to say so is not to derogate from art, because the highest art is displayed when a building is so designed as most successfully to fulfil its purpose by combining fitness with beauty. Thus the primary field for the exhibition of the architect's art is planning. This does not appear to admit of doubt. Let me demonstrate it. What is architecture? Is it the mere clothing of the structure? Or is it the artistic design of the structure itself? Unquestionably the latter; and if so, how can the study of planning be other than artistic work, the primary stirring of the dry bones out of chaos, and the life inspiration which creates out of them the useful and the beautiful? Planning is not the mere casual throwing together of so many forms, the chance disposition of so many lines representing walls, enclosing so many haphazard spaces representing rooms; it involves the exercise of imagination. The design of the plan is the medium for educing this quality, just as much as the design of the elevation. It is customary, no doubt, to hear the word design applied to the latter much more than to the former; but the one is really just as much design as the other; consequently the plan affords the opportunity for the display of artistic power just as much as the elevation. Not only so, but a true artist while studying and elaborating his plan has a mental drawing-board by his side, on which he rears in his mind's eye forms and proportions suggested by it and emanating from it; he disposes the arrangement so as not only to meet the requirements, but also so as to produce a happy result in point of effect; in short, the two things go together, they are mentally indivisible, and must be elaborated, not without reference to one another, but in unity. Hence experience demonstrates that a good plan will generally be found to produce a good elevation: they are integral parts of a whole; the one having been artistically studied with a view to the other, the result will be harmonious, for if the tree is good, so will the fruit be.

Did time permit, it might be interesting to divide the subject; and classify it under separate heads, treating each in turn, as for example: the plan ecclesiastical, the plan collegiate, the plan palatial, the plan municipal, the plan judicial, the plan official, and the plan domestic; and a moment's reflection will show you how easily we could find, in the elaboration of the characteristics and requirements of each, much that might profitably engage our attention. I must, however, content myself with a more general treatment, touching briefly what may be called principles, leaving the application of them to your own imagination.

None but those who have made a real study of planning have any conception of the infinite breadth and variety of the field of design which it creates. They only know experimentally the charm of puzzling over difficulties; of revising, re-arranging, and re-disposing, in order to overcome them; thereby probably creating other difficulties, which in their turn have to be surmounted by a further similar process, and so on, until, after many disappointments, many failures and many inventions, a satisfactory result is at length reached. It is now many years since I resolved never to let a plan leave my hands until I felt satisfied that it was right; and in battling with the difficulties thereby created until they have been successfully obviated, I have found some of the most engaging studies of professional life. The question with you should never be, whether a plan is good enough—that is an unworthy standard—but rather, is it the best that I can design? The former, the "it-will-do-well-enough" standard, prevails far too commonly; the latter is the only standard really worth working for, because the only one which will lead to attainments beyond mediocrity. Never, then, rest content with a plan until you are satifieds that it meets and fulfills all the requirements of the case, in the best and most complete manner that you can think of; the plan is the foundation of the whole design, and I need not say to architectural students, that if the foundation be faulty, there is not much hope for the superstructure.

It may seem like insisting on an elementary truism to say that the plan of a building must necessarily be adapted to, and governed by, the exigencies of the site, but the not infrequent violation, or rather neglect, of so obvious a principle justifies me in emphasising its importance. The peculiarities of a site in respect to levels and aspect frequently constitute difficulties that at first sight appear insurmountable, but out of which emanate in skillful hands the happiest results, which otherwise might not have been thought of, or attained. Herein is displayed the skill of the artist: to lay hold on all such adventitious circumstances and hindrances, and conform them to his will, transforming obstacles into mediums for achieving success. The neglect of such opportunities is unpardonable, and betrays the bungler.

Prospect, again, constitutes an important factor in planning. When the right aspect presents the best views, the case is simple; but this is often not the case, and few conditions call for more ingenuity than when the proper aspect is at variance with the prospect that it is desirable to secure. In towns, indeed, aspect and prospect must necessarily, and to a great extent, be subordinated to immovable conditions; but in the country it is different. While, therefore, striving for comfort, convenience, and grace within, never neglect an opportunity of securing the inestimable attraction of a higher than any art loveliness, the prospect of nature and creation. In connection with prospect, let me in passing condemn a practice too much in vogue, the glazing of the upper portions of windows with tinted, stained or painted glass, sometimes uglier than anything it is intended to obscure from view. Situated as we are in London, the expedient is no doubt attended with advantages, shutting out hideous objects which one's neighbors are so found of obtruding, or excluding the impertinent gaze of the too curious; but in the country, where it is frequently adopted, what possible justification can be urged? Is it possible that anything can compensate for the light of the sun, the beauties of nature, or the marvels of the heavens? Never, then, attempt to obscure the contemplation of God's universe by the commonplaces of humanity.

I would say, further, that a plan to be good must be simple. No doubt the arrangement of some buildings is necessarily more elaborate than that of others; but you may take it as an unerring guide, that when you find a plan becoming complicated and confused, you are on the wrong tack. I have seen an artist, after hours of work, wipe from his canvas all he had painted, and then make a fresh start with manifest advantage and no real loss of time; so, when your planning results in complication, your best course is ruthlessly to obliterate what you had done, and begin *de novo*. Nothing will compensate for the absence of simplicity in a plan. This is a golden test which I have never hesitated to apply, and I speak from no inconsiderable experience.

Again, a plan is only good when it is the embodiment of thrift. Much has been said, and more has been written, on the moral aspect of thrift; and it would be easy to enlarge on the advantages of its application, not merely to the life, but also to the artistic work of the student of architecture. I must, however, be content for the present to deal with it in its relation to my subject, and to show that without thrift, both of space and material, a plan cannot properly fulfill its purpose. Thrift is not parsimony any more than liberality is waste. Each space is a plan, be it room, hall, stair or passage, should be just the size that is necessary for its purpose; if it be less, there is parsimony, for what is inadequate will have to be enlarged hereafter at much more than what would have been the original cost; if it be more, there is waste, for it has involved the expenditure of more capital than was required, and will incur needless labor and consequent cost in maintenance. Take as an illustration a room which has been designed on a scale beyond the necessities of its occupants; it is obvious that it has cost more to build and furnish than it should have done, and involves a perpetual cost for maintenance and service which should have been avoided. Hence, the happy medium is to be found in thrift. So in respect to materials: walls should be of sufficient thickness, floors and roofs of sufficient strength for their respective functions, not much more, and not much less; else there will ensue, either waste in the first instance, or parsimony, which will involve waste in the long run. There are, however, cases in which materials should not be too sparingly employed: in a mansion, for example, intended to be a family home, and to pass from generation to generation, it would be unwise, and out of keeping with its purpose, to apply too literally such a condition as this; for nothing imparts more dignity and a greater idea of the enduring purpose for which such an edifice is designed than massive walls, thicker no doubt than may be actually required for sound construction, but not more than is called for in order to be in harmony with the traditions and associations which the structure will represent. This, however, is but one of those exceptions that prove the rule of thrift which I have enforced. I am, of course, not unprepared for the inevitable protest of the art student, who in a burst of æsthetic enthusiasm will denounce the suggestion that so prosaic a quality as thrift should dare to enter the hallowed sanctuary of the art studio; but while entertaining much sympathy with the enthusiasm of youth, and by no means desiring to curb it, and while respecting opinions which I doubt not are perfectly genuine, I venture to think that it would be easy to demonstrate that it would be in the true interest of art were her portals more frequently and more hospitably thrown open for the admission and entertainment of the prosaic maiden I have introduced to your notice. How often for instance might she, with manifest advantage, restrain the artist hand in scattering with inartistic profusion ornament which is misplaced, and therefore ineffective! But to enter on such matters would be to deal with other branches of the architect's studies, and be foreign to my present purpose.

I need not detain you by enumerating conditions more or less obvious, each one of which contributes in its place to the merit of a plan. Apart from considerations of aspect, prospect, and dimensions, each place should be—not only convenient in itself—but should be in its proper position in relation to other places; the work of an establishment, as well as the cost, may be materially diminished or increased, according as this condition is observed or neglected. Doors, windows, fireplaces, should be arranged so as at once to pro-

mote comfort and convenience without needlessly destroying wall-space, or incurring draughts; the amount of window-space should be regulated according to the aspect; and many other considerations of a similar nature should be duly thought of. In short, the perfect plan is, and can only be, the result of the thoughtful study of each principle and every detail: none are too minute to be overlooked: as little things sweeten life, so attention to little details makes a plan complete.

I have written to little purpose if I have not convinced you that planning is one of the most important, difficult, and artistic studies of the architect.

Now let me inquire why it is that plans are so frequently bad. I am aware that there are men in the profession who are adepts in planning, and whose productions in this respect we admire. But are they the majority? Rather, I fear, will they be found to be the small minority. Rarely do I examine published plans without detecting faults which are obviously not the necessary outcome of the circumstances. Why is this? In the majority of cases it does not, I believe, arise from lack of ability on the part of the author, but from the neglect to apply the ability he possesses to the working out of a good plan. Where plans are bad, they are so from two causes. (1) It is impossible to produce a satisfactory result without practical knowledge of the requirements: in the case of a gentleman's house, for example, how can we expect to succeed without being familiar with the nature and working of the establishment? (2) Plans are bad because they are not studied as they should be: I am satisfied that there are many practising architects who have never realized the true nobility of planning, who have never experienced the fascination of the almost exhaustless field it presents for the display of imaginative artistic skill, and who consequently have concentrated their artistic powers in the design of the elevation. Need I guard myself from possible misconception by adding that not one word I have written is intended to militate against the importance of artistic design as applied to the elevation? My subject is Planning, and my remarks naturally apply specially to it. Moreover, architects are not likely to regard the design of the elevation as the least artistic portion of their work, and it is because I entertain the conviction, judging from results, that they do far too much regard the design of the plan in that light, that I have emphasised its artistic character.

The architecture of the future will derive its character, and find its development, from the students of to-day; hence I have been tempted to embrace this opportunity to bring specially before you the subject of planning, believing that those who under-value it, do so because they have not studied it and tasted its fascination, and in the conviction that there is no more useful as well as artistic study in which you can engage. Remember that the subject vitally affects you who are devoting your lives to the study of architecture, and that your treatment of it will still more vitally affect those for whom, by-and-by, you will be called on to design; nothing will so certainly secure for you their grateful blessing as to promote the comfort, convenience, and beauty of their homes, for on nothing does the daily happiness of civilized society so greatly depend. If I have succeeded in elevating the study and lifting it out of the prosaic level from which it is too generally regarded; if I have inspired in any of you, whom it is my privilege to address, the determination to throw yourselves into it with an enthusiasm which you may not hitherto have displayed; if I have thus, through influencing you, sown seed which will fructify for the benefit of succeeding generations; if I have demonstrated that in this study is to be found one of the most interesting, fascinating and artistic pursuits, the time will not have been misspent which we have this evening devoted to the consideration of the Art of Planning.—J. Macvicar Anderson.

THE evolution in architecture for residence property during the past quarter of a century in San Francisco, is fairly represented by the two buildings herein illustrated.

The building shown at the left in the engraving, is a partial side view of one erected about twenty-five years ago, on Haight street, between Laguna and Buchanan streets, for Mr. Hiram Rosencrans, at the time a prominent hardware dealer, and at present the property of Mr. G. G. Burnett.

The more prominent building adjoining is the residence of Mr. Thos. Pollard, built in 1891.

Both these buildings were designed by, and erected under the supervision of Mr. James E. Wolfe, architect.

CITY RESIDENCE.

ONYX ON THE PACIFIC COAST.

BY PROFESSOR LOUIS FALKENAU, MEM. TECH. SOC.
[Read Sept. 4, 1891.]

Taken by permission from the Bulletin of the Transactions of the Technical Society of the Pacific Coast.

The demand for material adapted to the interior decoration of buildings is steadily increasing, and for some time past variegated marble and the so-called onyx have been extensively used, as they are more easily cut and polished than other stones, and are otherwise preferable to many of the materials at our disposal.

Onyx proper is a species of quartz of great hardness, and occurs in small fragments or nodules, while the so-called onyx of which this paper treats is mainly calcium carbonate, mostly in the modification called aragonite, and occurs in large masses. Its hardness is from 3½ to 4, its specific gravity from 2½ to 4, and it is easily cut into slabs and polished.

Onyx has been found in several localities of our State, but with a few exceptions, in small deposits, that do not yield large and perfect slabs. Large deposits have been found in Arizona, and new finds are constantly reported from all parts of the United States. Mexico has many fine deposits of onyx, most of which is used for clocks, table tops and small ornaments. The specimens of Mexican onyx, which I have here, are from La Sorpresa and La Mesa Mines, Tehuacan Pueblo, of which I have received the following description by the owners:

The deposits of onyx are found running through hills measuring about four miles across, at an angle of about 45 degrees, in layers of from 4 to 15 inches in thickness, separated from each other by parallel layers of clay, gravel and country rock. The deposits reappear on the other side of the canyon, running into the opposite hills at about the same angle.

The Sorpresa onyx is mostly white and green. The La Mesa, variegated. The first is near the bottom of the hills, the latter above it; a hard, red country rock separates the two mines. No marble, and no calcite crystals have thus far been found there. The deposits have been worked for three or four years without the use of machinery. From 5,000 to 6,000 cubic feet of onyx have been shipped to Paris, London and New York at a price of about $10 per cubic foot. The shipping port is Vera Cruz, which is reached in one day by railroad.

As the croppings of these deposits have been traced for five miles along the hill-sides, and extend from the bottom of the hill to the top, the amount of available material is very great. The largest slabs obtained were 12 feet long, 8 feet wide and 5 feet in thickness.

In our State the deposits of Suisun, and of San Luis Obispo, have for several years past been worked by Messrs. J. & F. Kesseler, of this City, who have kindly furnished me these specimens and the following description of the San Luis Obispo quarry:

To Prof. Louis Falkenau. Sir:—According to promise, we send you a short statement regarding our onyx mine in San Luis Obispo County, Cal. The mine is situated about thirty miles from San Luis Obispo, and about twenty miles from Pismo Beach. It lays in the hills between Huasno Creek and Arroyo Creek, about sixteen miles from Arroyo Grande, a station of the narrow gauge railroad. The ledge stands nearly perpendicular on the side of a hill. The earth and stone in front of the ledge have been removed to the depth of about forty or fifty feet for a distance of eighty feet along the ledge, which is sixteen feet wide on the top and gets thicker going down.

The croppings show themselves from three to four hundred feet along the ledge, and again about half a mile to the northwest. The blocks stand all on their edges, and are from two to three feet, from eight to twelve feet, and some from fifteen to twenty feet long, and from six inches to eighteen inches thick.

Along the ledge there are also several valuable mineral springs. The onyx has beautiful colors—red, green, sky-blue, rose color, and a lovely golden yellow. The rich colors run in charming and graceful transition from one shade to another. Men who have worked and used onyx extensively declare it to be the finest onyx known. It has solidity, large sizes, beautiful colors, and an endless variety of tints. It is within easy reach of San Francisco, whence it may be shipped to all parts of the world.

Surrounding the mines and springs are nine hundred and twenty-nine acres of land, which form part of the property; they have plenty of timber and running water, and would form a beautiful park for the springs.

Very respectfully,

San Francisco, March, 1891. J. & F. Kesseler.

I have no knowledge of other deposits in California having been worked to any extent. The Arizona deposits, discovered in August, 1889, which I visited in September, 1890, are located in Yavapai County, about 28 miles southwest from Prescott. The onyx is found in a group of low rolling hills. Eleven claims of 600x1500 feet cover the location. The bottom of the hills, and the beds of the creeks and gulches surrounding them show strata of conglomerate, formed of fragments of onyx mixed with other rock and cemented by lime carbonate. Above these the onyx crops out boldly in well-defined strata of from 12 to 20 feet in height, extending into the hills almost horizontally, with a slight dip toward the center.

The tops of the hills show indications of onyx, and several shafts sunk at a considerable distance from the hillsides show solid masses of onyx immediately below the surface. At the time of my visit, only about 1,800 square feet of the ground had been explored by cuts and shafts. At a very conservative estimate, I would say that there were 1,440,000 cubic feet, equal to 144,000 tons of onyx then available. Should, as is very probable, the balance of the still undeveloped croppings, prove to represent strata of equal dimensions to those already opened, the available supply would be practically inexhaustible. Large blocks, some 7x4 feet and 18 inches in thickness, had been separated from the mass by blasting, and from such blocks most of the samples I have here were broken by a sledge hammer. That the material stood such treatment as well as it did speaks highly for it.

The many varieties found in this deposit differ very much in color and density (8 to 10 cubit feet per ton). Analysis showed the presence of iron, manganese, strontia and magnesia, and it is to the iron and manganese the different tints are due.

Several tons of the onyx were taken to Colton to be cut and polished. The small slabs I have here are samples I brought from there.

Lately a new location has been found near Phœnix, Arizona, which is said to produce onyx of good quality and in great abundance. The cost of onyx varies from $5 to $10 per cubic foot, and over. To what extent it is used may be inferred from the following amounts expended on it: In Vanderbilt's residence, Newport, $250,000; C. P. Huntington's residence, New York, $100,000; Equitable Building, New York, $75,000; Auditorium Hotel, Chicago, $60,000; Imperial Hotel, New York, $500,000; Grand Union Hotel, New York, $25,000.

At the time the foregoing paper was read there were exhibited about forty specimens of onyx having polished surfaces and presenting almost every shade of color, and showing the laminations which indicated the manner of its formation by deposition.

Removal—Mr. James E. Wolfe, architect, after twenty-one years continuous occupancy of the same suite of rooms, corner of Montgomery and Pine streets, has moved his office to the Flood Building.

RURAL NOTES.

THE accompanying design is intended for a cheap and commodious suburban or farm dwelling. The front may be finished in any style desired. The interior arrangement presents some desirable features for locations in the "warmer belts" of this coast and some of the valleys. The first floor has on one side the parlor, dining-room and kitchen, while on the other side are two chambers and the stair-way to upper story. The second floor is divided into four chambers, stair-way and main hall. The main halls of both stories are extended through from front to rear, having doors or windows at each end, which secures perfect ventilation with through air currents. The first story has a wide veranda across the front, and at rear a porch convenient to hall and kitchen. The kitchen chimney is placed in the two story part of the house to gain sufficient height to insure a good draught.

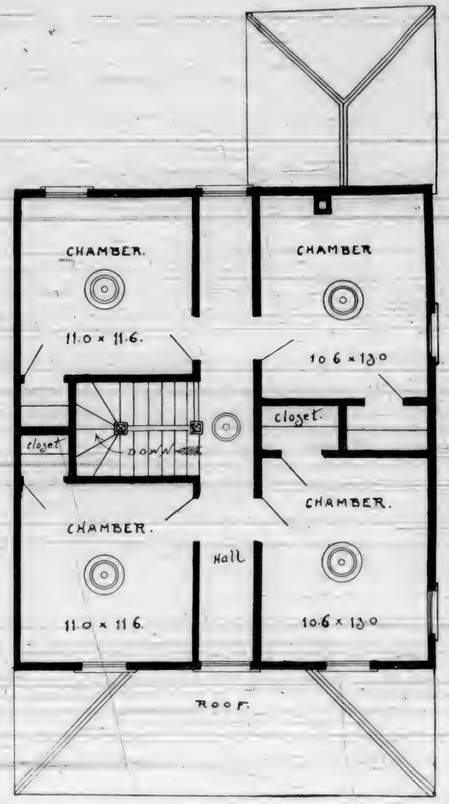
SUBURBAN DWELLING.



2nd FLOOR PLAN

SUBURBAN DWELLING.

ADULTERATION OF PAINTS AND OILS.

Written for the California Architect.

PERHAPS of all the adulterations from which the public suffer, the most aggravating is that caused by the adulteration of paints and oils, and this because the amount of profit to be derived by the painter is so small when compared with the loss and damage to the owner of the property, caused by the use of poor material when the best the market affords is called for in the specifications of the architect. The labor of painting being the same, or very nearly the same when good materials are used, as when the adulterated, or substitute, is employed, the extra profit being only on the first cost of the stock; which bears no comparison to the injury done to the owners of the property where the latter is used.

A slight review and comparison of the two methods of work may not be uninteresting to architects, contractors, and others who take an interest in the welfare and good looks of our city and its surroundings.

To the better understanding of the subject it may not be out of place to glance briefly on the composition and manu-

facture of both lead and oils as intended for the use of the house painter, upon which much ingenuity, skill and science has been displayed, to say nothing of the vast sum that has been expended in plants for the manufacture of an article intended for the use, ornament and presentation of our buildings.

White lead, or carbonate of lead, is manufactured from the purest of metallic lead, great care being used in the selection of the same to obtain the best quality, care being taken to avoid that containing much silver, that metal being the one that would cause the discoloration of the finished article. It is a singular fact that of all the rapid processes for making white lead none have superseded the old Dutch method for producing white lead with body, or covering quality—this is due no doubt to the opaqueness of each particle of the body—if each article is more or less transparent it shows the effect when spread upon wood notwithstanding the same amount of lead may be contained in both preparations.

The white lead ground with linseed oil forms in time a chemical compound instead of a mere mechanical mixture. It is this quality that renders it so valuable a medium for preserving wood from decay. The wood absorbing the oil and carrying the lead into the pores, thus preventing the atmosphere from encroaching upon, and commencing its work of oxidation upon the wood. Another cause for the preservation of the wood may be found in the destructive effect that lead has upon all fungus growth.

If, however, sulphate of baryta, a heavy earth, though of the same weight bulk for bulk, as white lead and also satisfactory in regard to its color, be ground with oil, the result is merely a mechanical mixture, no chemical union takes place between the oil and baryta, no cement is formed and but little protection of the wood afforded. In fact it is little better than a coat of whitewash if so good. Now what is true of the whole, is true of a part, and a mixture of half and half lead and baryta, is only half as good as all lead. Some painters contend that as baryta is a permanent color it is an improvement to add to the lead, this might be true if the oil united chemically with the baryta as it does with the lead. This not being the case however, it may be considered an adulteration pure and simple.

Before leaving the subject it may not be amiss to give an easy mode of detecting the presence of baryta. Take a small quantity of the suspected article, say a table-spoonful or less of the mixed paint, put it over an open fire, in an iron ladel, or small crucible, thus burning off the oil and turpentine. Then add to the remainder placed in a glass vessel, some nitric acid diluted one half with water—the lead will be dissolved forming nitrate of lead, the baryta left as a residue.

Linseed oil, as is well known, is expressed from flaxseed—the best quality being obtained from cold pressed seed—an additional quantity of lower quality is obtained by heat and repressure. It would seem that up to the present time nothing has been devised of a more satisfactory nature than this oil for the purpose of making a mixture with lead, or other mineral oxides, and carbonates for the reason that the oil will form with the lead or other mineral oxides, a chemical combination and therefore a more lasting protection to the wood, and thus serve to give wood and metals a coating well adapted to protect them from the action of the atmosphere.

Pure white or red lead ground with linseed oil, thickened to the proper consistency with spirits of turpentine, furnish a coating to wood or metal that will protect as well as ornament, also remain a protection and ornament for a reasonable length of time—while on the other hand poor fish oil diluted with benzine and ground up with baryta, affords no adequate protection to either wood or metals, and though for a short time may look well will soon blister, work off, and look dirty—affording no protection to the wood and become anything but an ornament.

The dealer in adulterated paints and oil should be held accountable for a large measure of the blame for such work, many painters doubtless purchase their stock in good faith that the articles they buy are what they profess to be. We were informed some years since that one of the largest of Eastern paint manufacturers, one too that manufactured much pure paint, never placed on the label "pure" except upon adulterated paint.

The claim for Lucol as a new invention to resist water, acids, alkalines, etc., and far above linseed oil in some respects, the writer leaves to others for further consideration.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

MENDOCINO STATE ASYLUM FOR THE INSANE.

The buildings for the Mendocino State Asylum for the Insane are now being erected on the State Ground three miles east of the town of Ukiah in Mendocino County. The Asylum consists of eight buildings. The Administration building, four ward buildings, two for the reception of female and two for the reception of male patients, a kitchen building, laundry and bakery building, and a boiler and engine house.

The buildings are built of brick with fire-proof halls and stair cases, the roofs are covered with slate. The fronts are of pressed brick with Ione red sand stone trimmings.

The total frontage of buildings is about 9,000 feet, and will be completed on or about January 1, 1893.

When completed they will accommodate about 600 patients.

Messrs. Copeland & Peirce of this city are the architects.

MODERN HOUSES.

Our illustration shows a row of dwellings now being built on the corner of Octavia and Broadway, that will prove quite an improvement to that part of the city.

The location is one of the best, situated as it is on the sunny-side of the block and a commanding elevation allow-

ing an unobstructed Marine view. Each house will be two stories with finished attic and basement.

The interiors will have finish of oak, mahogany and maple in principal rooms, and redwood in natural color in attic rooms. The dining-rooms will have paneled ceilings of oak and high oak wainscot of same material, and floors of inlaid hard-wood.

Each house will be finished with all modern conveniences—such as furnaces, dumb waiters chutes, electric lighting, speaking tubes, etc., and new and elegant designs in plaster decorations. The fronts will be finished in shingle, pebble-dash and paneling.

The front entrances are bold and inviting, approached by broad flights of concrete steps, and the vestibule floors laid in mosaic. Front doors will be oak and plate glass and all trimmed in antique copper.

The buildings are being erected by William Hinkle, Esq.

The designs are by Mr. Edward Burns, architect, under whose supervision the entire work will be performed.

Architectural Compositions.

By HENRY P. KIRBY. Published by BATES, KIMBALL & GUILD, 9 Tremont Place, Boston, Mass.

A collection of 50 fac-simile plates in portfolio, 15 by 20 inches, from pen drawings of Cathedrals, Chateaux, Palaces, Country and City Mansions, Hotels, Churches, Railroad Stations, Interiors, Details, etc., etc. Mr. Kirby requires no introduction to architects, as his wonderful pen drawings are already well known. His drawings have a freshness, sparkle and vigor that are entirely their own.

Two editions will be published, both from the same plates. The first printed on Whatman's hand-made paper, with special portfolio and title-page, each copy numbered, and sold only by advance subscription at $15.00. The second, printed on fine cream tinted paper made expressly for this work, price $10.00.

California's World's Fair Magazine.

A monthly journal devoted to the interests of the California exhibit at the World's Fair. Published by B. FEHNEMANN, 75 Flood Building, San Francisco. Subscription price, $3.00 per year. The Magazine is a new publication devoted to the interests of the World's Fair and in the aid to the advancement of industrial progress.

The Timber Trades Journal and Saw Mill.

We have received the Seventeenth Annual Special Issue of the *Timber Trades Journal*. It contains about 400 pages and is fully illustrated, and is an international authority on matters relating to the lumber trade throughout the world. It is published by WILLIAM RIDER & SON, London, Eng. The American office is at 136 Liberty street, New York.

The Engineering Record

Contains an illustrated article on the subject of "Public Baths," and which should be in the library of every architect.

South San Francisco News

Is the title of a new eight-page weekly paper. The first edition appeared on March 4, 1892. It is published by MR. C. L. BARNES, and is devoted to the interests and development of South San Francisco.

The paper has started out with a bright energetic look and we wish it success.

Toilettes

Is a monthly journal published in New York and treating of art in costumes, and is well illustrated with designs from Worth and other celebrities.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at 408 California street.

GEO. H. SANDERS, Pres. — OLIVER EVERETT, Vice-Pres.
H. T. BESTOR, Sec. — JOHN M. CURTIS, Tres.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. — L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. — GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

GEO. P. LOW, Pres. — C. O. POOLE, Vice-Pres.
W. I. CROSETT, Sec. — O. BROOKS, Treas.

MASTERS PAINTERS' ASSOCIATION OF THE PACIFIC COAST.

E. M. GALLAGHER, Pres. — H. G. JARMAN, Sec.

THE regular meeting of the San Francisco Chapter of the American Institute of Architects, was held the 11th inst. at their rooms, 408 California street. The President, Geo. H. Sanders, presiding.

A report from the committee on the Chapter Classes was received. For the competition of pen and ink drawings, "Diffidence," Mr. Linden Bree, received first mention; "Mars," Mr. Henry H. Meyers, receeived second mention; and "Pen and Ink," Mr. C. A. Meussdorffer, received third mention. The committee recommended that the Chapter Medal for the year 1891, be awarded to Mr. Linden Bree.

Drawings from models—Mr. C. A. Meussdorffer was placed first; Mr. Linden Bree, second; Mr. Joseph Rowell, third, and Mr. R. H. Wetmore, Jr., fourth.

Flat Studies—Mr. C. A. Meussdorffer was given first mention; Mr. Harvey E. Harris, second; and Messrs. Meyers and Blackenburg as equally entitled to third mention.

Mr. W. W. Polk was introduced as a visitor. Mr. Polk gave some good advice to the art students who were present, and entertained the members of the Chapter on the subject of the inspiration of art and architecture. The meeting ended with a pleasant discussion in regard to the architecture of the present time. Those who were absent lost a rich treat

COMMERCIAL LAW.

II. THE GENERAL CHARACTERISTICS OF LAW.

LAW is the rule of action prescribed by the supreme power in a state, for the guidance and control of the individual. From the rude regulations of the nomadic tribe, to the finely adjusted system of jurisprudence of to-day, is a long span of gradual but logical and progressive development. As new commercial and social development has extended and multiplied the rights and duties of men, the law has widened in its application to meet the new conditions. The first requisite of law is that it shall be as stable and fixed as the eternal hills, and the next requisite is that it shall be as flexible and pliant as the changing needs of men. We shall see how this apparent paradox is met. First, there are two kinds of law, so to speak; or more correctly, two sources of law; one, the common law and the other statute law. Common law is defined to be that "which runneth back to the time when the mind of man runneth not to the contrary," while statute law is that which is specially enacted. Common law may be said to be the foundation and the structure—statute law the alterations and additions.

The common law contains the essential elements of all jurisprudence. The common law of commerce, or law merchant as it is termed, is really the judicial adoption of those customs and practices which were adopted among merchants from time memorial. It is practically, a system of philosophy reasoned out from the primal conditions it is designed to protect. Statute law is the enactment of such additional regulations as necessity from time to time requires.

An instance which well illustrates this principle is the Statute of Frauds, so called. At the common law a man might do with his own as he chose. As the cunning of men was educated by experience, it developed that men might, in the proper exercise of this right perpetrate great wrongs upon others. The common law provided no remedy for this, and so resource was had to statute, and a law was enacted, providing, among other things, that upon a sale of personal property there must be an immediate and continued change of possession, to indicate where the title was actually vested. At the common law, there was nothing to prevent a man, when his goods might be levied upon, from saying that they were not his; that he had previously sold them to another, and by collusive testimony the prior sale could be proved. So the statute was enacted to prevent that and other species of fraud. In our own time, the Interestate Commerce Act furnishes an instance of supplementing by statute the requirements of the common law. At the common law a common carrier was required to carry for all who applied, and to charge for his services a fair and reasonable compensation. But it was found that charges, in themselves, fair and reasonable, and therefore within the common law duty of the carrier, became detrimental to the interests of the community by being different for different persons. And so by statute the further duty was imposed upon the carrier charging the same price to all for the same service. These will serve to show the relative relations of statute and common law.

There are two grand divisions of law—civil and criminal, and civil law is composed of two branches—contracts and torts. The law of contracts refers wholly to these obligations which are voluntarily assumed by the individual, while the law of torts refers exclusively to those obligations which are imposed upon him by law. The whole of the law of contracts may be summed up in the statement that the law will compel a man to do that which he has agreed to do, and the law of torts is simply to enforce against a man the consequences of doing what he ought not to do.

The application of these simple propositions to the complex necessities of such a civilization as ours, sometimes makes the law seem full of uncertainties and strewn with technicality, but it will be found that every case resolves itself down to one or the other of these propositions. The maze of complication which the law presents to the casual observer arises from the application of the underlying principles to the facts of the particular case.

If the facts of a given case are undisputed, there can seldom be a serious difference of opinion as to the law applicable to it. Ingenious lawyers may devise cunning theories, but, with the facts determined, an honest lawyer, properly equipped, ought to be as well able as the judge, to determine what the result of litigation would be.

The first question to be determined is as to whether a wrong exists—if so, we have the word of Blackstone that its remedy may be found in the law. Litigation is rather a question of proof than of law, as a rule, and of that every litigant should be sure before entering court. If men would inform themselves more thoroughly upon their rights and duties under the law, and be better able to judge for themselves of the probable outcome of litigation, thousands of cases which encumber the courts, would never have been brought. And this is information which the business man should possess, and which he ultimately will consider essential to his success.

We have seen the necessity for a general intelligence upon these subjects, we have seen something of the nature of law, and in the next of this series will be found some information as to the application of the law by the courts.

"Copyrighted 1892, the Law News Bureau."

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

LIABILITY FOR DEATH OF UNSKILLED WORKMAN.—Where a person employes about dangerous work, men who are not skilled in the work, he must provide them with proper safe-guards. A man was employed about dangerous work at a factory, in which he had no experience, under the direction of a competent master mechanic. The master mechanic left the work and placed in charge an unskilled man, and by reason of the use of improper tools and appliances, an accident occurred and the workman was killed. The employer was liable in damages to his surviving family.

McElligatt v. Randolph, Supreme Court of Errors of Connecticut, 22 At. Rep. 1094, (91C).

PARTNERSHIP RELATIONS UNDER JOINT CONTRACT.—A mason and a carpenter furnished estimates to the owner of a lot for work, in the erection of a building thereon, to be done by each according to his craft. These estimates were separately accepted, but only one contract was made between the owner of the first part, and the mason and the carpenter of the second. Payments as the work progressed were made to either indifferently, and were divided between themselves in the proper proportion. In their notice of lien they described themselves as contractors, and their claim as arising under a single contract, the notice being verified by both. The carpenter assigned his interest to the mason, describing them both in the assignment as claimants for the whole amount of the lien. These facts are sufficient to sustain a finding that they were partners as to the work done and the lien claimed therefore, though both testify that they had no intention of becoming partners.

Parr v. Baur, City Court of Brooklyn, 16 N. Y. Supp. 258, (157H).

SUFFICIENCY OF MECHANIC'S LIEN STATEMENT.—When the Mechanic's Lien statute requires a person claiming a lien for labor, under an entire contract for labor and materials at an entire price, to file a statement of the amount due him, and provides that "the contract price, the number of days of labor performed or furnished, and the value of the same, shall also be stated," a statement which contains two items, as follows: "Labor of myself, between September 1, 1889, and May 1, 1890;" and "Labor laying 1,100 yards concreting, at twenty-five cents per yard, in the last part of August 1890, and ending Auguts 30, 1890," is insufficient, because these items do not show the number of days labor was performed.

Ellinwood v. City of Worcester, Supreme Judicial Court of Massachusetts, 28 N. E. Rep. 1053, (114H).

BUSINESS MOSAICS.

Line Drawings made in pen and ink suitable for reproduction by any of the processes in use, can be ordered through this Journal. Architects and Engineers are oftentimes too busy or too isolated to obtain the time or talent for the ornamental drawings. These drawings can be made from the plain drawings, and we will cheerfully furnish information regarding such work.

Shingle Stains are being extensively used for exterior coloring of shingle work on modern dwelling houses, especially of the better class.

The above cut is a sketch of a cottage which was coated with Cabot's Creosote Stains and presents a very pleasing appearance. It was built in Ross Valley, California, last summer, and was planned by M. G. Bugbee, architect of this city. Mr. Samuel Cabot, of Boston, is the manufacturer of these stains and has met with success principally on account of using pure material and no adulterant in his stains. These stains stand the California climate wonderfully, and are perfectly adapted to red wood. The agenst of this firm are Bell & Van Wyck, 330 Pine Street, San Francisco.

The Excelsior Redwood Company is one of the most extensive firms on this coast engaged in the manufacture and shipment of finished redwood products for the markets of the business world. The company has two large plants, one in San Francisco and the other in Humboldt County, California.

They have all the latest improved machinery for turning out first-class articles worked ready for the builder. One of the specialties of this firm is the manufacture of tanks from 300 up to 50,000 gallons. The redwood tanks are used for the storage of water, wine and beer.

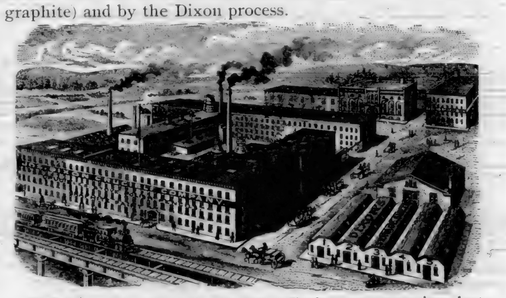
Another specialty is the manufacture of shingles for the Eastern market—redwood shingles having a great advantage over pine or other shingles commonly used in those sections—besides great quantities of split posts, shakes, tree-stakes, piles, fruit-trays, etc. The office of this company is at the corner of Fourth and Channel Streets, San Francisco.

We have received from the Cincinnati Corrugating Co., Ohio, an illustrated catalogue of their manufactures, which include Corrugated Roofing, Siding, Ceiling, Arches, Lath, Shutters and Doors, V Crimp Iron Roofing, Standing Seam Plain Roofing, Roll and Cap Steel Roofing, Outcalt Elastic Joint Roofing, Metallic Weather Boards, Ridge Capping and Beaded Metallic Ceiling; also Roofing Tin Plates and Juniata Galvanized Sheets, "Piqua" Brand.

They make a specialty of ornamental ridge work.

The Graphite Industry is fittingly represented by the Company whose founder first gave it birth.

The Joseph Dixon Crucible Co., Jersey City, N. J., was founded by Joseph Dixon in 1827, who, at that time, began the manufacture of black lead crucibles and completely revolutionized the crucible business. All crucibles used at the present day for melting brass, steel, copper, gold, silver nickel, etc., are made of blacklead, (the common name for graphite) and by the Dixon process.



The Dixon Company have not only been progressive, but they have been aggressive, and have pushed their goods into all parts of the civilized world. During the past year they made extensive changes in their factories, and we take pleasure in showing by the illustration above the main works and offices located in Jersey City. Their graphite mines are at Ticonderoga, N. Y., and their cedarmills are at Crystal River, Fla.

The nature of graphite, sometimes called Plumbago, or blacklead, is not generally understood; and therefore, its great value in the mechanical arts has not been fully appreciated. Graphite is one of the forms of carbon. It is not affected by heat, cold, acids, alkalies or any known chemical solvent. It is also the best solid lubricant known to science a remarkable conductor of heat and electricity. The peculiar qualities of Graphite have given it a wide range of usefulness. It is used in the manufacture of lubricants for all purposes, crucibles, stove polish, lead pencils, foundry facings, electrotyping graphite, graphite paint, etc.

The Dixon Company are miners as well as importers of graphite in all its forms, and use no graphite that they do not mine or prepare. Their mines are located in Ticonderoga, N. Y., and they have every facility in the way of chemists and expensive machinery, etc., necessary for completely freeing the graphite from the silica, sulphur and other impurities which it contains when it comes from the mines. The company's illustrated catalogue of graphite productions is an interesting pamphlet and well worth reading. It is sent free on application.

Mott's Patent Open Lavatory, as illustrated on page viii, has many advantages over the old style of lavatory. There is no closet underneath to act as a receptacle for dirt or filth; but it is so arranged that it can be kept perfectly clean, and presents an artistic appearance as is usual with this firms manufactures.

Merchant & Co's. Star Ventilator is an article which should be carefully examined into by all interested parties. It is made of galvanized iron, copper or brass, and for ventilating churches, school houses, theaters, factories, etc., it has no equal. Special ventilators for railroad cars are also furnished by this firm.

The Wm. Powell Company of Cincinnati, Ohio, manufacture a rubber stopper which is far superior to any stopper heretofore known. It is metal cored, which gives it weight and strength, so that it cannot float out of the socket. It is encased entirely with rubber, so that it cannot injure or dent the most fragile Basin or Bath, and there is no brass stud ring to pull out. For basin, bath, sink and tray plugs they are excellent, and should in all cases be used in preference to the old style of metal stoppers.

The windows of the Crocker Building are being fitted out complete with the Marshall Patent Sash Balance and Burglar Proof Lock.

TENDERS TO BE RECEIVED.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 8th day of April, 1892, and opened immediately thereafter, for all the labor and materials required for the excavation, foundations, cut stone work and brick work, iron and wood floor and roof construction, roof covering, etc., ready for the interior finish of the U. S. Post Office, etc., Building, at San Jose, Cal., in accordance with drawings and specification, copies of which may be had on application at this office, or the office of the Superintendent at San Jose, California.

Each bid must be accompanied by a certified check for a sum not less than two per cent of the amount of the proposal.

The right is reserved to reject any and all bids and to waive any defects or any informality in any bid.

All proposals received after the time stated, will be returned to the bidder.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Excavation, Foundations, Cut Stone Work and Brick Work, Iron and Wood Floor and Roof Construction, Roof Covering, etc., ready for the Interior Finish, of the U. S. Post Office, etc., building at San Jose, Cal.," and addressed to,

W. J. EDBROOKE,
Supervising Architect.

February 27, 1892.

Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M. on the 5th day of April, 1892, and opened immediately thereafter, for all the labor and materials required to put in place complete the iron columns, steel and iron floor, ceiling and roof construction, skylight roof complete, etc., for the U. S. Custom House and Post Office Building at Newark, N. J., in accordance with the drawings and specification, copies of which may be had at this office or the office of the Superintendent at Newark, N. J.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the proposal.

The right is reserved to reject any and all bids and to waive any defect or informality in any bid. All bids received after the time stated, will be returned to the bidder.

Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the iron columns, steel and iron floor, ceiling and roof construction, for the U. S. Custom House and Post Office Building at Newark, N. J.," and addressed to,

W. J. EDBROOKE,
Supervising Architect.

March 5, 1892.

CITY BUILDING NEWS.

Antonio near Jones. To build; owner, C. Curtin; architect, M. J. Welsh; contractor, Henry Rohling; cost, $4,400; signed, Feb. 24; filed, Feb. 24; payments, $1,100, frame up; $1,100, brown coated; $1,100, completed; $1,100, 35 days.

Baker near Clay. To build; owner, R. C. Miller; contractor, W. W. Rednall; bond, guaranteed; cost, $5,000; signed, Feb. 20; filed, Feb. 20; payments, $1,200, roof on and building enclosed; $1,200, brown coated; $1,200, completed; $1,250, 35 days.

Baker near Grove. To build; owner, H. H. Lowenthal; architect, Edward Burns; contractors, Buck Bros.; bond, $3,000; cost, $5,500; signed, Feb. 17; filed, Feb. 17; payments, $1,000, frame up; $1,000, brown coated; $1,000, completed; $2,500, 35 days.

Bartlett near 24th. To build; owner, J. H. Robertson; architect, M. J. Welsh; contractors, Douglass & O'Connor; bond, $1,586; cost, $6,345; payments, $1,586.25, frame up; $1,586.25, brown coated; $1,586.25, completed; $1,586.25, 35 days.

Broadway near Fillmore. To build; owner, Geo. F. Volkman; architects, Kenitzer & Kollofrath; contractor, C. F. Ruppel; bond, $3,650; cost, $14,600; signed, Feb. 8; filed, Feb. 9; payments, $3,500, frame up; $3,500, brown coated; $3,650, ready to paint; $600, completed; $3,650, 35 days.

Broadway and Gough. Plastering, arches and centres; owner, R. M. McMurray, architects, R. H. White & Co.; contractors, Lockwood & Hogan; cost, $1,125; signed, Feb. 8; filed, Feb. 9; payments, $450, brown coated; $393, standing finish on; $282, 35 days.

Broadway near Gough. To build; owner, Althea Walker; architect, W. H. Lillie; contractor, G. V. Daniels; bond, $500; cost, $1,300; signed, Jan. 22; filed, Feb. 5; payments, 75 per cent as work progresses; balance 35 days.

Broadway near Webster. To build; owner, Adolph A. Son; architect, Clinton Day; contractor, Samuel H. Kent; cost, $18,009; signed, Feb. 27; filed, Feb. 29; payments, $5,000, second floor joists are set; $3,000, enclosed and roof boards on; $2,000, brown coated and exterior primed; $2,800, inside finish on; $2,706, completed; $4,503, 35 days.

Bush and Chelsea Place. Brickwork and trench digging; owner, Mrs. M. W. Newman; architect, P. B. Schmidt; contractor, J. O'Sullivan; cost, $2,935; signed, Feb. 20; filed, Feb. 20; payments, 1st day of each month 75 per cent of value of work done; balance 35 days.

Bush, bet. Gough and Octavia. Grading; owner, Centenary M. E. Church; architect, W. W. Polk; contractor, F. Simonart; cost, $300; signed, Feb. 19; filed, Feb. 20.

Bush near Montgomery. Plastering; owner, D. O. Mills; architects, Burnham & Root; contractor, J. L. Crichton; cost, $19,887; signed, Feb. 19; filed, Feb. 19; payments, 1st and 15th day of each month 75 per cent as work progresses; balance 35 days.

Carl near Willard. Retaining walls; owners, Metropolitan Railway Co.; architects, Shea & Shea; contractor, D. J. Brennan; cost, $1,368; signed, Feb. 16; filed, Feb. 18; payments, $1,000, brickwork and cementing finished; $188, completed; $307, 35 days.

Carl near Willard. A power house; owners, Metropolitan Railway Co.; architects, Shea & Shea; contractors, Anderson Bros.; cost, $9,100; signed, Feb. 27; filed, Feb. 29; payments, $2,850, brick wall up and rear wooden walls up; $2,000, roof tinned and sash in place; $1,975 completed; $2,275, 35 days.

Chapultepec and Henrietta. To build; owner, Chas. Brusell; contractors, Peterson & Person; bond, $400; cost, $1,182; signed, Feb. 11; filed, Feb. 12; payments, $295, frame up; $295, brown coated; $297, completed; $295, 35 days.

Eddy near Laguna. To build; owner, Jeanette Joel; architects, John & Balczynski; contractor, Wm. Pluns; cost, $4,685; signed, Feb. 12; filed, Feb. 15; payments, $800, frame up; $800, partitions set; $800, white coated; $800, completed; $1,185, 35 days.

Eddy near Scott. Excavating, grading, etc.; owner, Rev. J. F. McGinty; architect, T. J. Welsh; contractor, M. J. Feely; bond, $1,707; cost, $6,827; signed, Feb. 29; filed, March 1; payments, $1,280, frame up; $1,280, brown coated; $1,280, white coated; $1,280, completed; $1,707, 35 days.

Elizabeth near Noe. To build; owner, F. Campbell; contractor, A. Petry; cost, $1,700; signed, Feb. 26; filed, Feb. 28; payments, $425, enclosed; $425, brown coated; $425, accepted; $425, all bills are shown and receipted.

Ellis near Powell. Plumbing and gas-fitting; owner, J. Frowenfeld; architects, Salfield & Kohlberg; contractor, H. Williamson; cost, $1,390; signed, Dec. 18; filed, Feb. 16; payments, $600, rough work in; $500, accepted; $390, 35 days.

Fell near Ashbury. To build; owner, Geo. Lang; contractor, W. H. Lillie; cost, $3,000; signed, Feb. 23; filed, Feb. 26; payments, 1st and 15th day of each month 75 per cent of work done; balance 35 days.

Fifteenth near Guerrero. To build; owner, Mary A. Schmidt; contractors, C. L. & J. A. Buck; cost, $2,585; signed, Feb. 16; filed, Feb. 18; payments, $500, roof on and rough plumbing in; $600, brown coated; $835, completed; $650, 35 days.

Frederick and Masonic Ave. Artificial stone work; owner, M. A. Fritz; architect, A. J. Barnett; contractors, W. R. Patterson & Co.; cost, $1,200; signed, Feb. 20; filed, Feb. 23; payments, $450, sidewalks completed; $450, completed; $300, 35 days.

Fulton, No. 617. Alterations and additions; owner, Cora Cliff; contractors, Gardner & Boyden; cost, $3,650; signed, Feb. 9; filed, Feb. 10; payments, $1,000, ready for plastering; $1,000, white coated; $1,000, ready for painter; $650, completed.

Geary near Franklin. To build; owner, J. A. Miller; architect, A. J. Barnett; contractor, O. E. White; bond, $2,000; cost, $5,000; signed, Feb. 18; filed, Feb. 20; payments, $1,000, roof boards all on; $1,000, brown coated; $750, white coated; $1,000, completed; $1,250, 35 days.

Harrison near Third. Alterations; owner, Leon Levy; contractor, L. A. Secor; cost, $784; signed, Feb. 29; filed, March 3; payments, $150, rear part done and brickwork finished; $250, plaster on; $384, accepted.

Hayes and Buchanan. To build; owner, P. J. Gallagher; architect, N. A. Comstock; contractor, Frank Williams; cost, $5,720; signed, Feb. 15; filed, Feb. 26; payments, $1,430, frame up; $1,430, brown coated; $1,430, completed; $1,430, 35 days.

Hayes near Webster. To build; owner, Henry F. Blanchet, Jr., architect, Emile Depierre; contractor, David Ross; bond, $1,200; cost, $6,540; signed, Feb. 19; filed, Feb. 23; payments, $800, 1st story joists are on; $1,200, roof on and building enclosed; $1,200, standing finish on and glazed; $800, ready to paint; $945, accepted; $1,895, 35 days.

Hyde, No. 812. Carpenter, brickwork and plastering; owner, Mrs. Caroline Stern; architect, Wm. Curlett; contractor, S. Wray; cost, $2,655; signed, Feb. 15; filed, Feb. 27; payments, $691.25, frame up; $400, roof on; $400, brown coated; $400, completed; $803.75, 35 days.

Hyde near California. Alterations and additions; owner, Ellen Littleford; architects, Henriksen & Mahoney; contractor, Geo. Lack; cost, $1,825; signed, Feb. 24; filed, Feb. 26; payments, $1,369, as work progresses; $456, 35 days.

Ivy Ave. near Laguna. To build; owner, J. Boas; architects, Salfield & Kohlberg; contractor, Henry Holzenberg; cost, $3,100; signed, Feb. 9; filed, Feb. 16; payments, $750, frame up; $750, white coated; $800, accepted; $800, 35 days.

Laguna near Green. To build; owner, Jeremiah Donovan; architect, H. D. Mitchell; contractor, Jno. T. Hayes; bond, $1,000; cost, $4,495; signed, Feb. 1; filed, Feb. 5; payments, $850, frame up; $850, enclosed and laths on; $850, white coated; $820, completed; $1,125, 35 days.

Laguna and Greenwich. To build; owners, H. P. Schneider and wife; architect, H. D. Mitchell; contractor, L. B. Schmidt; cost, $9,000; signed, Feb. 8; filed, Feb. 9; payments, $1,500, frame up; $1,500, brown coated; $1,500, completed; $1,500, 35 days.

Lloyd near Scott. To build; owner, Max Wiesenhutter; architects, John & Balczynski; contractors, Schutt & Kreeker; cost, $2,500; signed, Feb. 17; filed, Feb. 17; payments, $800, frame up, building enclosed, roof on and floors laid; $800, white coated; $675, completed; $825, 35 days.

Mission near Main. To build; owners, John Lee & Co.; architect, M. J. Welsh; contractor, Jas. T. Edwards; cost, $7,928; signed, Feb. 16; filed, Feb. 16; payments, $1,400, foundation walls ready for joists; $1,400, walls ready for 2nd floor joists; $1,200, walls ready for roof; $1,000, roof completed; $940, completed; $1,983, 35 days.

Mission and 15th. Store fixtures; owner, Jas. J. Stanton; architect, J. E. Krafft; contractor, Chas. M. Depew; cost, $1,355; signed, Feb. 16; filed, Feb. 17; payments, $800, work set and ready to paint; $255, completed; $400, 35 days.

O'Farrell near Pierce. To build; owner, Henry Geary; contractor, J. J. Matsem; cost, $3,800; signed, Feb. 8; filed, Feb. 24; payments, $1,000, frame up; $900, white coated; $1,900, 35 days.

O'Farrell near Gough. To build; owners, Duschbery and J. Stencel; architect, C. I. Havens; contractor, S. T. Greene; cost, $11,900; signed, Feb. 23; filed, March 2; payments, $2,231, rough frame up and diagonal boarding on; $2,231, brown mortar on and principal part of outside finish on; $2,231, hard finished and outside mill work up; $2,231, completed; $2,976, 35 days.

Pacific near Morrell. To build; owner, E. Micheletti; architect, M. J. Welsh; contractor, Ivory Wells; cost, $4,000; signed, Feb. 18; filed, Feb. 19; payments, $750, frame up; $750, brown coated; $750, completed; $750, 35 days.

Page near Schrader. To build; owner, J. F. Sarber; architect, W. H. Lillie; contractors, Brault & Batcman; bond, $800; cost, $2,300; signed, Feb. 25; filed, Feb. 26; payments, $345, frame up; $345, enclosed; $345, brown coated; $345, standing finish on; $345, completed; $575, 35 days.

Post near Mason. Tinwork, etc.; owner, Olympic Club; architect, H. A. Schulze; contractors, Jos. F. Forderer Cor. Wks.; cost, $9,895; signed, Feb. 17; filed, Feb. 17; payments, 1st day of each month 75 per cent of work done; balance 35 days.

Powell Street Theater. Electric lighting; owners, Denicke & Siebe; architects, Wood & Lovell; contractors, Edison Electric Co.; cost, $2,250; signed, Feb. 18; filed, Feb. 19; payments, $1,087.50, completed; $862.50, 35 days.

Powell Street Theater. Interior work; owners, Denicke & Siebe; architects, Wood & Lovell; contractors, Kellett & McMurray; cost, $1,500; signed, Feb. 10; filed, Feb. 11; payments, 75 per cent as work progresses; balance 35 days.

Sacramento and Montgomery. Passenger elevator; owners, Pacific Mutual Life Ins. Co.; architects, Wright & Sanders; contractors, Cahill & Hall; cost, $8,000; signed, Jan. 24; filed, Feb. 6; payments, 1st day of each month 75 per cent of work done; balance 35 days.

Sacramento near Drumm. Alterations and additions; owners, Hirschler & Co.; architect, W. H. Armitage; contractor, J. R. Whalen; cost, $2,950, signed, Feb. 25; filed, March 2; payments, 15th and 30th day of each month 75 per cent of work done; balance 35 days.

Sacramento and Powell. Grading and brickwork; owner, J. T. M. Kelly; architect, W. H. Armitage; contractors, Martin Fennell & Son; cost, $1,248; signed, Feb. 17; filed, Feb. 20; payments, $600, walls ready for plates; $329, chimneys completed; $320, 35 days.

Sacramento and Powell. Moving etc.; owner, J. T. M. Kelly; architect, W. H. Armitage; contractor, J. J. Dunn; cost, $15,769; signed, Feb. 17; filed, Feb. 23; payments, 1st day of each month 75 per cent work done; balance 35 days.

Sutter bet. Steiner and Fillmore. To build; owner, M. S. Price; architect, H. C. Macy; contractor, P. G. Martin; bond, $300; cost, $1,960; signed, Feb. 8; filed, Feb. 10; payments, $1,470, as work progresses; $490, 35 days.

Texas near Solano. To build; owner, Hannah Roberts; architect, W. C. Dickerson; contractor, T. Bishop; cost, $2,250; signed, Feb. 23; filed, Feb. 23; payments, $450, side walls of frame up; $550, enclosed and roof tinned; $800, completed; $850, 35 days.

Twelfth near Howard. Iron work of engine house, etc.; owners, E. P. White & Co.; architect, J. E. Krafft; contractors, Joshua Hendy Machine Works; bond, $2,500; cost, $4,511; signed, Feb. 11; filed, Feb. 11; payments, 75 per cent on 1st day of each month; balance 35 days.

Twelfth near Howard. Laundry and engine house; owners, E. P. White & Co.; architect, Julius E. Krafft; contractor, Thos. M. McLachlan; bond, $7,000; cost, $11,560; signed, Feb. 10; filed, Feb. 11; payments, 75 per cent of work done 1st day of each month; balance 35 days.

Utah near Yolo. To build; owner, Patrick Barrett; contractor, T. F. Mitchell; cost, $1,100; signed, Feb. 29; filed, Feb. 29; payments, $275, frame up; $275, brown coated; $275, completed; $275, 35 days.

Walnut, bet. Sacramento and Clay. Brickwork; owners, L. M. Weismann; et al.; contractor, Fred Wagner; cost, $1,280; signed, Feb. 17; filed, Feb. 19; payments, $200, all foundations in; $600, brown coated; $480, 60 days.

Washington near Baker. To build; owner, H. H. Lowenthal; architect, Edward Burns; contractor, L. B. Schmidt; bond, $3,000; cost, $4,500; signed, Feb. 17; filed, Feb. 18; payments, $1,000, enclosed, rustic on and roof on; $1,000, brown coated; $1,150, completed; $1,350, 35 days.

Webster and Bay. To build; owner, E. J. Wilkinson; architect, C. M. Rousseau; contractor, Andrew Christensen; cost, $5,700; signed, Feb. 23; filed, Feb. 24; payments, $1,425, roof on; $1,425, brown coated; $1,425, accepted; $1,425, 35 days.

ALAMEDA COUNTY.

Boardman's map of Oakland. Additions, alterations, etc.; owner, Oakland Preserving Co.; architect, Chas. Mau; contractor, G. S. Johnson; cost, $1,600; signed, Feb. 25; filed, Feb. 27; payments, $400, ½ material furnished and ¼ work completed; $400, ½ furnished and ½ completed; $400, completed; $400, 35 days.

Central and Alameda Ave., Alameda. To build; owner, F. B. Haight; architects, J. C. and E. A. Mathews; contractors, D. Straub & Son; cost, $4,264.50; signed, Feb. 4; filed, Feb. 9; payments, $800, frame up and ready for enclosing; $800, enclosed and chimneys built; $800, brown mortar on and gas, water and heating pipes are in; $796.50, completed; $1,065, 35 days.

College Hd., Lot 8, Berkeley. To build; owner, Jas. S. McShane; contractor, Thos. H. Gilbert; cost, $5,750; signed, Feb. 23; filed, Feb. 24; payments, $837, frames up and rustic and shingles on; $837, brown mortar on; $837, completed; $839, 35 days.

Encinal, near Ala. To build; owners, Brucker & Bansbach; architect, T. G. Cary; contractors, Marcuse & Remmel; cost, $2,600; signed, Jan. 23; filed, Feb. 10; payments, $650, frame up; $650, brown mortar on; $650, completed; $650, 35 days.

First and Lizzie Street, Alameda. To build; owner, Norman McLeod; architect, H. Meyers; contractor, Wm. Sanderson; cost, $1,969; signed, Feb. 10; filed, Feb. 11; payments, $400, frame up and roof sheathed; $800, building enclosed and mortar on; $800, completed; $969, 35 days.

Fountain near Lincoln Ave., Alameda. To build; owner, Mrs. Jennie Shannon architect, M. Stenhint; contractors, Marcuse & Remmel; cost, $1,375; signed, Feb. 27; filed, Feb. 29; payments, $343.75, frame up; $343.75, brown mortar on; $343.75, completed; $343.75, 35 days.

Fulton near Kittridge, Berkeley. To build; owner, Levi Booth; contractor, Geo. A. Embury; cost, $2,600; signed, Feb. 9; filed, Feb. 10; payments, $650, frame up; $650, building enclosed and brown mortar on; $650, completed; $650, 35 days.

Kings Ave. near Patterson, Ala. To build; owner, A. D. McMorran; contractor, H. Scholten; cost, $1,600; signed, Feb. 23; filed, Feb. 23; payments, $400, frame up and enclosed; $400, brown mortar; $400, completed; $400, 35 days.

Market St. Tract, Oakland. To build; owner, Stephen Zerga; architect, S. Edgar Fisher; contractor, Joseph Mennerman; cost, $1,875; signed, March 1; filed, March 1; payments, $468.75, ¼ when frame is up; $468.75, brown mortar on and chimneys in; $468.75, ¼ completed; $468.75, 35 days.

Ninth near Broadway, Oakland. Brickwork, etc.; owner, S. Huff; architects, Salfield & Kohlberg; contractors, Merrill Brick Co.; cost, $4,600; signed, Feb. 13; filed, Feb. 23; payments, 75 per cent as work progresses, 25 per cent 35 days.

Ninth near Broadway, Oakland. Carpenter work, glazing, etc.; owner, S. Huff; architects, Salfield & Kohlberg; contractors, McDonald & Eggleston; cost, $4,100; signed, Feb. 19; filed, Feb. 23; payments, $1,500, partitions set; $825, completed; $750, completed; $1,025, 35 days.

Ninth near Broadway, Oakland. Cast and wrought iron work; owner, S. Huff; architects, Salfield & Kohlberg; contractors, Bigelow & Little; cost, $2,331; signed, Feb. 13; filed, Feb. 23; payments, 75 per cent as work progresses until accepted, 25 per cent 35 days after acceptance of building.

Ninth near Broadway, Oakland. Gas-fitting, plumbing, etc.; owner, S. Huff; architects, Salfield & Kohlberg; contractor, Henry Saudern; cost, $1,00; signed, Feb. 23; filed, Feb. 23; payments, $370, rough work done; $370, work accepted; $260, 35 days.

Ninth near Broadway, Oakland. Iron Work, etc.; owner, S. Huff; architects, Salfield & Kohlberg; contractor, Wm. Cronan; cost, $800; signed, Feb. 23; filed, Feb. 23; payments, 75 per cent as work progresses and 25 per cent 35 days.

Ninth near Broadway, Oakland. All plastering; owner, S. Huff; architects, Salfield & Kohlberg; contractor, D. S. McNamara; cost, $873; signed, Feb. 24; filed, Feb. 26; payments, $400, brown coat plaster on; $253, completed, $220, 35 days.

Oakland Por lots 10 & 11. To build; owner, W. L. Archard; architect, C. M. Wange; contractor, H. J. Specht, cost, $861; signed, Feb. 9; filed, Feb. 11; payments, as work progresses.

Pacific Ave. and Paru, Alameda. To build; owner, Alvan Roundy; architect, Chas. Shuner; contractor, J. H. Young; cost, $3,380; signed, Feb. 24; filed, Feb. 25; payments, $1,000, frame up; $800, enclosed; $740, plastering on and windows in; $850, 35 days.

Peralta Ave. near Belmont, Brooklyn. To build; owner, Harry W. Davis; architects, J. C. Mathews & Son; contractors, McDonald & Eggleston; cost, $1,482; signed, Feb. 23; filed, Feb. 25; payments, $150, frame up and ready for enclosing; $450, enclosed and one coat plaster on; $511.50, completed; $370.50, 35 days.

Peralta Park. To build; owner, Mrs. J. E. Hocking; architect, R. Gray Frise; contractors, Ashley & Dornell; cost, $6,913; signed, Feb. 10; filed, Feb. 11; payments, $978.40, foundations laid, framing up and buildings enclosed, except roof; $978.40, roof on, rough plumbing done and 1st coat plaster on; $978.40, plastering finished, windows put in and hung; $978.40, 35 days.

Roberts and Wolfskill Tr., O. T. To build; owner, J. W. O'Donnell; architect, O. Everett; contractors, Brehaut & Diamond; cost, $2,350; signed, Feb. 18; filed, Feb. 19; payments, $587.50, rustic on, building and roof sheathed; $587.50, brown mortar on; $587.50, completed; $587.50, 35 days.

Sixteenth near Jefferson, Oakland. To build; owner, Aaron Jacobs; architect, E. C. McManus; contractor, J. C. Bassett; cost, $3,500; signed, Feb. 18; filed, Feb. 23; payments, 1st and 15th of each month 75 per cent of value of work done and materials furnished; 25 per cent 35 days.

Twenty-second and New Broadway. To build; owner, Max Greenhood; architects, J. C. Mathews & Son; contractor, F. C. Bignami; cost, $9,086; signed, Feb. 25; filed, Feb. 26; payments, $1,200, brick walls of basement are completed; $1,000, frame up and ready for enclosing; $1,500, enclosed, gas and water pipes in place and chimneys built; $1,500, brown mortar on and outside painted one coat; $1,589.50, completed; $2,271.50, 35 days.

GAS is rapidly supplanting coal for cooking, heating and general or special household use. The present demand for conveniences for housekeeping can only be met by the substitution of gas for other fuel. It seems somewhat anomalous that in many cases the much vaunted electric light is made applicable by the use of gas which runs a gas engine, which in turn runs a dynamo for inducing the electric fluid forming the electric light. The field for its use is widening, and the consumption of gas is continually increasing to such an extent as to lead to the conclusion that gas is destined to become the fuel of the future.

When gas became a necessity for lighting purposes, it was the usual custom for the house owner to put in the tubing, leaving for the tenant the furnishing of the fixtures, such as chandeliers, etc. At the present time, it is expected by the tenant that the owner will provide the gaslight fixtures.

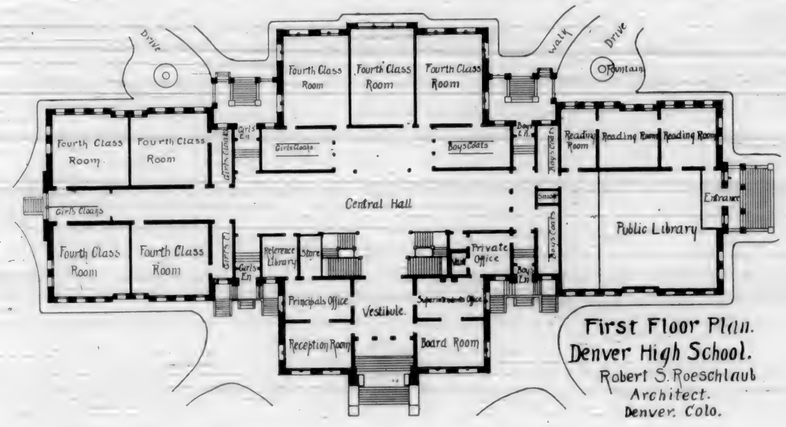
In the cooking department, the tenant furnishes the movable stoves, but the owner provides ranges, when set in brick work. The owner puts in all the apparatus where hot air, water or steam is used for heating, also grates for burning wood or coal in open fire places. In some of the larger cities it has become the custom for the owner to provide all the cooking and heating appliances for gas fully connected and ready for the use of the tenant by turning on the gas. The Mecca Flats, recently built in Chicago, comprising a block of ninety flats, each of which has a gas cooking range, gas water heater, and gas clothes drier furnished and fitted up complete ready for the tenant. Another block of one hundred and thirty four flats, each flat has a gas cooking range and all requisite heater generators provided by the owner.

Architects during the last few years have given much attention to the various systems of cooking and heating, and the appliances which would produce the most satisfactory results as to economy and comfort. In all household heating, one main feature to be gained is cheerfulness. A home without cheerfulness seems prevaded by the atmosphere of the tomb. "The fire on the hearth" enlivens everything in the apartment; care is driven away and contentment reigns over the home. The most feasible way to obtain this desirable condition seems to be the open gas fire grate, it is cleanly to use and always thoroughly under control by the turn of the finger.

IT is frequently a source of annoyance to be unable to find the names of streets on the lamps at street corners. In time the letters become so far effaced as to be illegible, while in others the lamp has been turned partially around, thereby indicating a wrong direction.

Where concrete sidewalks are laid, we would suggest that the names of the streets should be formed in bold letters stamped in the material while in a plastic condition. By this method the objections to the present system would be removed.

WE are indebted to *Books*, the bulletin of the Public Library, Denver, Col., for the accompanying plan of the East Denver High School and Public Library. Mr. Robert S. Roeschlaub, the architect, has designed a number of public schools for Denver. The building is 208x147 feet, and is intended to accommodate 700 pupils.



IN some localities there are times when the torrid heat becomes almost unbearable, verandas are inadequate and even the interior rooms are a delusion. At such times the enemy may be subdued by hanging a wet blanket or cloth in an open window or door, when the apartment will become delightfully cool and agreeable. The more rapid the evaporation from the cloth, the cooler the apartment; consequently, the blanket should face the air current, or at the most heated part.

Many ways will suggest themselves for this arrangement. If a portion of the open space of a veranda should be fitted with an awning of woolen cloth so arranged that it may be wet with a sprinkler or a small water pipe or trough at the top, provided with fine holes, through which water may trickle in sufficient quantity to keep the blanket damp, a surprisingly cool retreat may be thus formed during the most heated term.

For cooling a room the common outside screen door may be covered with woolen cloth which when wet will reduce the excessive heat.

WE invite the attention of Students of Architecture to the chapter on *The Art of Planning*, by MR. I. MACVICAR ANDERSON, President of the Royal Institute of British Architects, and published in the Journal of Proceeding of that Society, and reprinted in the March number of the CALIFORNIA ARCHITECT AND BUILDING NEWS. We believe it to be of great value in educating the younger and inexperienced members to the true value of such work. It is the man who studies and understands the importance of the advantages to be obtained by the adoption of careful planning, who will in the future take the lead in the profession.

NO trade or profession gives a man more scope for the exercise of his best faculties than Architecture.

THE SUBLIME AND BEAUTIFUL.

By Edmund Burke.

(Published about 1753.)

CHAPTER ON TASTE.

ON a superficial view, we may seem to differ very widely from each other in our reasonings, and no less in our pleasures: but notwithstanding this difference, which I think to be rather apparent than real, it is probable that the standard both of reason and taste is the same in all human creatures. For if there were not some principles of judgment as well as of sentiment common to all mankind, no hold could possibly be taken either on their reason or their passions sufficient to maintain the ordinary correspondence of life. It appears indeed to be generally acknowledged, that with regard to truth and falsehood there is something fixed. We find people in their disputes continually appealing to certain tests and standards, which are allowed on all sides, and are supposed to be established in our common nature. But there is not the same obvious concurrence in any uniform or settled principles which relate to taste. It is even commonly supposed that this delicate and aerial faculty, which seems too volatile to endure even the chains of a definition, cannot be properly tried by any test, nor regulated by any standard. There is so continual a call for the exercise of the reasoning faculty, and it is so much strengthened by perpetual contention, that certain maxims of right reason seem to be tacitly settled amongst the most ignorant. The learned have improved on this rude science, and reduced those maxims into a system. If taste has not been so happily cultivated, it was not that the subject was barren, but that the laborers were few or negligent; for, to say the truth, there are not the same interesting motives to impel us to fix the one, which urge us to ascertain the other. And, after all, if men differ in their opinion concerning such matters, their difference is not attended with the same important consequences; else I make no doubt but that the logic of taste, if I may be allowed the expression, might very possibly be as well digested, and we might come to discuss matters of this nature with as much certainty, as those which seem more immediately within the province of mere reason. And indeed, it is very necessary, at the entrance into such an inquiry as our present, to make this point as clear as possible; for if taste has no fixed principles, if the imagination is not affected according to some invariable and certain laws, our labor is likely to be employed to very little purpose; as it must be judged a useless, if not an absurd undertaking, to lay down rules for caprice, and to set up a legislature for whims and fancies.

The term taste, like all other figurative terms, is not extremely accurate; the thing which we understand by it is far from a simple and determinate idea in the minds of most men, and it is therefore liable to uncertainty and confusion. I have no great opinion of a definition, the celebrated remedy for the cure of this disorder. For, when we define, we seem in danger of circumscribing nature within the bounds of our own notions, which we often take up by hazard, or embrace on trust, or form out of a limited and partial consideration of the object before us; instead of extending our ideas to take in all that nature comprehends, according to her manner of combining, we are limited in our inquiry by the strict laws to which we have submitted at our setting out.

A definition may be very exact, and yet go but a very little way towards informing us of the nature of the thing defined; but let the virtue of a definition be what it will, in the order of things, it seems rather to follow than to precede our inquiry, of which it ought to be considered as the result. It must be acknowledged, that the methods of disquisition and teaching may be sometimes different, and on very good reason undoubtedly; but, for my part, I am convinced that the method of teaching which approaches most nearly to the method of investigation is incomparably the best; since, not content with serving up a few barren and lifeless truths, it leads to the stock on which they grew; it tends to set the reader himself in the track of invention, and to direct him into those paths in which the author has made his own discoveries, if he should be so happy as to have made any that are valuable.

But to cut off all pretence for cavilling, I mean by the word Taste no more than that faculty or those faculties of the mind, which are affected with, or which form a judgment of, the works of imagination and the elegant arts. This is, I think, the most general idea of that word, and what is the least connected with any particular theory. And my point in this inquiry is, to find whether there are any principles, on which the imagination is affected, so common to all, so grounded and certain, as to supply the means of reasoning satisfactorily about them. And such principles of taste I fancy there are; however paradoxical it may seem to those who on a superficial view imagine that there is so great a diversity of tastes, both in kind and degree, that nothing can be more indeterminate.

All the natural powers in man, which I know, that are conversant about external objects, are the senses, the imagination, and the judgment. And first with regard to the senses. We do and we must suppose, that as the conformation of their organs are nearly or altogether the same in all men, so the manner of perceiving external objects is in all men the same, or with little difference. We are satisfied that what appears to be light to one eye, appears light to another; that what seems sweet to one palate, is sweet to another; that what is dark and bitter to this man, is likewise dark and bitter to that; and we conclude in the same manner of great and little, hard and soft, hot and cold, rough and smooth, and indeed of all the natural qualities and affections of bodies. If we suffer ourselves to imagine, that their senses present to different men different images of things, this sceptical proceeding will make every sort of reasoning on every subject vain and frivolous, even that sceptical reasoning itself which had persuaded up to entertain a doubt concerning the agreement of our preceptions. But as there will be little doubt that bodies present similar images to the whole species, it must necessarily be allowed, that the pleasures and the pains which every object excites in one man, it must raise in all mankind, whilst it operates naturally, simply, and by its proper powers only; for if we deny this, we must imagine that the same cause, operating in the same manner, and on subjects of the same kind, will produce different effects; which would be highly absurd. Let us first consider this point in the sense of taste, and the rather, as the faculty in question has taken its name from that sense. All men are agreed to call vinegar sour, honey sweet and aloes bitter; and as they are all agreed in finding these qualities in those objects, they do not in the least differ concerning their effects with regard to pleasure and pain. They all concur in calling sweetness pleasant, and sourness and bitterness unpleasant. Here there is no diversity in their sentiments; and that there is not, appears fully from the consent of all men in the metaphors which are taken from the sense of taste. A sour temper, bitter expressions, bitter curses, a bitter fate, are terms well and strongly understood by all. And we are altogether as well understood when we say, a sweet disposition, a sweet person, a sweet condition, and the like. It is confessed, that custom and some other causes have made many deviations from the natural pleasures or pains which belong to these several tastes: but then the power of distinguishing between the natural and the acquired relish remains to the very last. A man frequently comes to prefer the taste of tobacco to that of sugar, and the flavor of vinegar to that of milk; but this makes no confusion in tastes, whilst he is sensible that the tobacco and vinegar are not sweet, and whilst he knows that habit alone has reconciled his palate to these alien pleasures. Even with such a person we may speak, and with sufficient precision, concerning tastes. But should any man be found who declares, that to him tobacco has a taste like sugar, and that he cannot distinguish between milk and vinegar; or that tobacco and vinegar are sweet, milk bitter and sugar sour; we immediately conclude that the organs of this man are out of order, and that his palate is utterly vitiated. We are as far from conferring with such a person upon tastes, as from reasoning concerning the relations of quantity with one who should deny that all the parts together were equal to the whole. We do not call a man of this kind wrong in his notions, but absolutely mad. Exceptions of this sort, in either way, do not at all impeach our general rule, nor make us conclude that men have various principles concerning the relations of quantity or the taste of things. So that when it is said taste cannot be disputed, it can only mean, that no one can strictly answer what pleasure or pain some particular man may find from the taste of some particular thing. This indeed cannot be disputed; but we may dispute, and with sufficient clearness too, concerning the things which are naturally pleasing or disagreeable to the sense. But when we talk of any peculiar or acquired relish, then we must know the habits, the prejudices, or the distempers of this particular man, and we must draw our conclusion from those.

This agreement of mankind is not confined to the taste solely. The principle of pleasure derived from sight is the same in all. Light is more pleasing than darkness. Summer, when the earth is clad in green, when the heavens are serene and bright, is more agreeable than winter, when everything makes a different appearance. I never remember that anything beautiful, whether a man, a beast, a bird, or a plant, was ever shown, though it were to a hundred people, that they did not all immediately agree that it was beautiful, though some might have thought that it fell short of their expectation, or that other things were still finer. I believe

no man thinks a goose to be more beautiful than a swan, or imagines that what they call a Friezland hen excels a peacock. It must be observed too, that the pleasures of the sight are not near so complicated and confused, and altered by unnatural habits and associations, as the pleasures of the taste are; because the pleasures of the sight more commonly acquiesce in themselves; and are not so often altered by considerations which are independent of the sight itself. But things do not spontaneously present themselves to the palate as they do to the sight; they are generally applied to it, either as food or as medicine; and, from the qualities which they possess for nutritive or medicinal purposes, they often form the palate by degrees, and by force of these associations. Thus opium is pleasing to Turks, on account of the agreeable delirium it produces. Tobacco is the delight of Dutchmen, as it diffuses a torpor and pleasing stupefaction. Fermented spirits please our common people, because they banish care, and all consideration of future or present evils. All of these would lie absolutely neglected if their properties had originally gone no further than the taste; but all these, together with tea and coffee and some other things, have passed from the apothecary's shop to our tables, and were taken for health long before they were thought of for pleasure. The effect of the drug has made us use it frequently; and frequent use, combined with the agreeable effect, has made the taste itself at last agreeable. But this does not in the least perplex our reasoning; because we distinguish to the last the acquired from the natural relish. In describing the taste of an unknown fruit, you would scarcely say that it had a sweet and pleasant flavor like tobacco, opium, or garlic, although you spoke to those who were in the constant use of these drugs, and had great pleasure in them. There is in all men a sufficient remembrance of the original natural causes of pleasure, to enable them to bring all things offered to their senses to that standard, and to regulate their feelings and opinions by it. Suppose one who had so vitiated his palate as to take more pleasure in the taste of opium than in that of butter or honey, to be presented with a bolus of squills; there is hardly any doubt but that he would prefer the butter or honey to this nauseous morsel, or to any other bitter drug to which he had not been accustomed; which proves that his palate was naturally like that of other men in all things, that it is still like the palate of other men in many things, and only vitiated in some particular points. For in judging of any new thing, even of a taste similar to that which he has been formed by habit to like, he finds his palate affected in a natural manner, and on the common principles. Thus the pleasure of all the senses, of the sight, and even of the taste, that most ambiguous of the senses, is the same in all, high and low, learned and unlearned.

Besides the ideas, with their annexed pains and pleasures, which are presented by the sense; the mind of man possesses a sort of creative power of its own; either in representing at pleasure the images of things in the order and manner in which they were received by the senses, or in combining those images in a new manner, and according to a different order. This power is called imagination; and to this belongs whatever is called wit, fancy, invention and the like. But it must be observed, that this power of the imagination is incapable of producing anything absolutely new; it can only vary the disposition of those ideas which it has received from the senses. Now, the imagination is the most extensive province of pleasure and pain, as it is the region of our fears and our hopes, and of all our passions that are connected with them; and whatever is calculated to affect the imagination with these commanding ideas, by force of any original natural impression, must have the same power pretty equally over all men. For since the imagination is only the representation of the senses, it can only be pleased or displeased with the images, from the same principle on which the sense is pleased or displeased with the realities; and consequently there must be just as close an agreement in the imaginations as in the senses of men. A little attention will convince us that this must of necessity be the case.

But in the imagination, besides the pain or pleasure arising from the properties of the natural object, a pleasure is perceived from the resemblance which the imitation has to the original: the imagination, I conceive, can have no pleasure but what results from one or other of these causes. And these causes operate pretty uniformly upon all men, because they operate by principles in nature, and which are not derived from any particular habits or advantages. Mr. Locke very justly and finely observes of wit, that it is chiefly conversant in tracing resemblances; he remarks, at the same time, that the business of judgment is rather in finding differences. It may perhaps appear, on this supposition, that there is no material distinction between the wit and the judgment, as they both seem to result from different operations of the same faculty of *comparing*. But in reality, whether they are or are not dependent on the same power of the mind, they differ so very materially in many respects, that a perfect union of wit and judgment is one of the rarest things in the world. When two distinct objects are unlike to each other, it is only what we expect; things are in their common way; and therefore they make no impression on the imagination: but when two distinct objects have a resemblance, we are struck, we attend to them, and we are pleased. The mind of man has naturally a far greater alacrity and satisfaction in tracing resemblances than in searching for differences: because by making resemblances we produce *new images;* we unite, we create, we enlarge our stock; but in making distinctions we offer no food at all to the imagination; the task itself is more severe and irksome, and what pleasure we derive from it is something of a negative and indirect nature. A piece of news is told me in the morning; this, merely as a piece of news, as a fact added to my stock, gives me some pleasure. In the evening I find there was nothing in it. What do I gain by this, but the dissatisfaction to find that I have been imposed upon? Hence it is that men are much more naturally inclined to belief than to incredulity. And it is upon this principle, that the most ignorant and barbarous nations have frequently excelled in similitudes, comparisons, metaphors, and allegories, who have been weak and backward in distinguishing and sorting their ideas. And it is for a reason of this kind, that Homer and the Oriental writers, though very fond of similitudes, and though they often strike out such as are truly admirable, seldom take care to have them exact; that is, they are taken with the general resemblance, they paint it strongly, and they take no notice of the difference which may be found between the things compared.

(To be Continued.)

PUBLIC BUILDINGS BILL.

Under the provisions of the bill passed by the Senate, and now pending before the House Committee on Public Buildings, the following named California towns will get public buildings: Alameda, Auburn, Bakersfield, Berkeley, Chico, Colusa, Eureka, Fresno, Gilroy, Grass Valley, Hanford, Healdsburg, Hollister, Los Angeles, Los Gatos, Marysville, Merced, Modesto, Monterey, Napa, Nevada City, Oakland, Oroville, Pasadena, Petaluma, Placerville, Pomona, Red Bluff, Redding, Riverside, Sacramento, St. Helena, Salinas, San Bernardino, San Diego, San Jose, San Luis Obispo, San Rafael, Santa Ana, Santa Barbara, Santa Clara, Santa Cruz, Santa Rosa, Selma, Stockton, Tulare, Ukiah and Vallejo.—*Sacramento Weekly Union.*

MYTHOLOGY.

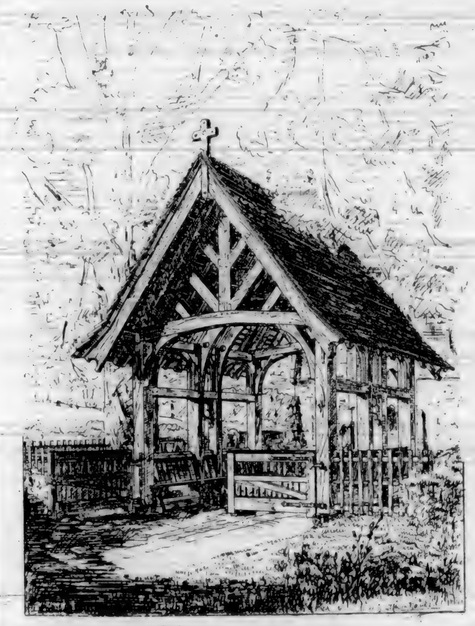
ALCYONE or HALCYONE, daughter of Æolus, married Ceyx, who was drowned as he was going to Claros to consult the oracle. The gods appraised Alcyone in a dream of her husband's fate; and when she found on the morrow, his body washed on the sea-shore, she threw herself into the sea, and was with her husband changed into birds of the same name, who keep the waters calm and serene, while they build and sit on their nests on the surface of the sea, for the space of 7, 11, or 14 days.

RURAL NOTES.

THE Swiss style is eminently adapted to the hill-side cottage architecture in many of our towns, especially those on rolling ground. The style being based upon wood as the constructive material brings it in accordance, more than any other, with our own staple building material.

The charming picturesque effect of its projecting roof with its bold carved brackets, gives a marked expression to the landscape, protecting the walls during the inclement seasons and shading them during the more heated portion of the day.

A style so well adapted for tasteful homes should receive more attention from the designers of rural homes.



ORNAMENTAL GATE-WAY.

WE herewith present a design for a covered gate-way which would form a picturesque effect as an entrance to gardens, parks or private premises.

THE increased mileage of our railways means the contracting of space and lessening of distance between settlements, which tends to the growth of villages, towns and cities with a rapidity hitherto unknown.

The demand for practical skill in construction, and artistic ability in designing is the necessary consequence.

The diversity and peculiarities of our climate requires special modified features in planning, thus giving to the architect a wide range in the various styles which may be adapted to the locality.

The Photographic Times,

Of March 11th, contains an article on "Development Printing on Prepared Paper". *The Photographic Times*, N. Y., is an illustrated weekly publication, each issue of which contains, in addition to the regular articles, many notes of practical value to the Architect or other person who may wish to finish his own pictures.

The Electrical Review,

New York, has published a Decennial Number, showing ten years of Electrical Progress. The leading article is a review of the Journal as it advanced side by side with the development of electrical science, and today as formally, is recognized as one of the leading papers in that line. The article taken as a whole is a complete history of the practical application of electricity to mechanical power, lighting and the various other uses in the industries of the age. The engravings show many modern electrical plants which contrast strangely with those of the previous ten years.

The Brickbuilder

Is a monthly Journal, published by the *Brickbuilder Publishing Co.*, 4 Liberty Square, Boston.

This is a new publication devoted to the interests of brick architecture. We have publications, already in the field, treating of the manufacture and marketing of brick, but the *Brickbuilder* deals with the finished product as used in the construction of buildings. The subjects have been well selected for the illustrations of the number before us. We wish it success, yet as architecture deals with so many different forms of manufactured articles, we see no real need for a special publication on the architectural features only, for any one particular article.

The Lancet, Clinic.

A weekly Journal of Medicine and Surgery. Published at Cincinnati, Ohio. Aside from the members of the Medical Profession, this paper has many articles of interest to Architects and Sanitarians who wish to keep informed in regard to the discoveries made from time to time in that science.

Fashion and Fancy.

Published monthly at New York, and is devoted to the fashions in costumes, household furnishing and decorating, and each number contains many notes of value to the artist or housekeeper who desires to make home pleasant for both old and young.

The FORTNIGHTLY REVIEW for March, has a chapter on the "Dissipation of Energy," by Kelvin; also one on the "Dangers of Modern Finance" by Samuel Montagu.

LIPPINCOTT'S MAGAZINE for April, has an article on "Walking" by Julian Hawthorn.

The COSMOPOLITAN for April, contains an illustrated article on "Homes of the Renaissance" by Wallace Wood.

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

RESIDENCE AT ROSS VALLEY.

The residence illustrated is for Wm. Barber, Esq., an attorney of this city. It is situated in Ross Valley and is being built to rent during the summer months. A deep veranda extends along three sides, and the halls and rooms are spacious and arranged for comfort and convenience.

The design is by Maxwell G. Bugbee, architect.

YOLO COUNTY HOSPITAL, WOODLAND.

Four designs were submitted for this hospital; the design illustrated, by Messrs. Gilbert & Son, architects of Woodland, being selected as the most suitable for erection.

The building has a frontage of 165 feet, by a depth of 110 feet. The foundation walls are six feet in height which secures ample air space. The front shows a central building of two stories in height, designed for the warden and attendants, physician's office, dispensary, library and reading room.

The main building is arranged for two large wards and smaller rooms for special cases. A wide veranda extends along the whole front, connecting with open corridors around each ward, thereby separating the toilet rooms, dining room, etc., from them. There are two turrets at either end of the front; one is finished for the accommodation of insane patients, and the other for the nurse. The dining room and kitchen are located at the rear. The air space under the floor and over the ceiling affords a free circulation of pure air for ventilation. The heating is by the hot water system. The doors of the wards and rooms are made wide to permit the moving of the cots with the patients.

The cost of the building will be about $12,000.

THE MACDONOUGH THEATER, OAKLAND.

The grand main entrance to the theater will be on the Fourteenth street side of the building, seventy feet from Broadway. It will be twenty-five feet wide and thirty feet long. The entrance is larger than any theater in San Francisco except the Grand Opera House.

The floor will be of mosaic tiling, and the walls of the entrance will be finely frescoed. The ceiling will be dome shape, decorated in elegant style. So large will be the entrance that crowding at all times will be avoided. To the left of the main entrance is the balcony exit, and to the right is the gallery entrance.

The entrance to the *foyer* and the box office will be in unison with the other parts of the theater. The doors leading to the *foyer* will be made of carved oak and art glass.

The *foyer* will be one of the charming features of the new theater. It will be fourteen feet wide and seventy feet long. The staircase leading to the balcony is in the center of the *foyer*. It will be elegant in every respect, the prevailing wood being polished oak. The floor of the *foyer* will be richly carpeted. Between the *foyer* and theater will be arranged arcades the whole width of the theater, so that one standing in the *foyer* can view the stage. The ceiling over the *foyer* will be diamond shaped and handsomely decorated in white and gold. The entire woodwork in this section will be of white oak.

At the extreme end of the *foyer* is the ladies' parlor.

Near the staircase on the right of the *foyer* is an exit eight feet wide leading to the Broadway entrance of the theater.

The balcony is reached by way of the grand staircase. The *foyer* here is the same size as on the main floor, with ladies' reception rooms. The arrangements, so far as exits are concerned, are ample.

The ground floor of the auditorium will be 70 feet wide and 90 feet long and will have a seating capacity of 576, exclusive of the boxes.

Special attention has been given to the stage details. The proscenium opening will be circular headed, thirty-six feet in height and thirty-three feet six inches wide. The stage will be equipped in a manner unequaled by any theater west of Chicago.

The contracts call for the lighting of the theater by both gas and electricity. The electricity will be furnished from a special dynamo. In the entire theater there will be 2080 electric lights.

WORLD'S FAIR NOTES.

The enormous steel trusses to sustain the roof of the Manufactures Building are about to be erected. These trusses are the largest ever made for architectural purposes. They span 368 feet and rise to a height of 211 feet. The contract for them calls for about $460,000.

An Esquimaux village, inhabited by from 50 to 75 natives of the frozen regions, will be one of the sights on Midway Plaisance at the Exposition.

A Choral Hall, 160x260 feet, will be erected near the Horticultural Building. There Professor Tomlins, with 2,000 trained voices, will furnish rare choral music during the Exposition. The Welsh International Eisteddfod will occupy the building for a week.

Instead of a reproduction of an Aztec temple, Mexico will construct a typical hacienda, or residence of a wealthy landed proprietor. This will be decorated in lavish manner with Mexican fruits and flowers and archæological and ethnological specimens. The Mexican exhibit will illustrate the present condition and resources and products of the country rather than its past history.

Jackson Park will retain as one of its permanent attractions the building which Japan will erect for its head-quarters at the Exposition. The building will be modeled after one of the most famous and architecturally unique of Japan's ancient temples, and with its surrounding garden will cost $70,000. About 40,000 square feet will be occupied. The South Park commissioners have accepted the offer of S. Tegima, representative of the Mikado, to give the structure to Chicago on condition that it be kept permanent and in repair, and that one room in it be devoted to a public exhibit of Japanese works of art, which the Japanese government agrees to replenish from time to time.

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE ARCHITECTS, meets second Friday of each month at 408 California street.

GEO. H. SANDERS, Pres. — OLIVER EVERETT, Vice-Pres.
H. T. BESTOR, Sec. — JOHN M. CURTIS, Tres.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. — L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. — GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evening of each month at the Academy of Sciences Building.

GEO. P. LOW, Pres. — C. O. POOLE, Vice-Pres.
W. I. CROSETT, Sec. — O. BROOKS, Treas.

MASTERS PAINTERS' ASSOCIATION OF THE PACIFIC COAST.

E. M. GALLAGHER, Pres. — H. G. JARMAN, Sec.

CLASSES OF INSTRUCTION UNDER THE AUSPICES OF THE SAN FRANCISCO CHAPTER OF THE AMERICAN INSTITUTE OF ARCHITECTS.

AT the January meeting the report of the Committee, after noting the honorable mentions for single competitions, contained the following:

"There are several other students of whom I feel it only right to make special mention. First, Mr. Samuel Benson who received first mention for six out of eight 1st honorable mentions in the competitions for 1890. This student was always distinguished for the delicacy, beauty and artistic quality of whatever work he undertook, and I beg to suggest that for such abilities as his, some adequate recognition is due by the Chapter, and I would propose that upon the attainment of the majority of first mentions for general work for any one year, the Honorable degree of Draughtsman, together with the Chapter's medal, to be conferred by the President for the time being on the successful candidate for that year, and the degree alone for the students attaining the second largest number of 1st mentions.

"The next student who distinguished himself by the greatest number of first and second mentions, both in competitions and flat studies, was Mr. Van Vlack; commencing with a good second he succeeded in vanquishing his chief opponent for the final competition of the year, viz: the best pen and ink rendering of a photograph. This was quite a difficult subject, and the difference between the subjects chosen by Mr. Van Vlack, (a carved capital) and Mr. Benson, (the North Entrance to Chartres Cathedral) who came in second, was so great and the work so nearly equal in execution respectively, that it was a matter of delicate judgment to decide between them. A slight lack of effect in general shading, however, in Mr. Benson's drawing, determined the committee to decide in favor of Mr. Van Vlack. Both these gentlemen it would seem were therefore entitled to the degree above suggested with the added distinction of a medal to Mr. Benson as the winner of the greatest number of 1st mentions.

"Third in order to merit for 1st mention are Mr. Meussdorffer and Mr. Bree, both of whom received one 1st mention each. Mr. Rowell was awarded two 2d mentions and two 3rd mentions for work which only needed perseverance and diligence to bring it up to a very high order of merit, both for quality of design and execution.

"Mr. Frank Holland received two mentions for design and also produced some excellent flat studies, of which, however, no mention has been made, though executed during the period embraced in the above report."

That the subject may be carefully considered by the Members, the following report has been prepared.

To the San Francisco Chapter of the A. I. A.

GENTLEMEN:—The Committee on Classes to which was referred the question of medals and competitive prizes, at the last meeting of the Chapter, begs leave to submit the following report:

In pursuance of the scheme briefly outlined in the report on classes at the last meeting of the Chapter, your Committee recommends the establishment of three divisions amongst the students attending the Chapter Classes. 1st, Pupils; 2d, Draughtsmen; 3rd, Assistants; and in correspondence with this division it is proposed that the Chapter confer three medals, viz: bronze, silver and gold. That the pupils or students shall compete for the medals in the order above named. The gaining of a bronze medal by a *pupil*, entitling him to compete for the silver medal of the Draugtsman, and on gaining that, for the gold medal of the Assistant. The holding of all three medals by a competitor constituting him a properly qualified architectural draughtsman of the A. I. A.

These medals would then form, in themselves, an appropriate and interesting as well as valuable testimonial to the holder's ability, and the attainment and conferring of the gold medal at the completion of the student's indentures with his principal, would be likely to form an interesting and noteworthy incident in his career—corresponding with the matriculation of a student in law, medicine or divinity.

To fully attain the benefits to be derived from the adoption of the above proposition, it would be necessary to arrange for proper courses of studies and competitions, suitable for the respective grades of students to be pursued in their order, so that the benefits derived by them should not be confined wholly to the acquirement of superficial skill in draughtsmanship alone, but be accompanied by the acquirement of such knowledge as would seem to solidify and supplement his acquirements in the chosen field of his life's labor.

In furtherance of the above suggestion it is thought that the purchase by the Chapter of some standard works of reference for the use of the students would be a valuable addition to the Chapter library, and constitute a source of attraction to the students who belong to the chapter. These works might be loaned to the students on proper guarantee being given for their preservation and return.

In connection with the above it has also been suggested that a quarterly gathering of the members of the Chapter and students thereof, together with invited guests, should be established, at which the student's competitive drawings should be exhibited and criticised and awards made, and at which some special addresses, calculated to be useful to the students and members as well, should be delivered on some subject connected with architecture and cognate arts.

It is also suggested that a circular be printed in the journal of the chapter and circulated amongst the professional men of the city, containing a resume of the above, as well as an explanatory statement showing the connection between the Chapter and the Chapter students, and setting forth the benefits which it is hoped will be attained by the above arrangements, and also the advantages to be derived by a broadening of the apprenticeship system and the building up of a properly qualified and respectable profession of Architects on the Pacific Coast.

MR. Geo. P. Low, Electrical Inspector for the Pacific Insurance Union, and President of the California Electrical Society, will, at an early date, deliver an address on Electrical Matters Relating to Buildings, before the San Francisco Chapter of the American Institute of Architects.

The members and those invited will receive due notice through the mail. Members are invited to send to the Secretary of the Chapter such questions as they may wish to have discussed.

The above list of recently expired patents, relating to buildings, is supplied us by Alexander & Davis, Patent Attorneys of Washington, D. C. We have engaged this firm to supply us regularly with lists of expired patents relating to this line of inventions, and these lists will appear regularly hereafter, so that our readers will be kept promptly advised of the patents that become public property. Copies of these patents may be had of the above firm at the official cost (10 cts.) with postage added.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

SMOKE-PROOF LATH.—The Order regulating the construction of buildings in the City and County of San Francisco, states that all elevator or light shafts shall be formed of substantial framing, both sides of which shall be covered with smoke-proof iron laths and finished with three coats of mortar. Much controversy has arisen between the Inspectors of the Fire Wardens and the Builders, as to what constitutes a smoke-proof lath. The Chief Deputy, Mr. Sullivan, claiming that only certain forms of lath fulfill the requirements of the Ordinance, while the Builders claim that none of the iron laths are smoke-proof until after being plastered. Recently Mr. C. C. Morehouse, a plasterer, was arrested for using the Bostwick Steel Lath in the light well of the Otis Building on Sansome street, that form of lath being contrary to the fire ordinance as interpreted by the Fire Wardens. Upon trial in Judge Rix's Court, the Jury after a short consultation found him not guilty.

Fire Wardens vs. Bostwick Steel Lath Co.

LIABILITY FOR ACCIDENT.—Where a person is injured by an accident occuring while the employes of another are engaged in work upon his premises, he may recover if the injury resulted from the negligence of the workman. But if it was an unavoidable accident, untainted with negligence, he is entitled to no damages. Steen v. Williamson, Supreme Court of California, 28 Pac. Rep. 52, (53C).

BUSINESS MOSAICS.

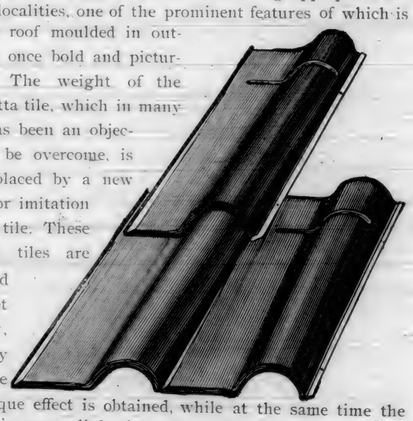
The A. Lietz Co., 422 Sacramento street, San Francisco, are manufacturers of scientific instruments of all kinds for the use of Architects and Engineers. This company comprises Instrument Makers and Engineers of high repute, who will examine, repair and adjust instruments when required. Supplies for field and office work kept in stock and supplied upon short notice. They have some very excellent levels, inclinometers, etc., especially adapted for the use of Architects.

Perspective Drawings made in pen and ink suitable for reproduction by any of the processes in use, can be ordered through this Journal. Architects and Engineers are often times too busy or too isolated to obtain the time or talent for the ornamental drawings. These drawings can be made from the plain drawings, and we will cheerfully furnish information regarding such work.

Every person in any way interested in the building trades should subscribe for the CALIFORNIA ARCHITECT AND BUILDING NEWS.

The Marshall Improved Window Furniture Co., 126 Main street, is fitting the windows of the Crocker Building with the Marshall Patent Sash Balance. Besides their general usefulness, these fittings have points of superiority which renders them especially applicable in certain situations. The upper or lower sash is locked at any position whether partially or fully open. This feature has advantages for windows opening where they may be accessible from halls, light wells, areas, balconies, fire escapes, etc. See page xv for further particulars.

The quaint style of the old Spanish Missions has attracted the attention of architects as being appropriate for certain localities, one of the prominent features of which is the tile roof moulded in outlines at once bold and picturesque. The weight of the terra-cotta tile, which in many cases has been an objection to be overcome, is now replaced by a new device or imitation Spanish tile. These Spanish tiles are moulded in sheet copper, whereby all the

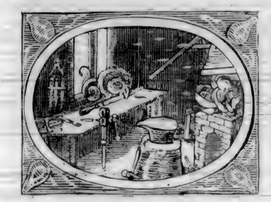


picturesque effect is obtained, while at the same time the weight is very slight in comparison with the old form. These copper tiles are placed on the market by Messrs. Merchant & Co. See advertisement on page xxi.

"Out of sight out of mind" is as applicable to-day as ever. A man might as well take down the sign over his door as to take out his advertisement occasionally. Advertisements should be continuous to insure the greatest benefit. When the usual advertisement fails to appear it gives rise to the thought that the firm has retired from business, or that the articles have been superseded by others in the market.

To Marble Men.—An unusual opportunity is offered to work a marble quarry, which is easy of access, only eight miles on good county road to railroad depot. Ledge is very large, solid and well defined; its marble is of superior quality. Owner will give to any quarry man, who has the necessary plant and is ready to commence work, the privilege of working the quarry for the first six months without royalty. Address owner, Mrs. Annie E. Wright, at New Almaden, Cal., or Julius Reimer, Att'y at Law, 507 Montgomery Street, San Francisco.

One of ÆSOP'S fables is the "Viper and the File."



A Viper entering a smiths shop, looked up and down for something to eat; and, seeing a file, began gnawing it as greedily as could be. The file told him very gruffly, that he had best be quiet and let him alone: for that he would get very little by nibbling at one, who, upon occasion, could bite iron and steel.

MORAL—We are cautioned to consider well before we speak ill of persons or merchandise, either by reason of envy or malevolence; which, like the viper, rather than not bit at all, will fall foul where it can hurt nothing but itself.

You can't pull a man over the fence with a single piece of thread, but if you have pieces enough you can weave them into a solid rope which will prove irresistible. That is the secret of the success of the J. L. Mott Iron Works. Not one design, but hundreds; not one patented improvement, but scores; not for one place only, but for all conceivable positions; no other manufactory in the United States to compare with it.

No wonder their works have been enlarged.

Wise men lay up knowledge: but the mouth of the foolish is near destruction.

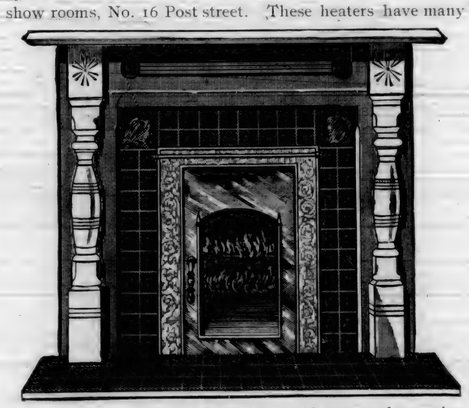
Carbolineum Avenarius has become an important article for the preservation of wood. Its chemical action neutralizes the nitrogenous substances of the fibers of the wood which gives it antiseptic properties of great value. Where the humidity varies it prevents the growth and spread of house fungus, and is an excellent disinfectant in stables, barns, etc. For timber and posts bedded in the ground or otherwise exposed to the actions of the elements, it is recognized as an effective preservative, at the same time comparatively inexpensive. It keeps away rats and other vermin, and also destructive insects. Carbolineum is a German invention where it has been manufactured and successfully used for the last fifteen years. Messrs. Muecke & Co., of 319 California street are the importers and agents for the Pacific Coast, and are reporting extensive sales. Write to them for further information.

He that gathereth in summer is a wise son: but he that sleepeth in harvest is a son that causeth shame.

With the growth in population, wealth and luxury on the Pacific Slope, the trade in hard woods for ornamental work and finish will increase. Our stocks of oak, ash, hickory, maple, walnut, mahogany, gum, birch, cherry and beach, is mostly drawn from the eastern markets. The E. D. Albro Co. of Cincinnati, Ohio, are dealers in all lines of domestic and foreign ornamental woods. We invite the attention of parties interested to their advertisement on last page of outside cover.

The young man, the country architect, and the builder who desires to improve himself in the art and science of building, should carefully read and study the best works on that subject to be had. THE CALIFORNIA ARCHITECT AND BUILDING NEWS will furnish him with valuable reading and hints for study, and its advertising pages will give him good ideas in regard to the improvements of the day in that line.

In office or house cheerfulness is more easily attained by the use of the open fire place for heating, than by any other means. The gas fire place heaters, as sold and put in by the San Francisco Gas Company, can be seen at their show rooms, No. 16 Post street. These heaters have many



features of superiority and which should command attention; the mantles and facings of the grates are made as highly ornamental as desired, the burning gas impinges and works its way over the asbestos backing, thereby consuming all the inflammable substance of the gas. Some of our largest and finest office buildings, such for instance as the Mills Building, are being fitted up for these open gas heaters.

This Company also furnishes all kinds of cooking appliances, water heaters, cloth driers, etc., arranged for gas.

Architects and other interested parties are invited to examine the Rapid Safety Filter as provided by the Filter Company.

These filters can be seen in operation at their show rooms, 1209 Market street. Among the various devices for sanitary improvement, the filtration of the water used for the house and office is receiving marked attention, as it has been proven that impure water has been the cause of much sickness.

The Pullman Sash Balances are becoming deservedly popular. The best evidence of this is the fact that there are now in actual use about one million, and the demand is steadily increasing. They will be used in the Oregonian Building at Portland, Ore., and the Carson Building at Eureka, Cal., taking between three and four hundred sets, besides in many residences here and elsewhere on the Coast. In seven years of manufacture they have placed upon the market an article as perfect as it is possible to produce, and will guarantee them to give satisfaction when properly applied.

The manufacturers are receiving many letters from architects who are satisfied with their use, and strongly recommending them.

CITY BUILDING NEWS.

Bartol near Broadway. To build; owner, C. Branagan; architects, Martens & Coffey; contractors, R. Doyle & Son; cost, $2,884; signed, March 4; filed, March 5; payments, $725, frame up; $725, brown coated; $725, completed; $719, 35 days.

Baker near McAllister. To build; owner, Chas. H. Rosenthal; architect, R. H. White; contractors, White Bros.; bond, $1,200; cost, $4,470; signed, March 25; filed, March 28; payments, $800, frame up and rafters on; $820, brown coated; $800, standing finish on; $800, completed; $1,150, 35 days.

Broderick near Hayes. Alterations and additions; owner, Thos. McGrory; architect, W. H. Armitage; contractor, Jas. Geary; cost, $3,600; signed, March 14; filed, March 17; payments, $750, frame up; $750, brown coated; $500, standing finish on new building; $700, completed; $900, 35 days.

Buchanan near McAllister. Excavating, sewer, plumbing, etc.; owner, D. Buckley; architect, T. J. Welsh; contractors, Ford Bros.; bond, $302; cost, $1,305; signed, March 9; filed, March 19; payments, $451.50, work roughed; $451.50, completed; $302, 35 days.

Buchanan near McAllister. Grading, brick-work, etc.; owner, D. Buckley; architect, T. J. Welsh; contractors, Currie & Loomer; bond, $2,016; cost, $8,030; signed, March 14; filed, March 19; payments, $1,505, frame up; $1,505, brown coated; $1,505, white coated; $1,505, completed; $2,010, 35 days.

Bush and Chelsea Place. Patent chimneys and iron stone pipe; owner, Mrs. M. W. Newman; architect, P. R. Schmidt; contractor, Francis M. Stevens; cost, $2,045; signed, March 9; filed, March 16; payments, 1st day of each month 75 per cent. of work done; balance 35 days.

_____. Carpenter work, etc.; owner, Alice Summerfield; architects, Salfield & Kohlberg; contractor, Thomas Elam; cost, $1,200; signed, March 2; filed, March 9; payments, $500, brown coated; $400, completed; $300, 35 days.

_____. Furnishing dynamos, etc.; owners, S. F. and San Mateo Ry. Co.; contractors, Thomson-Houston Elec. Co.; cost, $188,250; signed, June 16, '91; filed, March 14; payments, $75,000, in bonds at par of S. F. and San Mateo Ry., upon presentation of bill of lading; $75,000, road has been in operation 30 days; $38,250, 90 days after 2d payment.

TENDERS TO BE RECEIVED.

Treasury Department, Office, Supervising Architect, Washington, D. C., April 2, 1892. Sealed proposals will be received at this office until 2 o'clock P. M. on the 28th day of April, 1892, and opened immediately thereafter, for all the labor and materials required to put in place complete the iron beams and girders in basement and first floor, basement columns, etc., for the U. S. Court House, Custom House and Post Office building at Omaha, Nebraska, in accordance with the drawings and specification, copies of which may be had at this office or the office of the Superintendent at Omaha, Nebraska.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the proposal.

The right is reserved to reject any and all bids and to waive any defect or informality in any bid. All bids received after the time stated, will be returned to the bidders.

Proposals must be enclosed in envelopes, sealed and marked, "Proposals for the iron beams and girders in basement and first floor, basement columns, etc., for the U. S. Court House, Custom House and Post Office Building at Omaha, Nebraska, and addressed to,

W. J. EDBROOKE,
Supervising Architect.

ALAMEDA COUNTY.

Alameda Tr., near, Blk. 18. To build; owner, Adam Kraft; architect, Martens & Coffey; contractors, Herbert & McLeod; cost, $3,591; signed, Feb. 26; filed, March 10; payments, $800, rustic on and roof shingled; $800, brown mortar on and all inside finish; $900, completed; $851, 35 days.

Base Ball Grounds, Oak. To build; owner, Durham Peterson; contractor, Peter Ahern; cost, $2,400; signed, March 21; filed, March 23; payments, $575, enclosed without the windows; $575, doors and windows hung, etc.; $575, completed; $575, 35 days.

Barker Tr., Blk. 5, Berkley. To build; owner, Louis Juvete; contractor, F. E. Armstrong; cost, $1,750; signed, March 12; filed, March 14; payments, $437, frame up and house enclosed; $437, brown mortar on; $437, completed; $439, 35 days.

Bridge's Tr., Alameda. To build; owner, Chas. P. Doe; contractors, Marcuse & Remmel; cost, $2,835; signed, March 5; filed, March 8; payments, $708.75, frame up; $708.75, brown mortar on; $708.75, completed; $708.75, 35 days.

Broadway near Monroe, Ala. To build; owner, D. G. Alexander; architect, Chas. S. Shain; contractor, A. W. Cornelius; bond, $1,200; cost, $3,252; signed, March 26; filed, March 28; payments, $806.75, rough frame is up and sheathing on main roof; $800, enclosed, roof, rustic and cornice on and window frames in; $804, brown mortar on building and veranda and porch up; $804, plastering is finished and all wood-work done; $806.25, 36 days.

Butler Ave, Butler Tr., Oak. To build; owner, C. A. Klinkner; architects, J. J. & T. D. Newsom; contractor, G. B. Sonnier; cost, $1,710; signed, March 25; filed, March 26; payments, $840, rough frame up; rustic on and roof shingled; $300, frames set, rough plumbing done and rough plaster on; $300, completed; $810, 35 days.

Caledonia Ave, nr. Tel., Oakland. To build; owner, John A. Beckwith; architect, Howard Burns; contractor, John Ogle; cost, $2,400; signed, March 5; filed, March 17; payments, $600, enclosed, ready for plastering; $900, plastering done, doors and windows in place; $550, completed; $650, 35 days.

Central Ave, nr. McPherson. To build; owner, Mrs. M. Reigelmaph; architect, T. C. Cary; contractors, Marcuse & Remmel; cost, $2,000; signed, Feb. 23; filed, March 4; payments, $500, frame up; $800, brown mortar on; $800, completed; $800, 35 days.

Christina nr. King's Ave. To build; owner, George Langhorne; contractor, J. J. Boyle; cost, $2,100; signed, March 1; filed, March 7; payments, $525, frame up and secured; $525, plaster on; $525, completed; $525, 35 days.

Christina near King's Ave. To build; owner, Geo. Langhorne; contractor, J. J. Boyle; cost, $1,085; signed, March 2; filed, March 7; payments, $920, frame up; $920, plastering completed; $927 completed; $925, 35 days.

College Hd., Blk. 4, Bky. To build; owner, Lizzie K. Hume; contractors, Estey & Jewett; cost, $2,800; signed, March 8; filed, March 9; payments, $700, enclosed; $700, brown mortar on; $700, completed; $700, 35 days.

Eagle Ave, and Bay, Ala. To build; owner, Peter Ahlstrom; contractors, Marcuse & Remmel; cost, $2,100; signed, March 7; filed, March 7; payments, $525, frame up; $525, brown mortar on; $525, completed; $525, 35 days.

Eleventh and 5th Ave., Oakland. To build; owner, Oakland Tennis Club; architect, H. L. Smith; contractor, Chas. W. Burles; cost, $1,098; signed, March 18; filed, March 21; payments, $732, completed; $866, 35 days.

Eleventh Ave near 12th. To build; owner, Chas. Jurgens; architects, J. C. & E. Mathews; contractors, Baughman & Reom; cost, $3,280; signed, March 28 filed, March 30; payments, $800, frame up ready for enclosing; $800, enclosed and chimneys built; $800, gas and water pipes in and brown mortar on and building painted one coat; $850, completed; $829, 35 days.

Eleventh St. nr. Center, Oakland. To build; owner, Thos. J. Ford; architects, Townsend & Wyneken; contractors, Currie & Loomer; cost, $3,060; signed, March 19; filed, March 23; payments, $700, frame up and houses enclosed; $700, brown mortar on; $800, completed; $800, 35 days.

Elm St. nr. San Pablo Ave. To build; owner, O. J. McKemey; contractor, J. V. Embury; cost, $3,400; signed, Feb. 25; filed, March 5; payments, $775, brick foundation completed and frame up; $775, building enclosed and ready for plastering; $775, brown mortar on and priming coat on outside of house; $775, completed.

Fifteenth near 15th Ave., Oakland. To build; owner, Henry Schroeder; contractor, F. A. Brown; cost, $1,450; signed, March 9; filed, March 14; payments, $335, frame up; $335, 1st coat mortar on; $345, completed; $335, 32 days.

Franklin nr. Durant, Oakland. To build; owner, Mrs. S. Chamberlain; architects, J. C. Mathews & Son; contractors, Pierce & Ruch; cost, $4,036; signed, March 3; filed, March 4; payments, $500, frame up, ready for enclosing; $1,000, building enclosed, chimneys built; $1,000, gas and water pipes in place; $977, completed; $1,159; 35 days.

Fruit Vale Ave., Bkyn. Tp. To build; owner, Mrs. A. E. Douglas; architect, C. H. Wedgwood; contractor, Geo. J. D. Kyte; bond, $1,500; cost, $4,945; signed, March 29; filed, March 29; payments, $486.25, building up and enclosed, rustic and roof on; $486.25, plastered and hard finish on; $486.25, completed; $486.25, 35 days.

Fulton near Kittridge, Berkeley. To build; owner, Panthea H. Rogers; contractor, Geo. A. Embury; cost, $2,500; signed, March 19; filed, March 21; payments, $600, frame up; $600, when enclosed and brown mortar on; $600, completed; $700, 35 days.

Garfield Ave. nr. Haight St. To build; owner, J. L. Sanakamp; contractor, A. R. Denke; cost, $1,400; signed, March 14; filed, March 15; payments, $850, frame up; $850, 1st coat plaster on; $850, completed; $850, 35 days.

Harrison near 14th, Oakland. To build; owner, Fred'k. S. Stratton; contractors, A. W. Pattiani & Co.; cost, $5,082; signed, March 14; filed, March 21; payments; $1,350, building has rustic and roof shingles on, chimneys built; $1,300, window frames set, brown mortar on etc.; $1,161.50, completed; $1,270.50, 35 day.

Johnson Ave. and Court St. To build; owner, Wm. J. Smith; contractors, Marcuse & Remmel; cost, $1,450; signed, March 2; filed, March 4; payments, $362.50, frame up; $362.50, brown mortar on; $362.50, completed; $362.50, 35 days.

Kennedy Tr., Blk. C. To build; owner, C. N. Whitaker; architect, E. C. McManus; contractor, E. P. McGowan; cost, $3,573; signed, March 9; filed, March 10; payments, $893, brick work is done, frame up and rustic on; $893, roof shingled, window frames set, floors laid, etc.; $893, completed; $894, 35 days.

Lake View, Oakland. To build; owner, E. W. Woodward; contractor, Geo. W. Flick; cost, $7,464; signed, March 16; filed, March 18; payments, $1,866.17, tank house completed and 1st floor joists completed; $1,866.17, frame work dwelling completed and one coat mortar on; $1,866.17, dwelling house and stable completed; $1,866.17, 35 days.

Lorin Villa Tr. Ok. Tp. To build; owner, Sarah E. Axtell; architect, R. Gray Frise; contractor, William Jess; cost, $1,315; signed, March 29; filed, March 30; payments, $525, frame up and roof boards on; $525, roof and rustic on, window frames in, brown mortar on; $525, completed; $340, 35 days.

Lots 15, 16, 17, blk. 557, Oakland. To build; owner, F. Gee; contractor, F. C. Bigmani; cost, $2,400; signed, March 14; filed, March 18; payments, $800, frame, of each house on; $800, brown coat plaster on each house; $800, 35 days.

Lots 6, 7, block 7, addition to Bklyn. To build; owner, John Peters; architect, Marcuse & Remmel; cost, $1,670; signed, March 21; filed, March 23; payments, $417, frame up; $383, brown coat mortar on; $383, completed; $386, 35 days.

McClure Acad. Grounds, Ok. To build; owner, Guy C. Earl; architect, Chas. Mau; contractors, Concannon & Shuey; cost, $6,000; signed, March 15; filed, March 15; payments, 75 per cent of the value at May 1st, and June 1st; balance 35 days.

Minturn near R. R. Ave., Ala. To build; owner, Mrs. P. P. Cubery; contractors, Marcuse & Remmel; cost, $2,900; signed, Feb. 17; filed, March 4; payments, $725, frame up; $725, brown mortar on; $725, completed; $725, 35 days.

Morgan, bet. Railroad and St. Clara Ave. To build; owner, S. McHenry; contractors, Marcuse & Remmel; cost, $4,456; signed, March 21; filed, March 25; payments, $1,237.50, frames up; $1,237.50, brown coat mortar on; $1,237.50, completed; $1,237.50, 35 days.

San Antonia near Union, Ala. To build; owner, S. A. Brooks; architect, Chas. Shaner; contractors, Brehaut & Diamond; bond, $1,500; cost, $3,035; signed, March 22; filed, March 24; payments, $758.75, rough frame up and sheathing for shingles of roof on; $758.75, enclosed, cornice on, window frames in and ~~mortar on~~; $758.75, all wood work is done and building ready for painters; $758.75, 36 days.

San Leandro, Blk. 48. To build; owner, Miss Nellie Byrne; contractors, Simney & Graalfs; cost, $1,975; signed, March 1; filed, March 10; payments, $650, enclosed; $650, brown coat plaster on; $675, 35 days.

San Pablo Ave. nr. Market St. Addition; owner, Mrs. Rob't Chandler; contractors, Leiter & Prugh; cost, $500; signed, March 3; filed, March 4; payments, $200, outside done and brown mortar on; $100, completed; $200, 35 days.

Seventh nr. Adeline, Oakland. To build; owner, Mrs. M. I. Kolle; contractors, Leiter & Prugh; cost, $2,450; signed, March 8; filed, March 8; payments, $550, house is in place, etc.; $550, brown mortar is on and outside completed; $550, completed; $700, 35 days.

Thirteenth nr. Washington, Oakland. To build; owner, Julius Abrahamson; architect, Chas. Mau; contractors, Judson Iron Manufacturing Co.; cost, $5,176; signed, March 19; filed, March 21; payments, 75 per cent of sum when the work is fully completed and accepted; 25 per cent, 35 days.

Thirteenth near Washington, Oakland. To build; owner, Hugo Abrahamson; architect, Chas. Mau; contractor, V. L. Fortin; cost, $11,200; signed, March 19; filed, March 21; payments, $2,100, ½ materials furnished and ¼ work done; $2,100, ½ done and ½ furnished; $2,800, completed.

Thirteenth nr. Washington. To build; owner, Chas. Mau; architect, Hugo Abrahamson; contractors, Concannon & Shay; cost, $14,600; signed, March 30; filed, March 31; payments, $2,737.50, ½ materials furnished ¼ work done; $2,737.50, ½ furnished ½ work done; $2,737.50, ¼ materials, ¾ done; $2,737.50, completed; $3,650, 35 days.

Thirteenth Ave. and 24th St. To build; owner, Christian Hansen; architect, W. Winterhalter; contractor, C. Walte; bond, $400; cost, $1,450; signed, March 29; filed, March 29; payments, $400, frame up, roofed, enclosed, ready for plaster; $250, brown coat on and outside finish on; $400, completed; $400, 35 days.

Union St. near Encinal Ave, Oakland. To build; owner, Peter Klein; contractor, J. H. Young; cost, $1,070; signed, March 21; filed, March 23; payments, $400, frame up; $400, rustic and roof on; $400, putty coat on; $470, 35 days.

Union sch. dist., San Leandro. To build; owners, Trustees of Union sch.; architect, Howard Burns; contractors, Simney & Graalfs; cost, $5,496; signed, March 25; filed, March 25; payments, $1,374, frame up; $1,374, enclosed and partitions all on; $1,374, completed; balance 35 days.

_____. Cable and Electric R. R. owners, Piedmont Cable Co.; contractors, S. F. Tool Co.; cost, $182,500; signed, March 24; filed, March, 25.

MISCELLANEOUS.

Bay City, Oregon. To build school house; cost, $4,500.
To build saw mill, etc.

Davisville, Cal. To build; owner, Mr. J. Vincilit.

Golden Gate, Cal. To build church; owners, Baptish Church.

Hobsonville, Oregon. To build hotel; owners, The Truckee Lumber Co.

Lorin, Cal., Benton St. To build; contractor, W. C. Moran; cost, $1,100.
Alcatraz near Ellis. To build hall; contractors, Johansen & Sheridan.

Mill Valley, Marin Co., Cal. To build; owner, J. L. Cahill; contractor, Geo. R. Bowles; cost, $1,000.
To build public hall; owner, J. L. Cahill; contractor, Geo. R. Bowles; cost, $1,200.

Santa Maria, Santa Barbara Co., Cal. Addition; owner, Mr. Coblentz; contractor, L. T. Jeter.
To build; owner, Mr. Fleisher; contractor, Mr. Orr.
To build; owner, Thos. Boyd; contractor, Mr. Doane.
To build; owner, Mr. Farrington.
To build; owner, Mrs. Stephens.
To build; owner, Mr. Smythe.
To build; owner, Mrs. Gwin.

San Jose, Cal., Tenth St. near St. John. To build; owner, Mrs. M. Cherrie contractors, Geo. F. Decker & Son; cost, $3,138.
Ninth and St. John Sts. To build; owner, Chas. E. Howes; contractor, Joseph Des Roches; cost, $1,104.
Tenth St., near San Salvador. Owner, Etta Parker; contractor, C. A. Bates; cost, $1,600.

Stockyards, Cal., Dalton Ave. To build; owner, Jerry Smith; contractors, McIntyre & Johnson.

Woodland, Cal. Alterations; owner, District Attorney Hopkins.

The California Architect and Building News.

Copyrighted 1891, by the California Architectural Publishing Company.

OFFICE, 408 CALIFORNIA STREET, SAN FRANCISCO, CAL., U. S. A.

VOLUME XIII. MAY 20th, 1892. NUMBER 5.

A MONTHLY JOURNAL DEVOTED TO THE ARCHITECTURAL INTERESTS OF THE PACIFIC COAST.

Published on or about the 20th of each month by The California Architectural Publishing Company. The Stockholders being Architects and others interested in the profession.

SUBSCRIPTION TO THE JOURNAL, - $3.00 PER YEAR IN ADVANCE. ESTABLISHED 1879. - INCORPORATED 1889.

NOW IN THE THIRTEENTH YEAR.

W. J. CUTHBERTSON, President. OLIVER EVERETT, Secretary.

Remittances should be in the form of postal orders, payable to THE CALIFORNIA ARCHITECTURAL PUBLISHING COMPANY, and all communications addressed to the office of the Company, 408 California Street, San Francisco, Cal.

Building News	58

AS the building season opens the prospects for the building interests seems to brighten. A very considerable number of buildings have been placed under contract but not equal in number or value for the same time last year. Dwellings of a superior class are being extended far into the suburbs, mainly, because some of the most desirable locations are now accessible by the cable or electric railway system. Bulidings for business purposes show an advanced taste in design, stone and marble being used in place of the cheaper material heretofore in use. This increase in the demand and use of stone has stimulated parties with capital to look around for investment in this line with the result that new quarries are being opened in localities where the material can be economically shipped to market; the freight charge being an important factor in the cost of stone work. If the cost of freight can be reduced from $25.00 to $2.00 per ton a remarkable development will take place, which at the end of the year will make a good showing.

THE North Pacific Coast Line Railroad has been sold to eastern parties, who, it is said, intend to extend it to connect with some through overland road. It is probable that in the future management business principles will manifest themselves to the great benefit of that section. The *Petaluma Argus* suggests two routes by which the road could be extended to tap the immense redwood forests of Mendocino and Humbolt counties at points almost inaccessible at present. At present the road runs through several valleys sheltered from the ocean fogs, and beautifully situated for summer resorts.

Probably no other city in the United States can show such desirable suburban garden spots for quiet homes, and where the climate undergoes such change from the cool fog and dust of the city to a semi-tropical atmosphere and so easily accessible. Many delightful residence locations may be had within one hours travel from San Francisco.

THE architectural profession is becoming more complicated as new appliances are brought into notice in which science enters to such a degree that old systems are being changed, or new methods substituted to meet the new conditions.

The system of giving all the various contracts relating to a building to one contractor is convenient, but at the same time gives rise to many ills, especially those contracts where a considerable degree of scientific knowledge is required.

Electric work, when contracted for separately by well-known firms, would prove more satisfactory to all the parties interested. Where the contracts are carried out by the parties most interested in good work, better work will be the natural result.

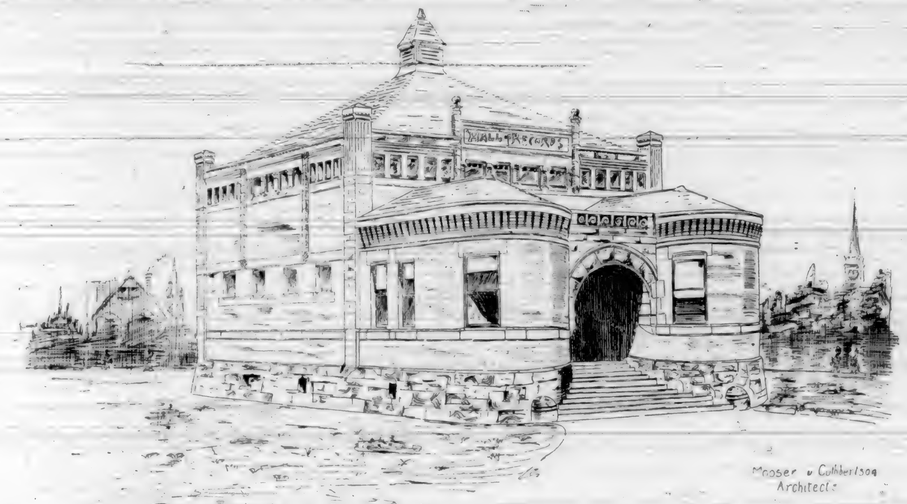
WITH the growth of a great people, there comes not only an increase of wealth, but an increase of want; with the passing away of the time when men struggle to obtain the bare necessaries of life there comes a period of luxuries; and luxuries to many of those who can command them become a necessity.

To provide for these additional luxuries new modes of manufacture become necessary, and machines are a factor in the labor problem, and it has been feared by many that machine work will supplant labor to such an extent as to seriously interfere with trained workmanship, and that the time is not far distant when no reward will be offered for excellence.

The experience to the present time has demonstrated that the machine can never cope with the facile hand having a trained and active brain to guide it. In the field of labor the skilled artesian is always in demand. The machine does one thing, and does it well, and in endless repetition, while the skillful workman does the same thing with many variations. One of the charms of nature is that no two thing are exactly alike; every blade of grass, every leaf, stone, stream, hill or cloud differs from every other one of its kind.

It may be well to bear in mind the fact that nature will continue to evolve and unroll new combinations long after the age of machinery has passed away. As we look forward toward the future we cannot fail to see an ever widening field for skilled labor in the manufacture of those things which knowledge and culture demand, and wealth is willing to pay for. With an increase of culture a higher order of craftsmanship will be required.

The leading art workman of the future is the student of to-day, and the young man who aspires to the attainment of excellence in his field of labor, should improve, as far as possible, the opportunities offered.



Record Hall at Sutter County

THE new Hall of Records for Sutter County, at Yuba City, California, is shown herewith. This building is of stone and brick, with a slate roof, and is entirely fire-proof. Cost $25,000, without the fittings. Messrs. Mooser & Cuthbertson, Architects.

COMPETITION is a term used as a cloak for unworthy methods of doing business. Ever since the creation of man, individuals and communities have been competing for something, and will continue to do so. Competition is a struggle in which each person endeavors to benefit himself, the natural tendency of which is toward selfishness and a disregard of the rights of others. The great problem is how to succeed by competition without injuring our business or wronging others. Competition is often looked upon as a warfare in which all ways and means for success are considered as fair, but warfare has its code of honor and recognized methods of procedure.

THE DECAY OF WOOD.

BY A. H. EVERETT.

THE question was asked the writer of this article, the other day, what causes the decay of wood and when does it commence? A comprehensive answer might be that it is a law of nature, a part of the universal law for the reproduction of new forms of life and beauty that we see around us on every side. The most beautiful flowers that grow upon the mountain-side no sooner complete their growth, and arrive, as it were, at perfection, than decay commences; and on the other hand the very granite mountains themselves, that appear to be indestructible,

"Warm by the tempest, wasted by the rain,
Sink slowly down to fill wide ocean's plane."

This, however, could not be a satisfactory answer to the architect who wished to preserve the foundation of his building in the most practicable manner from too rapid decay, or give him an idea of the best means, if not of preventing, at least of retarding decay.

One may, perhaps, arrive at a more every day matter of fact conclusion upon the subject before us if we look to the chemist to give some information in regard to the composition of wood, water and air, and the chemical changes that the elements undergo in the process of decay, even if obliged to admit at last that decay is only the result of the action of the universal law of nature. It will aid greatly to the better understanding of the process of decay if we look at the manner nature employs to construct vegetable substances. Organic substances have their origin entirely in plants; there they are first put together, fashioned into innumerable forms, and endowed with their wonderful qualities.

Starting with the germination of the seed, vegetable physiology informs us that every perfect seed contains within itself the rudiment of a new plant, which in some varities is so complete that the microscope reveals its structure, root, stem and leaves, while in others it is less distinctly developed. This minute plant, the germ, or embryo as it is called, lies imbedded within the mass of seed surrounded by a substance well adapted to protect and preserve it; wrapped in this envelope the embryo remains at the disposal of external agents. Under certain conditions it continues at rest and torpid, but when these conditions are favorably changed, it suddenly awakens from its slumber, puts forth a new power and begins to grow; this is called germination.

The germ during growth, derives its nourishment from that portion of the seed in which it is enclosed, and which consists chiefly of starch. But no nutriment can enter the germ except in a liquid form, and starch is insoluble in water, hence, it cannot accompany the fluid sap when it begins to circulate. To remove this difficulty, nature resorts to a very beautiful process. When a seed is exposed to the joint action of moisture and air, at a proper temperature it absorbs water and oxygen, swells in bulk, chemical action begins, carbonic acid is given off, its temperature rises and a new substance is produced within the seed called "diastase", which has the remarkable power of converting starch into sugar, and this the sap conveys to the plant.

Our tree has its start in life, one part of the embryo shoots downward to form the root, while another extends upward to the surface.

As the stem comes above the ground the leaf appears and a new order of growth now takes place, while a new order of phenomena is manifested equal in beauty and sublime interest to anything in nature.

The leaf is the seat of these chemical changes, and as Youman in his chemistry says, "whether it be an humble blade of grass or upon the oak that has stood a thousand years its office is the same:" it is at once an organ of exhalation, digestion and respiration, corresponding to the skin, stomach, and lungs of animals.

Water containing mineral and gaseous substances in solution is absorbed by the roots and carried upward as ascending sap to the leaves, from the surface of which much of it evaporates, leaving the remainder in a more concentrated state. This process goes forward in the daytime with great activity. Hales found that a sunflower weighing three pounds exhaled from its leaves thirty ounces of water in a day. According to Gray, the apple tree leaf contains 24,000 pores upon a square inch. Leaves absorb carbonic acid from the air, and although the proportion of this gas in the air seems small, 1-2500 of its bulk, or by calculation about seven tons over each acre, yet the structure of the vegetable machine is such as to draw it from the air in a very rapid manner. The leaf decomposes the acid setting free the oxygen and allowing the carbon to furnish the solid element of wood. Thus we have accounted, though in an imperfect manner, for the union of the three elements, Carbon, Hydrogen and Oxygen into the solid substance we call wood.

We have now the data for making our formula of wood, water and air, and can perhaps in this manner show that decomposition or decay must result in returning these elements again into the atmosphere.

But before doing so it may not be inappropriate to destroy the wood in another manner, first by fire directly with free access of air, in which case we find our wood has returned to the atmosphere in the form of gas, and the vapor of water, with the exception of the small per cent of ash.

Next, if we confine the wood in a retort and exclude the air, the heat will drive off the valatile parts in the form of gas or vapor of water, leaving the carbon in a solid mass called charcoal.

Why this difference? In the former case the free access of air has furnished oxygen to unite with the carbon forming carbonic acid and producing the rapid destruction or combustion of the wood; while in the latter method, the air being excluded, no carbonic acid can be formed, the volatile parts are driven off leaving the carbon unconsumed.

Therefore decay may be called slow combustion, the carbon uniting with oxygen of the air forming carbonic acid gas. When the combination of elements are once broken the different parts will seek fresh combinations, and thus the structure is destroyed.

The carbon united with oxygen from both the air and water forms carbonic acid; the hydrogen united with the nitrogen forms ammonia.

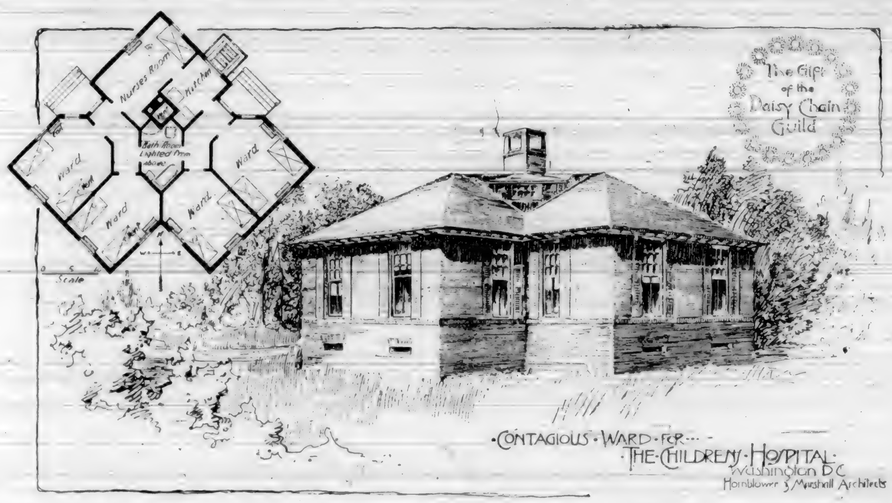
Thus are the elements returned to the atmosphere, free to form fresh combinations, to construct more trees, or perhaps grain may be the next form taken, and thus in its turn aid animal life to exist, only, however, to be again cast forth, decomposed as before to continue traveling around the circle to the end of time.

Having thus taken a hasty glance at the chemistry of decomposition, it may not be out of place to ask if chemistry can do anything to protect from decay, or to prevent the slow combustion of such materials used in the construction of our buildings? Preservation of wood from decay can be in a measure prevented by covering the outside with paint or other preparations which will protect it from air and moisture. Also, the process of Kyanizing wood by impregnating with bi-chloride of mercury, salts of iron, copper and zinc, has been used with good success for the purpose of rendering the albumen from the sap insoluble.

HOSPITAL.

We are indebted to the *Engineering Record* of March 19th, for the engraving of the Contagious Ward for the Children's Hospital at Washington, D. C. The plans were prepared by Messrs. Hornblower & Marshall, architects, and approved by Dr. John S. Billings, U. S. A. "The structure is one story high, with an air-chamber over and a cellar under the kitchen and nurses' room with access through a bulkhead outside. The air-chamber under the wards is 4 feet high, and the entire surface under the building is concreted. The plan is a square of 38 feet on a side. The building is placed with its angles on the cardinal points of the compass for the purpose of obtaining sunlight in all the rooms. A notch is cut on the south side of the square to expose each ward upon two sides. The out side walls are of brick, tarred on their inner face and plastered directly on the walls with soapstone finish, all the internal angles of the plaster being rounded.

The plan is designed to obtain for each ward-room the greatest amount of isolation in the least ground area. By sealing the hall doors of the outside wards, they can be cut off entirely from the rest of the building, and access to them can be obtained from the porches. Each ward has cubic contents of 1,850 feet, and will accommodate two beds. Heating is by direct-indirect steam supplied from a central plant outside, with 100 square feet of coil surface to each ward, the radiators being placed under the windows. In each ward there is a fresh-air supply of 7,200 cubic feet per hour at one foot velocity. Ventilation is secured at the floor under the beds and at the ceiling, communicating with a central shaft, with a duct velocity of two feet per second. The shaft current is maintained by heat from the laundry and kitchen stoves, and by a Bunsen burner in the shaft controlled from the bath-room. The bath-room is inclosed at the junction of the passages, carried up the full height of the building and lighted by a skylight and the dormers shown in the perspective. It contains a water-closet, a wash-basin and a tub on trucks for use in the ward rooms. The store and linen lockers are to be movable furniture in the nurses' room. The laundry in the basement will have a steam chest for purposes of disinfection."



It is proposed to make glass tubes to be used for drain and sewer pipes.

THE SUBLIME AND BEAUTIFUL.

Published about 1753.

CHAPTER ON TASTE.

Continued from page 40.

Now, as the pleasure of resemblance is that which principally flatters the imagination, all men are nearly equal in this point, as far as their knowledge of the things represented or compared extends. The principle of this knowledge is very much accidental, as it depends upon experience and observation, and not on the strength or weakness of any natural faculty; and it is from this difference in knowledge, that what we commonly, though with no great exactness, call a difference in taste proceeds. A man to whom sculpture is new sees a barber's block, or some ordinary piece of statuary, he is immediately struck and pleased, because he sees something like a human figure; and, entirely taken up with this likeness, he does not at all attend to its defects. No person, I believe, at the first time of seeing a piece of imitation ever did. Some time after we suppose that this novice lights upon a more artificial work of the same nature; he now begins to look with contempt on what he admired at first; not that he admired it even then for its unlikeness to a man, but for that general, though inaccurate, resemblance which it bore to the human figure. What he admired at different times in these so different figures, is strictly the same; and though his knowledge is improved, his taste is not altered. Hitherto his mistake was from a want of knowledge in art, and this arose from his experience; but he may be still deficient from a want of knowledge in nature. For it is possible that the man in question may stop here, and that the masterpiece of a great hand may please him no more than the middling performance of a vulgar artist; and this not for want of better or higher relish, but because all men do not observe with sufficient accuracy on the human figure to enable them to judge properly of an imitation of it. And that the critical taste does not depend upon a superior principle in men, but upon superior knowledge, may appear from several instances. The story of the ancient painter and the shoemaker is very well known. The shoemaker set the painter right with regard to some mistakes he had made in the shoe of one of his figures, and which the painter, who had not made such accurate observations on shoes, and was content with a general resemblance, had never observed.

But this was no impeachment to the taste of the painter; it only showed some want of knowledge in the art of making shoes. Let us imagine that an anatomist had come into the painter's working-room. His piece is in general well done, the figure in question in a good attitude, and the parts well adjusted to their various movements; yet the anatomist, critical in his art, may observe the swell of some muscle not quite just in the peculiar action of the figure. Here the anatomist observes what the painter had not observed; and he passes by what the shoemaker had remarked. But a want of the last critical knowledge in anatomy no more reflected on the natural good taste of the painter or of any common observer of his piece, than the want of an exact knowledge in the formation of a shoe. A fine piece of a decollated head of St. John the Baptist was shown to a Turkish emperor; he praised many things, but he observed one defect; he observed that the skin did not shrink from the wounded part of the neck. The sultan on this occasion, though his observation was very just, discovered no more natural taste than the painter who executed the piece, or than a thousand European connoisseurs, who probably never would have made the same observation. His Turkish Majesty had indeed been well acquainted with that terrible spectacle, which the others could only have represented in their imagination. On the subject of their dislike there is a difference between all these people, arising from the different kinds and degrees of their knowledge; but there is something in common to the painter, the shoemaker, the anatomist, and the Turkish emperor, the pleasure arising from a natural object, so far as each perceives it justly imitated; the satisfaction in seeing an agreeable figure; the sympathy proceeding from a striking and affecting incident. So far as taste is natural, it is nearly common to all.

In poetry, and other pieces of imagination, the same parity may be observed. It is true that one man is charmed with Don Bellianis, and reads Virgil coldly; whilst another is transported with the Æneid, and leaves Don Bellianis to children. These two men seem to have had a taste very different from each other; but in fact they differ very little. In both those pieces, which inspire such opposite sentiments, a tale exciting admiration is told; both are full of action, both are passionate; in both are voyages, battles, triumphs, and continual changes of fortune. The admirer of Don Bellianis perhaps does not understand the refined language of the Æneid, who, if it was, degraded into the style of the Pilgrim's Progress, might feel it in all its energy, on the same principle which made him an admirer of Don Bellianist

In his favorite author he is not shocked with the continual breaches of probability, the confusion of times, the offences against manners, the trampling upon geography; for he knows nothing of geography and chronology, and he has never examined the grounds of probability. He perhaps reads of a shipwreck on the coast of Bohemia: wholly taken up with so interesting an event, and only solicitous for the fate of his hero, he is not in the least troubled at this extravagant blunder. For why should he be shocked at a shipwreck on the coast of Bohemia who does not know but that Bohemia may be an island in the Atlantic ocean? And after all, what reflection is this on the natural good taste of the person here supposed?

So far, then, as taste belongs to the imagination, its principle is the same in all men; there is no difference in the manner of their being affected, nor in the causes of the affection; but in the *degree* there is a difference, which arises from two causes principally; either from a greater degree of natural sensibility, or from a closer and longer attention to the object. To illustrate this by the procedure of the senses, in which the same difference is found, let us suppose a very smooth marble table to be set before two men; they both perceive it to be smooth, and they are both pleased with it because of this quality. So far they agree. But suppose another, and after that another table, the latter still smoother than the former, to be set before them. It is now very probable that these men, who so agreed upon what is smooth, and in the pleasure from thence, will disagree when they come to settle which table has the advantage in point of polish. Here is indeed the great difference between tastes, when men come to compare the excess or diminution of things which are judged by degree and not by measure. Nor is it easy, when such a difference arises, to settle the point, if the excess or diminution be not glaring. If we differ in opinion about two quantities, we can have recourse to a common measure, which may decide the question with the utmost exactness; and this I take it, is what gives mathematical knowledge a greater certainty than any other. But in things whose excess is not judged by greater or smaller, as smoothness and roughness, hardness and softness, darkness and light, the shades of colors, all these are very easily distinguished when the difference is in any way considerable, but not when it is minute, for want of some common measures, which perhaps may never come to be discovered. In these nice cases, supposing the acuteness of the sense equal, the greater attention and habit in such things will have the advantage. In the question about the tables, the marble polisher will unquestionably determine the most accurately. But notwithstanding this want of a common measure for settling many disputes relative to the senses, and their representative the imagination, we find that the principles are the same in all, and that there is no disagreement until we come to examine into the pre-eminence or difference of things, which brings us within the province of the judgment.

So long as we are conversant with the sensible qualities of things, hardly any more than the imagination seems concerned; little more also than the imagination seems concerned when the passions are represented, because by the force of natural sympathy theyare felt in all men without any recourse to reasoning, and their justness recognized in every breast. Love, grief, fear, anger, joy, all these passions have, in their turns, affected every mind; and they do not affect it in an arbitrary or casual manner, but upon certain, natural, and uniform principles. But as many of the works of imagination are not confined to the representation of sensible objects, nor to efforts upon the passions, but extend themselves to the manners, the characters, the actions, and designs of men, their relations, their virtues and vices, they come within the province of the judgment, which is improved by attention, and by the habit of reasoning. All these make a very considerable part of what are considered as the objects of taste; and Horace sends us to the schools of philosophy and the world for our instruction in them. Whatever certainty is to be acquired in morality and the science of life; just the same degree of certainty have we in what relates to them in the works of imitation. Indeed it is for the most part in our skill in manners, and in the observances of time and place, and of decency in general, which is only to be learned in those schools to which Horace recommends us, that what is called taste, by way of distinction, consists; and which is in reality no other than a more refined judgment. On the whole it appears to me, that what is called taste, in its most general acceptation, is not a simple idea, but is partly made up of a preception of the primary pleasures of sense, of the secondary pleasures of the imagination, and of the conclusions of the reasoning faculty, concerning the various relations of these, and concerning the human passions, manners, and actions. All this is requisite to form taste, and the ground-work of all these is the same in the human mind; for as the senses are the great originals of all our ideas, and consequently of all our pleasures, if they are not uncertain and arbitrary, the whole ground-work of taste is common to all, and therefore there is a sufficient foundation for a conclusive reasoning on the matters.

Whilst we consider taste merely according to its nature and species, we shall find its principles entirely uniform; but the degree in which these principles prevail, in the several individuals of mankind, is altogether as different as the principles themselves are similar. For sensibility and judgment, which are the qualities that compose what we commonly call a *taste*, vary exceedingly in various people. From a defect in the former of these qualities arises a want of taste; a weakness in the latter constitutes a wrong or a bad one. There are some men formed with feelings so blunt, with tempers so cold and phlegmatic, that they can hardly be said to be awake during the whole course of their lives. Upon such persons the most striking objects make but a

faint and obscure impression. There are others so continually in the agitation of gross and merely sensual pleasures, or so occupied in the low drudgery of avarice, or so heated in the chase of honors and distinction, that their minds, which had been used continually to the storms of these violent and tempetuous passions, can hardly be put in motion by the delicate and refined play of the imagination. These men, though from a different cause, become as stupid and insensible as the former; but whenever either of these happen to be struck with any natural elegance or greatness, or with theses qualities in any work of art, they are moved upon the same principle.

The cause of a wrong taste is a defect of judgment. And this may arise from a natural weakness of understanding (in whatever the strength of that faculty may consist), or, which is much more commonly the case, it may arise from a want of proper and well-directed exercise, which alone can make it strong and ready. Besides that ignorance, inattention, prejudice, rashness, levity, obstinacy, in short, all those passions, and all those vices, which pervert the judgment in other matters, prejudice it no less in this its more refined and elegant province. These causes produce different opinions upon everything which is an object of the understanding, without inducing us to suppose that there are no settled principles of reason. And indeed, on the whole, one may observe, that there is rather less difference upon matters of taste among mankind, than upon most of those which depend upon the naked reason; and that men are far better agreed on the excellency of a description in Virgil, than on the truth or falsehood of a theory of Aristotle.

A rectitude of judgment in the arts, which may be called a good taste, does in a great measure depend upon sensibility; because, if the mind has no bent to the pleasures of the imagination, it will never apply itself sufficiently to works of that species to acquire a competent knowledge in them. But, though a degree of sensibility is requisite to form a good judgment, yet a good judgment does not necessarily arise from a quick sensibility of pleasure: it frequently happens that a very poor judge, merely by force of a greater complexional sensibility, is more affected by a very poor piece, than the best judge by the most perfect; for as everything new, extraordinary, grand, or passionate, is well calculated to effect such a person, and that the faults do not affect him, his pleasure is more pure and unmixed; and as it is merely a pleasure of the imagination, it is much higher than any which is derived from a rectitude of the judgment; the judgment is for the greater part employed in throwing stumbling-blocks in the way of the imagination, in dissipating the scenes of its enchantments, and in tying us down to the disagreeable yoke of our reason: for almost the only pleasure that men have in judging better than others, consists in a sort of conscious pride and superiority, which arises from thinking rightly; but then, this is an indirect pleasure, a pleasure which does not immediately result from the object which is under contemplation. In the morning of our days, when the senses are unworn and tender, when the whole man is awake in every part, and the gloss of novelty fresh upon all the objects that surround us, how lively at that time are our sensations, but how false and inaccurate the judgments we form of things? I despair of ever receiving the same degree of pleasure from the most excellent performances of genius, which I felt at that age from pieces which my present judgment regards as trifling and contemptible. Every trivial cause of pleasure is apt to affect the man of too sanguine a complexion: his appetite is too keen to suffer his taste to be delicate; and he is in all respects what Ovid says of himself in love,

> "*Molle meum levibus cor est violabile telis,*
> *Et semper causa est, cur ego semper amem.*"

One of this character can never be a refined judge; never what the comic poet call *elegans formarum spectator*. The excellence and force of a composition must always be imperfectly estimated from its effect on the minds of any, except we know the temper and character of those minds. The most powerful effects of poetry and music have been displayed, and perhaps are still displayed, where these arts are but in a very low and imperfect state. The rude hearer is affected by the principles which operate in these arts even in their rudest condition; and he is not skillful enough to perceive the defects. But as the arts advance towards their perfection, the science of criticism advances with equal pace, and the pleasure of judges is frequently interrupted by the faults which are discovered in the most finished compositions.

Before I leave this subject I cannot help taking notice of an opinion which many persons entertain, as if the taste were a separate faculty of the mind, and distinct from the judgment and imagination; a species of instinct, by which we are struct naturally, and at the first glance, without any previous reasoning, with the excellencies, or the defects, of a composition. So far as the imagination and the passions are concerned, I believe it true that the reason is little consulted; but where disposition, where decorum, where congruity are concerned, in short, wherever the best taste differs from the worst, I am convinced that the understanding operates, and nothing else; and its operation is in reality far from being always sudden, or when it is sudden, it is often far from being right. Men of the best taste, by consideration, come frequently to change these early and precipitate judgments, which the mind, from its aversion to neutrality and doubt, loves to form on the spot. It is known that the taste (whatever it is) is improved exactly as we improve our judgment, by extending our knowledge, by a steady attention to our object, and by frequent exercise. They who have not taken these methods, if their taste decides quickly it is always uncertainly; and their quickness is owing to their presumption and rashness, and not to any sudden irradiation, that in a moment dispels all darkness from their minds. But they who have cultivated that species of knowledge which makes the object of taste, by degrees, and habitually, attain not only a soundness, but a readiness of judgment, as men do by the same methods on all other occasions. At first they are obliged to spell, but at last they read with ease and with celerity; but this celerity of its operation is no proof that the taste is a distinct faculty. Nobody, I believe, has attended the course of a discussion, which turned upon matters within the sphere of mere naked reason, but must have observed the extreme readiness with which the whole process of the argument is carried on, the grounds discovered, the objects raised and answered, and the conclusions drawn from premises, with a quickness altogether as great as the taste can be supposed to work with; and yet where nothing but plain reason either is or can be suspected to operate. To multiply principles for every different appearance, is useless, and unphilosophical too in a high degree.

This matter might be pursued much further; but it is not the extent of the subject which must prescribe our bounds, for what subject does not branch out to infinity? It is the nature of our particular scheme, and the single point of view in which we consider it, which ought to put a stop to our researches.

MYTHOLOGY.

LUNA (*the moon*) was the daughter of Hyperion and Terra, and was the same, according to some mythologists, as Diana. She was worshipped by the ancient inhabitants of the earth with many superstitious forms and ceremonies. It was supposed that magicians and enhanters, particularly those of Thessaly, had an uncontrolable power over the moon, and that they could draw her down from heaven at pleasure by the mere force of their incantations. Her eclipses, according to their opinion, proceeded from thence; and on that account it was usual to beat drums and cymbals to ease her labors, and to render the power of magic less effectual. The Arcadians believed that they were older than the moon.

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

The double page illustration is a block of dwellings in course of erection on the corner of Washington and Buchanan streets in this city. Messrs. Rountree Brothers are the owners. W. H. Lillie, Architect.

On the single page we show an illustration of the Bush street Methodist Church—San Francisco. Messrs. Percy & Hamilton, Architects.

The two dwellings shown on single page are for Mrs. Annie Hendry, at Piedmont, and for Mr. Clayton Smith at Berkeley, California. Mr. B. J. S. Cahill, Architect.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute of Architects, meets second Friday of each month at 408 California street.

Geo. H. Sanders, Pres. — Oliver Everett, Vice-Pres.
H. T. Bestor, Sec. — John M. Curtis, Tres.

Technical Society of the Pacific Coast, meets first Friday of each month at Academy of Sciences Building.

John Richards, Pres. — L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. — Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evenings of each month at the Academy of Sciences Building.

Geo. P. Low, Pres. — C. O. Poole, Vice-Pres.
W. I. Crosett, Sec. — O. Brooks, Treas.

Master Painters' Association of the Pacific Coast.

E. M. Gallagher, Pres. — H. G. Jarman, Sec.

A special meeting of the San Francisco Chapter of the American Institute of Architects was held on the 9th inst. at their rooms, 408 California street, to take into consideration the subject of an exhibition and entertainment by the Chapter. After a general discussion it was decided to defer the exhibition to some time later in the season, and that the Chapter give an entertainment and dinner. The members of the Chapter will be notified in due time.

BOOKS & PERIODICALS

THE ELECTRICAL RAILWAY IN THEORY AND PRACTICE, by Oscar T. Crosby and Louis Bell, Ph. D., published by the W. J. Johnson Company, New York, 1892, and for sale by Osborn & Alexander, 401 Market Street, San Francisco, California, price $2.50.

This work treats on the general principles, methods, results and a detailed study of motors. Specific instruction are given in the construction and working of motors and car equipments; the line, track, car houses and stations. The efficiency of electric traction by the steam engine, also by the storage-battery, in connection with high speed service and commercial considerations are given in full. An appendix follows with instructions to linemen, expenditures of electric street railways, and a chapter on lightning protection.

ARCHITECTURAL IRON AND STEEL, AND ITS APPLICATION IN THE CONSTRUCTION OF BUILDINGS, is a new work by Wm. H. Birkmire, published by John Wiley & Sons, New York, and for sale by Osborn & Alexander, 401 Market street, San Francisco, Cal. Price $3.50.

This work is intended for Architects, Architectural Students and Builders, and treats the subject of iron and steel in its latest forms of application to building construction of the modern type. It takes in a very wide field; commencing with the pig iron through the processes of the manufacture of wrought iron, steel and cast iron, showing the strength and economic use of each. The strength and construction of floors, girders, lintels, trusses, struts, columns of cast and wrought iron, stairways, ornamental iron work, doors and shutters are all described in detail.

Sash, Doors, Blinds, Mouldings, Stair work, Mantles, and all kinds of interior and exterior finish for joiner work; also the latest styles of embossed, ground, and cut glass. Published by Rand, McNally & Company, Chicago, and for sale by Osborn & Alexander, 401 Market street, San Francisco, Cal. Price $2.00.

This work is nearly all illustrations of designs for doors, sash, wainscot finish, verandas, scroll work, brackets, newels and balusters for stairs and verandas, mantels, sideboards, desks and seats, mouldings, etc.

In the FORTNIGHTLY REVIEW for April, Robert S. Ball discusses the subject of "How Long can the Earth Sustain Life," and Juliette Adam treats of "Woman's Place in Modern Life."

The COSMOPOLITAN for May, has an article by S. P. Langley on the subject of "Mechanical Flight."

LIPPINCOTT'S for May, has a short chapter on "After-dinner Botany," by P. Hemsley.

The LANCET, CLINIC, April 2d, contains an interesting article on "Laboratories of Hygiene," by Dr. John S. Billings, of the U. S. Army. It is proposed to erect and equip buildings especially for the purpose.

Notes & Comments.

Building is quite brisk at Sebastopol.

It is proposed to build a $100,000, market in Oakland.

A condensed yeast factory is to be erected at Santa Rosa.

Boston capitalists are about to form a new steam ship line here.

The building business in the country districts is quite lively.

The Methodist church of West Berkeley has contracted for a new organ.

Work has been commenced on the new silk factory to be erected at Petaluma.

The citizens of Reno are agitating the project of building a fruit cannery.

The citizens of Santa Maria are moving themselves to establish a public library.

The great tunnel for the Southern Pacific near San Louis has been commenced.

Considerable lumber is being hauled to Alameda from the saw mills in this immediate vicinity.

The haying, harvesting and threshing machines are being put in order for the large harvest in view.

Orange county capitalists have organized to build an extensive pickle factory at Westminster.

A cannery building is in course of erection in Santa Maria, and a large dairy building is under consideration.

The Chicago Historical Society is about to erect a new building from the designs of H. I. Cobb, architect.

The Portuguese Catholics are erecting a building near Petaluma in which to celebrate the ceremonies of the day of Pantecost.

Terra-cotta tiles, glazed or unglazed, are now made in different colors and shapes, thus giving the designer more freedom in composition.

The late Rev. Dr. Benton left a property site at Berkeley to the Pacific Theological Seminary. The trustees have decided to build on the property.

A new paving material now being introduced in London, is composed of granulated cork and bitumen, pressed into blocks, which are laid as brick or wood pavements. A pavement of this material is very elastic and pleasant to the feet, and affords an excellent foothold for horses. There is almost an entire absence of noise.—*Exchange.*

The above list of recently expired patents, relating to buildings, is supplied us by Alexander & Davis, Patent Attorneys of Washington, D. C. We have engaged this firm to supply us regularly with lists of expired patents relating to this line of inventions, and these lists will appear regularly hereafter, so that our readers will be kept promptly advised of the patents that become public property. Copies of these patents may be had of the above firm at the official cost (10 cts.) with postage added.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

Material Lien in South Dakota.—A sub-contractor who furnishes materials, lumber, or labor, not to the owner, but to the contractor, for the erection of a new building, can, under the provisions of sections 5469, 5470, Comp. Laws, acquire and enforce a lien on the building, and on the interest of the owner of the real estate on which the building stands, to the extent of the value, or the price agreed to be paid by the contractor for the material, lumber, or labor furnished. It is not the contract between the original contractor and the owner which supports the lien under the statute, but it is the use of the materials and work upon the premises, the putting of them into the building and attaching them to the freehold, whereby the owner is benefited by them, which entitles the party furnishing them to a lien to the extent of their value.

Albright v. Smith, Supreme Court, of South Dakota, 51 N. W. Rep. 590, (15IC).

Limitation of Action for Extras under Building Contract.—Where a written building contract provides that extras shall be paid for at such rates as shall be agreed upon by the parties, the amount due for such extras is an amount due under a written contract, though the price was a verbal agreement, and the statute of limitation as to written contracts applies to it.

Wilkinson v. Johnston, Supreme Court of Texas, 18 S. W. Rep. 746, (61C.)

The October number of the California Architect and Building News will contain a supplement.—The price for single number will be fifty cents. No extra price to regular subscribers before that date.

Burglars at this season of the year being less active than during the winter, is no reason why provision should not be made for the time when it will be needed. Burglar alarms have become a necessity in modern houses. The system used by the Electrical Storage and Supply Co., shows the slighest irregularity in the proper adjustment of windows

and doors which is communicated by alarm signals to any location desired. It can be arranged to work with the doors and windows only, or to turn on the light in whole or part of the house, or all in combination as wished. The circuit lines can be turned on or off as wanted, and when turned on any protected point, when tampered with, will give the alarm. For further particulars see advertisement of the Electrical Storage and Supply Co. on page xii.

N. & G. Taylor Co's. American Tin Plate has become a standard article. The materials, coating and general good qualities give satisfaction wherever used. The plate is of even thickness, soft and pliable, and hammers down without cracking; the coating heavy and evenly applied, and has a clean and superior finish with all the qualities requisite for durability. Workmen in this line say it works and solders well. On account of its many excellent qualities it is gaining in favor wherever a good article is desired.

The Ives Mortice Door Bolt is easily set in place, as it only requires a hole made with a bit in which to insert the bolt. Insert the turn key and screw on the escutcheon and the job is finished. One of the good points for which this bolt is famous is that one turn of the key runs the bolt fully out or back as wanted, so that the user knows at once whether the door is locked or unlocked. The knob and escutcheon is made plain or ornamental to suit any style of hardware in use. The Ives Sash Lock is made with double eccentric mechanism which easily draws the sashes together and locks them securely. This sash lock is well adapted for either light or heavy sashes, and is made ornamental to suit any style of hardware. See advertisement on page x.

Attention is called to the Hercules Gas Engine which works without the electric attachment. All the gas is consumed and used for power; consequently, no smell from unburned gas. It is so completely under control and can be run with so much economy that any person who proposes to use a gas engine should inquire further. See advertisement on page xix.

Carbolineum Avenarius is guaranteed by the Pacific Coast Agents, Messrs. Muecke & Co., 319 California street, San Francisco, to preserve any kind of wood, above or under ground or water, and to prolong its life at least 100 per cent. While a wood-preserver in the truest sense of the word, Carbolineum must also be of great interest to owners of Vessels and to parties using and handling Ropework, Canvass, etc. Messrs. Muecke & Co. claim Carbolineum the only article which will render Rope and Canvass absolutely water proof and make rot or decay an impossibility.

Rope and canvass treated with Carbolineum will be soft and pliable and remain always in this condition without cracking or breaking. Rust from Iron Hinges or Hooks will not in the least affect rope or canvass on which Carbolineum has been used. It is claimed one gallon of it will go as far as four or five gallons of best tar.

The Byrkit-Hall Sheathing Lath is formed of board about one inch thick and five inches wide, having the surface worked out in dovetailed grooves as lock joints to hold the plastering, as shown in the advertisement on page x. The laths are worked in long lengths, ten or twelve feet or more. These laths are especially useful wherever earthquakes are liable to occur, as they add strength to the walls and ceilings. The damage by the late "shake" would have been much less if this lath had been used. The plastering cannot fall off from any considerable space because of the peculiar form of the key. They answer the purpose of a combined sheathing and lath, and when put on at an angle they form a thorough bracing, which is at once apparant to any person experienced in building.

Joists Hangers of metal will soon be placed on the market by James A. Maguire, 661 Market street. The principle of the construction of this hanger will be readily understood by the profession by a glance at the cut as shown in the advertisement on page xi. It will be made out of the best metal, thoroughly tested. The T shaped shank at the back of the hanger is built into the brick wall, leaving the "shoe" hanging entirely outside of the wall. The joists rest in these shoes and are notched in the bottom to correspond with the projection on inside bottom of the "shoe" of the hanger thus making a complete tie to the walls, and at the same time leaving joists free to fall out without prying down the walls, in case of fire.

You will notice that by this method the joists are entirely out of the wall, and the walls are built solid without a break. In light party walls, slow burning construction, framing around chimneys, and preventing dry rot to end of joists, these hangers will have no equal.

Wm. H. Birch & Co., is one of the oldest manufacturers of elevators on the Coast. The devices in use by this firm are simple, safe and easily worked, and the machinery is of the most complete description, which, with the air brake and air cushion renders their elevators the safest and most economical of any in the market.

The Pacific Press Brick Company has for several years been engaged in the manufacture of Fine Bricks, during which time their bricks have enjoyed the highest reputation for color, beauty, accurate bond and durability. The demand for a superior article has induced the company to increase its facilities, and they are now prepared to furnish this superior brick in any size lots as may be wanted. They will be pleased to furnish such information as may be desired by persons interested in this material.

The successful advertiser is one who has something that everybody wants and would buy if he only knew where to get it.

The J. L. Mott Iron Works for this month show a set of their Imperial Porcelain Roll-rim Wash Tubs. These fixtures for the Laundry Room have marble back slabs, and non-absorbent floors, and the tubs supported upon metal standards. By the methods adopted by this company, absolute cleanliness can be had with very little labor. See page xiii.

The firm of Hopper & Schroeder has been dissolved and the business will be carried on by Wm. Schroeder as sole proprietor. Another new furnace for bending glass has been put in. The Embossing room is separate. All descriptions of "art glass" work is done by Mr. Schroeder at the manufactory, 39½ Fremont St., San Francisco.

The new building on California street, for the German Saving and Loan Society, is having the front windows fitted with Clark's Self Coiling Steel Shutters by the Pacific Coast Agents, Edw. B. Hindes & Co., 411 Mission Street, San Francisco.

Browell's Patent Chimneys have given satisfaction wherever used. They are considered earthquake-proof, and are recommended by the highest authorities. In buildings where the recent "shake" damaged so many brick chimneys, the loss would have been much less if these chimneys had been used. Manufactured and put up by J. Browell, 727 Montgomery street, San Francisco.

Rischmuller's Door Opener or Closer is a practical device for opening or closing the entrance door of tenements, flats, etc., without decending one or more sets of stairs. The mechanism is strong and simple, and is entirely concealed from view. The appliance is worked by means of a handle from any desired position, such for instance, as placed at the top of stairs, or in another room, and is always under the complete control of the person operating it.

TENDERS TO BE RECEIVED.

Treasury Department, Office Supervising Architect, Washington, D. C., May 5, 1892. Sealed proposals will be received at this office until 2 o'clock P. M. on the 3rd day of June, 1892, and opened immediately thereafter, for all the labor and materials required for the excavation, fouudations, cut stone work, and brick work of the basement and area walls, basement columns, first floor iron beams and wood joists, manhole and sewer connection, for the U. Building News	70

THE subject of high buildings for business purposes has attracted the attention of architects for a number of years and many predictions have been made concerning the limit to which such structures may be carried. In Chicago, where the most noted examples of high business blocks may be found, the Common Council has passed an ordinance limiting the height of buildings. The ordinance was passed by a vote of thirty-nine yeas to nine nays. The question elicited a spirited discussion with regard to the rights of the public and the business and sanitary interests of the city. The ordinance provides that for buildings upon streets of not more than 80 feet in width the height shall not exceed 125 feet; that upon streets of not more than 40 feet in width the height shall not exceed 100 feet; the extreme height in any case shall not exceed 150 feet. The ordinance does not prohibit the erection of towers, spires, domes, etc., under certain conditions.

In this matter the Council has taken into consideration the right of the commonwealth as well as the rights of the owners of high buildings. The danger from fire for this class of structures has for some time occupied the attention of fire underwriters. A committee from several prominent Insurance Companies has recently made a report recommending that the height of buildings should not exceed four stories or 50 feet as a standard risk. This height is based on fireproof buildings of modern construction.

We should infer from this that Insurance experts rate the fire risk as increasing with the excess of height above 50 feet.

The streets and buildings of a city are the creation of the inhabitants, each individual being directly interested in any matter pertaining to the public welfare, therefore, we see no reason why the height of buildings should not be restricted to a safe limit as time and experience may determine.

With the growth of cities the importance of sanitary provisions becomes more pronounced and measures must be adopted to prevent the increased disease and death rate due to overcrowding. It has come to be an acknowledged fact that many forms of disease are propagated and carried about in the air, the danger from which may be lessened by a free movement of the air as in the rural districts. High buildings and narrow streets have a tendency to prevent free circulation, consequently the disease germs are multiplied and concentrated and the death rate increased. Thus from a sanitary point it seems proper that some restriction should be placed upon the excessive height of buildings.

AT a meeting of the Board of Health, held on May 20, 1892, the following resolutions introduced by Dr. Bucknall, were adopted:

In accordance with the recommendation made to the Board at its last meeting, by the Plumbing Inspector, I offer the following:

Resolved, That all persons building New houses, or altering Old ones, demand a certificate from the Plumbing Inspector of the Health Department before accepting.

Resolved, That all property owners putting down permanent sidewalks, should have an intercepting trap, with air-pipe, on outer edge of sidewalk, as sanitary precaution against Sewer Gas permeating their premises.—JAS. W. KEENEY, M. D., Health Officer.

WE are again indebted to *Books*, published in Denver, Colo., for the School Building herewith illustrated. The building was designed by Mr. Robert S. Roeschlaub, Architect, of Denver. The plans present features not usually meet with in school architecture.

With such buildings for school purposes as this and the High School shown in our April number, together with the facilities for study afforded by the Denver Library, it is no wonder that its citizens claim superiority over less favored places.

Well planned school buildings are the pride of the inhabitants of every city and town, and as architects are giving more thought to this class of structure than formely, the present school houses are showing a marked improvement to those erected a few years ago.

CORONA SCHOOL, DISTRICT NUMBER ONE, DENVER, COLO."

A recent issue of the *Granite Cutters Journal* contains a report from a committee from the Granite Cutters National Union in reference to a communication to that body from the Granite Manufacturers' Association of New England. The following paragraphs are taken from this report as they contain some reasonable advice to employers generally.

"We are also told that competition in the trade is so close and the margin of profit so low that they cannot afford to do anything. With whom is this competition? Surely not with the workman at the banker When an association or its members say that they are handicapped by the unfair competition of their own members, it is time for that association to take steps to bring its members to a healthy state of fair dealing one with another, and not endeavor to foster that system of unfair competition by throwing the burden on the workmen. We believe the system on which the Manufacturers' Association is founded is a wrong one, and its members should at once remedy its defects, and endeavor to elevate the trade instead of trying to destroy it. * * * It is better for them to live in peace and harmony with all men than to lie awake nights scheming how to get the better, not only of their workmen, but of their associates as well."

ELECTRICAL ILLUMINATION.

FROM time immemorial there has been a call for more light, and history leads us through a long line of development from the "torch" by way of the "tallow dip" to gas and more recently to electricity, which has brought into the field new and important problems for the consideration of the Architect. From the Journal of the *Royal Institute of British Architects* we reprint an abstract of a paper on this subject by Mr. W. H. Preece, F. R. S.

The Internal Illumination of Building.

"The art of internal illumination of buildings, the author considers, is just born, and will be an art in the future. Electricity is rendering theatres bearable and houses healthier, while the architect is brought face to face with a new art, in which the aid of the electrician is required to solve some of the difficulties. History is silent as to the origin of tallow, pitch, wax and oil, but gas as an illuminant came in with the present century. From the earliest days history, whether culled from paintings or writings, teaches that lights have been dim and crude until the middle of the present century. Light, by whatever means generated, follows the same laws, and is due to the rapid rhythmic undulation of the medium, called the ether, that fills all space. Wherever there is light there is heat, and the hope of the philosopher to supply light without any heat at all is at present but a dream. Light cannot be produced without heat, and the higher the temperature the brighter the light. Color varies with the rate of vibration of the ether, while changes of color are due to the changes of wave-motion of the ether. Light may become so intense that all sense of color is lost, and every bright illumination causes all colors to appear whitish. If light emanates from a point, its intensity diminishes with the square of the distance. The candle is the British standard source of light, and the bright surface produced by it at a distance of one foot the standard illumination by which to measure the amount of light distributed by any other means. This standard Mr. Preece calls a "lux". A sixteen-candle power glow lamp is a lamp which gives a light equal to that of sixteen British standard candles concentrated on one spot, and it will at a distance of four feet give the illumination of a lux. Thus one-candle power at one foot, four candles at two feet, nine candles at three feet, fifteen candles at four feet, twenty-five candles at five feet, give exactly the same illumination, viz., one lux, on the paper on which we write or on the page from which we read. The great problem is to diffuse light throughout a room so that it be distributed uniformly over the working surfaces with an intensity of a lux. Sixteen-candle glow lamps suspended eight feet above the floor, and fixed in eight feet squares, effects this very well; and groups of four such lamps fixed sixteen feet high produce a similar result. The light a lamp gives is owing to the expenditure of energy in its carbon filament; an electric current is driven through this filament by electric pressure, its resistance is overcome, it is intensely heated by the proceeding, and the result is pure unadulterated light. The energy expended per second by an *ampere* (the standard current), driven by a *volt* (the standard pressure), is called a *watt*. A sixteen-candle glow lamp takes sixty-four watts, which, assuming the lamps to be fixed eight feet high, means that one watt per square foot of surface is required to secure ample illumination from lamps so fixed. Therefore, in designing the normal illumination of rooms, Mr. Preece takes the floor area in square feet and divides it by sixty-four, which gives the number of sixteen-candle power lamps required, fixed eight feet high; these being increased or diminished according to the purposes of the room, its form and height, etc. The adaptability of the eye to nearly every degree of light is very great, and it is almost impossible for it to judge accurately of the amount of light present; but it is not as a mere source of light that the glow lamp is superior to the gas-burner. The former can be put anywhere and used without the adventitious aid of match or fire. It does not vitiate nor unnecessarily warm the air, and it simplifies the problem of ventilation, while it lends itself above all to the æsthetic harmony of furniture and decorations. Electric light is not always absolutely safe; security is to be obtained only by good design, perfect materials, first-class workmanship, and rigid inspection. Imperfect materials erected by cheap contractors lead to many disasters; on the other hand, it is stated no fire has occurred in buildings fitted up under the rules and regulations, and inspected by the officers of the insurance companies in this country. Mr. Preece advocates keeping everything as much as possible in view, and not hiding the conductors under wainscots or floors or above ceilings. The glow lamp excited by three watts per candle is at present the most perfect source of domestic light, and when the patent expires—in a year or two—will be obtainable at one-third the present price. It is scarcely fair, Mr. Preece thinks, to say all light should come from the side of a room, as Lord Beaconsfield stated in *Lothair* when describing the lighting of Belmont. The House of Commons is one of the best-lighted chambers in London, and is lignted from the roof, a false glass ceiling excluding the heat and glare, and admitting only the light. What is wanted is to avoid the glare of the incandescent filament in the eyes, and to prevent the lamp from being too obtrusive; it can be shaded from the eye without its effectiveness being destroyed, and without the flow of light being obstructed or its quality being deteriorated. Judging from the Crystal Palace Exhibition, at which several leading firms have not exhibited, the electric light fitter has not seized upon the spirit of the age—which is the rule of science over mere conventional æstheticism. Two exhibits at the Crystal Palace, however, the author considers, especially deserve inspection. The one is a Tudor ribbed ceiling erected by Messrs. Allen & Mannooch, who have applied glow lamps to the moulded intersecting pendants in

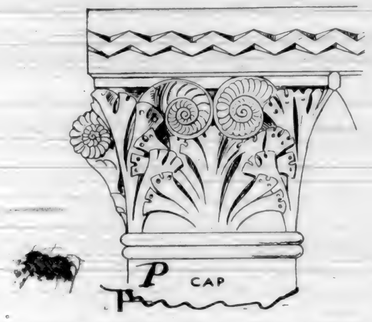
such a way that the feeling of the artist is maintained by day, and is rather intensified, and not marred, by the artificial illuminant at night. The other is a bold attempt of Messrs. Rashleigh, Phipps, and Dawson to design in ironwork the whole of the fittings of a dining-room, so that they shall, in combination, convey an idea. The artist (Mr. Reynolds) has attempted to symbolize the solar system, the centre light over the table representing the sun, and the brackets on the walls the planets. A survey of the Royal Academy pictures, the author thinks, affords instructive study." There are many interiors, but few into which artificial light has been introduced. Having described several pictures in which artificial light has been introduced with more or less successful results, Mr. Preece, in conclusion, considers that science is advancing with giant strides. Science has subdued nature so as to bring it within the compass of the human intellect, and Art must follow the knowledge thus acquired. These two being the chief instruments of modern civilisation, the architect and engineer must work hand in hand.



TERRA-COTTA CAPITAL FROM THE MUSEUM NATURAL HISTORY AT KEMSINGTON, ENG.

THE GOVERNMENT TIMBER TESTS.

THE U. S. Department of Agriculture has issued Bulletin No 6, compiled by B. E. Fernow, Chief of the Foresty Division. This work "TIMBER PHYSICS," deals with a practical question of great interest to architects and builders, and we shall, from time to time, make copious extracts from this and the following reports. Mr. Fernow's letter to the Secretary of the Department of Agriculture, and the introduction states the case clearly.

"This is the first of a series of bulletins which are to record the results of an extensive investigation into the nature of our important woods, especially their mechanical and technical properties, and the dependence of these upon structure and physical condition and upon the conditions under which the wood was grown.

The present bulletin is entirely preliminary in its nature. Its object is to serve as a basis for the work which is to follow and is partly begun. It discusses the need, object, and scope of the investigation, gives references to the work which has preceded the present investigations, and explains the methods pursued in these latter, including the forms of record and illustrations of the machinery in use."

"INTRODUCTORY.—Scientific research is satisfied with its results without any reference to their practical application. Increase of knowledge is its self-sufficient aim. Whether this may in the end bring us an increase of power to control nature's forces or to utilize them to better advantage is not the concern of science, and yet all increase of this power has come directly or indirectly from such scientific research. Acknowledgment or ignorance, then, from a scientific point of view, is sufficient to establish the need of an investigation. From a practical and economic point of view, however, it would still remain necessary to point out whether and why the need is a pressing one and what direct benefits may be expected from such an investigation.

It will be admitted by all who have to handle wood in building, engineering and manufacturing, that our knowledge regarding the properties of our various timbers is not very satisfactory, and that while attempts more or less systematic have been made to determine these properties, and knowledge gained from experience exists among those who have handled certain classes of woods for certain purposes, there does not exist much reliable published information for general use.

It is also a well-known fact that from this ignorance of the value of our varied timber wealth, and its special adaptation to particular uses, large quantities of valuable material have been wasted. Everybody is familiar with the waste of our fine black walnut timber for fence rails, posts, and firewood. Until twelve or fifteen years ago many million feet of hemlock were left to rot in the woods, after the bark had been taken for tanning purposes, or this timber was not cut at all because its value for building purposes was not understood or was underrated.

In Alabama, along the Louisville and Nashville Railroad, a few years ago a large amount of chestnut oak was felled for the tan bark alone, the wood of the trees being allowed to rot, because railroad people did not know its value for railroad ties. The Division of Forestry, by a little circular, called their attention to the superiority of this timber for tie purposes, and now the wood is utilized, and thus for this region alone a saving of from $40,000 to $50,000 annually was effected, or more than three or four times as much as the annual appropriations for the Division of Forestry.

Even now many thousand cords of this valuable wood are lost there and in other regions when the bark is taken for tanning purposes, while the wood itself, which contains as much and more tannic acid per cord than the bark, is left unused, because it cannot be profitable transported in its original form. Presently a new wealth will be developed for the tanners, where it was not looked for. * * *

It would be impossible to estimate the direct and indirect losses which the country suffers from our ignorance as to the true values and strength of our building timbers. Such losses occur by using kinds unsuited for given purposes, or by employing either more or else less timber than necessary. Engineers and architects are fully aware of this deficiency in our knowledge, which approaches "a state of ignorance" remarkable to contemplate when it is considered that timber has always been a foremost building material. * * *

Not only are are engineers' tables, giving values of strength, uncertain, unreliable for practical use, based upon European timbers, etc., but probably not one in a hundred engineers or architects, who specifies timber for work, is capable of determining whether a given stick of timber is or is not capable of doing the duty it is designed to do. Even if he recognizes the species of timber, which he rarely can do with accuracy, he would fail to recognize any relation between the appearance or structure of the material and its expected or desired quality. And if he be better informed than the majority it will be only through dearly-bought experience. Empiricism in this branch of engineering still reigns supreme.

It is only six years ago that Prof. Lanza showed that tests made on small specimens, and on which our tables for engineers' use are based, may give results more than twice as high as those made on full-sized sticks; and although a factor of safety of 4 may have been applied in the specification, when it is found that material may have actually a strength .50 per cent. less than that given in the tables, we may often strain our material, without knowing it, to its full capacity and feel safe in so doing.

The following statement, which occurs in one of the letters referred to, may serve as an illustration. Mr. D. H. Burnham, engineer of construction for the World's Columbian Exposition, writes:

When I was appointed engineer of construction, World's Columbian Exposition, August 1st, I found it necessary to make changes in most of the buildings because I did not dare to use as high unit stress in timber as was used by my predecessor, although he claimed to be perfectly safe in his strains, and brought forward authorities—Trautwine and others—to prove his statements.

Inquiries from woodworkers in all branches show that the same lack of reliable knowledge exists with regard to the adaption of woods to technical purposes. Especially are the ideas as to the relation of properties to structure, physical condition, locality of growth, etc., entirely at variance and lacking a sound basis derived from accurate observation and research. It would then appear that from a practical point of view the need of an investigation exists, the more so since our forest resources begin more decidely to show the signs of lavish wastefulness, and proper economy would dictate a more careful employment of our wood materials.

Lastly, since we are beginning to plant forests and since forestry does not concern itself with the production of wood simply, but is to produce wood of given quality, we need this knowledge in order to proceed intelligently in the selection of plant material with reference to locality and in order to be able to control in a measure the quality of the product.

It is of interest to inquire why our ignorance exists and has prevailed so long, and to find out what is necessary in order to remove it.

There is one important factor of difference between other materials of construction and timber. It is the factor of life. Life means variety, change, variability. Each individual differs from every other in its development, and each part of the individual differs from its other parts in structure, and hence in qualities. Each living tree of the same species, therefore, converted into building material offers a different problem as to its properties, especially its strength, and each stick taken from a different part of the tree shows different quality.

This endless variability it is that has kept us in ignorance as to the capabilities of our timbers. While, by experience, we have learned that these differences exist, and even learned to find some relations between physical appearances, anatomical structure, and mechanical properties, the enormity of the enterprise has baffled investigators and deterred them from carrying on, in a systematic and comprehensive manner, such tests and examinations as would furnish us not only with reliable data as to the range of capacity of our timbers, but also as to the exact relation of their properties to their structure and physical condition.

In order to establish fully for any one species the possibilities of its adaption to our use, it is necessary to test a very large number of specimens. In order to formulate laws of relation between physical condition, anatomical structure, and mechanical properties, each test specimen must be carefully examined. In order to establish laws of relation between the physical and mechanical qualities and the conditions under which the specimen has grown, it is necessary to perform the testing and the examination on a large number of specimens of known origin.

Almost all the investigations made in this line are deficient in one or more or all of these points. Not only have there been few tests made on a sufficient quantity of material to allow generalization, but rarely have there been sufficient data furnished regarding the nature and origin of the test specimens to enable us to form a judgment.

Whatever laws of interrelation between physical structure and mechanical properties have been established or indicated, we owe almost entirely to European investigators on European timbers. Our engineers' tables are mainly made up from European sources, and while the extensive tables of the Tenth Census, prepared by Prof. C. E. Sharples, give us an indication as to the relative values of our many species, they can hardly claim to furnish data for practical application; in fact the author himself distinctly disclaims this. Anyhow, no attempt has been made to find out the causes of variation in properties or even to give data from which argument might proceed or a relation between properties and structure might be inferred.

It is to supply this absolute gap in our knowledge—which causes thousands and millions of dollars of waste annually—that the Forestry Division has entered upon a comprehensive and systematic investigation which has become known under the name of "The Government Timber Tests".

This investigation, the most comprehensive of the kind ever undertaken anywhere, in this country or in Europe, differs from all former attempts in similar direction in this, that it starts out with the fullest recognition of three facts:

(1) That in order to establish reliable data as to mechanical properties of our timbers, it is necessary to make a very large number of tests, by which the range as well as average capabilities of the species is determined.

(2) That in order to enable us to make the most efficient practical application of the data thus obtained, it is necessary to know the physical and structural conditions of the test material and bring these into relation with the best results.

(3) That in order further to deduce laws of relation between mechanical properties and the physical and structural conditions, as well as the conditions under which the material was produced, it is necessary to work on material the history of which is thoroughly known.

Briefly, then, to solve the problems before us, it is necessary to make our tests on a large number of specimens of known origin and known physical condition. While the tests in themselves appeal at once and first to the engineer, inasmuch as, by their great number, they will furnish more reliable data regarding the capabilities of the various timbers, the chief value and most important feature of the work lie in the attempt to relate the mechanical properties to the structure of the material and to the conditions under which it was produced.

We are not only concerned to know that a stick of this species of tree will bear a given load, but we want to be able to tell why this stick of the species will bear so much and why the other stick of the same species will bear only half as much; why the timber grown in this locality is found generally superior to that of the same species grown in another locality, etc.

When we have established such knowledge, then it will be possible for an engineer not only to specify his timbers intelligently, but also to inspect them and to know whether or not they come up to his specifications. To be sure, we are not now quite without some knowledge regarding these matters, although few users of wood seem aware of it. But not only is this knowledge scanty, it is not quite certain or capable of general application, and the results and deductions of one investigator may often be found contradicted by another or by the same authority after further investigation. We know that there are differences in quality, at least for some timbers, in sticks from different parts of the tree: not only the heartwood differs from the sapwood, but also the butt log from the top log.

While some experiments would lead us to believe that specific weight is a fair expression of the strength of timber of the same species, yet it would be hazardous to rely upon this factor without regard to other physical conditions and structural features of the timber.

Such "ring-porous" woods as the oaks and ash show the greatest strength and elasticity when their annual rings are wide, while the slow-grown mountain oak seems to excel in stiffness. From conifers, on the other hand, according to Hartig, the slow-grown timbers seem to exhibit superior quality; hence those from rich soils are not desirable. This again has appeared doubtful, or at least true only within unknown limits, from Bauschinger's experiments, who showed that tensile strength in pines was independent of the total width of the annual ring, but dependent on the ratio between the spring wood and summer wood.

That wet soil produces brittle, dry or fresh soil tough timber, is believed but needs proof. Contrary to general opinion, the time of felling seems to be without influence on the strength of pines. The degree of seasoning, on the other hand, seems to increase the strength, although it would still have to be found out whether the manner and rapidity of seasoning may not change this result. Toughness or capacity for bending without rupture, on the contrary, is claimed to be inversely proportionate to seasoning.

Carriage-makers claimed "that the white oak when grown in the South loses its peculiar toughness, by which it excels in the North." We have shown by actual tests that this is not the case, and claim the exact opposite from physiological reasons."

Notes & Comments.

Work on the Yolo City Hall is to be begun immediately.

Work will soon be commenced on the Nevada Bank at Reno.

The Insane Asylum at Stockton is now lighted entirely by natural gas.

The lumber mills in Seattle and vicinity have formed a combination to maintain prices and stop the cutting of rates.

In London it is proposed to make the use of fire-resisting materials compulsory in the construction of important and extensive buildings.

Wharf and Pier room along the water front of San Francisco is getting scarce. A number of passenger and freight vessels are awaiting wharf accomodation.

The house laundry comes in for a large share of benefits from the gas heater, while the irons of the ironing table are warmed up to the work by the same means.

Gilroy, California, a town of about 1,600 inhabitants, has recently voted $50,000 bonds for the improvement and extension of its water-works system. Good water in abundance is a convenient sanitary necessity, and an economical fire protection.

The uses of wood pulp are being extended from time to time into the various departments for finishing and decorating of buildings. It now being used as the basis of a plastic compound to serve as a substitute for lime mortar in covering and finishing walls.

Iron in Butte.—Though no iron has evet been worked in this county yet several large deposits of it are known to exist. One of these is on the land of J. M. Rutherford, a little northeast of Wyandotte. This would not be more than seven or eight miles from the Northern California railroad. The deposit is said to be very rich. Another valuable bed of chrome iron is found near Magalia. This is twenty-four miles north of Oroville, the county seat, and in the mountains at an altitude of something over 2,000 feet. The bed is large and extensive, yet little attention has been paid to it, and we are not able to give any details concerning it.—*Oroville Register.*

Prof. Sorokin, of Kajan, in dealing with the various parasitical destroyers of wood, and particularly the dry-rot (Merulis lacrymanus), finds that a current of air destroys the parasite in twenty-four hours; light is also an obstacle to its growth. When exposed to the simultaneous action of light and a draft of air, drying up ensues within a few hours. The sprinkling of wood with a solution of common salt prevents the appearance of dry-rot. The greater the concentration, the more durable is the protective effect. A solution of sulphate of copper, particularly if concentrated, is preferable to the solution of common salt. Carbolic acid destroys the Merulis very rapidly. Ordinary birch tar is a very efficacious agent against dry-rot. Beams and interior surfaces of boards should be coated with it to make it effective.

Illustrations

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

THE Works of the Edison Light and Power Company in course of erection on Jessie street, San Francisco, California, is from designes by Messrs. Percy & Hamilton, Architects of this city. The building has a frontage of 165 feet, a depth of 80 feet, and a height of 53 feet. All the foundations are of cement concrete, walls faced with stock bricks. The foundation for stack is a single slab of concrete 28 feet square and 9 feet thick. The stack is 18 feet 6 inches for outside diameter at base, and 175 feet in hight, and the flue 12 feet in clear. The inside of flue is lined 9 inches thick to a height of 57 feet 6 inches with fire-bricks, and thence with common bricks to top. The cup of stack is of concrete 17 feet 6 inches diameter and 16 feet in height.

The building is divided into two portions, engine and boiler rooms. The boiler room is the entire height with no intervening supports, the whole roof being supported by steel trusses 17 feet deep. The trusses are made of this depth for the support of coal bunkers, the coal being dumped into hoppers under sidewalk, and carried by endless hoists to the bunkers, and from thence through chutes to the boilers. The engine room portion will have three floors and gallery, all hung from the roof trusses, except the first floor which will be supported from basement. The foundations for engines are of concrete 9 feet thick. In the boiler room there are twenty-seven boilers of 7,000 horse power.

The building throughout is built in a most substantial manner to withstand the continual jarring of machinery and dynamos. Elevators are provided for lifting machinery, etc.

The Edison Light and Power Co., are the successors of the California Electric Light Co., and the buiding illustrated is known as "Station C".

DESIGN for a house to be erected at Hyde Park, Kansas City, for Miss Annie Bernard. Mr. Willis Polk of San Francisco, Architect. The exterior finish will be of California red-wood shingles to sill-course, and above this Oregon split shingles, all set 2½ inches to the weather. The wood work of the principal rooms will be of red-wood finished to retain their natural color.

The design has been worked out by Mr. Daniel Polk, brother of Mr. Willis Polk, who will go to Kansas City to superintend this structure, with other work in hand there.

THE design for a Suburban Residence is by Mr. Clarkson Swain.

WE are indebted to the Japanese Journal of Architecture *Nagata Chio Ichime*, Tokyo, for the Illustration of the Building in Japan.

MDCCCXXXIV

ARMATURE AND FIELD-MAGNET WINDING by Edward Frevert, illustrated, published by Bubier Publishing Co., Lynn, Mass., and for sale by Osborn & Alexander, 401 Market St., San Francisco, Cal. Price $1.50, size 5x7 inches, 113 pages.

This is a new book full of practical working directions for armature and field-magnet winding for Dynamos and Motors, with descriptions of some apparatus made by leading manufacturers. The great experience and ability as an author enables him to give the directions which workmen so often need. The illustrations and descriptions are very clearly set forth, and in a manner to be readily understood. It covers the whole ground, and should be carefully read by all who would understand the subject to which it is devoted.

CENTRAL STATION MANAGEMENT AND FINANCE, by Horatio A. Foster and published by C. C. Shelley, New York, and for sale by Osborn & Alexander, 401 Market St., San Francisco, Cal. Price $1.50. This is a work that deals with the question of station management in a practical manner to the end that electric lines of travel may be worked in an economical manner. A carefully formulated system is outlined, tables and blanks prepared with directions for keeping and making reports.

THE PAINTERS ENCYCLOPÆDIA, by Franklin B. Gardner, published by M. T. Richardson, New York, and for sale by Osborn & Alexander, 401 Market street, San Francisco, Cal., price $1.00, size 5x7 inches, 427 pages. As is indicated by its title, the book is a dictionary containing a large collection of valuable information. The author evidently knows what he is writing about, and every page contains matters of interest to those who are connected in any way with painting or color decoration.

This is a work which should find favor with students and practical men who have no time to wade through more extensive books.

THE WEEKLY POST INTELLIGENCER of Seattle, Wash., of June 9th, gives an account of the founding of the Territory and finally the State of Washington.

The current issue of THE WEEKLY BULLETIN OF NEWSPAPER AND PERIODICAL LITERATURE, published at 5 Sumerset St., Boston, is twice its usual size, containing a classified index of 1300 articles from recent numbers of the periodical press.

The Bulletin catalogues the important articles in the leading daily and weekly papers and the monthly magazines of the United States and Canada, including THE CALIFORNIA ARCHITECT AND BUILDING NEWS. Its value to readers, writers, and students, is sufficiently indicated by its title, and, although still in its first volume, its success as evidenced by the current issue is a surprise to no one acquainted with its plan and purpose.

THE COSMOPOLITAN for June contains more than its usual quota of ideas relating to Art. The chapter on "Modern Life and the Artistic Sense," by Walter Crane, deals with architecture and art as represented in the great commercial centers of civilization at the present time.

LIPPINCOTTS'S for June, contains among other articles, "The Struggle for the West," giving an account of the first settlement of Oregon.

THE ENGINEERING RECORD for May 28th, contains a detailed description and illustration of the construction of the conical roof of the Boston Chamber of Commerce Building. Also a description of the hot-water heating of a Hartford apartment house.

THE AMERICAN MICROSCOPICAL JOURNAL, has a chapter on "Plant Growth and the Terminal Bud".

NOTICE OF MEETINGS.

SAN FRANCISCO CHAPTER, AMERICAN INSTITUTE OF ARCHITECTS, meets second Friday of each month at 408 California street.

GEO. H. SANDERS, Pres. — OLIVER EVERETT, Vice-Pres.
H. T. BESTOR, Sec. — JOHN M. CURTIS, Tres.

TECHNICAL SOCIETY OF THE PACIFIC COAST, meets first Friday of each month at Academy of Sciences Building.

JOHN RICHARDS, Pres. — L. WAGONER, Vice-Pres.
OTTO VON GELDERN, Sec. — GEO. F. SCHILD, Treas.

CALIFORNIA ELECTRICAL SOCIETY, meets the first and third Monday evenings of each month at the Academy of Sciences Building.

GEO. P. LOW, Pres. — C. O. POOLE, Vice-Pres.
W. I. CROSETT, Sec. — O. BROOKS, Treas.

MASTER PAINTERS' ASSOCIATION OF THE PACIFIC COAST.

E. M. GALLAGHER, Pres. — H. G. JARMAN, Sec.

AT the June meeting of the San Francisco Chapter of the American Institute of Architects, Mr. Willis Polk was elected an active member.

It was decided to give a preliminary dinner as soon as the prize medals should be ready, and later in the season to have an exhibition when it is expected that the interests of the Architects will bring out a full showing to the public.

EFFECTIVENESS in design is that which secures admiration, or gives pleasure without effort at ostentation. This desirable effect may be attained by the breaking up of the sky-line, by heavy projections giving strong shadows, or the artistic irregularity of the plan.

The cottage may partake of the picturesque beauty in harmony with the site as well as the more pretentious mansion.

POPULAR TALKS ON LAW.

By Wm. C. Sprague.

WHEN IS A CONTRACT BY CORRESPONDANCE COMPLETE.

HS a first requisite to the forming of a valid contract, there must be a meeting of minds of the parties thereto. An offer can be revoked before its acceptance, but after the acceptance the offer becomes a promise. The time of acceptance of the offer is the moment of the meeting of minds. It is not a difficult thing to determine this moment in the case of contracts made in the presence of both parties, but the question becomes difficult and very important when the offer and acceptance are made by letter, telegram, messenger, or otherwise. At what moment is the contract consummated? Is it the moment of the posting of the answer, or the receipt of same? Is it the moment the message is started on its way or the moment it reaches and is thus communicated to the offerer? In general a communication of an acceptance is necessary to a forming of the contract. Is this essential requisite complied with when the party to whom the offer is made does all he can do to deliver his acceptance (whether it ever reaches its destination or not) or must the acceptance have reached its destination before it can have the effect of binding the parties?

It is now decided that the acceptance is made when the acceptor has done all that he can to communicate his intention. The moment then of despatch of acceptance is the moment the contract has its beginning and once having despatched the acceptance it is irrevocable. It is understood that one making an offer by letter is making that offer continuously during every instance of the time the letter is traveling, so that if the letter is delayed in transit, and on its receipt a letter is at once posted accepting the offer, the contract is complete, even tho' in the mean time the party offering may have sold the goods which were the basis of the offer. Suppose the letter of acceptance be lost and does not reach the party offering. Is there a contract? The logical result of the position that the contract is made when the acceptance is posted leads us to infer that the question demands an affirmative answer, and such is the law. The settled rule in our Courts is that the time of mailing the acceptance is the time the contract is complete, and that the subsequent fate of the letter is immaterial. This is so on the theory that the post office is the agent of the person who makes an offer by post, and the delivery of the letter to the agent of the person making the offer.

Suppose that a letter revoking the proposal is mailed before the acceptance is mailed, this does not affect the result unless the revocation is received before the acceptance is mailed. One in making a proposal may state it as a condition to the making of the contract that the notice of the acceptance be received in order to be binding. Many other interesting and important conditions arise, a treatment of which we postpone until our next.

The above article on Contracts is from the Collector Publishing Co.

It is stated that one out of every seven land owners in Great Brittain is a woman.

High backed chairs the fac-simile of parliamentary chairs are used in halls; great oaken settles which lift up and in which can be stored away many odds and ends are also used.

The above list of recently expired patents, relating to buildings, is supplied us by Alexander & Davis, Patent Attorneys of Washington, D. C. We have engaged this firm to supply us regularly with lists of expired patents relating to this line of inventions, and these lists will appear regularly hereafter, so that our readers will be kept promptly advised of the patents that become public property. Copies of these patents may be had of the above firm at the official cost (10 cts.) with postage added.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

AUTHORITY TO CREATE LIEN.—Where a vender advances money to his vendee, and, by written contract agrees to convey the land as soon as foundations for a house shall be constructed thereon by the vendee, and take a mortgage for the land and advances, the vendee has "authority," before the delivery of the deed to create liens on the land for labor and materials used in the construction of such house, under the statute, which provides that any person to whom a debt is due for labor or materials furnished and used in the erection of a building upon real estate, by virture of an agreement with or consent of the owner, or any person having "authority" from or rightfully acting for such owner, shall have a lien upon the interest of the owner in the land.

Caren v. Stubbs, Supreme Judicial Court of Massachusetts, 30 N. E. Rep. 219, 133C.

ACTION ON LEIN AGAINST JOINT OWNERS.—When owners of adjoining lots jointly contract for the erection of one building upon the entire tract, they may be jointed as defendants in a suit to foreclose a mechanic's lien on such building. Where the plaintiff in such an action dismisses as to one defendent and seeks to enforce his lien, proportionately reduced, as to the others, the latter will not be heard to complain of such apportionment.

C. B. Carter Lumber Co. v. Simpson, Supreme Court of Texes, 18 S. W. Rep. 812, 80C.

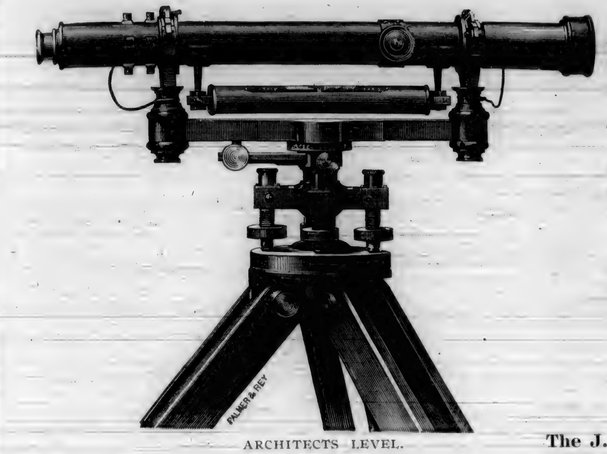
MATERIAL LIEN IN TEXAS.—Where a person enters into a contract with the owner of a building to furnish material for the building, and there is no middleman or other contractor intervening between them, he must be deemed an "original contractor," within Sayles, Civil St. art. 3165, allowing such a person four months within which to file a lien, and is not therefore, confined to the thirty days allowed a "day-laborer or other person" for that purpose. Where a person enters into a contract to furnish building material, and the amount of the material, as well as the times when it is to be delivered, is not fixed by the contract, but left to the needs of the party requiring it, the time at which the indebtedness occurs, and from which the four months begins to run, is the date of the sale and delivery of the last item.

Mathews v. Waggenhaenser, Brewing Co., Supreme Court of Texas, 19 S. W. Rep. 150, 148C.

DAMAGES FROM FAILURE TO PERFORM CONTRACT.—In an action by a sub-contractor against a contractor for breach of contract in failing to have certain preliminary work done, thereby causing delay, and in refusing to allow plaintiff to perform a certain part of the work, loss of the profits which plaintiff might have made as a contractor, but for the delay, doing some other work, cannot be considered.

O'Connor v. Smith, Supreme Court of Texas, 19 S. W. Rep. 168, 63C.

BUSINESS MOSAICS.



ARCHITECTS LEVEL.

The A. Lietz Co., at 422 Sacramento street, manufacture and keep on hand for sale Scientific Instruments of a superior quality. Upon a recent visit we noticed a very useful and convenient level to be attached to a measuring tape. A pocket instrument for taking the heights of rooms, buildings, trees, etc., cost $15.80; also inclinometers, compasses, barometers, thermometers of all the best makers, and measuring tapes for engineers and architects. Wood rules with white celluloid scales from $1.50 to $3.00. We were shown a superior level for architects use with long telescope, also a new styleof level or transit made especially for architects' use. This instrument will set off 90 degrees or right angles on the plan, while the telescope can be used for getting or testing plumb lines. The cost is about $150.00.

Todt & Peters, 53 Beal St., general house smiths, manufacture all kinds of wrought iron work for buildings.

The Gurney Hot Water Heater, J. J. Lawton & Co. Agents, 418 Fulton street of this city, is giving satisfaction wherever used. Architects will find this a very economical and practical apparatus for the purpose.

The Royal Metalic Paint as manufactured by the San Francisco Mineral Paint Co. of this city, has in many instances supplanted the other metalic paints. Painters who have used it recommend it highly on account of the "body" and ease with which it is applied. For farm buildings it seems to have no equal.

The Rapid Safety Filter in our office does its work admirably and has become a great favorite. Try one and you will not do without it.

Worthington Duplex Steam Pumps are suited for all kinds of work where pumps are required. The large hotels and boarding houses are most of them fitted with these pumps. For fire and elevator pumps in buildings they are unsurpassed. See advertisement page xvi.

The Hercules Gas Engine is the correct apparatus for running pumps, elevators, etc. Persons intending to use power in buildings should look into this matter.

The "Blount" Door Check.—This is a genuine Anti-Swear arrangement. Just try one and coincide with us. Try it you'll like it.

"What would you do if you were in my shoes?" asked Dull Times. "Black 'em, and then advertise in the CALIFORNIA ARCHITECT," replied Get There.

Clear money can be made by having your silver plating done at Denniston's.

The J. L. Mott Iron Works have issued a catalogue of designs for Fountains, ranging from the simple wall cup to elaborate monumental structures set off with emblematic sculptured figures for special situations. Parties who intend to put up either private or public fountains, will find it to their advantage to consult with this firm or their representatives. All the output from these works has an artistic value unsurpassed by any other manufactory in the country. See advertisement on page viii.

FOUNTAIN.

Messrs. Gladding, McBean & Co., are at present, making large quantities of terra-cotta work for buildings. The building in course of erection on the corner of California and Sansome streets in this city, will have all the portion above the stone work finished in bluff colored Roman brick and architectural terra-cotta. Messrs. Gladding, McBean & Co. have in preparation the architectural terra-cotta work for seven large buildings in course of construction at Tacoma. This firm has a new design for hollow arch fire-proof construction. The cut shows that the artistic modeling of their work is of a high order.

Edward Denny & Co., 418 Montgomery street, of this city, have on hand a full line of Albert Levy's blue print papers. This firm also makes blue or black prints of drawings for Architects. Architects in the smaller towns will find it to their advantage to send their drawings to Messrs. Denny & Co. for copying. It is cheap and saves work.

The Gardner Sash Balance Co. are now using a ribbon of Aluminium bronze, which, being "wire rolled" is claimed as superior to anything in that line heretofore used. Chas. A. Hare, 54 Mission street of this city is the general agent. See advertisement on page vii.

The objection that everyone of acute artistic taste has long entertained to a glossy and varnished finish on paint has now become almost universal. The consequence is that paint with a dull, dead surface, or more frequently yet, a stain, is used on shingles or clapboards.

Such stains or paints, from the very fact that the surface is rough and therefore more easily wet in rain, are peculiarly liable to the strong chemical action of rain followed by sunlight, which results in blackening.

We notice often on modern stained houses the change of greens to black or dark gray. To avoid this the stain, whether bought or made by the painter, should contain no Prussian Blue. A drop of soda or potash lye will destroy the blue of a Prussian Green, doing in a moment what sun and rain will do in a few weeks.

But we often notice yellows and other light colors in dull surfaced paints and other stains, blacken badly on the overhanging and exposed positions. This is caused, *not by dust*, but by the use of ordinary linseed oil with a dryer. To avoid this, the oil has to be prepared by a slow process with air, which gives it the drying properties necessary without any tendency to blacken. We believe that the Creosote Stains are the only exterior coloring that contain linseed oil so prepared, and we know that they are the only exterior coloring that will not blacken.

Wire Lathing as furnished by the John A. Roebling's Sons Co., is a superior article for the purpose. This company manufactures wire of all kinds, such as is use for electric conductors, wire rope, etc., either or iron, steel, brass or copper.

TENDERS TO BE RECEIVED.

Treasury Department, Office Supervising Architect, Washington, D. C., June 2, 1892. Sealed proposals will be received at this office until 2 o'clock P. M. on the 1st day of July, 1892, and opened immediately thereafter, for all the labor and material required for the Approaches to the U. S. Court House and Post Office Building at Helena, Arkansas, in accordance with drawing and specification, copies of which may be had at this office or the office of the Superintendent at Helena, Ark.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the proposal. The right is reserved to reject any or all bids and to waive any defect or informality in any bid, if it be deemed in the interest of the Government to do so. All bids received after the time stated will be returned to the bidders. Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the Approaches to the U. S. Court House and Post Office Building at Helena, Arkansas", and addressed to

W. J. Edbrooke,
Supervising Architect.

Treasury Department, Office Supervising Architect, Washington D. C., June 13, 1892. Sealed proposals will be received at this office until 2 o'clock P. M. on the 20th day of July, 1892, and opened immediately thereafter, for all the labor and materials required to fix in place the low-pressure, return-circulation, steam heating and ventilating apparatus for the U. S. Custom House and Post Office building at Port Townsend, Washington, in accordance with the drawings and specification, copies of which may be had on application at this office or the office of the Superintendent at Port Townsend, Washington.

Whalen; cost, $1,300; signed, May 17; filed, May 25; payments, $300 house raised, studding up and building encased; $300, plastering complete and ready to put finish on; $450, completed; $450, 35 days.

Hayes bet. Gough and Octavia. Three-story frame; owner, B. Levy; architects, Townsend & Wyneken; contractor, R. Parker; cost, $4,525; signed, May 23; filed, May 25; $800, frame up; $800, brown mortar on; $800, white coated; $800, completed; $1,325, 35 days.

Hayes near Buchanan. Alterations and additions; owner, E. D. Vecchio; architect, F. B. Wood; contractor, C. L. B. Jones; cost, $2,122; signed, May 9; filed, May 16; payments, $400, building raised and rustic on except front; $660, brown mortared; $600, completed; $562, 35 days.

Henry near Sanchez. Three-story frame; owner, James M. Juhlern; architect, H. Geilfuss; contractor, Tom. Muller; cost, $6,265; signed, May 20; filed, May 20; payments, on July 12, 1892, 75 per cent. of value of work done; after which date 1st and 15th day of each month 75 per cent. as work progresses; balance, 35 days.

Howard near 15th. Excavating, raising, carpenter work, etc.; owner, F. W. Runge; architect, H. Geilfuss; contractor, F. L. Hansen; cost, $5,707; signed, May 18; filed, May 18; payments, 1st and 15th day of each month, 75 per cent. as work progresses; balance, 35 days.

Hyde near Turk. Alterations and additions; owner, estate of P. Kelly; architect, T. J. Welsh; contractor, C. L. Lombardi; cost, $7,728; signed, May 10; filed, May 11; payments, $1,447.50, frame up; $1,447.50, brown coated; $1447.50, white coated; $1447.50, completed; $1930, 35 days.

Hyde near Turk. Plumbing, gas-fitting, etc.; owner, Estate of P. Kelly; architect, T. J. Welsh; contractors, Ford Bros.; cost, $1,025; signed, May 10; filed, May 11; payments, $600, rough work in; $600, completed; $407, 35 days.

Iowa near Solano. Frame building, two flats; owner, Jas. McHugh; architect, W. C. Dickerson; contractor, J. C. Rogers; cost, $2,525; signed, May 19; filed, May 19; payments, $625, frame up; $625, roof and brown mortar on; $625, completed; $850, 35 days.

Jackson and Powell. Addition to a two-story frame; owner, J. H. Drossel; architect, H. Geilfuss; contractors, Schutt & Kreeker; cost, $2,880; signed, May 19; filed, May 19; payments, 1st and 15th day of each month, 75 per cent. as work progresses; balance, 35 days.

Jersey near Noe. Cottage; owner, J. W. Lunny; architects, Townsend & Wyneken; contractor, J. C. Rogers; cost, $1,695; signed, May 9; filed, May 10; payments, $250, frame up and chimneys built; $300, brown coated; $270, completed; $275, 35 days.

Jones and Clay. Plumbing and gas-fitting; owner, Geo. W. Hooper; architect, F. B. Wood; contractor, R. H. Vance; cost, $1,695; signed, May 14; filed, May 21; payments, $600, rough work in; $600, completed; $400, 35 days.

Jones and McAllister. Desks and counters; owner Hibernia Savings and Loan Society; architects, Pissis & Moore; contractors, Fink & Schindler; cost, $2,820, signed, May 24; filed, May 25; payments, $2,115; completed; $705, 35 days.

Jones and McAllister. Grill work, etc., for counter; owner, Hibernia Savings and Loan Society; architects, Pissis and Moore; contractors, S. F. Novelty and Plating Works; cost, $1,750; signed, April 11; filed, April 30; payments $1,300, completed; $544; 35 days.

Jones and McAllister. All metallic furniture; owner, Hibernia Saving and Loan Society; architects, Pissis & Moore; contractors, Fenton Metal Manufacturing Co.; cost, $2,175; signed, March 24; filed, April 30; payments, $1,631, completed; $544, 35 days.

Jones and McAllister. Counter for banking room; owner, Hibernia Savings and Loan Society; architects, Pissis & Moore; contractors, Fink & Schindler; cost, $4,315; signed, April 11; filed, April 30; payments, $3,235, completed; $1,080, 35 days.

Jones and McAllister. Granite fence; owner, Hibernia Savings and Loan Society; architects, Pissis & Moore; contractor, O. E. Brady; cost, $2,000; signed, April 14; filed, April 30; payments, 1st, and 15th day of each month 75 per cent. as work progresses; balance, 35 days.

Mission near 10th. Alterations and additions; owner, Sarah Harney; contractor, F. W. Kern; cost, $1,800; signed, May 3; filed, May 4; payments, $950, 1st story studs set; $950, brown coated; $950, completed; $950, 35 days.

Pacific Ave. near Fillmore. All works to build; owner, Esther Greenberg; architect, M. L. Lyon; contractors, White Bros.; cost, $6,100; signed, May 21; filed, May 25; payments, $1,100, frame up; $1,100, building enclosed and chimneys complete; $1,100, plaster completed and standing finish on; $1,175, completed; $1,525, 35 days.

Post and Ophir Alley. Frame building; owner, Thos. McDonald; architects, Henriksen & Mahoney; contractor, Michael C. Lynch; cost, $14,500; signed, April 28; filed, April 29; payments, $2,719, rustic and roof on; $2,719, brown mortar and outside finish on; $2,719 white plaster finished and sashes glazed; $2,718, painting and varnishing finished; $5,625, 30 days.

Post and Ophir Alley. Plumbing, gas-fitting, etc.; owner, Thos. McDonald; architects, Henriksen & Mahoney; contractor, Jno. Doherty; cost, $3,250; signed, April 30; filed, May 3; payments, $1,355, rough work in; $1,080, completed; $875, 35 days.

Prosper near 16th. Two-story frame; owner, J. H. Taylor; architect, C. A. Parker; contractor, J. C. Nelson; cost, $2,505; signed, May 5; filed, May 19; payments, $1,878.75, completed; $625.25, 30 days.

Sacramento and Pierce. Lathing, plastering, etc.; owner, Mrs. K. D. Casey; architect, H. A. Schulze; contractor, Daniel O'Sullivan; cost, $1,275; signed, April 21; filed, May 2; payments, 1st day of each month, 75 per cent. as work progresses; balance, 35 days.

Sacramento and Pierce. Grading and artificial stone work; owner, Mrs. K. D. Casey; architect, H. A. Schulze; contractors, Gray Bros. A. S. P. Co.; cost, $1,649; signed, April 21; filed, May 2; payments, 1st day of each month 75 per cent. as work progresses; balance, 35 days.

Broadway near Gough. Two-story frame; owner, Helen S. Treat; architect, H. A. Schulze; contractors, Ingerson & Gore; cost, $4,700; signed, May 13; filed, May 16; payments, 1st day of each month, 75 per cent. as work progresses; balance, 35 days.

Broadway near Hyde. Two-story frame and basement; owner, Helen Chase; contractor, Henry Jensen; cost, $3,400; signed, April 26; filed, May 19; payments, $850, framed; $850, brown mortar on; $850, white coated; $850, completed,

Beaver near Castro. Two-story house; owner, P. J. Gorman; contractor, J. Schuler; cost, $2,700; signed, April 25; filed, April 29; payments, $900, frame up; $600, brown coated; $600, white coated; $400, completed; $500, 35 days.

Sacramento and Pierce. Plumbing, etc., in nine two-story frames; owner, Mrs. K. D. Casey; architect, H. A. Schulze; contractors, Duffey Bros.; cost, $3,509; signed, April 21; filed, May 2; payments, 1st day of each month, 75 per cent. as work progresses; balance, 35 days.

Sacramento and Pierce. Carpenter, joiners' and mill work; owner, Mrs. K. D. Casey; architect, H. A. Schulze; contractor, A. Jackson; cost, $27,769; signed, April 21; filed, May 2; payments, 1st day of each month, 75 per cent. as work progresses; balance, 35 days.

Sacramento and Pierce. Painting, graining and whitewashing; owner, Mrs. K. D. Casey; architect, H. A. Schulze; contractor, Thos. Downing; cost, $3,750; signed, April 21; filed, May 2; payments, 1st day of each month, 75 per cent. as work progresses; balance, 35 days.

Sacramento near Drumm. One-story brick and concrete building; owner, Holmes Lime Co.; architect, Wm. Jones; contractors, Richardson & Child; cost, $6,833; signed, May 17; filed, May 17; payments, 1st Saturday of each month, 75 per cent. as work progresses; balance 35 days.

Sacramento near Laguna. Painting, varnishing, etc.; owner, John D. Siebe; architect, H. Geilfuss; contractor, John Quadt; cost, $1,490; signed, April 28; filed, May 16; payments, 1st and 15th day of each month, 75 per cent. as work progresses; balance 35 days.

Sacramento near Leavenworth. Two-story frame with basement; owner, Vicente Denis; architect, Chas. M. Rosseau; contractor, Wm. Linden; cost, $3,195; signed, May 10; filed, May 12; payments, $798.75, framed; $798.75, brown mortared; $798.75, completed; $798.75, 35 days.

Seventh and Natoma. Alterations and additions; owner, Mrs. A. Pincus; architects, Salfield & Kohlberg; contractor, H. Rohling; cost, $3,415; signed, May 10; filed, May 12; payments, $900, frame ■; $885 brown mortar on; $800, completed; $850, 35 days.

South Park and Second. Third-story frame; owner, F. Ruhland; contractor, C. Zwierlein; cost, $5,800; signed, May 6; filed, May 10; payments, $1,087, frame up and enclosed; $1,087, brown mortared; $1,087, white coated; $1,089, completed; $1,450, 35 days.

Steiner near Pine. Raising and constructing; owner, Mrs. D. Quinlan; contractor, F. V. Rushton; cost, $2,015; signed, May 20; filed, May 20; payments, $125, house raised; $150, brick foundation done; $250, brown mortar on; $175 plumber has pipes in; $40, electric bells in; $75, chimneys built; $550, completed; $515, 35 days.

Stockton near Bush. Alterations and additions; owner, B. C. Duffy; architects, B. McDougall & Son; contractor, Wm. Tegeler; cost, $7,150; signed, May 12; filed, May 13; payments, $700, building raised and first tier of joists in position; $800, frame up and rustic on; $1,000, roof and brown mortar on; $1,300, white coat on and ready for painting; $1,562.50, completed; $1,787.50, 35 days.

Sutter near Taylor. Raising, moving and all work; owner, Mrs. May H. Morris; contractors, Peterson & Olson; cost, $2,375; signed, May 20; filed, May 23; payments, $1,200, brown mortar on; $575, completed; $600, 35 days.

Tehema near 5th. Alterations and additions; owner, Isaac Jacobs; architect, P. A. Sioli; contractor, J. W. Fish; cost, $4,000; signed, May 2; filed, May 6; payments, $750, frame up and roof on; $750, brown coated; $750, white coated; $750, completed; $1,000, 35 days.

Third near Hunt. Alterations and additions; owner, Joseph Hume; architects, Shea & Shea; contractor, E. B. Gifford; cost, $2,240; signed, May 2; filed, May 3; payments, $840, building raised and brickwork ready for sidewalk beams; $840, completed; $560, 35 days.

Thirtieth and San Jose Ave. Two-story frame; owner, Margaretha D. Joost; architect, H. Geilfuss; contractor, F. W. Kern; cost, $4,135; signed, May 21; filed, May 21; payments, $775, frame up; $775, brown mortar on; $775, standing finish on; $775, completed, $1,035, 35 days.

Union near Gough. To build; owner, Geo. Wise; architect, W. H. Lillie; contractor, Joseph Kennedy; cost, $3,258; signed, May 5; filed, May 5; payments, $485, frame up; $486, enclosed; $486, brown mortar on; $486, standing finish on; $485.50, completed; $809.50, 35 days.

Union near Fillmore. Two-story frame and stable; owner, M. Kelly; contractor, G. G. Gillespie; cost, $2,800; signed, May 11; filed, May 16; payments, $525, frame up; $525, brown mortar on; $525, white coat on; $525, completed; $700, 35 days.

Vallejo near Sansome. Two-story tenements; owner, Ernest Buchel; architect, Wm. Schrof; contractor, F. V. Steinman; cost, $4,400; signed, May 21; filed, May 23; payments, $825, rustic and roof boards on; $825, brown mortar on, $825 white mortar on; $825, completed; $1,100, 35 days.

Waller near Ridley. Two-story flat; owner, Otto Schrader; contractor, J. C. Rogers; cost, $2,250; signed, May 14; filed, May 17; payments, $550, lumber on ground and frame up; $600, brown mortar and roof on; $600, completed; $600, 35 days.

Washington near Hyde. House moving, brick work, etc.; owner, Henry B. Pasmore; architect, B. J. S. Cahill; contractor, Geo. Connon; cost, $5,900; signed, May 21; filed, May 23; payments, $1,000, old house moved into position and frame up; $1,100, brown mortar on; $1,100, frames set and plastered; $1,225, completed; $1,475, 35 days.

Western Addition, one-half 50 vara lot. Church building; owner, South M. E. Church; architect, W. W. Polk; contractors, Wilton & Havard; cost, $7,389; signed, April 23; filed, April 29; payments, weekly as work progresses sufficient sum to pay all employees; and monthly, 75 per cent. of sums for materials furnished. Contractor to receive $1,563, extra for furnishing glass, laying basement floor, putting on the plaster and inside finish, painting, etc. Also to receive $2,835, to complete the entire building ready for use, including what has been done, except grading sewering, etc.; making the total cost, $11,767.

ALAMEDA COUNTY.

Baker Track, Berkeley. Two-story house; owner, F. H. Lawton; contractor, Geo. A. Embury; cost, $2,550; signed, April 28; filed, April 28; payments, $800, frame up; $800, enclosed, brown mortar on; $800, completed; $750, 35 days.

Benton near Central Ave. Two-story frame; owner, J. G. Farrington; contractors, A. W. Cattiani & Co.; cost, $3,082; signed, May 12; filed, May 12; payments, $1,000, rustic and roof shingles on and chimney built; $900, brown mortar on and exterior primed; $852, completed; $920, 35 days.

Block 52, Oakland. To build; owner, Philomena Barbetta; contractor, F. C. Bignami; cost, $3,050; signed, May 10; filed, May 13; payments, $760, frame up; $765, building enclosed; $765, brown mortar on; $760, completed.

Block 207, Evoy Tract. One-story cottage; owner, P. H. Maloney; contractor, Peter Ahern; cost, $1875; signed, April 29; filed, April 29; payments, June 1, 1892, $875; July, 1892, $531.75; $468.25, 35 days.

Block 74, Oakland. Three-story and attic rooming house; owner, Mrs. Pauline Mack; architect, S. B. Abbott; contractors, Pierce & Rusch; cost, $8,113; signed, April 28; filed, April 28; payments, $1,000, frame up and roof on; $1,000, walls covered and floor laid; $1,000, front and roof on; $1,000, interior finish completed; $1113, 35 days.

Bristol and 7th, Berkeley. To build; owner, Anton Thienger; architect, Wm. Schrof; contractor, Henry Gotsoh; cost, $2,425; signed, April 28; filed, May 5; payments, $600, frame up, roof boards on, chimney built; $600, brown mortar, roof and outside finish on; $600, white mortar on, exterior and interior finish on; $625, 35 days.

Broadway and 14th, Oak. An elevator; owners, Joseph McDonough; architects, Mooser & Cuthbertson; contractors, A. J. McNicoll & Co.; cost, $5,100; signed, Jan. 19; filed, May 26; payments, 75 per cent. as work progresses; balance 25 days.

Broadway and 14th, Oakland. Excavating of trenches; owner, Home Savings Bank; architect, Walter J. Mathews; contractors, Ransome & Cushing; signed, May 10; filed, May 13; payments, 75 per cent. of value of materials delivered and work prepared to be paid when ½ of work is completed; 75 per cent. of value of materials delivered and work performed to be paid upon completion, provided the 1st payment be deducted; $200, for excavating and refilling trenches with concrete; 25 cents per cubic foot of concrete for building; balance, 25 per cent. 35 days.

Court St., Alameda. Three buildings; owner, Wm J. Smith; contractors, Marcuse & Remmel; cost, $6,000; signed, May 23; filed; May 26; payments, $1,500, frame up; $1,500, brown coat mortar on; $1,500, completed; $1,500, 35 days.

Eagle Ave. and Bay, Alameda. Building; owner, Wm. H. Jenkins; contractors, Marcuse & Remmel; cost, $1,075; signed, April 27; filed, May 2; payments, $268.75 frame up; $268.75, brown mortar on; $268.75, completed; $268.75; 35 days.

Eighteenth near West. To erect an additional story; owner, Carrie P. Hawley; contractors, Langtry & Johnson; cost, $1,050; signed, May 24; filed, May 25; payments $350, enclosed and brick work finished; $350, first coat of plaster and paint on; $350, completed.

Ellsworth St. near Dwight Way, Berkeley. Two-story frame; owner, Lizzie K. Hume; contractors, Estey & Jewett; cost, $3,600; signed, May 9, filed, May 10; payments, $900, house up and roof on; $900, brown mortar on; $900, completed; $900, brown mortar on; $900, completed; $900, 35 days.

Fitch and Sharon Tract. Three one-story cottages; owner, Frank Lucchette; architect, Fred. P. Fischer; contractors, D. Straub & Son; cost, $5,500; signed, May 9; filed, May 10; payments, $1,350, frames up; $825, enclosed; $825, plastered; $2,500, 35 days.

Fountain near Lincoln Ave. To build; owner, Mrs. J. M. Shannon; contractor, Marcuse & Remmel; cost, $2,900; signed, May 20; filed, May 23; payments, $725, frame up; $725, brown coat mortar on; $725, completed; $725, 35 days.

Fourteenth and Broadway, Oak. To build; owners, Home Savings Bank; architect, Walter J. Mathews; contractors, Rocklin Granite Co.; cost, $11,947; signed, May 23; filed, May 24; payments, $2,240, ¼ of granite stone work required is cut and in the building; $2,240, ½; $2,240, ¾; all, $2,240; completed; $2,987, 35 days.

Lot 13, Hawley Tract, Alameda. Two-story house; owner, L. C. Yates; contractor, C. F. Weldon; cost, $2,468; signed, May 7; filed, May 10; payments, $556, house enclosed; $656 plastered; $656, completed; $800, 35 days.

Mariposa near Aldine, Oakland. Cottage; owner, M. J. Sweeney; architect, John Conant; contractors, Simpson & Spence; cost, $1,200; signed, May 4; filed, May 7; payments, ¼ frame up and rustic on; ¾ brown mortar on; ¾ carpenter work done and ready for painting; ¾, 35 days.

Peralta and Nicholas Ave., Fruit Vale. One-story cottage; owner, H. Tinkensiedh; contractor, P. H. Maloney; cost, $1,650; signed, May 7; filed, May 17; payments, $550, enclosed; $550, completed; $550, 35 days.

Prospect Ave. near Webster. Frame dwelling; owner, Mrs. M. C. Benham; architect, Maxwell G. Bugbee; contractor, W. A. Griffith; cost, $3,658; signed, May 23; filed, May 24; $909.50, frame up and enclosed; $909.50, brown coat mortar on; $909.50, completed; $909.50, 35 days.

St. Mary's Hospital. A vault; owner, A. G. Chanchi; architect, Chas. Mau; contractor, D. Dwyer; cost, $1,000; signed, May 19; filed, May 17; payments, $725, ½ material furnished and ½ work done; $725, completed; $475, 35 days.

Thirtieth and Magnolia, Oakland. Cottage; owners, Mr. and Mrs. Giroux; contractors, Rose & Baker; cost, $2,000; signed, April 28; filed, May 2; payments, $500, frame up and brickwork completed; $500, brown mortar on; $500, completed; $500, 35 days.

Thirty-second near Telegraph Ave. Two-story frame; owner, J. J. Warner; architect, Howard Burns; contractor, E. H. Lake; cost, $2,758; signed, May 10; filed, May 10; payments, $689.50, house ready for plastering, $689.50 plastered, windows set and 1st coat of paint on; $689.50, completed; $689.50, 35 days.

Twenty-eight near Telegraph Ave., Oakland. Cottage; owner, A. C. Sandford; contractor, H. C. Brown; cost, $960; signed, May 9; filed, May 9; payments, $240, building enclosed; $240, brown mortar on; $240, completed; $240, 35 days.

Twenty-third and Broadway, Oakland. Two-story frame building; owner, J. A. Brunge; architect, Chas. Mau; contractors, Leiter & Prugh; cost, $5,357; signed, May 9; filed, May 9; payments, $1,000; ¼ materials furnished and ¼ work done; $1,000, ½ furnished and ½ work done; $1,000, ¾ furnished and ¾ work done; $1017.75 completed; $1339.25, 35 days.

Vine near Spring, Berkeley. Two-story frame dwelling; owner, Wm. McIntyre, architect, Geo. A. Bordwell; contractors, Nickerson & Caldwell; cost, $4,350; signed, May 18; filed, May 19; payments, $900, frame up; $750, brown mortar on; $800, white mortar on; $800, completed; $1,100, 35 days.

Webster near Lake Merritt, Oakland. To build; owner, Mother Elizabeth Roche, architect, Bryan J. Clinch; contractor, Thos. R. Bassett; cost, $10,500; signed, May 6; filed, May 7; payments, $2,600, frame up; $2,600, brown mortar on; $2,600, completed, $2,700, 35 days.

BUILDING IN SEATTLE, WASH., DURING MAY.

The superintendent of buildings presented his report for the month of May to the board of public works on Thursday as follows:

	No.	Cost.
Moves and repairs	46	$ 5,430
One-story frames	36	10,430
Two-story frames	21	64,300
One-and-one-half-story frames	7	4,385
Two-and-one-half-story frames	3	9,250
Three-story brick	1	4,900
Four-story brick	1	100,000
Five-story brick (excavate)	1	2,000
Three-story brick (foundation)	1	1,450
Totals	117	$202,155

THE location adds much to the convenience and beauty of the house, and the style or arrangement should be adapted to the location and surroundings. Birds seek a proper locality for their nests and then build in accordance with their peculiar needs, the strength varying with the exposure to the elements. Animals choose places of retreat protected from the influence of the disturbing elements, and then proceed with the erection of their habitations, some of which are marvels of architectural skill.

We thus see that architecture was coeval with the first life appearing upon the earth. If it is true that some forms of life have passed by evolution to the present state of high civilization, so architecture has followed as a natural and necessary accompaniment, and its historical markings, recorded at various epochs, show its faithful adherence to the wants of mankind.

Every building when erected has some object or end to be subserved. This object or end must first be made known to the architect before he can proceed to design a structure adapted to the required purpose.

It is not the province of architecture to present a Greek Temple located upon a bleak hill as a farm house, and say to the proprietor, "Live thou here in this temple, and make thy wants comform with this beautiful edifice," but rather to select a sheltered nook whereon to erect a conveniently arranged house with wide and airy verandas and exterior angles, and roof lines harmonizing with the surrounding landscape. We could go on and mention a number of such enormities, such, for instance, as a rural cottage for the purposes of a Court House.

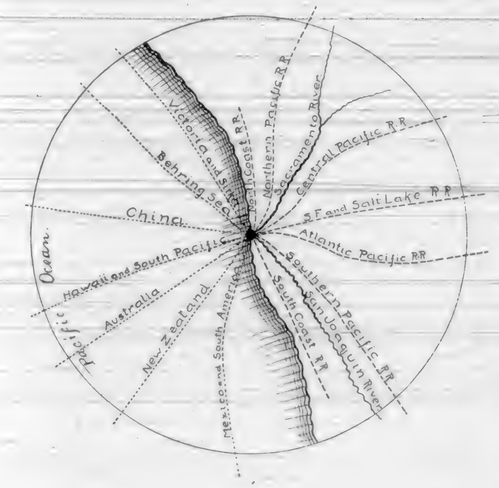
Architecture being so intimately connected and interwoven with our wants and necessities as to be inseparable from life, it follows that the highest type of architecture is that which most faithfully aids in the development of contentment and happiness ranging from the lowest wants of animal or man, through all stages of development, to the inspiration of the highest ideal. It therefore becomes the duty of the architect to plan healthy and comfortable buildings for the housing of the dumb animals, as well as those for the master.

With this end in view, we shall from time to time, give designs and details of construction for farm buildings and conveniences of all kinds, hoping thereby to aid in the work of beautifying and improving the homes which are increasing in number so rapidly at the present time throughout the Pacific Slope.

SAN Francisco as the commercial center of the Pacific Slope and the natnral terminus on the westerly coast of the Continent of North America has a great future. It has unlimited resources and as the means of communication improve and extend, and the manufacturer and merchant are brought more easily and quickly into connection with the trade centers of the world, so will the commercial enterprises become more extensive.

The situation is shown in the diagram, San Francisco being the natural central point for all the lines.

The bay of San Francisco is one of the best harbors in the world, having a depth of water sufficient for the largest ships and is large enough to float at anchor all the ships of the world at one time and have room to spare. It varies in width, but the average may be put at about six miles and has a length of nearly forty miles. The bay is connected with the ocean by one deep channel. At both sides of the channel, and at the entrance to "The Golden Gate", nature



has provided the preliminary requisites for fortifications.

In the development of the commence of a country the natural water ways rank first as an economical means of conveyance and as a check to monopoly. Two navigable streams, the Sacramento and the San Joaquin Rivers flow into the bay at San Francisco and furnish some 1,000 miles of internal navigation whereby millions of acres of fertile soil have direct communication with this port.

Taking the Rail Roads, we find the North Coast Road as a local line. This line has recently changed hands, and will probably be extended to connect with some overland road. The Northern Pacific R. R. is at present a local road but preparations are being made to extend the line to tap the northern coast of California and through to Oregon. The Central Pacific is well known as the first trans-continental road. The San Francisco and Salt Lake R. R. is about to be built to tap the overland routes. The Atlantic Pacific and Southern Pacific are two overland lines which separate after passing the mountain ranges, one line running Easterly and the other Southerly. The South Coast R. R. is running in sections, and when the gaps are all connected will make a line Southerly down the cost to San Diego and Los Angeles, then overland.

The lines of commerce on the Pacific Ocean cover a wide area. A steam-ship line runs up the Coast to Portland, Victoria and Alaska. Whaling and sealing ships run to Behring Sea. Steamer lines connect with China, Japan, Hawaii, Australia, New Zealand and the South Pacific, also to Mexico and South American Ports.

Sailing vessels run to all the trading points. All these lines are susceptible of expansion with a corresponding increase in the trade of the continent.

THE recent fires in this city, nearly all of which were in frame buildings, are admonitions, and the citizens, through the properly constituted authorities, should insist upon additional safeguards against a general conflagration and the use of a more fire-resisting material than wood in the districts outside but adjacent to the fire limits. Brick and terra-cotta come first as wall materials, and the extremely low price at which good brick, and even pressed brick, can be made, and are already to be had in the market, holds out additional reasons why brick should be used. Very few localities have better brick than San Francisco and its vicinity. Some of the brick in this market are of extra strength and are very tough and when properly laid with suitable mortar will make a wall more fire-proof than the wooden frame and equally earthquake-proof as the ones usually erected. One of the later brick manufacturing companies claims a pressure of 2000 lbs. per square inch, consequently a very strong brick and one that may be safely loaded with an increased weight over one of the softer kind, is the result. Our future for brick architecture is open to great possibilities and we hope and expect the subject will become an active one before the season closes.

IN a recent legal contest between Mr. C. C. Moorehouse and the officials of the Fire Department in regard to smoke-proof iron lath, the former presented evidence, which, it is claimed, was indisputable; viz., that there is no iron lath in the market that is smoke-proof until after the interstices are filled with mortar. Further it was claimed that the usually so-called smoke-proof iron lath having an angular corrugated form and which would, after plastering, leave continuous channels between the wall and a portion of the lath, instead of being smoke-proof, really formed flues which would be liable to convey not only the smoke, but the fire as well.

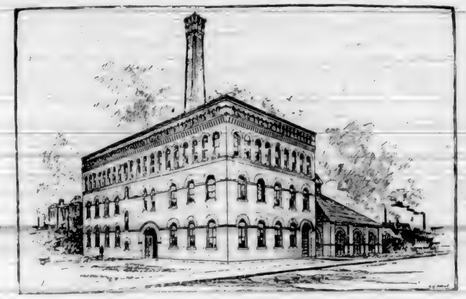
As we understand it, that claim was based upon the supposition that the lath should be applied to a boarded surface or to a wall with a plain surface to back the plastering. When applied to studding the effect is changed.

From this it appears that an iron or steel lath so formed as to make a key for the mortar, and allow the interstices to be completely filled with mortar, or a stiffened wire lath, would constitute the best smoke-proof lath extant.

The officials charged with the execution of the Fire Ordinances and who have been acting for some time, seem willing to accord equal rights to all; but when an attempt is made to introduce an inovation on the usual article it must be shown conclusively that the new article fills the requirements of the law. The newly appointed official whose "hand me down blue pants" have not lost their "shelf wrinkles," and with buttons resplendent with new brass, is the one who thinks it advisable to show convincing proof that he is much larger than any other man of the same size.

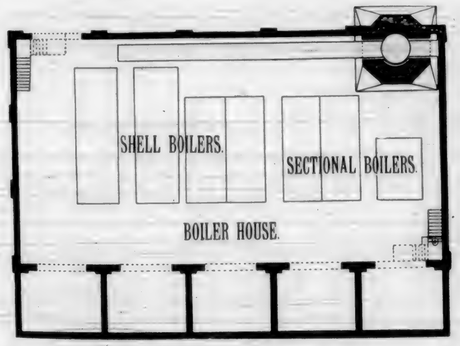
UNIVERSITY OF PENNSYLVANIA.

THROUGH the kindness of Mr. H. W. Spangler, U. S. N., of the Department of Mechanical Engineering of the University of Pennsylvania, we printed in our June number of last year a description of certain proposed improvements and additional buildings to that institution. We are again indebted to Mr. Spangler for the following illustrations and descriptions of the buildings in course of construction.

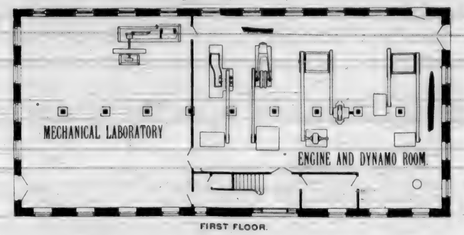


MECHANICAL ENGINEERING AT THE UNIVERSITY OF PENNSYLVANIA.

"About three years ago the necessity of increasing the equipment of the Department of Mechanical Engineering of the University of Pennsylvania became so apparent that a fund was immediately raised to place the Department on an equality with the best schools in mechanical engineering in the country. A portion of one of the very large rooms in the College, having a maximum capacity of about forty drawing tables, was used for a drawing room, one room of



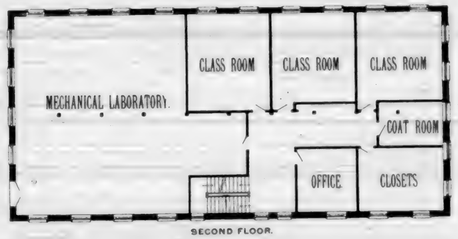
about five hundred square feet was set aside for test work in electrical engineering, and sufficient apparatus added to the equipment to enable satisfactory instruction to be given in this Department of the work. A year later a smaller room, of about one-fourth the floor space, was added to this portion for photometric and similar work. A second room of about six hundred square feet floor surface was taken for a mechanical engineering test room, and in this room was placed a 50,000 pound testing machine, a thirty-horse power testing engine, which could be run condensing or non-condensing, and numerous smaller pieces of testing apparatus, which enabled the Department to give instruction in most of those lines of work with which the mechanical engineer must be familiar. An additional room, covering 1300 feet of floor space, was secured, and a twenty-five horse-power vertical boiler and an 8x16 Porter Allen engine was put in this room, and the remaining space in the room was so



divided and equipped that one-half was used for an iron working shop and one-half for wood working. The additions then made were expected to be sufficient for the use of forty students as a maximum.

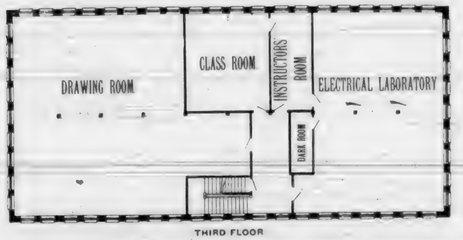
The effect of these additions on the attendance in this Department was such that before one complete year's work had been done the number of students exceeded that for which the equipment had been planned, the second year seeing the number doubled and the third year three times as many as were in the Department at the time the increased equipment was decided upon.

At the beginning of the second year the project of supplying heat and light for one central building was first discussed. There being twelve buildings then erected on the Univer-



sity grounds and some of them very large ones, is was finally decided that such a plant should be erected. This plant was expected to occupy a building about 100 feet by 50, one story high, having the boilers in one end and the engines and dynamos in the other.

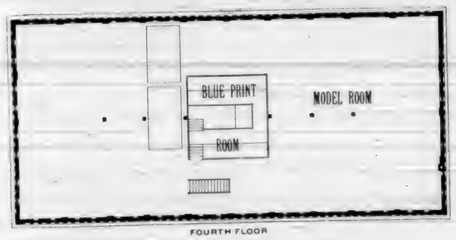
As the number of students in the Mechanical Engineering Department then was greater than the available space could accommodate satisfactorily, the Department began seeking other quarters. College Hall was over-crowded and the only way of obtaining more room was by moving into a separate building. The project of the light and heat station opened the way, and the results are as shown in the accom-



panying cuts. Two buildings are now in process of construction instead of the one at first proposed. The boiler house is 100 feet by 50 feet, and when equipped will contain four

shell and four sectional boilers. These boilers are intended to present to the students the best examples of modern stationary practice, and will be so equipped that the values of different kinds of coal, different methods of setting, different methods of burning coal, can be experimented on under the conditions actually found in a commercial plant. The roof trusses of this building are now being put in place. When completed this plant cannot be equalled by any in this country for the teaching facilities it will enable this Department to use, as it will be not only a plant installed by competent engineers to do economically commercial work, but with especial care as to its usefulness as an aid to the instruction in mechanical engineering.

The other building which is shown in the foreground of the picture, is the Engineering School proper. This building is to be practically four stories high and 100 by 50 feet on the ground. It is of red brick and already presents a handsome appearance, the third floor girders having just been put in place. On a portion of the ground floor will be placed the engines and dynamos for lighting the buildings of the University. This plant, like the boiler plant, has been planned not only to be commercially a successful plant, but to give the largest amount of opportunities for the students to study the peculiarities and test the efficiencies of the best types of engines and dynamos. This plant will be of 300 horse-power, and it is intended to install four engines driving six dynamos of various types. The balance of this floor, about 2000 square feet, will be devoted to the purposes of the Mechanical Engineering Department proper. The walls on



FOURTH FLOOR

this floor are of red brick, the floor granolithic, and mill construction is to be used throughout.

On the second floor will be the remainder of the Mechanical Laboratory—a second room, forty by fifty feet, in which will be installed much of the apparatus now in the laboratory, now in the College Hall. On this floor also will be the office of the Department, three class and lecture rooms and the closets.

On the floor above will be located the Drawing Room—a room covering 2000 feet of floor space——the Electrical Laboratory and Photometric Room, covering 1600 feet of floor space, one class room and the assistant's room. On the floor above will be located the model room, in which will be placed the models of machinery of various kinds, kinematical models and a series of very fine plaster models cast by the students for patterns of their own make, showing the methods of using cores and making castings.

The entire room actually used from day to day in this building for instruction purposes in the Department of Mechanical Engineering will be about 15,000 square feet as compared with about 4000 feet in the present quarters.

This Department has charge of both the Mechanical and the Electrical Engineering work done by the University of Pennsylvania. There are practically two courses of instruction open to students in this work. One of these courses has been established for a number of years, and is only open to students who have taken the first two years in the Towne Scientific School or who come prepared to pass examinations on the work of these two years. This course extends over three years. The Department has graduated from this course upwards of one hundred students, most of whom are actively engaged in some branch of engineering work.

The other course extends over four years and admits students after examination on the subjects usually required for admission to college. The studies taken in this course bear directly on the work of the engineer. At the end of the second year, the studies are differentiated somewhat for those students who desire to pay particular attention to electrical engineering, although all students taking either of the courses are given a good working knowledge of both mechanical and electrical engineering."

WHITHER IS OUR ARCHITECTURE TENDING.

At the Civil Engineers' Club of Cleveland, Mr. C. W. Hopkinson read a paper on "Whither is our Architecture Tending," of which a brief abstract is as follows:

To the casual observer there is much in the present condition of architecture in America which is perplexing. The variety of style and proportion, seen on every hand, and the seemingly ever-changing notion of what is proper, have done much to befog the judgment regarding our existing architecture. The American modern system of designing is essentially eclectic. That is, the different architects of the country work largely independent of each other. Even the work emanating from the same office often shows as wide a variation in style as the Gothic and Renaissance, or the Colonial or Swiss chalet styles. This system of designing has developed during the last twenty-five years, and has come about through the growing desire on the part of our architects for more freedom from restraint in their designing. The improvements in the technical journals, the better knowledge of what the men of the different parts of the country were doing, prevented our eclectic work from degenerating into wild experiments. Certain it is that this system led to an awakening in architectural circles, and made possible the introduction of Mr. Richardson's version of the Romanesque style of France. It was quite favorably received, but owing to Mr. Richardson's untimely death it did not reach the development its friends had hoped for. Instead, it was soon noticed that it began to take on a Gothic feeling, which was chiefly manifested in the ornamentation. In the hands of other architects, it exhibited a leaning towards the Renaissance style. But both the Gothic and Renaissance styles are in the field as candidates for honors. The Gothic claims a large part of the new churches, while the Renaissance has the honor of being the style in which the main buildings of the World's Fair are designed. As to what will be the coming style, it is extremely difficult to state. As a people we are altogether too restless in our natures to accept any one style for any great length of time. It seems probable that for some time the Gothic may claim a large part of the church work and the Romanesque the balance; the Renaissance the bulk of the public buildings and possibly a part of the office buildings, except that in the latter branch of building I shall look for a strong feeling of Romanesque, tempered, it may be, as indicated above. The private work will follow in the wake of all three styles, while the method of designing will probably be eclectic. With the splendid publications so complete on every hand and the training schools constantly sending into the offices young men with proper desires and theoretical training, and so many of our practicing architects zealous to raise the tone of the profession and promote scholarly work, it seems highly probable that the work, as a whole, will constantly grow better and more worthy the architecture of the most enlightened and progressive nation on the globe.—*The Engineering Record.*

Some of the old Mission buildings of this State are to be represented at the World's Fair. Mr. H. C. Ford, of Santa Barbara, expects to display twenty-four water color painting of these historical structures, each painting to occupy a space of about eight square feet.

A CENTURY OF ELECTRICITY, by T. C. Menden hall, Superintendent U. S. Coast and Geodetic Survey. Published by Houghton, Mifflin & Co., Boston and New York. Size 5x7 inches, and 1 inch in thickness. Price $1.00. For sale by Osborn & Axexander, 401 Market street, San Francisco, Cal. This is the revised edition of the work and is illustrated in a manner to make the matter clear. The book covers a long period in the practical use of electricity, giving a description of the discoveries by Galvani and Volta, the battery and electric current, and the electro-magnet. It also gives the history of the development of the telegraph, multiplex telegraphy and submarine cables, Faraday's discovery of the dynamo, the electric light and the transmission of energy; the motor, the telephone, secondary batteries and is supplemented with a copius index.

The work is a very useful one to have in the library for reference. Mr. Mendenhall is well known on this coast on account of his advanced scientific attainments. We predict the book will have a large sale.

Just published, Third Edition Atwood's REVISED RULES OF PROPORTION, complied and original and adapted to modern practice, by D. T. Atwood, Architect.

CONTENTS.

Part 1. Introductory and Explanatory.—Plate 1.—Standard of Proportion. Plate 2.—First Story Basement Elevation. Plate 3.—Fourth Story Elevation. Plate 4.—Optic Diagram. Plate 5.—Transverse Section, Interior of Basement and First Story.

Part 2. Rules, Notes and Tables of Comparative Proportions.—Plate 1.—Story Section, illustration Rules 1, 2, 3 and 4. Plate 2.—Base Section, illustrating Rule 5. Plate 3.—Architrave, illustrating Rule 6. Plate 4.—Room Cornice, illustrating Rule 7. Plate 5.—Post, Column and Pilaster, illustrating Rule 8. Plate 6.—Entablature, illustrating Rule 9. Plate 7.—Level and Raking Cornice, illustrating Rule 10. Plate 8.—Story Elevation, to obtain Raking and other styles of Cornice for Country, Town, or Suburban Houses, illustrating Rule 10.

12mo. vol., bound in cloth, price, 75 cents. Sent by mail free of postage to any part of the world. William T. Comstock, publisher, 23 Warren street, New York.

Mr. Atwood is the author of several works on architecture. In this book the author treats on the systems and rules adapted to the students' rudimentary course of studies in Architecture. The book contains much that is useful and is so compact as to be readily accessible when wanted.

THE METAL WORKER, Essays on House Heating by Steam, Hot Water and Hot Air, with introduction and tabular comparisons. Second edition, revised. Arranged for publication by A. O. Kittredge, editor of *The Metal Worker, Carpentry and Building*, etc. Author of the "Metal Worker Pattern Book," "Practical Estimator," etc. Publisher, David Williams, 96–102 Reade street, New York. 407 pp., 7x6½ inches. Handsomely bound in cloth. One volume. Price, $3.00.

The volume is illustrated with 85 full-page plates, showing the arrangement of apparatus and indicating the runs of pipes. Marginal notes on the pages adjoining the subject under consideration, together with a carefully prepared index at the end of the book, serve to facilitate references to required parts.

This volume is offered to the trades and professions in the interest of which it has been prepared, with the confidence that it will prove what is commonly required, "An Every-Day Help."

The work is not a mere theoretical consideration of principles and a statement of facts gained by inquiry in the trade; but, instead, a collection of essays by practical men, each showing how one man would go about heating the building in question, using the means with which he is best acquainted in practice. Features of the book which are not the least important among its numerous merits are the lists of items and statement of cost accompanying the different essays. Never before in the history of the heating trades has there been offered such a collection of information directly from the practice of those who are actively engaged in the heating business as is contained in this volume.

In this, the second edition, is contained a large amount of matter originally published in *The Metal Worker* and not given in the first edition. This has proven of exceptional interest and value to the trades, and consists of criticisms and opinions from the experience of many interested readers and an exhaustive section devoted to rules for proportioning raidiating surfaces, from standard authorities, with a large number of tables.

All persons who wish to inform themselves on the question of heating should be provided with this new edition. The extensive sales of the first work has made this enlarged edition necessary.

LIPPINCOTTS' for July, contains some travel and legendary stories.

THE COSMOPOLITAN for July, contains a number of articles of interest to architects. "England's Great Modern Schools" and "Riverside Hospital" are especially so.

SUGGESTIONS FOR THE CONDUCT OF ARCHITECTURAL COMPETITIONS.

SACTIONED BY THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

1.—The Promoters of an intended Competition should, as their first step, appoint one or more professional Assessors, architects of established reputation, whose appointment should be published in the original advertisements and instructions, and whose decision should govern the selection of the designs.

All the designs sent in should be submitted to the Assessors.

2.—The duty of Assessors should be:—

(*a*) to draw up the particulars and conditions as in-

structions to Competitors, and to advise upon the question of cost;

(*b*) to determine which of the designs conform to the instructions, and to exclude all others;

(*c*) to advise the Promoters on the relative merits of the designs admitted to the Competition, and to make a selection in accordance with the conditions.

3.—Every Promoter of a Competition, and every Assessor engaged upon it, should abstain absolutely from competing, and from acting as architect, for the proposed work.

4.—The number and scale of the required drawings should be distinctly set forth, and they should not be more in number, or to a larger scale, than necessary to clearly explain the design. If prespective views be required, it should be so stated; and they should be uniform in scale, number mode of coloring, etc.

5.—Competitions should be conducted in one of the following ways:—

(A) By advertisement, inviting architects willing to compete for the intended work to send in designs. The promoters, with the advice of the Assessor or Assessors, should make their selection from such designs. The author of the design awarded the first place should be employed to carry out the work.

(B) By advertisement, inviting architects willing to compete for the intended work to send in their names by a given day; with such other information as the candidate may think likely to advance his claim to be admitted to the Competition. From these names the Promoters, with the advice of the Assessor or Assessors, should select: (*a*) an architect to carry out the work; or (*b*) a limited number to compete, and each Competitor thus selected should receive a specified sum for the preparation of his design. The author of the design awarded the first place should be employed to carry out the work.

(C) By personal invitation to a limited number of selected architects, to join in a Competition for the intended work. Each Competitor should receive a specified sum for the preparation of his design. The author of the design awarded the first place should be employed to carry out the work.

6.—No design should bear any motto, device, or distinguishing mark; but all designs should be numbered by the Promoters in order of receipt. Any attempt to influence the decision of the Promoters, or of the Assessor or Assessors, should disqualify a Competitor.

7.—In every case the amount of premium or renumeration for the competitive designs should be fixed by the Promoters, acting under the advice of the Assessor or Assessors, and should be paid in addition to the usual professional charges for carrying out the work.

8.—Where a deposit is required for supplying the instructions, it should be returned on the receipt of a *bona fide* design; or if the applicant declines to compete and returns the said instructions within a month after their receipt.

9.—A design should be excluded from a Competition:—

(*a*) if sent in after the period named (accidents in transit excepted);

(*b*) if it does not substantially give the accommodation asked for;

(*c*) if it exceeds the limits of site as shown on the plan issued by the Promoters, the figured dimensions on which should be adhered to until officially altered;

(*d*) if the Assessor or Assessors should determine that its probable cost will exceed the outlay stated in the instructions, or the estimate of the Competitor should no outlay be stated; provided always that should the Assessor or Assessors not have been consulted in the first instance respecting the cost, as recommended in paragraph (*a*) of Clause 2, and should he or they be of opinion that the outlay stated in the instructions is inadequate for the proper execution of the proposed works, the Assessor or Assessors shall not be bound in the selection of a design by the amount named in such instructions, but the question of cost shall nevetheless be a material element in the consideration of the award;

(*e*) if any of the other instructions are violated.

10.—It is desirable that all designs submitted in a Competition, except any excluded under Clause 9, should, with the consent of their authors, be publicly exhibited after the award has been made, which award should be published at the time of exhibition.

11.—The architect, whose design may be selected as the best, should be employed to carry out the work, and he should be paid in accordance with the Schedule of *Professional Practice and Charges of Architects* sanctioned and published by the Royal Institute. If no instructions are given to him to proceed within twelve months from the date of the selection, he should receive adequate compensation in addition to the premium (if any) awarded to him. In the event of a part only of his original design being carried out, he should be paid a sum to be agreed upon in respect of the deferred portion, such sum to be merged in the usual professional charge when the completion of the design is proceeded with.

*** It should be understood that the Royal Institute issues these Suggestions as a guide to Promoters where a Competition has been decided upon, but not as necessarily recommending the principle of competition

ASTON WEBB, *Hon. Secretary.*
WILLIAM H. WHITE, *Secretary.*

For the above schedule we are indebted to the *Journal of Proceedings of the R. I. B. A.*

ILLUSTRATIONS

The management of this journal desires to extend a cordial invitation to all architects on this coast and elsewhere to contribute designs for publication.

Drawings should be made with perfectly black lines on a smooth white surface. Good tracings, if made with black ink, answer the purpose.

The designs selected will be published without charge. All drawings, whether accepted or not, will be returned to their authors, who must bear express charges both ways.

DESIGN for the City Prison of Guaymas, Mexico; Messrs. Pissis & Moore, Architects, San Francisco, Cal.

HOUSE for Mr. Watson, San Francisco, Cal.; Messrs. Percy & Hamilton, Architects. The basement and main story are of concrete and brick and the two upper stories are shingled.

THE sketch of building and landscape was worked out by Mr. Clarkson Swain. These sketches are three in number and so picturesquely delinated as to furnish artistic ideas to designers for rural buildings. Cottages and farm buildings may appropriately take on this character of design. The two remaining sketches will appear in later numbers.

THE building on the corner of Geary and Polk streets was designed and carried out by Mr. R. H. White, Architect, San Francisco. The exterior of the lower stories is finished with rustic boarding and of the upper stories with shingles. The building is arranged for a boarding house and flats.

NOTICE OF MEETINGS.

San Francisco Chapter, American Institute of Architects, meets second Friday of each month at 408 California street.

Geo. H. Sanders, Pres. Oliver Everett, Vice-Pres.
H. T. Bestor, Sec. John M. Curtis, Tres.

Technical Society of the Pacific Coast, meets first Friday of each month at Academy of Sciences Building.

John Richards, Pres. L. Wagoner, Vice-Pres.
Otto Von Geldern, Sec. Geo. F. Schild, Treas.

California Electrical Society, meets the first and third Monday evenings of each month at the Academy of Sciences Building.

Geo. P. Low, Pres. C. O. Poole, Vice-Pres.
W. I. Crosett, Sec. O. Brooks, Treas.

Master Painters' Association of the Pacific Coast.

E. M. Gallagher, Pres. H. G. Jarman, Sec.

THE Semi-annual Reunion and Banquet of the San Francisco Chapter of the American Institute of Architects was held on Thursday, the 7th inst.

All architects were invited to participate whether members of the Chapter or not.

The "Menu Cards" were all hand pen work prepared by Mr. Daniel Polk. Each card had a different sketch and they presented a unique appearance.

Letters were read from those who were unable to attend.

Mr. Geo. H. Sanders as president of the Chapter made the opening remarks, congratulating the profession upon the progress of architecture during the fifty years of its growth on the Pacific Coast.

He claimed that we have sufficient native latent talent for all future requirements, and that it should be placed under some systematic training at as early a period as possible. He stated at some length, the benefits that would be likely to follow from a Winter exhibition of architectural drawings and art work having a special adaptation to architectural design.

He also mentioned the proposition for forming an Architectural Club, the membership of which may be broad enough to include architects, sculptors, decorators, and all workers in architectural art work, and furthermore it was proposed to include amatures and patrons of such works. A club of this breadth could establish classes of instruction on a more extended scale than a more limited membership would allow. This idea and project of a "Club", Mr. Sanders stated, had been formulated in conjunction with Mr. Willis Polk.

The president then introduced Mr. Wm. Curlett as Master of Ceremonies.

As a preliminary to his remarks, Mr. Curlett quoted the maxim, 'Perfection is out of the question but excellence can be gained by hard work,' and then stated that without unremitting study and work no excellence can be obtained.

His remarks were appropriately pointed to the subject as he introduced the different speakers.

Mr. Geo. W. Percy then presented the awards.

1st Silver Medal to Mr. Samuel C. Benson, he having receive first mention six times out of eight competitions for the year 1890. This student was distinguished for the delicacy, beauty and artistic quality of whatever he undertook.

2nd. Silver Medal to Mr. H. J. Van Vlack, he having received the greatest number of 2nd mentions and the final prize for the best pen and ink drawing from photograph for the year 1890.

3rd. Bronze Medal to Mr. Linden Bree, he having received first mention for the best pen and ink drawing from photograph for 1891.

3th. Certificate of honorable mention to Mr. Conrad A. Meusdorefer, he having received one first mention for pen and ink drawing for 1891.

Mr. Percy then gave the students a brief outline of the history of architecture and of special lines of study, as laid down by eminent authorities, and to which it was desired to call their attention.

Mr. Theo. Lenzen made some old time remarks, and Mr. Albert Pissis was gratified that so much interest was exhibited in the future welfare of the profession. Mr. Jas. E. Wolfe gave an early history of the architecture of San Francisco, and stated that in 1853, the toll gate leading to the Mission Dolores was placed at or very near the locality of the building in which we were then holding our festivites. Mr. L. R. Townsend was pleased to think that the architects should be able to "draw a full house" when so many were away on vacation trips. Mr. J. H. Littlefield made some remarks on the amplitude of speech, architecturally considered, and Mr. Edw. Kollofrath responded to the "dinner" question. Mr. M. G. Bugbee spoke on the subject of "Modern Architecture", and Mr. H. T. Bestor considered the "Press in Architecture".

Mr. Oliver Everett and Mr. Edw. Burns both treated the dining-room from the æsthetic and art side of the question. There were several present of whom we did not get the names. At eleven o'clock all hands joined in "Auld Lang Syne" and the company dispersed.

LEGAL DECISIONS.

From a large number of Legal Decisions of the higher Courts of the different States of the Union, we select and publish in this column, such as appear applicable to this section of the country.

Release of Liens by Contractor.—A stipulation by a contractor, "to release and discharge the house from the operation of all liens for material furnished or work done in the construction of the same," is not a waiver of the lien so as to prevent a subcontractor enforcing a lien for lumber and woodwork before final settlement between the contractor and owner, Schroeder v. Galland, 19 At. Rep. 632, 134 Pa. St. 277 distinguished. It is no defense to such lien in Pennsylvania that the aggregate amount of the liens entered against the building, together with the cost of completing the same, exceed the contract price, if the materials furnished were of the quantity and quality needed for its construction.

Taylor v. Murphy, Supreme Court of Pennsylvania, 23 At. Rep. 1134, 112C.

TALKS ON LAW.

BY the earlier conquests and during the settlement of a Country, order and law develop and become a part of its civilization. The growth of law and architecture are so interwoven that the history of one becomes the history of the other. America has at different periods had portions of its territory under the influence of different nations which have left certain peculiarities in the earlier architecture that are not easily understood without a history of the settlement of these sections. To obtain a concise history of the settlements made by the different nations is of material aid to the student of the architecture of this Continent. In addition to the legal aspect of the question the student will be interested in the "Talks on Law" by Mr. Wm. C. Sprague, who has by a systematic research given a clear history of the law, with a brevity seldom met with.

THE GROWTH OF AMERICAN LAW.
By Wm. C. Sprague, Esq.

"To obtain an adequate idea of the law of any country, one must travel to its sources and follow its growth from its very beginning. Let us pursue this method in a few studies on the growth of our law. In the first place the seeds of American jurisprudence were transplanted from the old world. The navigators, explorers, missionaries, reformers, gold seekers of the very earliest days, brought to our shores along with their intense desire for conquest, for individual gain, for the glory of their sovereigns, and for religious freedom, the customs and laws of the homes they left and adopted them in the new world so far as they were fitted to their circumstances and their environment. The English brought with them the priceless heritage of the common law of England, and the French and Spanish brought the principles and codes built upon the foundations of the civil law—the law of Rome.

Of the early explorers succeeding Columbus, there was Juan Ponce de Leon, who landed in 1513, near St. Augustine, in Florida, in search of the Fountain of Youth; in 1520, Spanish ships touched the cost of Carolina; in 1521 the territory now known as Texas, New Mexico and California became a part of a great province attached to Spain by the conquest of her great explorer, Cortez. De Soto, another Spaniard, led a party from Florida across the country to the Mississippi in 1542. In 1584–5, Sir Walter Raleigh sent two expeditions to North Carolina. A Spanish settlement was made at St. Augustine, 1565. Jamestown, Virginia, became the first English settlement in 1607. New York (New Netherlands), in 1613, was settled by the Dutch, and Plymouth, Massachusetts, by the English in 1620. La Salle explored the Great Lakes and the Mississippi in 1682, the French establishing settlements at Kaskaskia and Arkansas Post in 1685, and Mobile and Vincennes in 1702. Thus England, Spain and France divided among themselves the great continent of North America. Spain got the Southern, England the Central, and France the Northern portion.

The discoveries thus made vested the new lands in the sovereign. His title was that by discovery grounded upon the three following ideas: The christian nation that discovers a heathen land owns it to the exclusion of all other christian nations. This nation to complete its title must within a reasonable time, occupy and use this land. The native inhabitants are only the occupants of the land and not its owners.

For over one hundred years from the discovery by Columbus no settlement deserving of more than passing mention was made in the new world by the English. Many and feeble attempts were made, fearful hardships endured, heroic efforts put forth, but in vain. Raleigh's and Drake's efforts were unsuccessful. The Spanish settlements were more successful, and for a clear reason. Spain looked upon her explorations as means toward extending her dominion. She looked forward to another great Roman Empire. Her explorations were, in a sense, official, and once a post was planted, high officers of State with large salaries were annexed to it, thus drawing patronage, wealth and population. It was otherwise with the English. In nearly every case colonization and exploration was private enterprise; if unsuccessful drawing in its wake individual suffering and loss, but if successful, resulting in little indeed to the individual but everything to the crown. Left thus to their own resources, English colonies in America had a precarious existence for the first one hundred and fifty to two hundred years, leading one writer to say of the British colonists as late as the end of the seventeenth century, "they were robbers and pirates on a large scale."

BUSINESS MOSAICS.

Geo. H. Tucker, manufacturer of galvanized iron cornices, and other ornamental work in sheet metal; also of the "Hayes Patent" skylights, etc. See advertisement on page xxii.

The Pullman Sash Balance using Alluminum Tape is by degrees displacing the older system of cords and weights. Lately we inspected some old sashes which had been re-hung with this new balance and found them to work either up or down very easily, and to remain where left. In fact, they were under perfect control. The appliance is neat and attractive in appearance, effective in use, and has been in use a sufficient length of time to demonstrate its durability and merits. Interested parties should send to C. A. Maydwell, general agent for Pacific Coast, 132 Market street, San Francisco, Cal.

Portland Cement of the best quality is of great importance. Where brick work is laid up with a good quality of cement, it is considered earthquake-proof. As the science of manufacture becomes better understood, better qualities of the finished product may be found in the market. Messrs. Girvin, Baldwin & Eyre, at 307 California street, San Francisco, Cal., are now importing several brands of the best quality of Portland Cement. See advertisement on page xiv.

Mantels and interior finish for first-class work for banks, offices, etc., are furnished by Wm. Bateman, 411 Mission street, San Francisco, Cal.

Wire work for Aviaries is coming into use for suburban and country estates where many ornamental wire structures are contemplated. The West Coast Wire Works, Trowbridge & Son, 13 and 15 Spear street, San Francisco, Cal., make a specialty of this class of work, together with all kinds of wire work.

The future points to an advance in the iron manufacturing interests on this Coast. The troubles in the Eastern Centers of manufacture will turn the tide backward toward this section of the country. We would particularly call attention to the Western Iron Works at 123 and 125 Beale St., San Francisco, Cal. This company contracts for all kinds of wrought iron and steel work for buildings from anchors to beams and girders of the largest size.

This firm is too strong to have a couple of months dull times drive them out of the market. They have business energy to back them.

The J. L. Mott Iron Works, has issued a new catalogue and price list of Cast and Wrought Iron, Brass, Bronze and Nickel-plated Stable, Cattle and Piggery Fittings. The plans and suggestions shown are of a nature to be useful for the Architect and Builder of such structures. The sanitary problems are worked in accordance with the latest scientific knowledge of the subject. The designs are artistic and present a beauty of finish hitherto unknown in such work. The designs and arrangements shown are the result of years of experience in this line of manufacture as improved from time to time by suggestions from practical experience. Every architect who has not already done so, should inform himself by addressing the agent. See advertisement on page viii.

The San Francisco Gas Light Co. has introduced so many gas cooking and heating stoves that the old style of wasteful coal stove is being rapidly displaced. It has been demonstrated that the pleasant open fire is more economical with gas than with coal. At present new buildings with any pretentions to modern conveniences provide for open gas fires.

In the new building in course of erection for Mrs. Anna Donahue on Market street, Chas. I. Havens, Architect, outlets have been left for gas connections for open gas fires in the grates. As arranged in this case either open fires or close heaters can be used as desired.

Galvanized Steel Laundry Tubes are being used in many of the modern houses. They are light and tough, the corners rounded and easily cleaned, and do not foul and sour with use. Geo. H. Tay & Co., 612 to 620 Battery St., San Francisco, are the manufacturers.

A correspondent in the *American Machinist* says: If engineers, machinists and millwrights in general and pipe-fitters in particular knew of the good qualities of graphite, I dare say there would be ten times the demand for it. Its lubricating qualities are questioned only by the impractical and it is this quality alone that sounds its key note, so to speak. Let me describe a few of what I consider its most important uses. As above stated its primary object is lubrication and it is to this fact we must credit good pipe joints and cool bearings. In making pipe cement, (or as I would term it, pipe smear), it is not necessary to use the best oil or grease, as it is the Graphite and not the body in which it is suspended, that makes the mixture valuable and the joint perfect. I use the drippings from line shaft bearings, caught in the ordinary way and mix it with the best Ticonderoga flake Graphite so that it can be applied with an ordinary sash tool.

During the past three years I have used about fifteen or twenty pounds of dry Ticonderoga flake Graphite for pipe joints, cylinder heads, piston rod packing, etc.

Bolts, smeared with Graphite mixed as above, I have unscrewed after having been in the dampest places for upward of two years, or more, proving the anti-rusting qualities of Graphite. To cool hot bearings put it on as thick as it will mix with oil. Almost any oil or grease will answer but don't use poor Graphite.

The Bostwick Steel Lath seems to have distanced all other sheet iron lath in this vicinity. They have lately increased their facilities and are prepared to furnish their superior lath in any quantities. The superiority of this lath is at once appearent. The openings form a very strong key to hold the mortar in place, while the mortar that passes through the interstices partially covers the back of the lath, thereby forming a fire resisting material. See advertisement on page xvi.

W. T. Garratt & Co. is one of the oldest manufacturing establishments on this coast. This firm has in the market an efficient and noiseless pump especially adapted for elevators, electric motors and gas engines. This firm also furnishes bronze work of all kinds, both high and low reliefs for gates, doors, railings, hinges, etc., for cemetery work; also copper, brass and iron pipe, tubing and fittings of every description.

Patent Chimneys are a standard feature in house construction in San Francisco and the neighboring cities and towns. The Stevens Patent Chimney is one that has withstood the test of time. See advertisement on page xvii.

Another importing house has come over to American made Tin Plate for roofing and other use. Merchant & Co., of Philadelphia, are now furnishing tin roofing plates of a superior quality, each plate being guaranteed. These plates are made by a continuous process. The best quality of steel sheets in large rolls are put in at one end, run through a scouring machine, thence through a tining bath, and then scoured. A course through a tern bath gives the final coating, and then they are cut, assorted and packed. This is one continuous operation from the sheet steel to the finished product ready for the roofer.

This company furnishes copper, tin or other metal tiles for roof and wall work. These tiles give a beautiful effect to towers or high pitched roofs. The Star Ventilators furnished by them are of practical utility. See advertisement on page xxi.

The re-opening of the works of the Hydraulic Pressed Brick Company last month marks a period in the brick architecture of San Francisco. The works are situated near Vallejo where the Company has an abundance of material well adapted to the manufacture of pressed bricks. The hard clay and shale is first carried to and stored in sheds where it air slaks, dries and crumbles. It is then put into a course crusher and thence run through a finer crusher, sifted and bolted, and the resulting fine flour clay dust is conducted through the moulding and pressing machine where it is first pressed from below and then from above with a pressure of 2,000 lbs. to the inch. The bricks are now taken to the kiln and packed for burning. The kiln is continuous, but divided into eighteen compartments by open arches. Each compartment holds one day's work, or 35,000 bricks. As we inspected the kiln the conclusion was forced upon us that the economic system upon which this company is working will revolutionize the general opinion that brick is so much more expensive than frame. The daily capacity of the machine and kiln is 35,000 extra quality of stock and pressed bricks, and so nearly automatic that forty men constitute the working force. Architects and builders will find it to their advantage to look into this matter.

TENDERS TO BE RECEIVED.

Treasury Department, Office Supervising Architect, Washington, D. C., July 14th, 1892. Sealed Proposals will be received at this office until 2 o'clock P. M. on the 28th day of August, 1892, and opened immediately thereafter, for all the labor and materials required for the erection and completion of the buildings for the U. S. Quarantine Station, at San Diego, California, in accordance with the drawings and specification, copies of which may be had at this office or the office of the Superintendent, San Diego, California.

Each bid must be accompanied by a certified check for a sum not less than 2 per cent. of the amount of the proposal. The right is reserved to reject any and all bids, or to waive any defect or informality in any bid, if it be deemed in the interest of the Government to do so. All proposals received after the time stated will be returned to the bidder. Proposals must be enclosed in envelopes, sealed and marked, "Proposal for the erection and Completion of the buildings for the U. S. Quarantine Station, at San Diego, Cal," and addressed to,

W. J. Edbrooke,
Supervising Architect.
